Alexander Campbell also said:

"Religion is the development of a man's moral and spiritual obligations to God; morals, his duties and obligations to man: and politics, his duties and obligations to the state or social compact in which he lives and moves and has his being."

"A temporizing politician is bad; an equivocal moralist worse; but a compromising Christian, worst of all."

It would be presumptuous for any mortal to select which religious principle has the most significance to human behavior. But this has been answered for us by Christ when the Pharisee lawyer asked of him: "Teacher, which is the great commandment?" The Scriptures record the answer in Matthew 22, verses 37-40:

"And he said unto him: Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the great and first commandment. And a second like unto it is this: Thou shalt love thy neighbor as thyself. On these two commandments the whole law hangeth."

President Johnson steadfastly upheld those commandments; for he loved God and he loved his neighbors; and his neighbors were world wide. He showed the love he had for God in the way he lived and in his going to God in prayer in all of the major decisions of leadership. He showed his love for his neighbors in his warm affection for all mankind, not only the needy and others in America but on foreign shores as well.

President Johnson said: "As long as I am President, I have one resolve. Before I leave, I am determined to do things that will make opportunities better for ordinary Americans, and peace in the world more secure." he did both.

Few Presidents have come close to the record of President Johnson in securing from Congress the passage of landmark legislation. To name a few: medicare, aid to education, the Department of Housng and Urban Development, a fair immigration law, bills for senior citizens, a National Crime Commission, drug controls, the antipoverty program, highway beautification, clean air and clean water legislation and important civil rights legislation, such as the voting rights bill.

I was glad to support the President in major legislation in these areas. Some of these were unpopular at the time among many of my constituents; and the President used to call me and talk with me about some of them. Knowing how busy he was I never called him but I did write him about my affirmative vote for the voting rights bill and his splendid leadership in presenting this issue to the country. I treasure his warm note of response: "Your letter was a bright and happy event in my day."

The President's speech on March 15, before the joint session of Congress on this issue was outstanding. He said:

"I speak tonight for the dignity of man and the destiny of democracy. There is no constitutional issue here. The command of the Constitution is plain. There is no moral issue. It is wrong—deadly wrong—to deny any of your fellow Americans the right to vote in this country. There is no issue of states' rights or national rights. There is only the struggle for human rights. This time, on this issue, there must be no delay, no hesitation, and no compromise with our purpose."

In this effort the President was quite consistent with the political leadership of Alexander Campbell, about a century and a half before. Then Campbell was serving in the Virginia Constitutional Convention of 1829-30 (serving there with James Madison, James Monroe, John Marshall and other patriots). He opposed limiting suffrage to the wealthy saying that this right "Is not a right derived from or confined by society, for it is a right which belongs to him as a man." "It is a right natural and underived, to the exercise of which every man by nature has as good a reason as another". Incidentally, when Campbell was asked how he justified himself, as a preacher, running for this office of delegate, he replied that he did so to lay "A foundation for the abolition of slavery".

That was a courageous thing for a Virginian to say while running for office in 1829. It was similar to the courage and leadership of President Johnson for civil rights sought under the even more trying circumstances of an inflamed and turbulent society in the 1960's.

Before I conclude, I would like to pay special attention to the President's love of his family, fully represented here today. They were always supportive of him and deserve great credit for their part in his achievements. Of his wonderful wife Lady Bird he said: "I outmarried myself. She is my strength." On another occasion he said "I have everything I want . . . I have got the best family a fellow could ever have. Everything is perfect. We never have a cross word in our family."

The President had a lot of idealism in him. Some laughed when he spoke of the quest for the great society. I am reminded of my own mother's admonition when she sent me off to college: "Never set for yourself small goals". When the President spoke at Ann Arbor that day in May, defining the great society, he said "It is a place where men are more concerned with the quality of their goals than the quantity of their goods."

So as we dedicate this beautiful window let us send up a prayer of thanksgiving that God gave us great preachers like Alexander Campbell and George Davis; and that God let us enjoy the wisdom, courageous leadership and the idealism of the great President Lyndon Baines Johnson.

REAGAN'S POLICY IN EL SALVADOR THREATENS PEACE

(Mr. WEISS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WEISS. Mr. Speaker, President Reagan has increased U.S. military involvement in the conflict in El Salvador, recklessly describing it as part of a Soviet-inspired conspiracy, even though most of the world sees it as civil strife; a struggle for economic and social justice which has been going on for more than 50 years. Since Archbishop Oscar Romero was assassinated while celebrating Mass on March 23, 1980, an estimated 14,000 Salvadorans and 8 Americans have been killed in El Salvador.

Alleging Soviet manipulation of this civil strife may have been intended to generate domestic support for the President's proposed vast increases in defense spending. In fact, these vacciliating charges have damaged America's credibility and undercut our efforts to achieve world peace through negotiation.

Mr. Reagan took exception during the Presidential campaign at suggestions that his policies would lead the Nation into war. Yet less than 2 months after he took office, we face the very real possibility of Americans being involved in hostilities in Central America. The U.S. role in El Salvador should be to seek a negotiated settlement of longstanding differences. Instead, President Reagan has escalated the U.S. military presence there and warned that America will continue to flex its muscles in this hemisphere.

It is foolhardy to believe that any amount of U.S. military equipment and advice can resolve this deeply rooted civil strife. I urge the President to turn away from his wrongheaded U.S. military involvement in El Salvador.

OUR POLICY IN EL SALVADOR MAKES NO SENSE

(Mr. FRANK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FRANK. Mr. Speaker, the American administration in El Salvador makes little sense either politically or geopolitically. We are intervening in a situation by signaling to one faction of the governing junta that all they need do is say the magic words, "We are anti-Communists," and no further examination of their policy is needed.

We are giving the signal that automatically you can commit American interests and American military power and American money simply by muttering those words.

Mr. Speaker, the policy there is not simply immoral, it is not likely to work, because I believe if I were a member of the guerrilla movement trying to overthrow the Government of El Salvador, I would be more in favor of the American policy than I think almost anyone else. Because what we are doing is strengthening precisely that wing of the Government that is most likely to generate opposition, most likely to build up the opposition side. It is a policy that makes very little sense. It is not in our interest, and the time has come to stop it.

U.S. POLICY IN EL SALVADOR CONDONES VIOLENCE

(Mr. MARKEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MARKEY. Mr. Speaker, over 13,000 deaths have been reported in the past 15 months in El Salvador, a country just larger than my own State of Massachusetts. A majority of these deaths have been attributed to the rightist government in power since 1979. The El Salvadoran Government, which the United States supports both with military aid and economic aid, is clearly incapable of controlling the brutality of its own armed forces—forces whose tactics include terrorism, torture, and murder—even of American religious workers. U.S. assistance to El Salvador serves only to condone and to encourage this deplorable activity.

The violence in El Salvador is civil violence. A strong U.S. military presence will heighten the volatile situation in Central America and will push us closer to an unnecessary military confrontation.

Mr. Speaker, our position should be one of neutrality; our goal should be to achieve a political and humanitarian solution to this crisis; our hope is that a lasting peace may come to the people of El Salvador—so that they may again have a life—free of terror. Thank you.

MULTILATERAL DEVELOPMENT AGENCIES

(Mr. PATTERSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. PATTERSON. Mr. Speaker, I am introducing today, by request, two bills to authorize continued U.S. participation in the World Bank, the Inter-American Development Bank, and the Asian Development Fund, and for U.S. membership in the African Development Bank. These bills have broad bipartisan support. This legislation has been endorsed by the Carter and the Reagan administrations and cosigned unanimously by the entire membership of the Subcommittee on International Development Institutions and Finance.

We agree with the Reagan administration that this authorizing legislation should be enacted in order to honor the agreements the United States has negotiated with other governments. We need to have a strong, effective, and dependable foreign policy. We cannot have it if other countries cannot rely on the United States to stand behind its international agreements every time there is a change of governments.

Our subcommittee plans to undertake a careful, thorough examination of the costs and benefits of the multilateral development agencies. It has been 35 years since the World Bank was founded, 20 years since the International Development Association was created. We agree with the Reagan administration that there needs to be a hard look at the merits of these programs once Congress adopts the basic legislation to continue our participation in the multilateral agencies. The Reagan administration is planning to report the results of its current analysis of these programs within a few months. Our committee study will probably take the rest of the year or more. I ask my colleagues to lend their support to this legislation. Letters from both the Carter administration and the Reagan administration supporting the legislation follow:

WASHINGTON, D.C.,
January 17, 1981.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: There are transmitted herewith two draft bills "To provide for continuing participation by the United States in the International Bank for Reconstruction and Development, and for other purposes" and "To provide for continuing participation by the United States in the International Development Association, to provide for United States participation in the African Development Bank, and for other purposes." Summaries of each bill, which also outline the importance of the legislation, are enclosed.

It would be appreciated if you would lay the proposed bills before the House of Representatives. Similar proposed bills have been transmitted to the President of the Senate.

On January 15, 1981, the Office of Management and Budget advised that enactment of these legislative proposals would be in accord with the program of the President.

Sincerely,

G. WILLIAM MILLER.

WASHINGTON, D.C.,
March 10, 1981.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: On January 17, two draft bills were transmitted to the Congress "To provide for continuing participation by the United States in the International Bank for Reconstruction and Development, and for other purposes" and "To provide for continuing participation by the United States in the International Development Association, to provide for United States participation in the African Development Bank, and for other purposes."

The Administration has reviewed this draft legislation within the context of projected foreign aid budget levels. The need for a tightly disciplined national budget and the importance of the multilateral development banks both to the international economic system and to overall U.S. interests were carefully assessed.

As a result of the review, the Administration is requesting prompt and favorable Congressional action on the two draft authorizing bills. The bills are a high priority element of the Administration's foreign economic assistance program. They are an integral part of our efforts to establish a strong and coherent foreign policy in partnership with our allies. Authorization of the full amounts requested is essential to this effort. It will demonstrate the intention to reassert U.S. leadership in our international relations. In the case of the International Development Association, authorization of the full U.S. contribution is required before the Sixth Replenishment agreement can become effective. It would therefore be appreciated if you could undertake the necessary steps to assure that this proposed legislation receives prompt consideration by the House.

While the overall amounts of the authorization requests for the banks have not been changed, U.S. funding for the multilateral banks has not been exempted from the President's budget reduction program. The Administration is recommending that contributions and subscriptions on the major elements of the authorization requests be made over a longer period of time than was envisioned in the budget submitted by the previous Administration. Specifically, the Administration is requesting funding for U.S. subscriptions to the General Capital Increase of the World Bank over six years (fiscal years 1982–1987) instead of seeking funding for the full subscription in fiscal year 1982. We are also seeking graduated appropriations ($540 million, $850 million and $1,850 million in fiscal years 1981–83 respectively) for the U.S. contribution to the Sixth Replenishment of the International Development Association instead of $1,080 million in each of those years.

The funding adjustments recommended by the Administration will cause programming problems for the banks. These adjustments are necessary, however, to enable the United States to carry out internationally negotiated agreements at the lowest possible cost.

The Office of Management and Budget has advised that the enactment of these legislative proposals would be in accord with the program of the President.

Sincerely,

R. T. MCNAMAR,
Acting Secretary.

PARLIAMENTARY INQUIRY

Mr. KRAMER. Mr. Speaker, I have a parliamentary inquiry.

Are we still proceeding under the normal rules for 1-minute speeches?

The SPEAKER pro tempore (Mr. DANIELSON). The Chair will advise the gentleman from Colorado that recognition at this time is within the total discretion of the Speaker.

The House is proceeding under the 1-minute practice.

The gentleman will be recognized.

The Chair assures the gentleman that he will be recognized.

U.S. POLICY IN EL SALVADOR SHOULD CHANGE

(Mr. EDGAR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EDGAR. Mr. Speaker, I would like to thank each Member of the House who has come over to share a 1-minute speech on the issue of El Salvador. My colleague, GERRY STUDDS, and my colleague, BARBARA MIKULSKI, and I spent 10 days in Central America struggling with the issues of what to do about not only El Salvador but Guatemala, Honduras, Nicaragua, and Costa Rica.

I would like to share with the House at this time 25,000 people who took 1 minute to say that they want the U.S. policy in El Salvador to change. They recognize the indigenous nature of the revolution, they recognize the role of Catholic liberation theology at work, and they recognize the fact that no military solution is possible in El Salvador and that the United States ought to use its good office to seek a political solution.

I intend to share these 25,000 petitions with the Speaker of the House, and I have asked the Speaker of the House to share them with the President of the United States. The United States should get out of El Salvador and seek a political solution, not a military solution of that conflict.

Given the minidebate within the executive branch as to whether or not the media are now giving too much attention to El Salvador, I hope the real issue will not be lost in all the verbiage—the fact that innocent civilians are losing their lives every day while the United States continues to arm the very military responsible for much of the carnage. Sending military equipment to El Salvador will not solve the basic inequities or necessity for economic and social reforms in that country, where delayed solutions can only further strengthen the opposition forces.

Although military victories are dramatic and speedier, the United States must contribute its good offices toward a political solution instead. A negotiated settlement, while difficult to achieve, will be a more enduring victory than one imposed by guns. I hope that our Government will place continuous pressure on the Salvadoran military to reform itself before its too late. In addition, the administration should be very careful about sending signals subject to misinterpretation at the other end, and likely to bolster the position of the reactionary elements in the military. The Salvadoran Army's interpretation of our policy is as important as the policy itself.

Furthermore, let us not fall into the trap of assuming that all opposition to the current Salvadoran Government is Communist inspired, but realize that there are legitimate demands for a change in the status quo. We must use the force of our diplomacy constructively to help produce long-needed reforms and give hope to those living daily in despair. Let the death of six Americans not have been in vain.

I urge my colleagues to join us in stopping military assistance to El Salvador while continuing the U.S. effort to prevent military intervention from other countries as well.

PROPOSED CETA DEFERRALS

(Mr. HAWKINS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HAWKINS. Mr. Speaker, I rise to speak on the subject of the proposed CETA deferrals which the President announced in his message to Congress on March 10, 1981. It is my intention to oppose the deferrals in title II(d), welfare demonstration program, summer youth, YACC, and research and development and evaluation. To that end I am introducing today a resolution which would disallow these deferrals.

While I will also oppose the CETA PSE title VI rescissions at the appropriate time, today, because of time constraints, I will limit my comments to only the deferrals of title II(d) PSE.

There exists a great urgency in dealing with the President's deferral message as it relates to title II(d) due to the fact that a great many CETA primes find that the new and reduced allocation levels leave them with absolutely no funds with which to continue their II(d) programs beyond March 17. While these primes were informed by DOL that the expense of giving the customary 2 weeks' termination notices would be covered by the Department, the message is clear that the program will be terminated immediately.

In the case of the city of Los Angeles alone, this means that on March 17 a total of 3,000 termination notices were sent out. Of this total, 1,300 went to persons involved in training and employment programs operated by 29 community-based private nonprofit organizations. All participants were drawn from the structurally unemployed, and 52 percent were hired off local welfare rolls.

For other cities the situation is not much better, and within a few months it is estimated that the title II(d) program will be virtually nonexistent. At the same time, the unemployment ranks will be so inflated by this anticipated action that the Department of Labor has reserved $245 million of its CETA funds to cover the UI liability created by the termination of the PSE titles II and VI programs.

Mr. Speaker, the fact that the President's proposals are tantamount to ending programs sanctioned by Congress, without any congressional review is reprehensible; but this coupled with the fact that the programs he is cutting means the difference between hope and desperation for millions of Americans is unacceptable.

Mr. Speaker, I would ask my colleagues to support the early adoption of the resolution which I am introducing today so that we might forestall the action already taken by the administration and act in time to save a program which has proven successful and responsive to the needs of the unemployed.

WE SHOULD NOT BE IN EL SALVADOR

(Mr. FITHIAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FITHIAN. Mr. Speaker, I am here for just 1 minute today to remind my colleagues in the House that the United States of America historically has not been able to be the policeman of the world, that the United States historically and certainly today cannot be the banker for the world. And those two prerequisites for policy would argue persuasively, I believe, for reviewing the revising of our policies in El Salvador; for not only is the policy wrong on morality principles, but it is wrong on yet another front. It is wrong because it is not an area of vital interest to the United States. It is not the Middle East where the oil comes from, it is not Japan and China on the littoral of Asia, it is not three

or four other areas, such as NATO, where the stakes are very, very high and where our national security is very keenly at work and tested.

On that ground alone, we should not be in El Salvador.

MARKUP OF EDUCATION AND LABOR REPORT A FRUSTRATING EXPERIENCE

(Mr. DeNARDIS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DeNARDIS. Mr. Speaker, I positioned myself here 55 minutes ago to speak on an education and labor matter, and I want to say, for the record, that my associates on the minority side of the aisle, who were here promptly at 3 o'clock, have had to wait, I would say unnecessarily and unfairly long, to have our opportunity to speak. And we ought to look at the rules again if the rules do not cover this sad situation.

Mr. Speaker, the House Education and Labor Committee, or at least the majority members, are congratulating themselves today for the committee's report to the Budget Committee which not only sustains the same high levels of spending for fiscal year 1982 for the items within the committee's jurisdiction, but actually adds $1 billion for impact aid that even former President Carter did not recommend.

This has been my first markup as a Member, and, quite frankly, it has not only been a frustrating experience, but a downright disappointing one. The praise by and for the majority of this supposedly courageous act is really fatuous self-congratulations for a mindless act of maintaining a totally unrealistic level of spending.

Mr. Speaker, we have abdicated our responsibility and washed our hands of the opportunity to make a constructive input on matters that we know best.

DR. LEON SULLIVAN—A BEACON OF HOPE ON EQUALITY

(Mr. PURSELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PURSELL. Mr. Speaker, I want to take this time to indicate to my colleagues that Dr. Leon Sullivan, known principally as a world leader in bringing about equality in South Africa through his famous Sullivan Code, was a special guest of mine today. I introduced him to our Subcommittee on South Africa.

Dr. Sullivan and I have proposed the formation of a group of congressional leaders who are sensitive and concerned about matters in Africa with respect to our foreign policy. Those of us who have been to South Africa should constructively offer solutions in achieving equality in job opportunities, wages, promotion, housing, educational training, and most of all promoting the basic principle of one man one vote.

I have asked Dr. Sullivan to testify before the appropriate House committees to report on the progress, or the lack of progress, in bringing about a high record of compliance with respect to the Sullivan Code.

I personally believe that the United States would be best served if we also encourage and dramatically support the successful leadership of Prime Minister Robert Mugabe of Zimbabwe as he leads an orderly transition of power to majority rule in a country adjoining South Africa.

Zimbabwe's success will have profound impact on South Africa's present repressive government, which does not allow blacks to vote even though they are 90 percent of the population. Zimbabwe will demonstrate to the world that majority rule will work. Ian Smith has asked his followers to support the present government. White farmers such as Parliament leader Andrea Holland indicated to our congressional Subcommittee on Foreign Operations that they want to stay and continue to be productive citizens.

The United States, both the administration and the Congress, must support Zimbabwe's historical transformation in order to gain respect in all the countries of Africa as well as promote our basic principles of representative government in a free society.

Dr. Leon Sullivan has been a beacon of hope in demonstrating our aspirations. I should also mention his leadership as chairman of the board for the "OIC" Corporate Communications Group. This volunteer, self-help community-based effort now numbers over 3,000 projects, which train and develop skills for disadvantaged young people.

This magnificent program strengthens the very core of our country. Every child has a talent and a gift. As the author of the gifted and talented legislation, I too, believe we must be positive and concentrate on the potential of every young person as a contributing individual within our great Nation. Dr. Sullivan serves as the pastor of the Zion Baptist Church in Philadelphia and is a board member of General Motors. We all applaud his enormous contributions toward improving the quality of life in all parts of the world.

Again, I am pleased to be a personal friend and his host in Washington today.

TRIBUTE TO FORMER CONGRESSMAN THOR TOLLEFSON

(Mr. MORRISON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MORRISON. Mr. Speaker, today the Washington State Legislature is meeting in a joint session to honor former Congressman Thor Tollefson. I rise to join them in honoring a man who distinguished himself in 18 years of service in this Chamber, and then went on to further service at the local, State, National, and international levels.

Thor Tollefson was first elected to Congress in 1947 representing Washington's Sixth District. He served in Congress until 1965 when he left to return to the State of Washington after having served as the ranking member on the Merchant Marine and Fisheries Committee.

Upon returning home, he was appointed director of the Washington State Department of Fisheries by Gov. Dan Evans. He went on to serve as a member of the U.S. State Department Fishery Advisory Committee which advised the State Department on fishing problems involving foreign nations. He served as one of the commissioners of the Pacific Marine Fisheries Commission and also a member of the Interagency Committee on Outdoor Recreation.

Now retired, Thor Tollefson has spent a lifetime in public service—going where called—serving where needed. I am pleased to join the Washington State Legislature in honoring a colleague who has given so much to the people of this Nation.

□ 1545

FULL STEAM AHEAD FOR COMMITTEE ON EDUCATION AND LABOR

(Mr. KRAMER asked and was given permission to address the House for 1 minute.)

Mr. KRAMER. Mr. Speaker, although budget cuts have been proposed for Conrail and Amtrak, another Government-run railroad was moving ahead under a full head of steam yesterday. In a series of straight party-line votes, the Education and Labor Committee, which has never been known for its fiscal sanity, ignored the national mandate for Federal belt tightening and recommended that the budget authority for programs under its jurisdiction be increased by a whopping 27.4 percent. Not only did Democrats on the committee refuse to go along with any of the specific cutbacks recommended by President Reagan, they even increased the Carter administration's recommendations by more than $4 billion.

Mr. Speaker, the American people will not tolerate business as usual in Washington. They are looking to their elected representatives to make the hard decisions that will result in lower

inflation and interest rates. Those in this body who continue to listen more to the special interest groups than to their constituents are likely, in 1982, to find that the steam locomotive they jumped on board yesterday is a one-way ticket back to their districts.

RAILROAD UNEMPLOYMENT INSURANCE BILL

(Mr. PETRI asked and was given permission to address the House for 1 minute, and to revise and extend his remarks and include extraneous matter.)

Mr. PETRI. Mr. Speaker, I would like to associate myself with the remarks that the gentleman from Connecticut (Mr. DENARDIS) made earlier today concerning today's procedure.

Mr. Speaker, I have introduced H.R. 2374, a bill which would bring unemployment benefits paid to railroad workers in line with State unemployment benefits. The purpose of this legislation is to see that railway workers are not receiving less compensation than they would be eligible to receive were they covered by the State's unemployment compensation formula.

In my own State of Wisconsin, for example, the maximum unemployment compensation currently paid is a weekly benefit of $166. This compensation is for workers whose weekly wage exceeded $331. In the case of unemployed railroad workers, the nationwide maximum weekly benefit is $125, while the weekly base pay is in excess of $400 for well over three-fourths of the claimants.

The 1975 amendments to the Railroad Unemployment Insurance Act made the last modifications and improvements in the existing nationwide benefit structure. These amendments were based on the joint recommendations negotiated by railway labor and management. I would strongly encourage discussion between labor and management to effect improvements in the unemployment and sickness insurance program, and I believe that H.R. 2374 is a positive step in that direction.

Mr. Speaker, the text of the bill is as follows:

H.R. 2374

A bill to amend the Railroad Unemployment Insurance Act to provide that the maximum daily benefit will be the daily equivalent of the maximum weekly benefit payable under State unemployment compensation law

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsection (a) of section 2 of the Railroad Unemployment Insurance Act is amended—

(1) by striking out "$25" and inserting in lieu thereof "$25 (or if greater, the daily equivalent of the State maximum weekly benefit)", and

(2) by adding at the end thereof the following:

"For purposes of this subsection, the daily equivalent of the State maximum weekly benefit is one-fifth of the maximum amount of unemployment compensation which could be paid under applicable State law to a totally unemployed individual for the week in which occurs the day for which benefits are being paid under this Act. For purposes of the preceding sentence, the applicable State law is the unemployment compensation law of the State in which the employee has his principal place of abode.".

(b) The amendments made by subsection (a) shall take effect on the first day of the first month beginnning after the date of the enactment of this Act.

BUDGET RESOLUTIONS SHOW INCREASES FOR COMMITTEE STAFFING

(Mr. COLLINS of Texas asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COLLINS of Texas. Mr. Speaker, today the House Administration Committee took final action on staff committee budget resolutions for this session of the 97th Congress. These bloated, inflated budgets do not measure up to their promises.

Budget resolutions approved by the House Administration Committee total $42,886,562. This figure is much higher than last year's total expenditures of $39,971,551. Overall, the committees are spending more of the taxpayers' money than last year.

Compare these 1981 proposed budgets with 1980 expenditures: Ways and Means budget, as brought out of the House Administration Committee, is $2,450,782—a 27-percent increase over the amount spent in 1980—which was $1,928,611. The Committee on Government Operations budget which will come to the floor for a final vote is a whopping $2,461,885, an 18-percent increase over the 1980 expenditures. Agriculture, District of Columbia, Education and Labor, Foreign Affairs, Interior and Insular Affairs, and Rules: All of these committees have increased their budgets by 16 percent over last year's costs. The stark facts are that the liberals in the House are still big spenders.

The American people are watching closely the spending patterns being set by the 97th Congress. The clear message from the last election was to cut the cost of the Federal Government.

When the investigative staff budget is combined with the statutory House budget it gives a total House staff budget of $67.5 million. I urge my colleagues to vote down these unjustified spending increases and to recommit the resolutions for true cuts. Our ideal total staff budget goal should be $41.7 million and not the overloaded total submitted by the Democrats. Instead of $67.5 million of budget staff we should ask for $41.7 million. The statutory is already approved so we must cut this investigative.

COMMITTEE ON EDUCATION AND LABOR WOULD INCREASE SPENDING AUTHORITY FOR 1982

(Mr. LATTA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LATTA. Mr. Speaker, for weeks now—as we have prepared to address the critical questions before us on the economy and Government spending—the bipartisan watchwords have been consensus and cooperation. Consensus that the huge rise in Federal spending cannot continue and must be brought under control. Cooperation between the White House and the Congress in working to achieve these goals. Cooperation on a timetable for completing action on cuts in spending and taxing. Apparently, however, the Democrats on the Committee on Education and Labor do not yet realize we are confronted with critical economic and fiscal problems. They have just recommended—not a reduction in spending for 1982—not even a slowing down—but a 75-percent increase over the spending authority requested by President Reagan. The majority Democrats—voting as a bloc—have raised the President's request from $24 billion to $42,785 million—an increase of over $18 billion. Amazing. Disappointing. But not entirely surprising.

Mr. Speaker, I hope that when the Budget Committee takes up this recommendation, it will think of all the American people and act more responsibly.

A TRIBUTE TO THE LATE HONORABLE JACOB H. GILBERT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. ADDABBO) is recognized for 60 minutes.

GENERAL LEAVE

Mr. ADDABBO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to revise and extend their remarks on the life, character, and public service of the late Honorable Jacob H. Gilbert.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ADDABBO. Mr. Speaker, I have taken a special order today to pay tribute to the Honorable Jacob H. Gilbert of New York, who passed away on February 27, 1981, at Columbia Presbyterian Hospital in New York City. Jack was 60 years old when he died, a victim of a yearlong struggle against cancer.

Jack served 10 years in this House from 1961 to 1970. Previously he had served for a decade in the New York State Legislature.

In the 10 years that Jack served in this body, he distinguished himself as an influential and knowledgeable member of the House Ways and Means Committee, and all the committees he had served on. At a time when the Committee on Ways and Means was ruled by Wilbur Mills, a Member—especially a senior Member like Jack Gilbert—had no option but to be on top of the issues before the committee. The Ways and Means Committee during that decade passed some of the most landmark tax legislation in this country's history. That was a committee that provided the money to enact the Great Society's social programs that were to change the way America responded to its domestic inequities. Jack Gilbert played a major role in that episode. It was then that he established his overwhelming concern for the truly needy of this country, the aged, the young and disadvantaged, the handicapped, and the ill. It was a concern that haunted him until his death.

Jack was an energetic Member of this House who will long be remembered by those who served with him in that period for his work on behalf of the city. Although this was before the city fell into the fiscal crisis that was to block its credit in 1975, Jack was one of the first to notice that the city was living far beyond its means. He sought to bring some stability into the city's spending habits, while stemming the flow of business and residents from the outer boroughs. He was especially concerned about his beloved Bronx, where he had been born and where he lived until he died.

Jack first got into politics as a youngster who went ringing doorbells for the local Democratic club and who kept it up as he worked his way through college and law school. He was, by all definition, one of the better lawyers who served in this House. He felt little remorse in returning to the practice of law in 1971 after leaving the House of Representatives. It was, he used to say, one of the more enjoyable ways to earn a living because the practice of law involved dealing with people and dealing with the legal statutes which could not be manipulated.

Jack and Irma Gilbert were my good friends during the 21 years that Mrs. Addabbo and I were privileged to share with them. Jack and I were close during our years of service here together and we remained good friends until his death. His going leaves a void in my life and I shall miss him deeply.

But it is probably more important that we remember him for the work that he did while he was serving here. To the people he represented Jack Gilbert stands as a man who cared first for them and second about the politics of a thing. To me, that is just one of the things that made him so unique among the many people who have served here. My prayers are with his wife, Irma, his daughters Miriam and Sandra, and his son, Samuel. They miss him most of all.

● Mr. BINGHAM. Mr. Speaker, I am grateful to our colleague, Mr. ADDABBO, for arranging this time for us to pay tribute to our former colleague, the late Jack Gilbert.

My own contact with Jack goes back to the middle 1950's when he served in the New York State Senate and I was secretary to the Governor, Averell Harriman. During the years 1965 to 1970, we served in the House together. While we were not on any of the same committees, we worked jointly on many matters of interest to the Bronx.

It was always a pleasure to work with Jack and to spend leisure hours together. He was always obliging and helpful, and, indeed, was the New York member on the Committee on Committees who arranged for me to go on the Foreign Affairs Committee in 1969.

Jack was a true New Yorker, born in the Bronx, educated at St. John's College and Law School, and a member of the city and State governments before he was elected to Congress. He served for 10 years in the New York State Legislature before winning election to Congress in 1960. He was an enthusiastic supporter of President Kennedy during his early years in Congress, and later an active force in shaping Great Society programs of the Johnson administration. He was a strong supporter of organized labor and fought hard for increases in the minimum wage. He pushed continually for improvements in the working conditions and rewards for civil servants and postal workers. He was an early advocate of comprehensive medical care for senior citizens and later an active supporter of the medicare program enacted in 1965. I also admired his early support for civil rights legislation and public housing. Jack compiled a record to be proud of in his 10 years in the House of Representatives.

My wife and I extend to his wife, Irma, and to his two daughters our deepest sympathy in their loss.●

● Mr. ROSENTHAL. Mr. Speaker, on Friday, February 27, I learned with much sorrow of the death of Jack Gilbert, who had been a Member of Congress from New York some years ago, serving for about 10 years as a Representative from the Bronx.

Jack was born and raised, and lived all his life in the Bronx. He came from a strongly Democratic background, and at an early age was out campaigning for Democratic candidates from his area. He was an active member of his local Democratic club, as was his mother before him, and his political activities eventually lead him to the position of assistant corporation counsel in New York in 1949. He went on to win a seat in the New York State Assembly, and in the New York State Senate, where he served with distinction for almost a decade. He subsequently came to Congress with legislative experience gained through that service, and he brought with him a keen desire to continue his service to his constituency and his country. Because of his previous work in the State legislature he was a natural for assignment to the influential Committee on Ways and Means, and devoted his time and energy within that committee toward developing some of the most important tax legislation enacted during that period. And he was especially proud of his accomplishments in effecting increases in social security benefits.

When I came to the House in 1962 Jack had already been here for several years. As members of the same congressional delegation we were closely associated with one another, and that was when Jack demonstrated to me his willingness to do for others. He was extremely helpful to me, as he was to everyone; he gave unstintingly of his time and counsel; and that is when I learned what a good friend really was.

He will be sorely missed by all of us who were privileged to know him and to have served with him, but he will be remembered with much affection. He was a good and decent man.●

● Mr. RODINO. Mr. Speaker, I want to express my sadness at the death of a friend and former colleague, Jack Gilbert. As the Congressman from the Bronx for 10 years, Jack Gilbert brought honor to this House by his integrity and dedicated service to the people of New York.

His intelligence, warmth, and wit gained him many friends and admirers in the House, and his hard work on the Ways and Means Committee was widely respected. Jack was an outstanding attorney who devoted his energies to securing basic rights and a better life for the millions of Americans on the lower end of the economic spectrum. His efforts in Congress to increase social security benefits will help millions of Americans for years to come.

I join my colleagues in mourning the loss of a dear friend, and I extend my deepest sympathies to Jack's wife, Irma, and the rest of his family.●

● Mr. GILMAN. Mr. Speaker, I want to thank the gentleman from New York (Mr. ADDABBO) for arranging this time this evening so that we may pay our respects to our former colleague the gentleman from New York, the Honorable Jack Gilbert, who passed away on February 27.

Jack Gilbert represented the 22d Congressional District of New York in this body for 10 years. His constituents in New York State are joined by

all of us in the Congress in mourning Jack's death.

Jack will long be remembered not only in New York but across the Nation for his role in expanding social security benefits during his service on the Committee on Ways and Means. Truly, this man brought to the Congress a concern for all Americans as well as a deep sense of duty to his district and his State.

Congressman Gilbert left the House of Representatives shortly before I came to serve in this body, but I knew Jack and profited from his friendship and association while working with him on matters of mutual interest and concern in the New York State Legislature, where we both served.

I join my colleagues this afternoon in extending to the Gilbert family, his wife, Irma, his daughters Miriam and Sandra and his son, Samuel, our condolences for their loss, and our thanks for his 20 years of service to his State and Nation that will not be quickly forgotten.●

● Mr. STRATTON. Mr. Speaker, I was saddened the other day to learn of the passing of our former colleague from New York, Jack Gilbert, who represented the southeast Bronx in this House for nearly a decade, and did it with distinction, not to say panache.

Jack Gilbert served with great skill on the Ways and Means Committee, and was especially interested in social legislation. After leaving Congress in 1970, following an extensive redistricting that took place that year, Jack continued to maintain his interest in legislative matters, and maintained a law office here in Washington. He was especially active on issues that would benefit New York State, and his own city of New York. Because of that interest I was privileged to keep in touch with him, and to seek his advice on a number of occasions, right down to the onset of his final illness.

We have missed Jack Gilbert in this Chamber in the 10 years since he left. And the people of New York State will also miss his wisdom and his remarkable legislative skills. To his wife Irma, and his three children, we all extend our deepest sympathy.●

● Mr. MINISH. Mr. Speaker, I was saddened to learn of the death of one of our distinguished former colleagues, the Honorable Jacob H. Gilbert of New York. His decade of service with us in the House of Representatives was just one phase of a lifetime devotion to the public interest, as a lawyer, a legislator, and a good citizen.

Many would call Jack Gilbert a workaholic, and it is surely true that great energy and hard work were among his most outstanding characteristics; but he was not driven by any compulsion. He was simply a man who loved his work, and loved it all the more because he saw himself as serving the people of America. Naturally he brought to it all the vigor and enthusiasm which were native to him. Jack's cheerful devotion to duty became a public asset as well as an inspiration to his colleagues.

Jack learned his politics in his native Bronx. He brought a lively concern for its people and their neighborhoods to his long career as a political volunteer, a corporation counsel, a member of both houses of the New York Legislature, and a Congressman. He took his title as "Representative" seriously, never thinking about programs or policies in an abstract vacuum, but always translating his votes into a sober judgment of how they would affect his people. Ably serving his own constituents, he took care to work as a spokesman for the ordinary citizen in Washington during the turbulent sixties.

Jack left Washington, but he did not slow down, plunging into the practice of law with characteristic zest. Not even a long illness could prevent him from pursuing his work to the very end of his life. That characteristic vitality makes the loss of this fine gentleman all the more dismaying. We might have hoped to benefit from Jack's experience and example for years to come.

I extend sympathy to Jack's wife, Irma, and his daughters and son, to whom he was conspicuously devoted. They can be proud of Jack's distinguished public record as well as his endearing personal qualities. I am glad to have had an opportunity to know Jack, who did a lot of good in this world.●

● Mr. CLAY. Mr. Speaker, I was deeply saddened when I received the news of the passing of my old friend, Jack Gilbert. Today, I am honored to join my colleagues in final tribute to a treasured friend and former colleague of many years, the late Congressman Jacob H. Gilbert.

Jack Gilbert was a man who dedicated his life to public service. He was a true statesman of a vanishing breed. Congressman Gilbert never needed to engage in spectacular events or exhibitions to draw the attention and applause of others. His unbiased judgment and unselfish thinking, consistently demonstrated in the work he performed as a Congressman, earned him the recognition of his peers. And, it was his genuine devotion to our country and its people, that made others aware of Jack Gilbert's skill and integrity. He consistently held the respect and admiration of all those whose lives he touched.

Congressman Jack Gilbert touched my life. I shall miss him very much, and I shall always treasure my memories of him. His family is in my prayers today.●

● Mr. FORD of Michigan. Mr. Speaker, I am deeply saddened by the recent death of my friend, Jack Gilbert. Jack was a fine Congressman who took great pride in his work. He understood the legislative process well and used his skills to help pass important legislation which bettered the lives of the elderly, the poor, the handicapped, the young, and the disadvantaged.

Jack was an energetic and important member of the House Ways and Means Committee and his successful effort to increase social security benefits was perhaps the highlight of his congressional career.

Jack Gilbert was a good friend of mine while we served together in this House. I regret that he has passed away and I extend my deepest sympathies to his family.●

NATIONAL WILDLIFE WEEK: MARCH 15 TO 21

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Hampshire (Mr. D'AMOURS) is recognized for 30 minutes.

Mr. D'AMOURS. Mr. Speaker, this week, March 15 through March 21, more than 15 million American citizens—conservationists, educators, and students—are participating in National Wildlife Week and affirming that "We Care About Oceans," this year's theme.

For 44 years, the National Wildlife Federation has sponsored National Wildlife Week in an effort to rally public support for programs to enhance our Nation's wildlife population, and this year, for the first time, this venerable organization has focused its theme on the sea. I urge my colleagues to join me in association with the National Wildlife Federation; Walter Cronkite, who is chairman of this year's observance; and more than 15 million Americans in sharing the responsibility of caring for our oceans.

For centuries man has relied on Earth's oceans for food, water, and oxygen. As the world's population continues to grow, we will become increasingly more dependent on the many resources our vast, but fragile, ocean environment can provide. In fact, estimates show that by the year 1990, 75 percent of this Nation's population will live within 50 miles of our seacoasts. As our use of the oceans grows, it is critically important that we pay closer attention to protecting the quality of our marine environment. We cannot continue to abuse what may be our single most important natural resource.

Our oceans cover more than two-thirds of the Earth's surface and provide a home for about 90 percent of the life on this planet, yet there is still so little we know about them.

Our oceans provide us with about 60 million tons of food each year, and that is only a fraction of the amount

of food scientists predict we will someday reap from the sea through ocean farming.

Our oceans are a rich depository of minerals and organic compounds which man uses for a variety of purposes. Estimates show that there is enough copper on the ocean bottom to last the world 6,000 years, and enough nickel to last 150,000 years. About 99 percent of the world's bromine is found in the sea, along with substantial quantities of magnesium, cobalt, chlorine, iodine, calcium, silicon, phosphorus, and other minerals.

Our oceans have become an important source of oil and gas, and scientists are currently studying various other ways to tap the oceans' enormous energy potential through such techniques as tidal power and ocean thermal energy conversion. The Department of Energy estimates that 180 million kilowatt hours of power could be generated annually if the currents from the Gulf Stream along our east coast could be harnessed.

Our oceans provide us with 97 percent of the world's water supply, and about half of our life-supporting oxygen.

Our oceans are a source of pleasure for millions of people who pursue such sports as swimming, fishing, boating, and scuba diving. Such recreational pursuits have resulted in the growth of huge industries which provide the necessary equipment for these sports.

Our oceans are a bountiful resource valuable to us all regardless of whether we live on the coast or in a landlocked area. But this infinitely valuable resource on which our very existence depends is being recklessly endangered because of ignorance, greed, and careless treatment of our coastlines and our ocean environment. For years, we have treated our oceans as dumping grounds, polluting them with sewage, sludge, oil, radioactive compounds, toxic heavy metals, pesticides, and other chemicals on the cavalier assumption that their ability to absorb this garbage was endless. Moreover, and most unfortunately, the heaviest pollution has occurred on our Continental Shelf where most marine life is concentrated.

In recent years, we have begun to awaken and to take steps to curb some of the more obvious abuses which we are inflicting on our oceans.

But in recent months, we have seen signs of a reversal of some of the trends aimed at protecting our oceans. There are moves afoot to cut off funds and eliminate some of the very programs that have enabled us to make progress in protecting our seas such as coastal zone management, the coastal energy impact program, and the sea grant program. Other programs dealing with marine sanctuaries, estuarine sanctuaries, and public education efforts are also endangered by lobbies and groups which seek to rape the sea for their own good with no thought for future ramifications.

We must be strong and fight these unfortunate efforts. We all must care about oceans. Our seas may just be our single most important legacy to future generations.

Mr. ADDABBO. Mr. Speaker, will the gentleman yield?

Mr. D'AMOURS. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Speaker, I commend the gentleman from New Hampshire (Mr. D'AMOURS) for taking the time to bring this subject to the attention of the Nation and to the House. This is a most important week, and I believe we should all participate in this observance.

Mr. Speaker, one of the most captivating and revealing photographs ever taken shows the Earth as seen from outer space. Taken by the crew of Apollo 17, while returning from a lunar landing, it is a view a space traveler would see as he approached the Earth for the first time. In viewing that magnificant sight, I am sure he would be taken back, as I was when I first saw the photo, by the rich expanse of blue water which dominates the view, a blue water, teeming with life, and supporting life, which makes our planet so different from the others in our solar system. It is a photo that while showing the beauty of our home, also shows the fragility and finiteness of our planet which we all must come to acknowledge if we are to insure the survival of mankind.

This week, millions of Americans, from border to border, and ocean to ocean, will participate in the 44th observance of National Wildlife Week. This year's observance has for the first time in history taken as its theme, "We Care About Oceans," to remind us how precious our oceans are and what we must do to preserve them.

As Americans, living in a nation surrounded on three sides by water, we cannot help but be cognizant of the many roles oceans have played, and will continue to play in our lives. As a nation of immigrants, untold Americans traversed wide oceans to come here to start new lives, their journey by boat never to be forgotten.

As a provider of food for millions of Americans as well as employing thousands of men and women along our shores, the waters that surround our country have become an important natural resource vital to our health and well-being. At a time when energy has become one of our Nation's utmost concerns, we have turned to the oceans to help us, today supplying us with oil and gas, and tomorrow yielding tidal power and ocean thermal energy conversion. Properly utilized and with the utmost respect to marine life, the oceans will be able to help us meet our future energy needs.

It is obvious that there would not be a necessity of having a week dedicated to the survival of our oceans if they were not in serious danger. We have reached a point in our civilization where we must stop the needless and utterly senseless pollution of our seas. We have reached a point where we may have done irreversible harm to the waters which have helped insure our survival. Let us hope that "We Care About Oceans Week" will alert the people of the world that a bleak future of the oceans is a bleak future for mankind. If we continue on the path of abuse and destruction of our waters, then there may come a time when a space traveler, approaching our planet, may find a planet devoid of the rich blue water and devoid of life.

□ 1600

Mr. D'AMOURS. Mr. Speaker, I yield to the gentleman from Hawaii (Mr. AKAKA).

Mr. AKAKA. I thank the gentleman for yielding.

Mr. Speaker, I rise to express my strong support for the theme of National Wildlife Week—the importance of the ocean.

This is a subject which is very close to my heart, for as you know, my home State, Hawaii, is surrounded by water. We are, in fact, cut off from the continental United States by miles and miles of water.

To some, the ocean is a barrier. To others, it is dangerous and unpredictable and a source of destruction for beaches and shorelines. To others it is a source of food, of nourishment, and of life itself.

The ancient Polynesians viewed the ocean as a highway and as a source of food. While we still look to the ocean as a source of nutrition, her role in our lives has further expanded. Now, we look to the ocean as a new source of resources. We look to the ocean for new sources of energy. Already, in Hawaii we are researching and developing ocean thermal energy conversion technology, and technologies using wavepower and seaweed to produce energy. All of these potential sources of energy will play a key role in the development of island economies, and may be of critical importance to Third World nations. In the United States, it is conceivable that the States which front the gulf may someday rely on ocean energy to meet their energy needs.

A new and exciting use of the oceans is currently under study in Hawaii. An innovative and capable group of physicists is now at work researching a deep sea neutrino telescope. From their initial studies, they believe that the ocean may be one of the best places in the world to detect and measure the

movement of the elusive particle called the neutrino. In a recent article which appeared in Scientific American, authors John G. Learned and David Eichler describe the project this way:

High energy phenomena such as supernovas and X-ray double stars may emit a flood of neutrinos. An array of sensors shielded by 5 kilometers of water could selectively detect such particles.

No one in the world has ever built a neutrino telescope of the size that the research group in Hawaii would like to build. Furthermore, if the project is successful, this will be the first time that man has ever been able to detect the interaction of neutrinos emitted by distant stars in our galaxy. It will be the first time that stargazers will be able to study the neutrino as it relates to some of the remarkable phenomena of our universe, phenomena such as black holes, pulsars, and exploding galaxies.

Surely, the ocean is more than a source of food for us. The ocean is one of man's unexplored frontiers—a frontier for discovery of the unknown, and for use of the known to support man in his quest for a better life.

Indeed, no better theme could have been found for National Wildlife Week than that of the ocean.

Mr. Speaker, I include the article which appeared in Scientific American with my remarks in the RECORD:

A DEEP-SEA NEUTRINO TELESCOPE

(By John G. Learned and David Eichler)

Virtually everything astronomers know about objects outside the solar system is based on the detection of photons: the quanta of electromagnetic radiation. Yet there is another form of radiation that pervades the universe and may even dominate it: neutrinos. With no electric charge and negligible mass, the neutrino is an elementary particle that rarely interacts with other particles, so rarely that a neutrino can cross the entire universe, even traversing substantial aggregations of matter, without being absorbed or even deflected. And neutrinos that have not been absorbed or deflected carry with them information about the site of their production and can escape from regions of space where light and other kinds of electromagnetic radiation are blocked by matter. Therefore the detection of cosmic neutrinos could provide new information about a wide variety of astrophysical phenomena.

The same reluctance to interact with matter that gives the neutrino its long range makes it extraordinarily difficult to detect. Most neutrinos reaching the earth travel all the way through it unperturbed, leaving no sign of their passage. No apparatus can detect neutrinos unless it is extremely massive and sufficiently shielded from the interfering effects of other particles. Great mass is synonymous with huge numbers of nucleons (neutrons and protons), and the more massive the detector, the larger the probability of one of its nucleons interacting with a neutrino.

A few years ago a group of physicists came up with an ambitious proposal for detecting cosmic and terrestrial neutrinos by harnessing the mass of the ocean. Named DUMAND, for deep underwater muon and neutrino detector, the proposal calls of placing an array of light sensors above the ocean floor at a depth of some five kilometers. The detecting medium is the seawater itself: when a neutrino interacts with a particle in an atom of seawater, it gives rise to a cascade of electrically charged particles and a flash of light that will be detected by the sensors. The five kilometers of seawater above the sensors will shield them from the interfering effects of other high-energy particles raining down through the atmosphere.

The neutrino has a rich intellectual history. In 1931 the particle was introduced as a hypothetical entity to account for a tiny amount of energy that seemed to vanish in the radioactive decay of certain atomic nuclei. Wolfgang Pauli proposed that the missing energy was spirited away by an unobserved particle, which was later named by Enrico Fermi the neutrino ("little neutral one"). It was not until 1956, however, that Frederick Reines and Clyde L. Cowan, Jr., detected the particle. The neutrino is now seen as being a member of the small family of elementary particles known as leptons, which seem to have no measurable size and no constituents. The other species of lepton are the muon, the electron and the tau particle. There are three kinds of neutrino, one associated with the electron (called the electron neutrino), one associated with the muon (the muon neutrino) and one associated with the tau particle (the tau neutrino). And for each kind of neutrino there is a corresponding antineutrino.

Neutrinos created in large particle accelerators are routinely employed to probe the massive members of the other major class of particles: the hadrons (including the proton, the neutron, the pion and the kaon), which seem to have the constituents called quarks. Particle-accelerator experiments in which neutrinos are scattered by hadrons have revealed much about the quark structure of matter. It is testimony to the versatility of the neutrino that it can be exploited both to probe objects as small as quarks and to investigate objects at astronomical distances. Neutrino microscopes, however, have far outpaced neutrino telescopes.

The DUMAND apparatus will not be the first neutrino telescope. In the early 1960's Raymond Davis of the Brookhaven National Laboratory made the initial serious attempt at neutrino astronomy. He set out to detect low-energy neutrinos emitted by the sun, the brightest source in the sky of neutrinos as well as photons. The neutrinos are generated deep within the sun in the thermonuclear reactions that transmute hydrogen into helium with the release of energy. Almost a tenth of the energy is carried away by neutrinos, whose energies range from half a million electron volts to 14 million. The flux of solar neutrinos at the distance of the earth is staggering (more than 100 million million pass through the human body every second), but the particles are nonetheless elusive. Even so, a tiny fraction of them do interact with a sufficient quantity of matter.

With a massive detector and endless patience Davis has apparently detected solar neutrinos. His detector is basically a large tank containing 610 tons of the ordinary cleaning fluid tetrachloroethylene, the molecules of which consist of two atoms of carbon and four of chlorine (C_2Cl_4). A fourth of the chlorine atoms are those of the isotope chlorine 37, and when such an atom captures a neutrino, it is transformed into an atom of argon 37. The argon 37 is radioactive, and so the decay of an atom of it signifies the capture of a neutrino. Davis and his co-workers have spent the past decade trying to record solar neutrinos. The experiment has finally begun to yield a positive signal, although it is not as large as was expected.

Another kind of low-energy neutrino telescope has been developed in the past decade. It consists of a tank of water equipped with light detectors. If a neutrino interacts with an atom of the water, the interaction gives rise to charged particles that recoil with high energy. When such a particle travels through a transparent medium faster than the speed of light in that medium, it emits the characteristic blue light of Cerenkov radiation, and it is the tiny flash of this light that is picked up by the detectors.

Low-energy neutrino telescopes may be able to record neutrinos from a supernova, a star that is believed to explode after it has exhausted its nuclear fuel and collapsed. More energy is released in the few seconds of the explosion than in the star's entire previous history. Most of this energy escapes in the form of neutrinos, each of which typically has an energy of 15 million electron volts. A detector with a mass of several tons could monitor neutrinos coming from a supernova on the other side of our galaxy. Several low-energy neutrino telescopes are now poised to observe the next such supernova.

Some neutrinos are far more energetic than those produced in supernovas or in the interior of stars such as the sun. In the earth's atmosphere and in many astrophysical systems neutrinos are created with energies in excess of 10^9 electron volts. Such neutrinos are the result of extremely energetic collisions between nucleons. For example, high-energy neutrinos are generated when energetic cosmic-ray protons strike the nuclei of atoms in the earth's atmosphere. DUMAND will be able to detect neutrinos with energies of more than 10^{11} electron volts.

The history of attempts to detect high-energy neutrinos at sites other than particle accelerators is a short one. There have been only four experiments, of which the first and largest was done by Reines and his coworkers. Their detector and the others consist of extensive arrays of sensors deployed in deep mine shafts. When an occasional high-energy neutrino interacts with a nucleon in the surrounding rock, it creates a shower of electrically charged particles that are registered by the sensors.

If the neutrino is a muon neutrino with an energy of more than 10^9 electron volts, the particles emerging from the collision will usually include a muon. Muons have great penetrating power; indeed, an energetic one can penetrate a kilometer of rock. Hence the neutrino can be monitored even if it interacts with a nucleon a kilometer from the sensor: the resulting muon will continue roughly along the trajectory of the neutrino and trip the sensor. Therefore the effective size of the detector extends well beyond its physical dimensions.

Muons are also created high in the earth's atmosphere in collisions between cosmic rays and the nucleons of air molecules, and the muons will trigger a high-energy neutrino detector if they can reach it. It is to keep atmospheric muons from swamping rarer neutrino-generated muons that the detector must be placed deep below the surface. Reines' detector, which had a total

area of 140 square meters, was two miles down in the deepest mine shaft in the world (near Johannesburg in South Africa). The depth and the installation costs put limits on the size of the detector, and it did not reveal any neutrino sources outside the earth's atmosphere. Even so, the negative result has astrophysical significance: it bears on the production in the universe of deuterium (heavy hydrogen), in which nucleons collide and give rise to neutrinos.

The DUMAND apparatus will be much more sensitive than other high-energy neutrino detectors chiefly because it will be better shielded and will be able to detect neutrino interactions in a much larger volume of matter. The current plan is to ultimately distribute at least 2,000 light sensors throughout a cubic kilometer of seawater. Flexible cables will anchor the sensors to one another and to the ocean floor. The entire array will be linked to a computer on the shore.

The DUMAND array will efficiently detect a single neutrino interaction if the energy of the neutrino exceeds 10^{11} electron volts. Neutrinos with less energy will register only if many of them trip the detector simultaneously, as might happen if an astrophysical system gave off a powerful burst of them. An essential feature of the array will be its ability to determine the direction from which a detected neutrino came. The bulk of the charged particles created in the interaction of a neutrino and a nucleon of seawater will continue for some 10 meters in a direction within half a degree of the trajectory of the incident neutrino. The charged particles will collide with other particles in the water, which will in turn collide with still other particles, giving rise to a cascade of perhaps a few million particles. The cascade will be accompanied by billions of tiny flashes of Cerenkov radiation and will trigger light sensors in the immediate vicinity.

A muon among the charged particles, being exceptionally penetrating, will emit light throughout its long path through the seawater. At a neutrino energy of about 10^{12} electron volts the typical muon track is at least a kilometer long. A computer analysis of the sensor responses should fix the direction of the incident neutrino to better than half a degree. According to calculations by Arthur Roberts and Victor J. Stenger of the Hawaii DUMAND Center, a computer analysis of the total number of detected Cerenkov photons should establish the energy of the neutrino fairly accurately.

Although the DUMAND array will have a cross-sectional area of a square kilometer for muon detection, its effective collection area will be far smaller for neutrino detection. For a neutrino with an energy of 10^{12} electron volts each nucleon of seawater in effect provides a target of 10^{-38} square centimeters. A cubic kilometer of seawater holds 6×10^{38} nucleons, and so the total collecting area for collisions within the DUMAND array comes to 6,000 square centimeters. Unlike telescopes that record photons, the neutrino telescope will look in all directions at once; it will even be detecting neutrinos coming up from below through the earth. Three or more counts per year of high-energy neutrinos from a given direction might constitute a statistically significant result. Such a result would correspond to a minimum energy flux of 15 electron volts per centimeter squared per second. If the distance over which the neutrino-generated muon can travel is taken into account, the effective size of the detector is much larger.

Theodore Bowen of the University of Arizona was the first to suggest another way the ocean could be harnessed to detect neutrinos. The particle cascade triggered by the neutrino collision heats a rod-shaped volume of water. The heat expands the water and launches a small pressure pulse, or sound wave, that can travel as far as 10 kilometers before it is absorbed or lost in the background noise of the ocean. If acoustic sensors could be designed that would "hear" the cascade, they would have a much longer range than the optical sensors have. Nevertheless, for a muon or particle cascade whose energy is less than 10^{16} volts the sound pulse will quickly be lost in the background noise. If there are neutrinos that can trigger a cascade of more than 10^{16} electron volts, the acoustic sensors would be able to determine the trajectory of the neutrinos from the highly directional sound wave of the cascade. Hence the DUMAND array may include an array of acoustic sensors.

It will be no small technological feat to place thousands of optical and acoustic sensors five kilometers deep in the ocean, to keep them operating and to monitor their signals. Over the past six years some 100 physicists, astronomers, engineers and oceanographers headed by Reines have evaluated potential sites on the ocean floor, have studied ways of deploying the apparatus and have investigated different kinds of optical and acoustic sensors. A series of studies and workshops decided on the Hawaiian Islands as the site. Since the islands are steep-sided volcanoes, the ocean floor is quite deep near the shore; as a result the sensors would be more accessible. Above the ocean floor near the islands there are few strong currents and little biological activity that might interfere with the sensor's performance.

Another advantage of the Hawaiian Islands is that the deep seawater around them is unusually transparent to blue light. Recent tests conducted 20 kilometers west of the island of Hawaii at a depth of 4.5 kilometers showed that a flash of blue light is attenuated by 64 percent only over the surprisingly large distance of 25 meters. As a result the DUMAND sensors can be placed not at intervals of 20 meters, as was originally suggested, but at intervals of more than 50 meters, so that fewer detectors will be needed to monitor the same volume of water.

The cost of the DUMAND project was initially put at about $100 million, but the need for fewer detectors has significantly reduced the figure. Moreover, the DUMAND organization plans to build and install a smaller array of sensors before implementing the full project. That array would cost about $5 million. If the smaller project is approved and the funds are provided, the array could begin gathering data in perhaps three years.

This spring a group of investigators led by Vincent Z. Peterson of the Hawaii DUMAND Center plans to deploy a string of five muon sensors at depths of between one kilometer and five kilometers. The sensors will collect data for two weeks, during which they are expected to record thousands of atmospheric muons and perhaps four neutrino-induced muons. If the detected muons come from below, they will undoubtedly have been generated by neutrinos; the neutrino is the only particle that can pass all the way through the earth. The operation of the string of sensors should help to establish the feasibility of the DUMAND project.

What originally generates the high-energy neutrinos the DUMAND array will detect? The neutrino is a chief decay product of the unstable hadrons the pion and the kaon. Pions and kaons are copiously created when a nucleon is struck by a relativistic proton: a proton moving at nearly the speed of light. About a third of the pions have no electric charge; they decay into gamma rays. The charged pions and most of the kaons decay into neutrinos, muons, electrons and their antiparticles. When a relativistic proton strikes a stationary nucleon, the pions, kaons and the decay products all continue in about the same direction as the proton. In many such collisions one of the decay products (such as the neutrino) inherits a large fraction of the proton's energy.

In short, the production of high-energy neutrinos calls for high-energy protons and a target of stationary nucleons for the protons to bombard. With the exception of particle accelerators the main terrestrial source of high-energy neutrinos is the impact of cosmic-ray protons on the nucleons in air molecules in the upper atmosphere. When the pions and kaons created in such collisions are able to decay before being absorbed in the atmosphere or in the ground, they give rise to neutrinos.

The relativistic effect of time dilation prolongs the life of pions and kaons that are particularly energetic. For pions and kaons with energies exceeding 10^{12} electron volts the effect of time dilation is to lengthen their lifetimes to the point where many of them eventually collide with a particle in the air instead of decaying into neutrinos and other products. Cosmic-ray protons entering the earth's atmosphere at shallow angles give rise to secondary particles that skim along the top of the atmosphere, where the density of the air molecules is low. Such particles have a better chance of decaying before undergoing a collision than particles that are heading straight down into the denser regions of the atmosphere, where the probability of a collision is much higher. At energies of about 10^{12} electron volts four times as many atmospheric neutrinos come from the horizontal direction as come from the vertical. This angular dependence is a signature that the neutrinos originated in the atmosphere.

Cosmic-ray protons collide not only with nucleons in the atmosphere but also with protons in the rarefied medium between the stars of our galaxy. In regions of the galaxy where protons have been accelerated to high energies the density of matter is typically so low that all the secondary particles created in a collision decay and yield neutrinos before they lose most of their energy in subsequent collisions. In this sense neutrino production is more efficient in the galaxy at large than it is in the earth's atmosphere. Extraterrestrial neutrinos are likely to dominate those detected by the DUMAND array at the high energies where the production of neutrinos in the atmosphere is the least efficient.

High-energy neutrinos created in interstellar cosmic-ray collisions would trigger a few hundred counts in the DUMAND array each year. These neutrinos, however, would come from a large sector of the sky, and it may be difficult to distinguish such a diffuse signal from the background of atmospheric neutrinos. Whether or not DUMAND is able to resolve the signal depends on the precise energy distribution of the cosmic rays in the galaxy. Even the failure to detect the signal, however, would be an im-

portant result that would bear on the sources of cosmic rays.

A concentrated neutrino signal could come from collisions closer to a source of relativistic protons. Here the neutrinos would arrive not from a large sector of the sky but from a point source. As a result they would stand out above the atmospheric background much better than a diffuse signal. Relativistic particles are known to be generated by a wide variety of astrophysical systems, both within the galaxy and outside it: neutron stars, the blast waves of supernovas, the active nuclei of other galaxies and even quasars. The collisions of relativistic protons from any of these objects might give rise to neutrinos that DUMAND could detect.

One simple scenario for the generation of neutrinos has relativistic protons being created near the surface of a massive astrophysical object. (An example on a modest scale is a solar flare, in which magnetic energy suddenly released near the surface of the sun results in the acceleration of protons to extremely high velocities.) If some of the protons then rain down on the surface of the object, the object itself provides the target nucleons. The resulting collisions yield neutrinos, most of which pass through the object and continue on their way to vast distances.

Another scenario has matter accreting, or falling, on a compact object and providing the target for relativistic particles generated by the object. Many galactic X-ray sources are neutron stars to which matter is accreting. The X-ray emission of the source is in fact powered by the falling matter. Quasars and active galactic nuclei may be powered in the same way. According to some theories, quasars and active galactic nuclei generate relativistic particles in their innermost regions; such objects would be candidates for neutrino astronomy.

If the accreting matter is thick enough, it will obscure the object from view. In that case the emitted neutrinos would be the only direct clue to high-energy processes taking place in the object. The greater the rate of accreting matter, the more powerful the object. Two years ago a remarkable system was discovered that is obscured by accreting matter. Known as SS 433, it seems to consist of a compact object that is expelling two jets of matter in opposite directions at extradordinarily high velocities [see "The Bizarre Spectrum of SS 433," by Bruce Margon; Scientific American, October, 1980]. Some astronomers estimate that SS 433 is 1,000 times more powerful (that is, it puts out 1,000 times more energy per second) than the brightest stellar object known in the galaxy.

Why should such a powerful object have been discovered only recently? The answer is the SS 433 is a relatively faint source of photons. Although it may seem contradictory that an object with such power should be so faint, the two properties actually go together. The accreting matter that gives SS 433 its tremendous power also acts to screen its bright central region from view. Any relativistic protons that are created near the compact object would undoubtedly collide with other nucleons, and the resulting neutrinos could escape. SS 433 may be so powerful that only one part in a million of its energy budget need go into the production of high-energy neutrinos for them to be detected by DUMAND. It is not yet known exactly what SS 433 is or whether high-energy protons are actually generated in the accreting matter. Nevertheless, the discovery of SS 433 supports the view that exotic astrophysical systems exist hidden by the accreting matter that powers them. Neutrino astronomy offers the only hope of directly detecting such objects.

Many stellar objects are binary, or double, systems. One member of the system can therefore provide target nucleons for relativistic particles generated by the other. If a young, rapidly rotating neutron star belongs to a binary system, its companion could play the target role. When the companion eclipsed the neutron star, relativistic protons from the neutron star impinging on the nucleons of the companion would generate neutrinos that would proceed through the companion along the line of sight.

Theoretical considerations suggest that at any one time there could be a few young neutron-star binary systems in our galaxy. One such system may have been observed: the binary X-ray source Cygnus X-3. The neutron star in Cygnus X-3 emits gamma rays, which implies it also generates relativistic particles. The details of the X-ray emission indicate that the entire system is shrouded by a cloud of gas that seems to have evaporated from the surface of the companion star when it was heated by radiation from the neutron star. The companion periodically eclipses the neutron star, at which time X-rays are no longer detected. From this observation it can be inferred that the companion star is then between the solar system and the relativistic particles associated with the neutron star. The geometry is ideal for the emission of high-energy neutrinos in our direction.

Another scenario for neutrino production involves the ejection of matter from a compact object. For example, neutron stars are apparently born in the explosions of supernovas. When a star explodes as a supernova, it blows off its outer shell. The expanding shell can then provide a screen of target nucleons for relativistic protons from the neutron star. In fact, for the first six months the shell would be opaque to photons and all other relativisitic particles, and so the neutron star could not be observed with conventional telescopes. In this period of infancy the neutron star would, it is thought, have more power than it would have at any other time. Indeed, the DUMAND array might detect neutrinos from an infant neutron star shrouded by a supernova shell even if it were not in our own galaxy but in a nearby one. Supernovas are thought to explode at the rate of roughly one per galaxy every 20 years. In a few years of operation the DUMAND array might pick up high-energy neutrinos from a supernova in one of several nearby galaxies.

In principle the supernova shell could act as a source of neutrinos for much longer than six months. If the shell had a significant magnetic field, it could store relativistic protons. Then the shell could continue to emit neutrinos as long as its ever decreasing density allowed relativistic protons to collide frequently. We estimate that the shell would be dense enough to yield neutrinos for perhaps 50 years. Our own galaxy may include two or three such neutrino sources that the DUMAND project could detect.

These are some of the most plausible astrophysical scenarios for the production of high-energy neutrinos. There are many other possible scenarios involving the same concept: relativistic protons colliding with a target, with neutrinos emerging from the collisions.

Would the DUMAND array be sufficiently sensitive to detect the neutrinos created by these various objects? Since the neutrinos cannot be detected at present, we cannot give a definite answer. The energy output of many kinds of celestial objects is nonetheless compatible with the hypothesis that the DUMAND project will be able to detect neutrinos. From such objects the earth is exposed to a considerable flux of electromagnetic energy, and if it is exposed to a flux of neutrino energy that is only a small fraction of the electromagnetic-energy flux, then the DUMAND array will be able to detect the neutrinos.

For example, the energy flux of photons from neutron stars in our galaxy, quasars and active galactic nuclei is on the order of a few thousand electron volts per centimeter squared per second. Since the threshold neutrino flux for DUMAND is between 10 and 100 electron volts per centimeter squared per second for neutrinos with energies of between 10^{12} and 10^{14} electron volts, nearby neutron stars, quasars and active galactic nuclei need spend only 1 percent of their energy budget on the very-high-energy neutrinos that would be detected by the DUMAND array. Even so, the production of relativistic particles in such objects needs to be quite efficient. There is remarkable evidence, however, that this high-efficiency requirement is frequently met.

The Crab Nebula is the best-known system in which particles with energies greater than 10^{13} electron volts are produced with high efficiency. the nebula generates X rays by the synchrotron mechanism, in which high-energy electrons radiate away energy when they are deflected by the nebula's magnetic field. The estimated strength of the field implies that the electrons each have an energy of about 10^{13} electron volts.

Such energetic electrons should radiate away their energy in a year or so, yet this population in the Crab Nebula does not seem to be decreasing. Astronomers have therefore concluded that the electrons are somehow being continuously supplied or reenergized by the rapidly rotating neutron star at the center of the nebula. The neutron star, whose rate of rotation is slowly decreasing, emits a pulse of radiation once per revolution: it is a pulsar. In the gradual decrease of the pulse rate astronomers have a measure of the rate at which the star is spinning down. The spin-down rate in turn yields the approximate rate at which the star is losing rotational energy. The rate of energy loss is comparable to the power needed to sustain the synchrotron emission of the electrons in the Crab Nebula. This numerical agreement suggests that the neutron star is somehow converting a large fraction of its rotational energy into relativistic particles.

Another example of the efficient production of relativistic particles is an entirely different kind of system: the bright quasar 3C 273. Recent measurements by satellite instruments reveal that the quasar emits almost as much energy in gamma rays as it does in any other region of the electromagnetic spectrum. The energy of each gamma ray is more than 10^8 electron volts, which means that the gamma rays could only have been generated by relativistic particles (although precisely how relativistic is not yet known). The quasar is apparently spending a very large fraction of its energy budget on relativistic particles. Energy considerations suggest that neutrinos from this source could register about 100 counts per year in the DUMAND apparatus. Even though the quasar 3C 273 is exceptionally bright, it is not unrepresentative of a large class of qua-

sars and active galaxies that are also believed to efficiently produce relativistic particles. Other sites where high-energy particles are generated with unexpected efficiency include blast waves from supernovas and, on a more modest scale, shock waves coming from a variety of sources in our own solar system.

Since astrophysical systems that give rise to high-energy neutrinos also give rise to gamma rays of comparable energy, a measurement of the gamma-ray flux from a system might provide an indication of the expected neutrino flux. There is not, however, a one-to-one correspondence between detected gamma rays and expected neutrinos. Although high-energy gamma rays are always produced where high-energy neutrinos are, high-energy neutrinos are not always produced where high-energy gamma rays are. In other words, the measured gamma-ray flux may result in part from non-neutrino sources. Alternatively, the measured gamma-ray flux can understate the case for neutrinos if some of the gamma rays produced by neutrino sources never reach the earth. Indeed, the same screen of target material that gives rise to the neutrinos can absorb the gamma rays. Moreover, when the highest-energy gamma rays traverse astronomical distances, many of them are stopped by collisions with other photons. Nevertheless, if these caveats are kept in mind, gamma-ray astronomy helps in estimating the flux of neutrinos in the vicinity of the earth.

The gamma rays of interest have the same energy (more than 10^{12} electron volts) as the neutrinos to which the DUMAND array will be the most sensitive. Designated VHEGR, for very-high-energy gamma rays, they have more than 1,000 times the energy of the gamma rays that are routinely observed by satellites. Very-high-energy gamma rays are detected by large reflecting dishes that collect the feeble flash of light produced by the shower of particles marking the entry of such a gamma ray into the earth's atmosphere. VHEGR astronomy, which has been attempted for two decades, has begun to yield positive results in the past few years.

Although a screen of matter that is thick enough to stop most of the relativistic particles striking it will also be thick enough to block gamma rays, the neutrino-production scenarios do not demand that most of the protons be halted. Neutrinos could be efficiently produced if only half of the protons were stopped. It is possible to have a screen that is thick enough to halt a significant fraction of the impinging protons but thin enough to allow much of the gamma radiation to pass through. A case in point is the young neutron star in the binary system Cygnus X-3. Since the neutron star apparently vaporizes matter from the surface of its companion, it is observed through a mist of matter as it goes into and out of eclipse. At some point as the neutron star is moving away from its eclipsed position the mist must have the optimum thickness for gamma-ray emission.

This conclusion has now been borne out by observation. Over the past decade a group of investigators led by A. A. Stepanian of the Crimean Astrophysical Observatory in the U.S.S.R. has observed very-high-energy gamma rays emitted by Cygnus X-3. The observation has recently been confirmed by the same group and by a group in the U.S. The gamma rays are seen to be emitted only periodically, with the most radiation apparently being produced just as the neutron star emerges from behind its companion. The gamma rays were observed over only 5 percent of the neutron star's orbital period. To account for the observed gamma-ray flux the neutron star in Cygnus X-3, like the one in the Crab Nebula, must efficiently produce particles with an energy of 10^{15} electron volts. If the gamma rays are the product of pion decay, neutrinos are produced along with them. We estimate that these neutrinos would register about 50 counts per year in the DUMAND array.

In 1975 very-high-energy gamma rays were discovered emanating from the radio galaxy NGC 5128. If these gamma rays come from pion decay, the accompanying neutrinos would register at least a few counts per year in the DUMAND array. The significance of the discovery for DUMAND is that active galaxies are capable of efficiently generating relativistic particles with enough energy to create neutrinos the DUMAND array could detect.

Neutrino astronomy may also provide answers to basic questions about the overall structure and history of the universe. One question is whether all galaxies are made of ordinary matter or roughly half of them are made of antimatter. The conventional view is that all galaxies consist of ordinary matter [see "The Cosmic Asymmetry between Matter and Antimatter," by Frank Wilczek; Scientific American, December, 1980]. Some investigators nonetheless think there is an overall symmetry to the universe requiring that half of it be antimatter. Photon astronomy cannot directly resolve the issue because the photon is its own antiparticle and hence carries no information about whether its source is matter or antimatter. Neutrinos are different from antineutrinos and can be distinguished by the DUMAND array according to the details of the interaction. Galaxies made of matter emit many more neutrinos than antineutrinos, so that a sufficiently strong neutrino signal from a galaxy should reveal whether it consists of matter or of antimatter.

With the DUMAND array it should be possible to examine not only astrophysical phenomena but also fundamental concepts in particle physics such as the electroweak theory; the unified theory of the weak interaction and the electromagnetic interaction. These interactions are two of the three fundamental forces of nuclear physics; the third is the strong force, which binds nucleons together. Neutrinos are subject only to the weak interaction; they do not "feel" the other nuclear forces. According to the electroweak theory, the weak and the electromagnetic interactions have about the same strength within some small distance (less than 10^{-16} centimeter) of a quark in a particle that is subject to both forces. At short range, then, the weak force is not weak.

A neutrino traversing a proton has a probability of less than one in a million of coming close enough to a quark and felling the weak force. Nevertheless, as the energy of the neutrino increases, the weak force plays more of a role, and the neutrino is more likely to interact with the proton. The electroweak theory predicts that above a certain critical energy the probability of a neutrino-proton interaction is no longer dependent on the energy. Neutrinos whose energies exceed the critical value are regularly created in the earth's atmosphere at a known rate. From this rate and the number of neutrino-nucleon interactions detected by the DUMAND array the probability of the interaction could be calculated, and the measured probability could then be compared with the predicted one. The theory also makes predictions about the distribution of energy among the various charged particles created in a neutrino-proton interaction. The DUMAND array will be able to test those predictions.

The DUMAND organization has recently investigated the possibility of putting another kind of detector at the surface of the sea or on the shore to measure the energy of the cosmic rays that would generate muons that would be detected by the DUMAND array. Information about the energy and the distribution of the muons could reveal much about the nature of high-energy interactions and high-energy cosmic rays.

The strongest motivation for the DUMAND project is that it will exploit a source of information about the universe that has not so far been exploited. The extension of astronomy from visible light first to radio waves and then to X rays and gamma rays never failed to lead to the discovery of unusual objects such as radio galaxies, quasars and pulsars. All these objects came as a surprise. It is likely that neutrino astronomy will bring its own share of surprises.

Mr. D'AMOURS. Mr. Speaker, I thank the gentleman from Hawaii for his contribution.

● Mr. SEIBERLING. Mr. Speaker, I rise to participate in this special order commemorating the 44th annual observance of National Wildlife Week and I commend the gentlemen from the Merchant Marine and Fisheries Committee, the Honorable JOEL PRITCHARD and the Honorable NORMAN D'AMOURS, for requesting this time. The observance, which was first proclaimed by President Franklin D. Roosevelt in 1938, centers this year on a resource which we share with other nations—the oceans.

I am departing from my usual reluctance to participate in special orders of this nature because, as a member of the former Select Committee on the Outer Continental Shelf and as a member of the Interior Committee, I have had an unique opportunity to learn of the extent of the impact of man's activity on marine life and resources in our coastal waters. I have participated in hearings on the dumping of nuclear wastes off our shores; the effect of oil and gas exploration on the offshore Continental Shelf, and its effect on the fishing industry and water quality of our coastal waters; and of development on the fragile barrier islands.

The condition of our barrier islands as an ocean resource is worth bringing in closer focus for purposes of this special order. The barrier islands are our first line of coastal defense against ocean storms. The National Park Service has identified 250 barrier island units, making up over 1,400,000 acres of uplands, wetlands and interior waters.

The barriers consist of unconsolidated sediments, with inland wetlands,

and ocean-front beaches. The islands literally roll over themselves as a natural component to the process of depletion and replenishment. Since the islands change position in response to storms, water levels, and current patterns, adapting as protection for the mainland, they are a truly hostile environment for manmade construction. Yet development on barrier lands is increasing at a rate greater than 6,000 acres per year, despite the dangers of the destructive forces of migrating inlets, overwash, and high winds. This rate of development, should it continue at the present pace, will consume all the undeveloped barrier lands by the year 1995, and destroy a natural resource essential to the protection of the mainland, and to the marine food chain and the natural wildlife and resources which thrive in the barrier ecosystem.

The barrier ecosystems sustain an amazing array of wildlife in their beaches, bays, estuaries, and wetlands. As part of a Federal effort to protect this wildlife, 31 refuges occupy barrier islands lands and waters, providing habitats for some of the most endangered and threatened species in the continent—the manatee, alligator, bald eagle, brown pelican, peregrin falcon, and several species of sea turtle. Moreover, the wetlands of barrier ecosystems are highly valuable for erosion control, flood control, pollution control, ground water recharging, and the vitality and productivity of our marine food chain. For example, offshore harvest of shrimp is directly correlated with the onshore acreage of salt marsh. Our coastal vegetation is a natural resource which moderates the summer heat, buffers strong winds, and cleanses and purifies our air, and reduces soil erosion and the runoff of storm water.

The very instability of these areas is the essential ingredient to their continued productive existence. Yet man continues to gamble with time and nature by claiming more and more of this natural—national—resource for residential and commercial development. Congress has the ability to protect this oceanic resource. Recent studies suggest that Federal acquisition of the private undeveloped coastal lands is the most cost-effective way of preserving the barriers and preventing the destruction experienced in the developed coastal zones. The Federal Government can in this way avoid the tremendous loss of natural resources, and the repeated investment in restoring structures on barrier lands that are destroyed or damaged periodically by ocean storms.

I hope that during this week—National Wildlife—my colleagues will take the time to listen or read the remarks offered by other colleagues in this special order on the oceans to prepare ourselves for the important decisions we may have to make further down the road.●

● Mr. VENTO. Mr. Speaker, the week of March 15 to March 21 marks the 44th anniversary of National Wildlife Week and I feel that this year's theme, "We Care About Oceans," is especially appropriate. Our diverse ocean resources extend from the rocky shores of Maine to the marshlands of Florida and from the icy coast of Alaska to the sandy beaches of Hawaii. Not only do people visit the ocean for recreation and sport, it also serves as the livelihood for entire economic communities.

Esthetically the ocean has always been a special place for Americans. The beauty of the beaches and the pureness of the air have always refreshed the spirit and confounded the imagination. In order to focus public attention on the value of the ocean, and the dangers that threaten and degrade its vitality, I hope that all my colleagues will give special recognition to the ocean's conservation problems during this National Wildlife Week.●

● Mr. HUGHES. Mr. Speaker, as a member of the Merchant Marine and Fisheries Committee and a representative from one of the Nation's most interesting and diverse coastal districts, I am pleased to have the opportunity to participate in today's special order marking the 44th annual observance of National Wildlife Week.

This year's theme, "We Care About Oceans," comes at an appropriate time. Although a tremendous amount of public concern over the need to protect and manage our important ocean resources resulted in several key legislative initiatives in the past decade, I sense that the controversy over ocean resource use and protection is not yet over.

The new budget proposals attempt to scrap much of the progress that Congress has made in ocean areas. Coastal zone management, sea grant, fishery assistance are just a few of the areas which are slated for reductions. At the same time, the EPA, NOAA, and others are studying the possibility of continued ocean dumping despite a clear congressional mandate to phase it out.

In looking ahead, however, I am optimistic. Public concern for protecting fragile ocean resources continues to be strong. Many of my constituents who earn their livelihood from the seas have a tremendous respect for the oceans and have become staunch supporters of marine protection programs. Many others who live in my district spend their lives in close proximity to the ocean. These people have also demonstrated their concern over the future of the marine environment. They clearly understand the interrelationship between their daily lives and the ocean environment. They also have an admirable respect for this fragile resource.

Last month, I introduced legislation which would create an interagency task force to look into past dumping of radioactive waste in the oceans and to recommend to Congress a comprehensive health and environmental monitoring program for the affected areas. I am extremely pleased to see that support for this measure has come from Representatives and individuals throughout the country and not just from those areas which are directly affected by past dumping practices.

In looking back over the past decade, I am proud to say that Congress has taken a number of important initiatives in the conservation of the marine resources and the protection of the ocean environment. I am hopeful that the 97th Congress will follow suit and continue to maintain its responsibility as trustee for future generations who will depend on clean and healthy oceans for food, energy, minerals, and recreation.

As land-based resource and waste disposal problems become more complex and politically volatile, we will see an inclination on the part of some to look toward the ocean as a workable solution. I hope that we in Congress will not be swayed by those who believe there is no constituency for the oceans.●

● Mr. DYSON. Mr. Speaker, I wish to take this opportunity to commend the National Wildlife Federation on this year's celebration of National Wildlife Week. This is the first time a wildlife week theme has focused on the sea, and I believe that this year's theme of "We Care About Oceans" is particularly relevant.

While the ocean is a natural resource on which we are all dependent, most of us take it for granted. The oceans not only cover 71 percent of the Earth's surface, but they serve as a reservoir for 97 percent of the Earth's water supply, provide us with half our life-sustaining oxygen, and provide us with millions of tons of food. Even though we are so totally dependent on this massive natural resource, we continue to treat it as a bottomless disposal site, dumping into it sewage, deadly chemicals, and nuclear wastes.

I am particularly concerned about the radioactive wastes which have been disposed of in ocean and coastal waters off U.S. shores. According to the Environmental Protection Agency, the United States dumped more than 86,000 containers of radioactive waste material into ocean and coastal waters between 1946 and 1970. Most of this radioactive material was packaged in 55-gallon drums filled with cement so that they would sink to the bottom of the ocean. The material was dumped in water depths from 50 feet to 15,000

feet at over 35 locations in the Atlantic and Pacific. Most of this material, however, was deposited in four dump sites—two sites in the Atlantic Ocean off the Maryland-Delaware-New Jersey coast, and two sites in the Pacific Ocean off San Francisco.

I have recently cosponsored legislation introduced by my colleague, Representative BILL HUGHES of New Jersey, which would create an interagency task force to inventory the radioactive material which has been dumped into ocean waters within 300 miles of U.S. shores. The task force would recommend to Congress within 1 year a comprehensive plan for monitoring and assessing the impact of these wastes on public health and the marine environment.

As we celebrate National Wildlife Week this year, I fervently hope that the Congress will closely and carefully examine the effects of radioactive material in the marine environment before we exacerbate the problem for the future.●

● Mr. HOWARD. Mr. Speaker, I have always felt very fortunate to represent a district that has as its eastern border the Atlantic Ocean. Not only does the ocean provide us with great pleasure, it forms the economic base for many seashore towns—providing jobs for fishermen and college students alike.

With our proximity to this great natural resource comes the responsibility to see that it is protected from pollution and misuse. That is why it is important to demonstrate our concern publicly and to do what we can, here in the Congress, to promote conservation of the seas. For too many years in the past, many regarded oceans, rivers, and lakes as convenient dumping grounds for any and all types of waste—oil, pesticides, sewage, and other toxic materials. Because of this attitude, such pollution has inflicted irreparable injury on the lives of individuals, on communities, and on the ecosystem. The people of New Jersey have seen firsthand such destruction and damage.

In response to such an unprecedented threat to the environment, government has implemented—at the Federal, State, and local levels—a number of policies and programs which have led to a noticeable improvement in many of America's water ecosystems. Unfortunately, much remains to be done to correct the years of abuse and neglect that have befallen our great waterways. On National Wildlife Week, let us reaffirm our commitment—that we do care about oceans—and that we will see to it that they are protected for future generations. With our commitment, oceans will continue to provide food, enjoyment, and a way of life for many people now and in the future.●

● Mr. OTTINGER. Mr. Speaker, as a past recipient of the National Wildlife Federation's Congressman of the Year Award, I would like to join my colleagues in welcoming Walter Cronkite as chairman of this year's observation of National Wildlife Week. Walter has become a key figure in publicizing efforts to preserve our deteriorating and dwindling resources.

I would also like to join my colleagues in emphasizing the importance of our oceans—this year's wildlife week theme. My congressional district, New York's 24th, borders Long Island Sound.

Coastal areas are becoming increasingly popular places for people to live. By the end of the decade it is expected that three out of every four Americans will live within 50 miles of the coast. With this increased popularity, comes the threat of harm to the oceans' ecosystem in the form of urban and industrial development and misuse of highly productive wetlands. Being an ardent conservationist, I feel the importance of our ocean and coastal resources should not be overlooked.

More than two-thirds of the world is covered by ocean, a single body of water upon which the entire world is dependent. The ocean, like the air, is a shared resource. Not only does the oceans' ecosystem contain the largest creature in existence today, the great blue whale, but it also has the ability to provide us with excellent and substantial sources of food. The ocean even helps to maintain a stable climate. We may, in fact, also need to make greater use of seawater to provide us with fresh water during drought, in addition to possible alternate sources of energy.

It is critical that we protect this unique and diverse resource from the pressures of advancing technology and overexploitation of its resources. To be successful in maintaining this system will require an international effort. I would like to encourage this Congress to act quickly, as prolonged delays could mean the demise of our oceans. I would also like to suggest that all my colleagues read the chapter relating to coastal and marine resources in "Global Futures: A Time To Act." This chapter summarizes some of the problems we can expect if no immediate steps toward conserving our ocean resources are taken.●

● Mr. IRELAND. Mr. Speaker, I am pleased to join my colleagues in celebrating National Wildlife Week, and to speak specifically today on this year's theme, "We Care About Oceans." The environmentalists, fishermen, and scientists of Florida and our Nation have worked hard for the benefit of our oceans and I applaud their efforts.

As a Floridian, I am particularly sensitive to the importance of the oceans. Florida has approximately 1,000 miles of coastline—more than any State except Alaska, and, of course, our water resources are important to all Floridians.

In 1980, tourists spent $17.1 billion in Florida. More than 11 percent of the Florida population works in the tourist industry and I would hate to think where we would be if our ocean resources were defiled. Our oceans serve many others, as well. For example, Florida has the sixth largest fish catch in the United States. In 1979, the dockside value of the fish caught was $124 million. Those working in these important industries to Florida are dependent on the Atlantic Ocean and the Gulf of Mexico for much of their livelihood.

Looking to the future, the oceans and the gulf are also a rich source of energy. The U.S. Geological Survey has estimated resources from 10 to 49 billion barrels of crude oil and from 42 to 81 trillion cubic feet of natural gas are located on the Outer Continental Shelf, which runs along our Atlantic and Pacific coastlines. Oil and gas are presently being produced in the Gulf of Mexico. It is vital that we underscore the need to develop these resources cleanly, so that our environment is not harmed.

Furthermore, the Government and private industry are studying proposals to obtain energy from temperature differences that exist between warm water at the surface of oceans and cold water in the deep oceans.

Rich deposits of strategic minerals have also been discovered in the ocean, particularly in the northern Pacific. Estimates of the quantity of minerals in the Pacific Ocean range from 100 to 1,600 billion tons. The mining industry is presently developing the technology to mine these minerals in the deep sea.

It is important that we continue to develop these resources. However, we must develop them carefully. The impact of dumping chemical waste at the Love Canal, in New York, has demonstrated clearly the danger we face if we do not examine closely the impact our actions have on our environment, which keeps us alive.

It is essential that we conduct studies of the oceans and its inhabitants so that we can measure our impact. The Mote Marine Laboratory, on Longboat Key, in my district, is an excellent marine laboratory which has conducted a significant study of sharks and has completed an important study of the "red tide." We must continue such research and expand it to include more studies on man's impact on the ocean, or we may again pay for our mistakes.

So I again wish to add my voice to those celebrating National Wildlife Week, and to thank the many concerned people and organizations in Florida and in my district who spend their time making our ocean resources productive for the present, and clean and safe for the future.●

● Mr. PRITCHARD. Mr. Speaker, I rise in support of National Wildlife Week, and I would especially like to speak briefly about the value of the ocean and its resources to our Nation and our economy. From the beginning, our Nation has looked to the sea for a variety of resources, as a medium for transportation, and defense. We are now increasingly advancing our technological capabilities to develop ocean resources as well as increasing our understanding of the significant contribution made by the oceans to our global environment.

It is fitting during National Wildlife Week that we pay particular attention to the oceans as a resource which needs to be further developed, managed wisely, and protected. At a time when our Nation needs to look for new sources of minerals, food, and other raw materials, the oceans provide attractive prospects, assuming that we judiciously develop these resources without diminishing the productivity of other resources. At this time, we are also facing dramatic changes in the legal regime which affects conduct of many ocean activities, especially those activities which in the past were conducted under the aging concept of the freedom of the high seas. Under the 1958 Convention on the High Seas, many activities including mining of the deep seabed and fishing beyond 12 miles were considered as high seas freedoms along with navigation and other rights such as the freedom to conduct marine scientific research. In the early 1970's, we began a long process of negotiation with the other nations of the world within the United Nations Conference on the Law of the Sea. Formally commencing in 1974 in Caracas, we began a process of fashioning a new law of the sea, and we have endured several turbulent periods during these negotiations including the period we are going through right now. The Law of the Sea Conference has become a major forum for the so-called north-south conflict and the new international economic order.

During this slow progress over the last few years, the United States has proceeded with domestic legislation for both a 200-mile economic resource zone which covers primarily fisheries and, in a more contentious action, the United States has proceeded with domestic seabed mining legislation. Although the 200-mile fisheries legislation is quite close to the emerging consensus within the law of the sea negotiations for fisheries management by coastal States, the deep seabed mining legislation departs significantly from the concept embodied in the law of the sea text. Within the law of the sea text, a new Seabed Authority would be created for the governance of the exploitation of minerals from the deep seabed. This is a major change in international law and it recognizes an entirely new concept which says that the resources of the deep seabed are part of the common heritage of mankind. Although there are many other provisions in the law of the sea text which provide for improved management, development, and protection of marine resources, this new concept is the most troublesome for the United States to swallow. Part of the derivation of the concept of the common heritage of mankind was to stave off what was felt by the United States at the time as "creeping jurisdiction" by many countries such as Peru and Ecuador in the late 1960's.

During this time when we are experiencing major changes in the international regime for ocean management, as well as a major change within our own administration, it is important that we, as Members of Congress, continue to see that ocean resources are managed wisely and efficiently. It is my view that we are experiencing a time in ocean resource development which is similar to the time when the United States opened up the Western lands of the United States. Property rights in ocean resources are still very unclear as they were during the development of the frontiers of the West. However, with such events as the enactment of 200-mile fisheries legislation and the development of an international regime for certain ocean activities, we are beginning to clarify property rights in ocean resources. As these property rights evolve, more sound investment and development of ocean resources is likely to occur, and better management can likely result as well. In Japan, for example, if fisheries resources are damaged by certain types of industrial pollutants, the fishermen who depend on the fishery stocks for their livelihood, are compensated. This type of property right is valuable both to assure wise development and protection of resouces.

Given the rapid changes in technology and the continuing pressures on ocean resources, it is important that we extend our experience in land management to the oceans and apply what has worked well. It is appropriate during National Wildlife Week that we appraise how we have managed our ocean resources over the last few decades, and seek ways to improve the management of our last frontier.●

GENERAL LEAVE

Mr. D'AMOURS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include extraneous matter on the subject of this special order today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Hampshire?

There was no objection.

COMMITTEE BUDGETS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 15 minutes.

Mr. ANNUNZIO. Mr. Speaker, last week the Subcommittee on Accounts, which I am privileged to chair, completed action on budget requests for the committees and related organizations of the House. I am taking this time today because I think it is important that every Member of this body be fully informed as to the way the subcommittee conducted itself in handling budget requests.

I have noted in recent weeks that many Members on the opposite side of the aisle have delivered fiscal restraint speeches which made it appear that the Accounts Subcommittee was conducting a giveaway program that was rivaled only by "Tic-Tac-Dough," "The Price Is Right," and the "$50,000 Pyramid."

I did not rush into the Chamber each time such a speech was made to defend the subcommittee because while some were talking, the subcommittee was working. We are not interested in making headlines. We were interested in doing our job. I am not standing in the well today to pat myself on the back, but rather I am here to pat the subcommittee on the back.

Some Members would leave the impression that the subcommittee whipped through budget requests without any opportunity for discussion or to hear minority opinions. Let me set the record straight. The subcommittee held 8 days of hearings during which it heard 25 budget requests. We took testimony from more than 70 witnesses and no one who asked to appear was denied an opportunity. We had a spirited discussion of each budget request, but unfortunately there are some who believe that the democratic principle should not prevail. They believe that the decision of the majority is somehow foreign to our American form of government.

But what bothers me the most, Mr. Speaker, is the impression being left by some Members that the Accounts Subcommittee has not done its job. I submit that no matter what the subcommittee did, there are those on the other side of the aisle who would not endorse its action.

When I was elected chairman of the Accounts Subcommittee at the beginning of this Congress, I did not take the job for the purpose of stripping the House of Representatives of its ability to do its job. This is the house of the people, and the people are calling upon their elected Representatives to eliminate unnecessary Government spending, but how can we do that job if there are not enough funds availa-

ble to conduct the work of the Congress?

The Senate budget has been held up as a model of financial restraint because it accomplished a 10-percent budget cut from current authorization. But what those Members who held up the Senate as an ideal model have failed to point out was that the Senate did not cut its budget by 10 percent of the amount that it spent last year, but rather it cut its budget by 10 percent of what it was authorized to spend last year.

Now let us look at what the Accounts Subcommittee has done. The 25 budget requests submitted to the subcommittee for 1981 totaled $47,394,476. The subcommittee reviewed each budget carefully, and by cutting out unnecessary jobs and unnecessary expenditures, reduced the overall request to $42,886,562. That means that the subcommittee cut more than $4.5 million from the budget requests. In percentage figures, it was a cut of 9.5 percent from the amount requested by the 25 committees and support agencies. We arrived at the budget cuts not by imposing an arbitrary 10-percent figure, but rather by looking at each budget individually and judging each committee on its past performance and projected workload. If we had cut on the basis of an arbitrary 10 percent, we might have hurt some committees which had a legitimate need for extra funds, while at the same time we might have given extra money to committees that were unable to justify such extra funds.

Since some Members have chosen to compare the Senate and House budgets, let me explore that matter further. The Senate budget for this year is $41,698,899. That amount is to service only 19 committees and 100 Members. The Accounts Subcommittee has recommended a budget for the House of only slightly more than $1 million more than the Senate will spend. But the House budget will go to 25 committees and support organizations which service 435 Members.

I contend that we have done a better job than the Senate because we will be spending less money for each Member than will the Senate. I would also point out that the Senate budget is not a complete budget. For example, the Senate does not contain the $17 million that body spends for its information processing unit. The Accounts Subcommittee budget, however, contains a $9 million expenditure for the operations of the House Information System. If the House were not required to show the $9 million funding for the House Information System, the proposed funding budget for this year would be only $33,886,562.

That would represent a 21-percent decrease from the 1981 House authorization. And if the Senate were required to include the $17 million that it spends on its information services, it would result not in a 10-percent reduction over the 1980 authorization, but rather an increase of 26 percent.

So let us put to rest once and for all the myth about what a good job the Senate has done in cutting its budget. The Senate may well have done more in the way of recalculating, than it did in budget cuts. And when I hear talk of the Senate cutting staff positions, let us make it clear that the only staff people that got fired on the Senate side were Democratic staff members. When the Republicans took control of the Senate, they cut staff but no Republican blood was spilled.

In fact, Mr. Speaker, if you compare the individual budgets of the House and Senate committees, you find that in almost every case it is the Senate that is spending the most money even though it is servicing 335 less Members. The only reason that the House budget is even slightly larger than the Senate budget is that the House has more committees. And I think that is quite proper, given the number of Members who serve in the House.

Mr. Speaker, in the past weeks there has been so much smoke blown into the ears of the American public by some Members of this House that it is a wonder that every smoke detector on Capitol Hill has not been set off. But I know that those who like to blow smoke will continue their unwarranted attacks.

As chairman of the Accounts Subcommittee, I honestly and sincerely believe that the amount recommended by the subcommittee is a just and fair budget for the House of Representatives. We are being asked to use a budget of $43 million to make decisions on a national budget of more than $710 billion.

And with all the talk of increased spending on the military, I would point out that the $43 million budget proposed by the Accounts Subcommittee for the operations of this House in 1981 compares very favorably to the cost of a single jet fighter which costs between $16 to $32 million, or to the proposed B-1 bomber that will cost between $40 to $50 million apiece. And if we bring a battleship out of mothballs after 20 years on the shelf, such an action will cost several hundred million dollars for processing each ship. And consider, finally, that a single Trident submarine will cost $1.2 billion and that a *Nimitz*-class nuclear aircraft carrier will cost $2.3 billion.

Is it unrealistic then for this body to consider such costs with a budget of only $43 million?

□ 1615

WE MUST UTILIZE COAL, ONE OF AMERICA'S MOST ABUNDANT RESOURCES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. CORCORAN) is recognized for 10 minutes.

● Mr. CORCORAN. Mr. Speaker, I am pleased today to join Congressmen RICHARD C. SHELBY of Alabama, KENT HANCE of Texas, and CLEVE BENEDICT of West Virginia, in introducing the Coal Incentives Act of 1981. This legislation is very similar to H.R. 8269, a bill I joined in introducing on October 1, 1980.

We simply must increase our utilization of coal, one of our most abundant resources. It makes absolutely no sense to continue our self-inflicted dependence on OPEC oil, and it is especially appropriate that we are introducing this bill during American Energy Week.

The bill we are introducing today would provide incentive to the production and use of coal by amending the Clean Air Act and the Internal Revenue Code of 1954. While we must take care to continue to protect our environment, we must also balance environmental policies with energy, national security, and economic considerations.

Mr. Speaker, for the benefit of our colleagues, I would like to insert in the RECORD at this point a section-by-section analysis of the Coal Incentives Act of 1981:

SECTION-BY-SECTION ANALYSIS OF COAL INCENTIVES ACT OF 1981

TITLE I

Section 101

Section 101 defines coal in language similar to that used in the New Source Performance Standards regulations.

Section 102

Current Law. Section 109(d)(1) of the Clean Air Act provides for a review by December 31, 1980, of all the existing criteria upon which the current air quality standards are based. Furthermore, this review shall be repeated at no less than five year intervals so that the Administrator may revise air quality criteria and standards and promulgate new standards when appropriate.

Amendment. Section 102 of the bill extends the current deadline in the Clean Air Act for review of existing air quality standards by one year. The extension would permit the review to include a cost benefit analysis of the regulations with an emphasis on the impact of the regulations on the utilization of domestically produced coal. The standards promulgated as a result of this review would be subject to Congressional review and a one House veto in accord with provisions of the Energy Policy and Conservation Act.

Section 103

Current Law. Section 110(a)(3)(B) of the Clean Air Act sets July 1, 1979, as the date by which state implementation plans bear-

ing attainment dates later than December 31, 1982, must be revised.

Amendment. Section 103 of the bill extends the deadline for state implementation plans through 1981.

Section 104

Current Law. Section 110(f) of the Clean Air Act outlines a procedure whereby a temporary emergency suspension of the state's implementation plan may be granted. To obtain such a suspension, the owner or operator of a fuel burning source must apply to the Governor of that state, who in turn petitions the President if he, the Governor, finds that an energy emergency exists in the area and is causing high levels of unemployment or the loss of necessary energy supplies to residential dwellings. The President is then to determine whether the emergency is severe enough to mandate a suspension and whether there are alternative means of responding to the crisis. If there are no other alternatives, the Governor may then order a suspension of a state's plan for as long as four months, except that the Administrator may shorten the suspension period or recind it altogether if he determines that the necessary conditions are not in fact present. If the state has not yet adopted an implementation plan, the above determination and order shall be made by the President. Finally, the Governor may include under such a suspension the compliance schedule to which such source is subject under Section 119 or Section 113(d) of the Clean Air Act.

Amendment. Section 104 of the bill provides additional flexibility under Section 110(f) of the Clean Air Act. This section permits the Governor or the President to suspend air quality regulations to allow utility and industrial plants to switch to coal and allows a suspension to remain in effect for five years. The amendment adds a new basis for suspension, if energy imports have reached an excessive level and the emergency suspension can reduce such imports.

Section 105

Current Law. Section 111(a) of the Clean Air Act provides that if a facility is mandated by Federal requirement to convert to coal, it is not subject to New Source Performance Standards.

Amendment. Section 105 of the bill provides that voluntary conversions to coal are treated on the same basis as mandatory conversions.

Section 106

Current Law. Section 113(d)(5)(A) of the Clean Air Act extends the compliance deadline to 1980 and to 1985 in certain instances for major stationary sources which are required by Federal law to switch from oil or gas to coal.

Amendment. Section 106 of the bill permits the extension of compliance deadlines for sources converting to the use of coal to 1983. This extension would apply regardless of whether the conversion is voluntary or compelled by a prohibition order or the threat of natural gas curtailments.

Section 107

Current Law. Section 120(a)(2)(B) permits the waiver of non-compliance penalties for certain facilities (e.g., facilities required to convert to coal by Federal mandate).

Amendment. Section 107 of the bill waives non-compliance penalties for facilities whose only alternative to using coal is oil, gas or another non-renewable energy source.

Section 108

Current Law. Section 125(h) of the Clean Air Act defines "locally or regionally available coal or coal derivatives" to be coal which can be produced in the region of the major fuel burning stationary source.

Amendment. Section 108 of the bill clarifies the definition of local coal to include coal mined within the state in which a source is located or a state sharing a common border with that state.

Section 109

Current Law. No provision.

Amendment. Section 109 of the bill provides that any major stationary source which meets all applicable emission standards shall not be subject to more stringent limitations for a period of ten years.

Section 110

Current Law. Section 162(a) of the Clean Air Act creates certain class I areas automatically and bars redesignation of such areas. All national wilderness areas in excess of 5,000 acres are automatically included in class I.

Amendment. Section 110 of the bill would revise the initial classifications. The size threshold for including national wilderness areas in class I would be increased from 5,000 acres to 50,000 acres. The 71 national wilderness areas smaller than 50,000 acres account for only 5% of total class I acreage and attract only 4% of the visitors to class I areas.

Section 111

Current Law. Section 163(b) of the Clean Air Act establishes the maximum allowable increases in sulfur dioxide in particulate matter concentrations for each area according to its classification. Section 165(a) establishes such maximums for new facility emissions which impact on class I one areas. These allowable increases are measured on an annual mean, and 24 and 3 hours maximum, basis.

Amendment. Section 111 of the bill changes the period of time over which increases in pollutants would be measured to an annual geometric mean only and eliminates short-term maximum allowables.

Section 112

Current Law. Section 164(a) of the Clean Air Act outlines state authority to redesignate an area's classification. Any area may be redesignated as class I and certain national park or wildlife areas may only be redesignated class I or II. To redesignate an area as class III, specific procedures must be followed to gain the participation of all the relevant governmental groups and a finding that the redesignation will not result in the violation of the applicable air quality standards must be made.

Amendment. Section 112 of the bill requires that states follow the same procedure to reclassify an area to class I as they currently follow to reclassify an area to class III.

Section 113

Current Law. Under Section 165(d), Federal land managers of a class I area are required to be informed of any facilities whose emission may affect the class I area. A Federal land manager is given affirmative responsibility to protect air quality related values including visibility of the class I area.

Amendment. Section 113 of the bill requires that Federal land managers only receive notice of facilities to be constructed within 50 miles of the class I area. The bill would limit the Federal land managers' authority under Section 165(d)(2)(C)(ii) to block a permit to facilities located within 50 miles of the class I area.

TITLE II

Section 201

Current Law. Under the Internal Revenue Code, investments in pollution control equipment with a useful life of five years are eligible for the full investment tax credit without regard to rapid amortization.

Amendment. Section 201 would also make the 10% investment tax credit available to the extent 100% of a taxpayer's rapidly amortized basis in facilities under Section 194.

Section 202

Current Law. The Internal Revenue Code provides an energy tax credit for coal preparation plants. However, eligibility for the credit is restricted to plants at the point of use.

Amendment. Section 202 of the bill would delete the restriction on energy tax credits for coal preparation plants thus making coal preparation plants at the mine eligible for energy tax credits.

Section 203

Current Law. Under the Energy Tax Act of 1978 and Title II of the Crude Oil Windfall Profit Tax Act of 1980, an additional investment tax credit is provided for investments in eligible property. Generally, public utility property is not eligible for energy tax credit.

Amendment. Section 203 of the bill would modify the energy tax credit enacted as part of the Energy Tax Act of 1978 and the Crude Oil Windfall Profit Tax Act of 1980, by allowing public utility property, which is also coal utilization property, to qualify for any applicable energy tax credit.

Section 204

Current Law. No provision.

Amendment. Section 204 of the bill would add a new section 194 to the Internal Revenue Code of 1954 to permit the rapid write-off of coal utilization property. This is defined as a boiler or burner for which coal will be the primary fuel or pollution control equipment required by Federal, state or local regulations in connection with the use of coal-burning equipment.●

FEDERAL GRANTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. COLLINS) is recognized for 15 minutes.

● Mr. COLLINS of Texas. Mr. Speaker, with all of the discussions about Federal grants, I was interested in reviewing two sets of comparable figures. One of them is a study that was made by City Councilman Steve Bartlett. Bartlett compared five cities as regards their community development, transit subsidies, and revenue sharing.

Here is Steve Bartlett's most enlightening comparison:

With all the debate on the supposed regional bias in the President's tax and budget cuts, I took the opportunity to conduct a brief inquiry into various levels of federal grants in several cities in the nation. While this report is in no way comprehensive as to all types of grants or as to all types of cities, I do believe the results to be revealing.

City	Population	Community development	Transit subsidies	Revenue sharing
Dallas	901,000	$17,146,000	$5,338,000	$13,959,000
Buffalo	357,000	22,768,000	.....	6,248,000
Detroit	1,192,000	63,000,000	30,000,000	48,800,000
Cleveland	573,000	32,000,000	16,453,000	14,255,000
New Orleans	557,000	9,138,000	10,000,000	19,413,000

I also found a splendid comparison of city busfares that was prepared by Clif Bosler, a staff member of the Dallas Morning News. Compare the subsidies, which ranged from 37 percent in Dallas to 75 percent in St. Louis and Los Angeles.

Why should city busfares be 40 cents in Houston and 65 cents in Dallas, while the Federal Government is paying twice as much subsidy to Houston?

Look at the city bus fares and the tremendous subsidy that is going into them. Below is the chart which appeared in the Dallas Morning News:

CITY BUSFARES

City	Base fare	Revenues (percent), of budget	
		Fare box	Subsidies
Dallas	65¢	63	37
Chicago	80¢	50	50
Pittsburgh	75¢	45	55
Los Angeles	65¢	25	75
New York	60¢	55	45
Detroit	60¢	33	67
St. Louis	50¢	25	75
San Francisco	50¢	30	70
Denver*	50¢	25	75
Houston	40¢	30	70

* Rush hour rate. ●

CRIMINAL JUSTICE SUBCOMMITTEE TO HOLD BRIEFING ON REVISION OF THE FEDERAL CRIMINAL CODE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. CONYERS) is recognized for 5 minutes.

● Mr. CONYERS. Mr. Speaker, I wish to announce that the Subcommittee on Criminal Justice, which I chair, will hold its first briefing on revision of the Federal Criminal Code for Members, staff, and interested persons.

The briefing will be held on Friday, March 20, 1981, at 10 a.m. in room 2226, Rayburn House Office Building.

The discussion will include the background of the Criminal Code revision efforts, and the major issues involved. Additional briefings on specific topics will be held in the near future. The subcommittee hopes to begin hearings on Criminal Code revision as soon as the new administration is prepared to present its views.●

AGAINST MILITARY AID TO EL SALVADOR

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Washington (Mr. LOWRY) is recognized for 5 minutes.

● Mr. LOWRY of Washington. Mr. Speaker, I rise to speak against military aid to El Salvador and join my colleagues in calling for immediate suspension of present and future military aid for that country.

The situation in El Salvador cannot be compared with situations in other countries—it is unique to the Salvadorans. Any policy that ignores this, ignores the history and the culture of the people and is destined to failure.

Tremendous social inequalities are contributing to the present unrest in El Salvador. El Salvador's traditional governmental structure has not addressed or resolved these inequalities. President Duarte's government, in an attempt to break with the past, vowed to mediate with all political forces and reduce the violence. It is time that the United States actively encourage the fulfillment of that stated mission. Rather than adding to the conflict by supplying more arms and advisers, we should concentrate our efforts on halting the violence, much of it perpetrated by the military forces we support, while encouraging the formation of a government that is dedicated to free elections and to the participation of all Salvadorans in the political life of their country.

Certainly the Salvadoran people are not interested in continuing the historical military/oligarchy alliance which has been their government. The uprisings in the past have been the result of the need for land—of the hope of obtaining the right to a life that allows survival.

Now is the time for the United States to take a role in emphasizing a political solution to the problems in El Salvador. A negotiated settlement which involves all parties in the conflict must be our policy in El Salvador. European nations and countries in our hemisphere understand this and could aid in this pursuit. We should make sure that President Duarte knows that continued U.S. aid is contingent upon his controlling the security forces under his government's jurisdiction. The United States must wisely lever aid to secure a peaceful settlement that results in a new, broadly based political structure for the Salvadoran people. The alternative is continued civil war and violence that could result in the deaths of hundreds of thousands of Salvadorans. Such a situation is unacceptable, but likely given the current course of U.S. policy.

Let us make it perfectly clear that we have not lost interest in the investigation into the murders of six Americans. Let us make it clear that we support reform and that human rights and democracy are the bulwark of our foreign policy.●

EXPORT-IMPORT BANK FINANCING NOTIFICATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. NEAL) is recognized for 5 minutes.

● Mr. NEAL. Mr Speaker, I am notifying the House today of the U.S. Export-Import Bank's proposal to help finance the sale of 18 Boeing Co. jet aircraft and related spare parts to Ansett Airlines of Australia. This transaction would make possible the export of nearly $457 million worth of U.S. goods.

The Eximbank is prepared to extend a direct credit of $289,251,000 to facilitate this sale. Ansett Airlines is prepared to buy five B-767's, four B-727's, and nine B-737's. The airframe components of the planes will be made by the Boeing Co., the engines by the General Electric Co. and by Pratt & Whitney. These three companies will subcontract with numerous other U.S. firms.

This notification from Eximbank was referred to me as chairman of the Banking Committee's Subcommittee on International Trade, Investment and Monetary Policy. Section 2(b)(3)(i) of the Export-Import Bank Act of 1945, as amended, requires that the Eximbank notify Congress of proposed loans or financial guarantees, or combinations thereof, of $100 million or more. Unless the Congress determines otherwise, the Eximbank may give final approval to the transaction after 25 days of continuous session of the Congress after notification.

This Ansett loan has been the subject of many newspaper reports. I hope that my colleagues will read the official Eximbank notification, which provides a detailed account of the proposed transaction and includes the terms and particulars of the financing arrangement.

I would welcome any comments or questions my colleagues may have about this notification. The Eximbank material follows:

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., March 5, 1981.

THE SPEAKER OF THE HOUSE OF REPRESENTATIVES,
The Speaker's Room,
The Capitol,
Washington, D.C.

DEAR MR. SPEAKER: Pursuant to Section 2(b)(3)(i) of the Export-Import Bank Act of 1945, as amended, Eximbank hereby submits a statement to the United States House of Representatives with respect to the following transaction involving U.S. exports to Australia.

A. DESCRIPTION OF TRANSACTION

1. Purpose

Eximbank is prepared to extend a direct credit of $289,251,000 to Ansett Aviation Equipment Pty. Ltd. ("AAE"), with the unconditional guarantee of the Government of Australia. The purpose of this Eximbank financing is to facilitate the purchase in the

United States by AAE of 18 new Boeing jet aircraft and related spare parts (5 B-767s, 4 B-727s and 9 B-737s). The engines for the aircraft are manufactured by General Electric Company and Pratt & Whitney. The total U.S. export value for this transaction is estimated to be $456,893,300.

2. Identity of the parties

AAE is a wholly-owned subsidiary of Ansett Transport Industries Limited, which is also the parent of Ansett Transport Industries (Operators) Proprietary Limited ("Ansett"). Ansett operates Ansett Airlines. Ansett's current fleet consists of 12 DC-9s, 11 B-727s and 11 F-27s. Ansett, which is one of the two major domestic airlines in Australia, will lease the financed aircraft from AAE. Eximbank has dealt with Ansett (the parent company) since 1966, and its experience on all the Ansett credits has been good.

3. Nature and use of goods and services

The principal goods to be exported from the United states are the above-described aircraft, which are to be used by Ansett on its existing domestic routes. The airframe components will be manufactured by the Boeing Company of Seattle, Washington. The engines for the aircraft will be manufactured by General Electric Company's jet aircraft engine division in Cincinnati, Ohio and by Pratt & Whitney in Hartford, Connecticut. The three companies will subcontract with numerous U.S. companies for major portions of the airframe and engine manufacture.

B. EXPLANATION OF EXIMBANK FINANCING

1. Reasons

The Eximbank Credit of $289,251,000 will facilitate the export of $456,893,300 of U.S. goods and services. Sales, profits and employment of U.S. aircraft manufacturers and their subcontractors are heavily dependent upon exports. Through 1990, aircraft purchases by foreign airlines are expected to account for approximately 40% of total U.S. aircraft sales.

The Boeing Company estimates that the export of the aircraft will provide 10,575,100 man hours of work for the company and its sub-suppliers. Additional benefits which will flow to the United States from the transaction include sizable follow-on exports of spare parts, ground support and other related equipment.

In 1979 Ansett decided on a major expansion of its fleet of aircraft. In the same year, Trans Australia Airlines, the government-owned airlines which is Ansett's only major domestic competition, decided to purchase 4 Airbus A-300 B4 aircraft, with an option for 8 additional aircraft. The two airlines had long followed a policy of buying the same kind of aircraft, so Ansett's initial consideration was of the Airbus. On February 11, 1980, Airbus offered to sell to Ansett 4 Airbus A-300 B4 aircraft, with options for 6 to 8 additional aircraft. The financing offer for the firm sale was for 85% cover in a basket of European currencies and U.S. dollars, with a blended interest rate of 7.95%.

The Boeing Company had also been negotiating with Ansett for the purchase of its planes rather than the Airbus. On February 19, 1980 Boeing and Ansett informed the Bank that Ansett was about to make a final decision on the purchase of the new aircraft, either the 12 Airbus A-300 B4s or a package of Boeing planes.

In response to its statutory mandate to provide credits at rates and terms which are competitive with those provided by the government supported export credit agencies of other countries, the Board of Directors of the Bank on February 28, 1980, authorized a preliminary commitment covering the sale of five 767's, four 727's and nine 737's. The Eximbank financing so authorized appears to have been a significant factor in overcoming the favorable financing offered by Airbus and in winning the sale for the U.S. suppliers.

2. The financing plan

The financing plan for the total U.S. procurement supported by Eximbank is as follows:

	Percent of U.S. costs	Total
(1) Five B-767's:		
Cash payment	15	$35,261,000
Eximbank credit	85	199,813,000
Total	100	235,074,000
(2) Four B-727's:		
Cash payment	15	10,442,000
Eximbank credit	49.6	34,550,000
Private financing [1]	35.4	24,624,000
Total	100	69,616,000
(3) Nine B-737's:		
Cash payment	15	22,830,300
Eximbank credit	36.1	54,888,000
Private financing [1]	48.9	74,485,000
Total	100	152,203,300

[1] Without Eximbank guarantee.

(a) Eximbank Charges

The Eximbank Credit will bear interest as follows:

Five B-767s, 8.0% per annum.
Four B-727s, 8.375% per annum.
Nine B-737s, 8.4% per annum.

The overall blended interest rate for the Eximbank and the private credits (together totaling 85% of the U.S. Costs) at current market rates is estimated to be about 9.75%. The interest is payable semiannually. Eximbank will charge a commitment fee of ½ of 1% per annum on the undisbursed part of the Eximbank Credit.

(b) Repayment Terms

Aggregate disbursements under the Eximbank Credit and the Private Financing will be repayable in 20 equal, semiannual installments as follows:

(1) Five B-767s: Two repayment schedules: one schedule for the first four aircraft delivered, with repayment beginning June 30, 1983; and one schedule for the fifth aircraft delivered, with repayment beginning February 28, 1985.

(2) Four B-727s: One repayment schedule, beginning February 15, 1982, with the Private Financing being repaid first.

(3) Nine B-737s: Three repayment schedules, with the Private Financing being repaid first: one schedule for the first four aircraft delivered, with repayment beginning January 30, 1982; one schedule for the next two aircraft delivered, with repayment beginning April 30, 1982; and one schedule for the last three aircraft delivered, with repayment beginning July 30, 1982.

(c) Additional Information

Attached is additional information on Eximbank activity in and economic data on the country involved in this transaction.

Sincerely,

JOHN L. MOORE, Jr.

SUMMARY OF ANSETT FINANCING PLAN

Planes	Number	U.S. export value of sale	Eximbank loan amount	Percent Eximbank loan cover	Percent of total Eximbank loan	Eximbank interest rate
B–767's	5	$235,074,000	$199,813,000	85.0	69.1	8.0
B–727's	4	69,616,000	34,550,000	49.6	11.9	8.375
B–737's	9	152,203,300	54,888,000	36.1	19.0	8.40
Totals	18	456,893,300	289,251,000	63.3	100.0	[1] 8.12

[1] In addition to the 8.12 percent Eximbank interest rate there is a 0.5 percent per annum commitment fee on any undisbursed part of the Eximbank credit and this usually averages 0.2 percent spread over the life of the loan, so the total Eximbank charges will amount to about 8.32 percent.

Note.—At a Libor rate of 17 1/16 percent, and the private financed portion at 0.5 percent above Libor, the overall blended Eximbank and private bank rate on the 85 percent financed portion, after a 15 percent cash payment, is 9.75 percent, including commitment fee.●

CONTROLLING THE JINNI: OSHA LABEL INQUIRY DUE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. GAYDOS) is recognized for 20 minutes.

● Mr. GAYDOS. Mr. Speaker, I want to note for the record of the House that an early act of the new administration was to withdraw proposed labeling regulations for industrial chemicals. Mr. Speaker, such compounds are used by millions of workers, and in almost every district represented here, they are a specie of modern-day jinni capable of great service and great harm, often on a delayed-action basis.

To understand what has happened, and why, the Subcommittee on Health and Safety will hold hearings next month.

Deflecting the harm of these powerful compounds is the issue, and in the folklore of the jinni, always bent on evil but often manipulated to good, we have a parallel and, perhaps, guidance.

Chemicals in new combinations are put to use regularly in industry, and knowledge of their full power, for destruction or good, runs behind the wizardry of their creation. Currently more than 55,000 substances and compounds are in use, the Council on Environmental Quality says.

Thus powerful agents with tongue-twisting names of six and seven syllables give us on demand better goods, but their power is not spent in the act of creation. Buried in the tissues and organs of the workers who work miracles of productivity with them, they abide for years to deliver later nasty surprises such as cancer, premature disability, and in many cases, even early death.

From the Arabs we get many things, some at overwhelming prices and some only for the taking: Oil, our system of numbers, and the concept of the jinni, a malevolent spirit of supernatural power that means only harm to humanity but which can be made by cleverness to benefit man; cleverness is the thing we need to give attention.

All jinn were imprisoned by Solomon, the folk stories say, forced into bottles, kept there by seals bearing the name of God, and thrown into the sea. From that time foolish mankind began to find bottles, break seals, and face the fury of jinni.

Fear was the first emotion of those facing a jinni out of the bottle and, for those who lived, rational thought was the second. They had certain knowledge of something serious on their hands, and they devised a way to deal with it.

If the jinn's bottles had borne some warning—caution: Efrits and ghuls inside—mankind still would have opened them, for that is the nature of man; but more would have survived had they knowledge of what awaited.

Some from of widely available information would tell workers that spirits will greet them when they work with those drums, containers, transfer pipe and tanks; and some kind of record-keeping would allow them to know that they have worked with, and what might happen, as knowledge of destructive power is found.

Secretary of Labor Ray Donovan said the labeling regulations were withdrawn for more study and, perhaps, discovery of a better, less expensive way to deal with our two-edged creations. The matter is in the hands of the new managers at the Occupational Safety and Health Administration (OSHA).

An OSHA spokesman, noting the action came at the direction of the White House, said this week that no new proposal is expected any time soon.

OSHA is 10 years old this year, Mr. Speaker, and labeling of industrial chemicals was one of the hypothetical protections suggested in 1970 for the then-proposed agency in the committee reports.

Meanwhile, those who work with these chemicals speak with heat and wonder if the idea of labeling will ever be heard again. They note that the proposal of regulations was meant in the first place only to start the public discussion Secretary Donovan said is needed.

We are in a time of creating new things, which also is a time of promise and constructive activity for people of good motive, and there is no reason to suppose that any involved on any side of the question are other than that at the present.

So this is a development of high interest to me, as chairman of the Subcommittee on Health and Safety, and to the committee; it is a question into which we will inquire as a matter of oversight. Unions representing workers will be invited along with the employers' representatives and, ultimately, Secretary Donovan and Assistant Secretary for Occupational Health and Safety, Thorne Auchter.

The first of these hearings is scheduled for 10 a.m., Tuesday, April 7, 2257 Rayburn Building.

We cannot manipulate this industrial-age jinni back into the bottle, but we can handle it rationally and in a way that serves the interests of workers and industry.●

EL SALVADOR

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. BINGHAM) is recognized for 15 minutes.

● Mr. BINGHAM. Mr. Speaker, I am deeply troubled by the Reagan administration's policy in El Salvador, which appears to be seeking a military solution to what is essentially an internal conflict arising from deep-rooted social and economic problems. By mounting a full-scale press campaign and pursuing a major diplomatic offensive in Europe and Latin America, the administration has publicly drawn the battleline against the Soviets in this tiny Central American country. It has now taken a major substantive step toward military involvement by agreeing to provide 54 American military advisers and substantial quantities of weapons and other military equipment. This is hauntingly reminiscent of our past "gunboat diplomacy." Once again we appear in the eyes of the world to be seeking to impose a military solution on a small Central American country, while virtually ignoring legitimate demands for social and political change. Although the administration has provided convincing evidence that the guerrillas fighting for control of this country have received large-scale arms aid from Communist sources, with Cuba playing a key role, effective steps to stem this arms flow can be taken without the bellicose rhetoric chosen by President Reagan and Secretary Haig. Our aims should be focused on the internal sources of the conflict, recognizing the Communist aid to insurgents for what it is: An attempt to win political gains cheaply by putting communism in the role of supporting legitimate revolutionary change and the United States in the position of shoring up bankrupt military regimes.

I am outraged and saddened by reports of continuing human rights violations in El Salvador, which include abduction, indiscriminate violence and over 10,000 killings last year. The brutal murders of four U.S. missionary women and three labor leaders, two of whom were Americans, were particularly heart rending. The suspected involvement of national security forces, who are ostensibly under government control, is abhorrent and deserves to be condemned in the strongest possible terms. I greatly fear that the Reagan administration's decision to provide increased military aid to the Salvadoran junta, without making it conditional on continuing progress of economic and social reforms, could send the wrong signal to these murderous right-wing elements and encourage them to attempt a military coup.

A very tempting response to the President's policy would be to support legislation terminating all military aid to the Salvadoran Government. However, I have so far refrained from doing this because I still have some hope that the moderate, centrist civilians in the present government can be sufficiently strengthened to control the renegade security forces and continue to implement needed social and political reforms. I am impressed with the judgment of former Ambassador White and several democratic Latin American leaders, notably President Carazo of Costa Rica, that the Duarte government offers the only viable moderate alternative to the two extreme left- and right-wing factions, both of which are responsible for brutal excesses. Carazo has stressed, however, that pressure for economic and political reforms must accompany military assistance. I was also struck by the complete failure of the leftist insurgents to obtain popular support for their January "final offensive," which belies claims that they represent the majority of the Salvadoran people. More recently, Archbishop Rivera y Damas, a respected moderate Catholic leader in El Salvador, declared that the left has lost the backing of the people. As long as there still exists a possibility that the moderate element of the ruling junta can stop rightist violence and implement an effective reform program, I will not oppose military aid which is conditional on progress in these areas.

Specific conditions which I believe should be tied to our assistance include strong and successful measures by President Duarte to control the violence-prone security forces; continued progress in the land distribution program; concrete moves toward holding countrywide elections; and serious discussions with the democratic elements in the opposition about developing a political solution. To the extent that U.S. military and economic aid give leverage toward accomplishing these goals, it would be a mistake for such aid to be prohibited.

Senators KENNEDY, TSONGAS, LEAHY, and LEVIN have introduced a bill in the Senate which would establish conditions for the continuation of military assistance to El Salvador, but the listed conditions, while quite detailed, do not cover all the points that especially concern me. Other Members of the House are working in similar legislative ideas. I am developing a bill of my own which I expect to introduce shortly.

As the Foreign Affairs Committee proceeds to the consideration of foreign aid legislative recommendations submitted by the Reagan administration, the various proposals for prohibiting, or setting conditions for, the continuation of military assistance to the Government of El Salvador will be carefully reviewed. At that time I will do what I can to see that appropriate conditions are imposed in the bill that is reported to the House.●

GRAIN STORED IN BANKRUPT ELEVATORS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Kansas (Mr. GLICKMAN) is recognized for 5 minutes.

● Mr. GLICKMAN. Mr. Speaker, today I am introducing legislation to protect the rights of farmers who have grain stored in elevators involved in bankruptcy proceedings. I am joined in this effort by my colleague from Nebraska (Mr. BEREUTER) and my colleague from Kansas (Mr. ROBERTS).

Under present bankruptcy law, interested parties may file a motion for relief against the stay. If a farmer follows that procedure, his motion is considered en masse with the others. Action can take a considerable amount of time. Most affected businesses can withstand some delay without seriously injuring their operations. But, in the uncertain, price-volatile business of farming, any delay in the disposal of the commodity can cause serious hardships. First, the grain in a bankrupt elevator is generally the sole marketable asset of a farmer's operation. If the disposal of the grain is tied up for any length of time, the viability of the entire farm enterprise may be jeopardized. In fact, I am aware of a number of situations where farmers involved in elevator bankruptcies were forced to declare bankruptcy since they were not able, themselves, to remain solvent during the long time needed to settle the elevator bankruptcy.

Second, any time agricultural commodities are being marketed, a large degree of price volatility should be as-

sumed. This is particularly true today when a brief rain shower in western Kansas causes the price of wheat in Kansas City to drop 10 cents in just 1 day. Bankruptcy judges simply should not be left with the burden of responsibility for determining when to put grain on the market. Instead, upon application by the farmer, the judge should make every effort to promptly deliver the grain in question.

While some bankruptcy judges are sensitive to the particular situation of farmers and move quickly to clear up any claims, other judges, with no ill will, simply do not. My legislation would address that latter situation in an uncomplicated, yet, I believe, effective manner. This bill would require that priority attention be given to resolving claims to agricultural producers involved in elevator bankruptcy cases, who seek relief. My legislation works within the existing bankruptcy statute and merely strengthens the law as far as the need for priority action for fungible, perishable commodities.

And let me assure you this is a very real problem. As a member of both the Agriculture and Judiciary Committees, I am very disturbed about the increasing number of grain elevator bankruptcies around the Nation and the consequent problems which have confronted America's farmers.

No one can deny that the farm sector of our economy is in a weakened position. Inflationary costs of production are simply not being offset by comparable increases in commodity prices, with the grain embargo being one of many causes for the slump. More and more farmers, unable to sustain losses year after year, are going out of business.

But, as we all know, these tough times are not confined strictly to farmers. People who do business with farmers are facing insolvency as well. Therefore, there has been an acceleration in the frequencies of grain elevator bankruptcies.

We all know that bankruptcy can be very disruptive. It can leave guiltless, hard-working people who conduct business in good faith with limited recourse while protecting the debtor's status. In urban areas, bankruptcy generally affects only a narrow sector of usually diversified business communities. In the case of a bankrupt grain elevator, however, the entire economy of a nearby farm community can be disrupted.

A few weeks ago, the tremendous and devastating impact of a bankrupt elevator on farmers was highlighted by Wayne Cryts, a Puxico, Mo., farmer. Cryts had 31,000 bushels of soybeans stored in a local elevator which declared bankruptcy. Under the bankruptcy stay, Cryts could not retrieve his beans although he had a warehouse receipt clearly indicating that they were his.

Cryts tried for 9 months to get the soybeans released, but the bankruptcy became snarled preventing the timely relief he so desperately needed. In frustration, Cryts, with the help of other local farmers, recovered the beans in defiance of the bankruptcy proceedings.

There is no reason why a farmer should have to wait 9 months to retrieve what is rightfully his, particularly when his commodity is both perishable and fungible. Yet, the bankruptcy involving Wayne Cryts' soybeans is unfortunately not an isolated incident. Bankrupt elevators are becoming increasingly common, evidence of the underlying weakness of our farm economy. Some farm States have had as many as eight elevator failures in 1 year. Most of those failures have involved millions of dollars in agricultural commodities.

State regulations on the licensing of grain elevators are uneven at best. Some States, like Kansas and Illinois, have established bonding programs to protect farmers against losses in case of elevator bankruptcies. Other States provide little or no protective mechanism.

Regardless of how States regulate elevators, there is a real need to assure farmers who have commodities in elevators gone bankrupt that they can secure prompt release of the commodities once they prove they are the rightful owners.

My bill would require no Federal expeditures since it merely makes a minor clarification to assure priorities in judicial proceedings. It would not set up any new program to deal with the broader problem of insolvent elevators which may warrant some other action at some point if we want to resolve the underlying problem. In fact, legislation to establish a Federal Grain Insurance Corporation to protect producers against elevator bankruptcies was introduced in the 95th Congress and I understand, similar legislation is being introduced in this Congress. Such a corporation would be modeled after the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation. But that is not my intent here; my aim is to make the adjudication process in bankruptcies more responsive to the particular circumstances when agricultural commodities are involved.

The legislation is direct and to the point. It reads as follows:

Section 362(e) of title 11, United States Code, is amended by adding at the end thereof the following: "The court shall give priority to a preliminary hearing, and a final hearing and determination, on a request of an agricultural producer for relief from a stay of an act against an agricultural commodity stored by such producer in a grain elevator which is a debtor in bankruptcy or which is property of an estate in bankruptcy."

My bill would provide an effective and uncomplicated solution to insure the rights of farmers involved in bankrupt elevators. I invite Members to join me in correcting the current inadequacy by cosponsoring the legislation.●

REAGANOMICS: RICH MAN'S WAR, POOR MAN'S FIGHT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 15 minutes.

● Mr. GONZALEZ. Mr. Speaker, at long last we have seen the revised budget program of the Reagan administration. Many details remain to be settled, but at least we now have an idea of who is going to be asked to sacrifice for the greater good of the country: It is the poor, and it is those who are struggling to find the money to buy a home, get an education, buy a meal, or get medical care. The war on inflation is, bluntly, a rich man's war and a poor man's fight. It is the well-off who get the bulk of the benefits of the Reagan budget, not the poor, and not the ordinary wage earner.

We have been told that the Federal budget is out of control, but that is not true; how many new programs were started in the past 4 years? How many programs were even expanded in the past 4 years?

We have been given the illusion that the Reagan plan would cut Government spending, but that is not true. The fact is that every spending cut proposed is offset by huge increases in expenditures elsewhere. Yet, the attention of the Nation is riveted on just the cuts, not the additions.

We have been told that we can achieve three contradictory goals: Balanced budget, lower taxes, and vastly greater military outlays—all at once. Yet, the fact is that all of this rests on the assumption that our economy will perform at levels enormously greater than the forecasts of any responsible economist. The truth is that the monetary policy called for by the administration will greatly constrain growth, which in turn means that the tax cuts called for are likely to lead to greater deficits than we have now—even if the Congress gives Mr. Reagan all that he demands by way of budget reductions.

We have been told that the Federal Government is doing too much, and that there are no political considerations in any of the budget recommendations that have been sent up. The truth is that the budget program is not an economic program at all. It is simply a political agenda, an agenda to roll back the clock, an agenda to eliminate the social and domestic programs that have served this country so well.

We are being told that it is up to us to justify why these programs should continue. The truth is that the burden of proof is on those who want to dismantle these programs. It is up to them to prove that this country has no unmet needs, that we do not need to have a social conscience, or indeed any conscience at all. It is up to them to show why housing programs are not needed or do not work—because we know that they are needed and do work.

We have been told that the country cannot afford to have a conscience, cannot afford compassion. But the burden of proof is on the Reagans and Stockmans to show that we can afford to ignore the festering sores of city and countryside. The question is, can we afford not to have these programs? What is the price of destroying programs that provide jobs, programs that provide training, and programs that tell people they have some worth and dignity, and hope for the future? What compelling reason do we have to turn our backs on our own people?

Anomalies abound in the Reagan budget; inexplicable assumptions lie throughout. Take medical care. They say that medicaid payments will in the future be indexed to the cost of living, not the cost of providing medical care. This is the same cast of characters who opposed any effort to control rising hospital costs. Now they are saying that hospital costs will not, cannot, go up faster than the cost-of-living index. This not only ignores what the experience of the past has been with hospital costs; it ignores the reality that medicaid payments are already far under the actual cost of providing care. It ignores the fact that it is the full-pay patient who has to make up a good part of that difference. The result of this curious proposal is surely going to be higher hospital bills for the bulk of patients who are already hard pressed to find money to pay inexorably rising insurance premiums. This is but one case in which the rich need not be concerned—but the middle class will foot the bill, and the poor will face greater needs with less help than ever before.

The administration preaches that it has not made any exceptions to the stringency diet on political grounds; that would be too crass. Yet they plan a $100 million increase for a breeder reactor project in Tennessee, a project that President Carter found wasteful and not likely to be needed until sometime in the 21st century, if then. It is just a happenstance, I suppose, that this delightful bauble goes to the State of the Senate majority leader, who happens to be of the President's party and keenly interested in helping his own State. How can they say that subsidies for nuclear power are fine, but subsidies for solar power are not? It could be that the nuclear power subsidies go to huge corporations, but solar power is the realm of small entrepreneurs who did not have the price to buy inaugural tickets or underwrite the expenses of redecorating the White House.

We are told that this administration wants to get people back to work, and yet at the same time they propose dismantling the very same programs that provide jobs and training. It is impossible to have workfare if there is no work, and especially when the economic program calls for creating even more unemployment than we have today. We are told that close to a half million families will be taken off food stamps, but that the truly needy will suffer no harm. Yet, they would not be on food stamps in the first place if they could not demonstrate need. There is not that much fraud in the program, not that much waste, and not that much abuse, and administration witnesses have confessed to that fact.

If the administration's program is immune to politics, why do they call for continued subsidies to tobacco growers, even while they call for ending special nutrition programs for women, infants, and children? Is that the price of keeping a certain Senator happy?

The administration says that they like the urban homesteading program. It rewards those who want to work and take a risk to restore center city housing. Yet they propose to kill the one program that finances urban homesteading and makes it possible in the first place. They want to continue the urban development action grant program, but provide no money for it. In fact, in the community development function, they propose adding $1.8 billion worth of programs to block grants, but no money to pay for those operations. It is hard to imagine a more cynical approach than that. They say, in other words, that these programs are beneficial, they are worthwhile, and they are needed—but that there will be no money for them. They build a Potemkin Village—fine facades, but nothing behind the painted scenes.

We are being told that something as basic, workable, proved, and self-financing as the FHA loan program is no longer necessary. That kind of statement is absurd. What they should be saying is that they just do not want it, not because it hurts the budget any, but because taking out FHA makes the budget look smaller. The economic effect, however, is simply to wipe out the ability of the most vulnerable home buyers to get into new housing. If FHA folds, there will be a vast number of self-sufficient, hardworking people, who will not get to buy a home. They are not striking out at bloated government with this proposal; they are striking at the hopes and dreams of ordinary citizens who want to buy a home, a modest one at that.

We have to ask whether or not we really want to help people own homes, whether or not we really want to have a revival of construction in this country. It is not enough to buy the dubious assumptions being thrust upon us, and assume that after 1 or 2 years everything will be rosy. Where is the evidence to support their forecasts? Where is the showing that their program works? We cannot afford to sit back and take the Hoover stance that all the country needs is a little dose of confidence. We cannot afford to fail to ask what the price is behind all those slogans.

Looking at the budget, looking at the tax proposals, it is plain that those who have no need to worry about their security will be given less reason to worry, because they will get more than they now have. As for those who have nothing, they will be consigned to the bottom of the heap, no way out, and probably lose any little hope they may now have for themselves, even for their children. And as for the great mass of people, they are being told that they need to work harder, maybe earn less, and wait for better times. We're all spoiled children, they say. And they also present us with a program that says, God helps those who get the best tax breaks.

The war on inflation is, in short, a rich man's war and a poor man's fight, if we fight it on the terms dictated by Mr. Stockman. It is too bad he does not have to experience life in the so-called safety net. If the Reaganites had to live with those who are being drafted and offered up for sacrifice in the fight against inflation, they might possibly develop a little of that commodity that is devoid from their program—compassion, and real help for those in real need.●

EL SALVADOR

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. EDGAR) is recognized for 5 minutes.

Mr. EDGAR. Mr. Speaker, I have asked to take 5 additional minutes to talk about the subject of El Salvador. As 20 or so Members of the Congress took the well to give a 1-minute speech, there was some concern by some, on the other side particularly, that the subject of El Salvador is not important enough to take the early moments of this House session to talk about it. I would like to assure my colleagues and everyone in the United States that El Salvador is critical to us as a nation, not critical in terms of sending advisers or bullets, but critical in terms of the very spirit and very nature of our Nation.

My colleague, GERRY STUDDS, from Massachusetts, and my colleague, BARBARA MIKULSKI from Baltimore, and I had the privilege and the opportunity to travel to Costa Rica and Nicaragua and into Honduras, and, while in Central America, to keep an eye on and listen carefully to the problems that we face in El Salvador and Guatemala.

I was privileged to be taken by Charles Boazch to a refugee relief coordinator in Honduras, to the hill country between Honduras and El Salvador. I found there things that our State Department and our CIA were not admitting.

I found 25,000 to 35,000 refugees. I found people who were fleeing the violence in El Salvador, but not, as was suggested by our Embassy, fleeing the guerrillas from the hills. In fact, the death, the rape, and the torture and the crop burning that was described by the peasants and the refugees that I talked to was all committed by the very government and by the very military that we are now extending our lethal bullets and aid to.

I think the United States has a responsibility in Central America not to repeat the mistakes we have made for the last 50 to 100 years. I think the United States has a responsibility to use its good offices in Central America to seek peace and to seek a political solution.

I think the United States ought to stand up and be counted for human rights and for good government and for justice. I think the United States ought to say to Mexico and Venezuela, to Germany and other nations of the world: "Help us to bring together the five or six factions on the left and the many factions within the military of El Salvador and the present government in El Salvador and bring those factions to the negotiating table, to set a time line for peace and for elections and to let the people rule."

Unfortunately, our Secretary of State, Alexander Haig, and our President, Ronald Reagan, I believe misunderstand the indigenous nature of the revolution in El Salvador. They misunderstand the role of the Maryknolls and the Jesuits and the Sisters of Mercy nuns who are bringing healing to the peasants who have been oppressed and repressed for generations.

I think the administration in its labeling of left and right misunderstands the nature of the conflict. I would hope we could regain the real prestige and spirit of the United States by shifting our policy and respecting the rights of human life in Central America.

Mr. STUDDS. Mr. Speaker, will the gentleman yield?

Mr. EDGAR. I am pleased to yield to my colleague from Massachusetts (Mr. STUDDS).

Mr. STUDDS. Mr. Speaker, I want to commend the gentleman on what he is saying. Let me say something else I think this administration fundamentally misunderstands, and that is the American people and what they said last November.

This morning in the House Foreign Affairs Committee we heard for some 2½ hours from the Secretary of State, General Haig. As I listened to him, my thoughts went to the mail which I know the gentleman has received and which I have received, which Congresswoman MIKULSKI and others who have spoken out nationally on the question of American policy in El Salvador have received, and which we now know the White House received. As the gentleman knows, the White House, in an astonishing admission last week, conceded that its own mail on El Salvador is running dramatically against the policy of this administration, and that is that the American people did not vote for what they now find happening.

The foreign aid applications or requests of this administration are absolutely staggering. For example, in one of the few statements of the Secretary of State which I thought constituted an insight of some consequence, he warned about the Russians and the Third World. He said Third World countries have learned, quite correctly, to beware of Russians bearing arms. So the Soviets have had disaster after disaster in the Third World because they have offered themselves as the donors and the sellers of arms, and shortly thereafter they have shown very little if any concern for the primary, overriding economic and social problems of these nations.

Fine. I think that is right. I think that is a precise analysis of what has gone wrong with Soviet policy.

But then the Secretary of State presented to us a budget document for our own foreign aid program which mimes the Russians, which has us increasingly doing precisely what it was, it seems to me, he so accurately caught the Russians doing wrong themselves.

Do my colleagues know what they have asked this Congress for with respect to economic aid? Down in every category, down in health, down in education, down in nutrition, down in population planning by some one-half billion over what the Carter administration had asked.

Mr. Speaker, as the gentleman I am sure knows, we then looked to the military ledger. It is up in military education and training, up in military sales, up in military assistance by another half billion dollars. In the next 5 fiscal years the new administration would have us spend $11 billion less on foreign economic and humanitarian assistance and an analogous amount more on military assistance.

This, as I say to the gentleman, I think represents a fundamental misunderstanding of the people of this country, of what they said when they spoke out against the preceding administration so loudly and clearly last fall, and perhaps even more devastating, it seems to me, it represents a fundamental misunderstanding of what it is that makes this country unique in the history of the world and on the world stage, the values, the ideals and the traditions which each of us was taught in school, which many of us have carried into public life, thinking that it does make a difference whether one is born in the United States or born in the Soviet Union, a difference rather than an accident of geography and birth that is a fundamental difference of values that separates us, and the policies of our Nation ought to reflect those differences.

I commend the gentleman. I am sure we could both talk at enormous length on the subject. I suspect that maybe we will have to. If the gentleman will yield further to let me echo what he was saying, I am disappointed at the lack of voices speaking out in this Congress. We do have 73 cosponsors of this legislation to terminate military assistance. While that is 73 more votes than were cast against the Gulf of Tonkin Resolution when it went unanimously through this House, it is nonetheless not enough. It does not reflect, I believe, the true feelings of the Members who are here.

I think it is important for our colleagues to understand that the people, as usual, are ahead of us, and that those of us who are supposed to lead might at least be able, if not to summon up the courage to lead, at least to get our act together sufficiently to represent the American people who understand, seemingly far better than we, the ways in which this administration is straying and straying from those things which are most basic and most fundamental to our own country.

Mr. EDGAR. I would like to compliment the gentleman for his statement and leadership on our expedition to Central America. I think the questions and the insights the gentleman has shared are very pertinent.

The gentleman pointed out the fact that the people are, in fact, leading and standing up, writing letters, speaking out, and yet it is the leadership of our Government that is failing to do so.

The Religious Task Force for El Salvador, a group of Roman Catholics, of Methodists, of Presbyterians, have gathered some names on a petition. Let me read for my colleagues what the petition says and recognize publicly that this is their 1-minute speech.

It is as if those 25,000 people have come to Congress to share this petition with us and with the leadership in hopes that we might alter our policy.

The petition reads, and I quote:

As concerned North Americans we cry out against the recent brutal assassinations of four American women religious and six opposition leaders in El Salvador. Since January 1, 1980, more than 10,000 people have been killed in El Salvador by the combined action of government Security Forces and right-wing paramilitary groups. We protest all forms of U.S. intervention in El Salvador which is directly supporting this repression.

We join our voices to the voice of Mons. Oscar Romero, in his February 17 letter to President Carter calling for an end to all military, economic and diplomatic aid to the military government of El Salvador: "The contribution of the U.S. government instead of promoting greater justice and peace will without doubt sharpen the injustice and repression against the organizations of the people."

Nine months later Mons. Rivera y Damas, the successor to Mons. Romero, repeated this call: "We demand that the U.S. government stop military aid * * * which facilitates repression against the people and the persecution of the Church." The Church is persecuted, he said, "because it tells the truth that shakes up the powerful and because it has made a preferential option for the poor of this country."

We demand that the U.S. government immediately and permanently stop all military, economic and diplomatic aid to the military government in El Salvador, and withdraw all military advisors from that country.

We repeat the prophetic words of Mons. Romero one day before his assassination: "In the name of God * * * and in the name of this suffering people, whose laments reach up to the heavens every day with greater intensity * * * stop the repression!"

I share these names and these petitions with the Speaker of the House. I urge him to share them with the President of the United States and with our colleagues, and I urge everyone to cosign the bill introduced by my colleague from Massachusetts (Mr. STUDDS), H.R. 1509, which is a call upon this House to stop the military aid to El Salvador.

Mr. STUDDS. Will the gentleman yield further?

Mr. EDGAR. I yield to the gentleman.

Mr. STUDDS. May I say to the gentleman that I would commend also to our colleagues the testimony last week before the House Foreign Affairs Committee of the Archbishop of Washington, Bishop Hickey, who gave one of the most eloquent statements I have heard. May I reflect, as I did at that time, on the irony, it seems to me, historically. Here we have one of the historically most conservative of institutions, the Roman Catholic Church, and historically one of the most revolutionary institutions, the United States of America, crossing in the night in Central America.

After Vatican II, the Catholic Church in Latin America all of a sudden has come forth to the forefront for social and economic change, and where at the same time has the United States of America gone? We have gone the other direction time and time again, contrary to our own history and revolutionary origins and ideals. We support the forces of the status quo, of the economics of a social privilege and the brutality of military regimes which have traditionally defended those forces over time.

My colleagues, it seems to me, ought to be aware of that and when they think and perhaps are tempted to give speeches moralizing about the conduct of the Soviet Union and on their brutal invasion of Afghanistan, and as they contemplate what the Russians may be considering doing in Poland, they ought to think very carefully what position we will be in to say anything whatever of any credibility and any moral standing to the Soviet Union if we are increasingly more deeply getting ourselves involved in military intervention in a nation in our own hemisphere. We remove any position from which we can stand in this world with any kind of moral stature and any degree of credibility and say to the Russians, "You must not; that is an action that is indefensible in the world community."

We cannot allow this administration in its bullheaded zeal to somehow draw a line and prove its macho strength to discredit our country so greatly in the eyes of our own people and of the world as to render us essentially an impotent force in international politics.

I commend the gentleman for taking the time.

Mr. EDGAR. Mr. Speaker, I thank the gentleman and yield back the balance of my time.

□ 1630

VETERANS ORGANIZATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oklahoma (Mr. JONES) is recognized for 5 minutes.

● Mr. JONES of Oklahoma. Mr. Speaker, when Franklin Roosevelt addressed Congress after the declaration of war on Japan, he asked a rhetorical question of his audience: "When will this war end?" His answer is as accurate now as it was then:

It will end just as soon as we make it end by our combined efforts, our combined strength, and our combined determination to fight through and work through until the end * * * most certainly we should not settle for less.

The current dangers may not be as immediate now as they were in 1941, but I firmly believe that we must not waiver in our resolve to defend our Nation against all external threats.

In the past, the backbone of our strength has been the interest and active participation of our citizens in the Armed Forces and veterans support groups. Continued active involvement by Americans in such support groups is vital to the defense of our country.

With these thoughts in mind, I am introducing today legislation with Congressman CONABLE that will insure the future viability of such veterans organizations. These organizations now face a problem with their tax-exempt status that threatens many of their programs.

In 1969, Congress added section 501(c)19 to the Internal Revenue Code. This section granted tax-exempt status to certain groups of veterans. In order to qualify for such status, the group must be comprised of 75-percent war veterans. The remaining 25 percent must be substantially comprised of veterans' widows, military cadets, et cetera.

The problem these organizations now face is simple: With a prolonged period of peace at hand, there are few war veterans leaving active military service. This situation, plus the natural attrition rate among surviving war veterans, is draining down the percentage of these veterans in section 501(c)19 organizations. For instance, one such organization, the Air Force Association, has seen its membership of war veterans go from approximately 90 percent in 1975 to 82 percent in 1978. At this rate, they will drop below the 75-percent rate in the very near future. Other veterans organizations have similar problems.

Section 501(c)19 was enacted at the height of the Vietnam conflict. It was a reaction to the times, and it is no longer responsive to the current climate of peace. If we are lucky enough to avoid armed conflict in the future, it will unduly penalize veterans organizations and stifle their programs.

For these reasons, I have introduced legislation to change the percentage requirements in section 501(c)19. this change would provide that 75 percent of such organizations must be comprised of veterans instead of war veterans. This change will preserve the intention of Congress when it enacted this section. It will preserve the essential character of these organizations as being veteran-oriented. It will insure that their tax-exempt status is not threatened by a combination of natural attrition rates and a lack of armed conflict involving American citizens.

Currently, these organizations are tax exempt on income other than that which is nonbusiness related. Thus, passage of my bill will have no revenue impact. Assuming that nothing is done, and these organizations lose their tax-exempt status, the Joint Committee on Internal Revenue Taxation has indicated the amount collected from these organizations would not be in excess of $5 million annually. Therefore, the revenue impact of this measure is negligible. Moreover, if these veterans groups lose their tax-

exempt status under section 501(c)19, it is likely they would be forced to suspend many of their activities due to financial considerations. Under this analysis, the Government would not collect any additional taxes due to this change in status, and the Nation and our veterans would lose the benefits provided by these organizations.

I hope my colleagues will support Congressman Conable and me in this effort to provide relief to these noteworthy organizations.●

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Ms. FIEDLER) to revise and extend their remarks and to include extraneous material:)

Mr. BLILEY, for 5 minutes, on March 19.

Mr. CONABLE, for 60 minutes, on March 19.

Mr. CORCORAN, for 10 minutes, today.

Mr. COLLINS of Texas, for 15 minutes, today.

(The following Members (at the request of Mr. GEJDENSON) to revise and extend their remarks and to include extaneous material:)

Mr. CONYERS, for 5 minutes, today.

Mr. LOWRY of Washington, for 5 minutes, today.

Mr. NEAL, for 5 minutes, today.

Mr. GAYDOS, for 20 minutes, today.

Mr. BINGHAM, for 15 minutes, today.

Mr. GLICKMAN, for 5 minutes, today.

Mr. GONZALEZ, for 15 minutes, today.

Mr. STRATTON, for 5 minutes, today.

Mr. IRELAND, for 5 minutes, today.

Mr. EDGAR, for 5 minutes, today.

Mr. DE LA GARZA, for 60 minutes, on March 19.

Mr. PHILLIP BURTON, for 5 minutes, on March 19.

(The following Member (at the request of Mr. STUDDS) to revise and extend his remarks and include extraneous material:)

Mr. JONES of Oklahoma, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Ms. FIEDLER) and to include extraneous matter:)

Mr. DANIEL B. CRANE.

Mr. COURTER.

Mr. GILMAN in two instances.

Mr. LENT.

Mr. LEBOUTILLIER.

Mr. CORCORAN.

Mr. CAMPBELL.

Mr. SENSENBRENNER.

Mr. DORNAN of California.

Mr. SHAW.

Ms. FIEDLER.

Mr. DENARDIS.

Mr. MITCHELL of New York.

Mr. HILLIS.

Mr. O'BRIEN.

Mr. MICHEL.

Mr. COLLINS of Texas in three instances.

Mr. LOTT.

Mr. COLEMAN.

Mr. MARTIN of North Carolina.

Mr. LUJAN.

Mr. PAUL in two instances.

Mr. JEFFRIES in four instances.

Mr. ROTH.

Mr. PURSELL in two instances.

(The following Members (at the request of Mr. GEJDENSON) and to include extraneous matter:)

Mr. NICHOLS.

Mr. HAMILTON.

Mr. ROSENTHAL in two instances.

Mr. SABO.

Mr. BEDELL in two instances.

Mr. STOKES.

Mr. BRODHEAD in two instances.

Mr. SKELTON.

Mr. BENJAMIN.

Mr. GUARINI.

Mr. HANCE.

Mr. MOAKLEY.

Mr. ECKART in three instances.

Mr. EDWARDS of California.

Mr. EDGAR.

Mr. BONKER.

Mr. ALBOSTA.

Mr. KILDEE.

Mr. SHELBY.

Mr. AUCOIN.

Mr. WYDEN.

Mr. FAUNTROY.

Mr. YATRON.

Mr. OBERSTAR.

Mrs. SCHROEDER.

Mr. HAWKINS.

Mr. HARKIN in two instances.

Mr. WEISS in two instances.

Mr. TRAXLER.

Mr. MCDONALD.

Mr. JONES of North Carolina.

Mr. DYSON.

Mr. BARNES.

Mr. PEPPER.

ADJOURNMENT

Mr. STUDDS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 30 minutes p.m.), the House adjourned until tomorrow, Thursday, March 19, 1981, at 11 a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

831. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to amend the Rail Passenger Service Act to authorize additional appropriations for the National Railroad Passenger Corporation and for other purposes; to the Committee on Energy and Commerce.

832. A letter from the Acting Assistant Administrator for Planning and Management, U.S. Environmental Protection Agency, transmitting a report covering fiscal year 1980 on the Agency's disposal of foreign excess property; to the Committee on Government Operations.

833. A letter from the Director, Administrative Office of the U.S. Courts, transmitting a draft of proposed legislation to amend section 3006A of title 18 of the United States Code to provide protection against personal liability to the officers and employees of certain defender organizations providing representation under the Criminal Justice Act; to the Committee on the Judiciary.

834. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to authorize the Secretary of the department in which the Coast Guard is operating to establish fees for Coast Guard services and for other purposes; to the Committee on Merchant Marine and Fisheries.

835. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to amend the Urban Mass Transportation Act of 1964 to provide authorizations for appropriations and for other purposes; to the Committee on Public Works and Transportation.

836. A letter from the Acting Administrator, U.S. Environmental Protection Agency, transmitting the biennial report on the costs of construction of publicly owned wastewater treatment facilities needed to carry out the provisions of the Federal Water Pollution Control Act, and estimates of those costs on a State-by-State basis, pursuant to section 516(b)(1) of the act; to the Committee on Public Works and Transportation.

837. A communication from the President of the United States, transmitting notice of his intention to proclaim, under the authority of section 502(a)(3) of the Trade Act of 1974, that all member countries of the Andean Group (Bolivia, Colombia, Ecuador, Peru, and Venezuela) and of the Association of South East Asian Nationals (ASEAN) (Indonesia, Malaysia, Philippines, Singapore, and Thailand) shall be treated, respectively, as one country for purposes of the Generalized System of Preferences; to the Committee on Ways and Means.

838. A letter from the Acting Chairman, Consumer Products Safety Commission, transmitting an amended budget estimate for fiscal year 1982, pursuant to section 27(k)(1) of the Consumer Product Safety Act of 1972, as amended; jointly, to the Committees on Appropriations and Energy and Commerce.

839. A letter from the Chairman, National Transportation Safety Board, transmitting the 1980 annual report of the Board, pursuant to section 305 of Public Law 93-633; jointly to the Committees on Energy and Commerce, Merchant Marine and Fisheries, and Public Work and Transportation.

840. A letter from the Comptroller General of the United States, transmitting a report on low productivity in the U.S. coal industry (Mar. 3, 1981, EMD-81-17); jointly, to the Committees on Government Operations, Interior and Insular Affairs, and Education and Labor.

841. A letter from the Comptroller General of the United States, transmitting a report on Federal capital investment policy

(Feb. 26, 1981, PAD-81-19); jointly, to the Committees on Government Operations and Rules.

842. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, to amend the Highway Safety Act of 1966 to authorize appropriations, and for other purposes; jointly, to the Committees on Public Works and Transportation and Ways and Means.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. AKAKA (for himself and Mr. HEFTEL):

H.R. 2578. A bill to amend section 203 of the Federal Property and Administrative Services Act of 1949 to authorize the donation of surplus real or personal property for use in connection with a public harbor; to the Committee on Government Operations.

By Mr. BENNETT:

H.R. 2579. A bill to amend title 38, United States Code, to provide a new educational assistance program for persons who enlist, reenlist, or otherwise enter the Armed Forces after December 31, 1980, and to provide a career serviceperson's educational assistance program for members of the Armed Forces, and to amend title 10, United States Code, to authorize an educational leave of absence for members of the Armed Forces; jointly, to the Committees on Armed Services and Veterans' Affairs.

By Mr. JOHN L. BURTON (for himself, Mr. WALKER, Mr. CLAY, Mr. DWYER, Mr. FASCELL, Mr. FRENZEL, Mr. JEFFORDS, Mr. LAGOMARSINO, Mr. LOTT, Mr. MCGRATH, Mr. PANETTA, Mr. ROSE, Mr. VENTO, Mr. WHITEHURST, AND Mr. YATRON):

H.R. 2580. A bill to amend the Federal Property and Administrative Services Act of 1949 to reform contracting procedures and contract supervision practices of the Federal Government, and for other purposes; to the Committee on Government Operations.

By Mr. CARNEY:

H.R. 2581. A bill to amend the Internal Revenue Code of 1954 to partially exclude interest earned in savings institutions from the gross income of certain taxpayers; to the Committee on Ways and Means.

By Mr. COLEMAN:

H.R. 2582. A bill to amend title 11 of the United States Code to require that bankruptcy courts grant relief from stays of acts against perishable commodities held under bailment as property of estates in bankruptcy; to the Committee on the Judiciary.

By Mr. CONABLE (for himself, Mr. GREEN, and Mr. LUNDINE):

H.R. 2583. A bill to amend the Internal Revenue Code of 1954 to provide transitional rules for estate and gift tax treatment of disclaimers of property interests created by transfers before November 15, 1958; to the Committee on Ways and Means.

By Mr. PHILIP M. CRANE:

H.R. 2584. A bill to provide for fair treatment of skilled trades under the Fair Labor Relations Act; to the Committee on Education and Labor.

By Mr. DONNELLY:

H.R. 2585. A bill to designate Building No. 1 at the Veterans' Administration Medical Center in Brockton, Mass., as the "Everett E. Crosier Center"; to the Committee on Veterans' Affairs.

H.R. 2586. A bill to amend the Internal Revenue Code of 1954 to provide a deduction for funeral expenses paid by the spouse or other relative of the decedent; to the Committee on Ways and Means.

H.R. 2587. A bill to amend the Internal Revenue Code of 1954 to provide a tax credit for expenditures for multifuel heating systems; to the Committee on Ways and Means.

By Mr. EDGAR:

H.R. 2588. A bill to amend the Internal Revenue Code of 1954 to allow individuals a credit against income tax for the purchase of a commuter highway vehicle, to exclude from the gross income of individuals certain amounts received in connection with the provision of alternative commuter transportation, to allow employers a credit against income tax for costs incurred in ride-sharing programs, and for other purposes; to the Committee on Ways and Means.

By Mr. EDWARDS of California:

H.R. 2589. A bill to amend title 18 of the United States Code to prohibit certain disclosures relating to intelligence personnel; jointly, to the Committees on Judiciary and the Permanent Select Committee on Intelligence.

By Mr. ENGLISH:

H.R. 2590. A bill to amend the Privacy Act of 1974 to impose additional restrictions on the maintenance and disclosure of mailing lists by Government agencies; to the Committee on Government Operations.

By Mr. FAUNTROY:

H.R. 2591. A bill to amend the Federal Reserve Act to facilitate the implementation of monetary policy by establishing reserve requirements on certain accounts; jointly, to the Committees on Banking, Finance and Urban Affairs and Energy and Commerce.

By Mr. FINDLEY (for himself, Mr. CORRADA, Mr. MARKS, and Ms. MIKULSKI):

H.R. 2592. A bill to make February 12 a legal public holiday for Lincoln's Birthday; to the Committee on Post Office and Civil Service.

By Mr. GLICKMAN (for himself, Mr. BEREUTER, and Mr. ROBERTS of Kansas):

H.R. 2593. A bill to amend title 11, United States Code, to require that priority be given to determinations made with respect to requests of agricultural producers for relief from stays of acts against agricultural commodities stored in grain elevators involved in bankruptcy proceedings; to the Committee on the Judiciary.

By Mr. HARKIN:

H.R. 2594. A bill to amend the dairy provisions of the Agricultural Act of 1949 and for other purposes; to the Committee on Agriculture.

By Mr. HOWARD:

H.R. 2595. A bill to amend title XVIII of the Social Security Act to permit payment under the medicare program for certain types of foot care; jointly, to the Committees on Energy and Commerce and Ways and Means.

By Mr. JONES of North Carolina (for himself and Mr. HUBBARD):

H.R. 2596. A bill to authorize appropriations for the fiscal year beginning October 1, 1981, for the maintenance and operation of the Panama Canal, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. JONES of Oklahoma (for himself and Mr. CONABLE):

H.R. 2597. A bill to amend the Internal Revenue Code of 1954 with respect to the exemption from tax of veterans organizations; to the Committee on Ways and Means.

By Mr. LEHMAN:

H.R. 2598. A bill to amend title XVII of the Social Security Act to eliminate all the deductibles, coinsurance, and time limitations presently applicable to benefits thereunder; to eliminate medicare taxes as the method of financing hospital insurance benefits and premium payments as the method of financing supplementary medical insurance benefits (so that all benefits under such title will be financed from general revenues); to provide payment for eye care, dental care, hearing aids, prescription drugs, prosthetics, one physical checkup a year, preventive care, diagnosis of breast cancer, services of registered nurses, and certain other items not now covered; and to provide for the administrative and judicial review of claims (involving the amount of benefits payable) which arise under the supplementary medical insurance program; jointly, to the Committees on Energy and Commerce and Ways and Means.

By Mr. LOTT:

H.R. 2599. A bill to authorize construction of the project for navigation at Gulfport Harbor, to the Committee on Public Works and Transportation.

By Mr. LUJAN:

H.R. 2600. A bill to direct the Secretary of the Treasury to pay the funds appropriated by this Act to the Administrator of Veterans' Affairs for the purchase of a parcel of land adjacent to the Sante Fe, N. Mex., National Cemetery; to the Committee on Appropriations.

H.R. 2601. A bill to amend the Internal Revenue Code of 1954 to allow individuals certain credits against income tax for certain expenses for education and a deduction from gross income for certain contributions to qualified higher education funds, and for other purposes; to the Committee on Ways and Means.

H.R. 2602. A bill to reduce unemployment by providing that unemployment insurance funds may be used pursuant to State laws establishing programs for payments to employers who hire the unemployed; to the Committee on Ways and Means.

By Mr. McDONALD:

H.R. 2603. A bill to authorize appropriations for the purchase of certain strategic and critical materials for storage in the National Defense Stockpile under the Strategic and Critical Materials Stock Piling Act; to the Committee on Armed Services.

H.R. 2604. A bill to abolish the Federal Election Commission; to the Committee on House Administration.

By MATSUI (for himself, Mr. ROUSSELOT, Mr. PATTERSON, and Mr. GIBBONS):

H.R. 2605. A bill to amend the Internal Revenue Code of 1954 to make permanent certain rules relating to travel expenses of State legislators; to the Committee on Ways and Means.

By Mr. MILLER of California:

H.R. 2606. A bill to establish an improved system for water pricing from Federal projects in order to reduce unjustified subsidies, to more rapidly recover costs, to encourage conservation and the more efficient use of water resources, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MINISH:

H.R. 2607. A bill requiring the Law Enforcement Assistance Administration to provide funds, as authorized to be appropriated under this act, to the mayor of the city of Atlanta, Ga., for extraordinary investigation expenses relating to the recent murders of black children; to the Committee on the Judiciary.

By Mr. MITCHELL of New York:

H.R. 2608. A bill to repeal the reduction required by law in the number of senior-grade civilian employees in the Department of Defense; to the Committee on Armed Services.

By Mr. PATTERSON:

H.R. 2609. A bill to amend the Internal Revenue Code of 1954 to exempt from the excise tax on the sale of motor vehicles certain wind deflectors designed to be mounted on the front of a truck cargo container; to the Committee on Ways and Means.

H.R. 2610. A bill to amend the Internal Revenue Code of 1954 to provide for cost-of-living adjustments in the amount of the personal exemption and in the individual tax rates; to the Committee on Ways and Means.

H.R. 2611. A bill to eliminate the reduction in social security benefits for spouses and surviving spouses receiving certain Government pensions, as recently added to title II of the Social Security Act by section 334 of the Social Security Amendments of 1977; to the Committee on Ways and Means.

By Mr. PATTERSON (by request) (for himself, Mr. HYDE, Mr. LAFALCE, Ms. OAKAR, Mr. NEAL, Mr. REUSS, Mr. LOWRY of Washington, Mr. EVANS of Delaware, Mr. STANTON of Ohio, and Mr. JAMES K. COYNE):

H.R. 2612. A bill to provide for continuing U.S. participation in the International Development Association, to provide for U.S. participation in the African Development Bank, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

H.R. 2613. A bill to provide for continuing participation by the United States in the International Bank for Reconstruction and Development, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. PRICE (for himself and Mr. DICKINSON):

H.R. 2614. A bill to authorize supplemental appropriations for fiscal year 1981 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles and for research, development, test, and evaluation for the Armed Forces and to increase the authorized personnel end strengths for military and civilian personnel of the Department of Defense for fiscal year 1981; to the Committee on Armed Services.

By Mr. SABO:

H.R. 2615. A bill to amend title XIX of the Social Security Act to permit States to establish flexible income contribution and resource standards for couples in which one spouse is in a nursing home; to the Committee on Energy and Commerce.

By Mr. ST GERMAIN (for himself and Mr. WYLIE):

H.R. 2616. A bill to extend the authorizations of appropriations under the National Consumer Cooperative Bank Act; to the Committee on Banking, Finance and Urban Affairs.

By Mr. SANTINI:

H.R. 2617. A bill to amend the Internal Revenue Code of 1954 to allow the deduction for individual retirement savings to employees who are active participants in employer plans; to the Committee on Way and Means.

By Mr. SHELBY (for himself, Mr. CORCORAN, Mr. HANCE, and Mr. BENEDICT):

H.R. 2618. A bill to amend the Clean Air Act and the Internal Revenue Code of 1954 and to provide for the balancing of energy and environmental policies by providing incentives for the use of coal in lieu of imported energy; jointly, to the Committees on Energy and Commerce and Ways and Means.

By Mr. WEISS:

H.R. 2619. A bill to amend title VI of the International Claims Settlement Act of 1949 (relating to claims of nationals of the United States against the German Democratic Republic) to permit the determination of claims of persons who were aliens lawfully admitted for permanent residence in the United States as of the date of loss and by September 4, 1974, citizens of the United States; to the Committee on Foreign Affairs.

By Mr. WYLIE:

H.R. 2620. A bill to amend title II of the Social Security Act to eliminate the offset against social security benefits which is presently imposed in the case of spouses and surviving spouses receiving certain Government pensions; to the Committee on Ways and Means.

By Mr. COLLINS of Texas:

H.J. Res. 209. Joint resolution authorizing the President to proclaim October 6, 1981, as "Children's Day"; to the Committee on Post Office and Civil Service.

By Mr. PATTERSON:

H.J. Res. 210. Joint resolution proposing an amendment to the Constitution of the United States to prohibit compelling the attendance of a student in a public school outside the school district in which the student resides; to the Committee on the Judiciary.

By Mr. NEAL:

H. Con. Res. 95. Concurrent resolution to encourage the reduction of export credit subsidies in world trade; jointly, to the Committees on Banking, Finance and Urban Affairs, Foreign Affairs, and Ways and Means.

By Mr. HAWKINS:

H. Res. 111. Resolution disapproving a proposed deferral of budget authority numbered D81-36A; to the Committee on Appropriations.

MEMORIALS

Under clause 4 of rule XXII,

28. The SPEAKER presented a memorial of the Legislature of the Territory of Guam, relative to the impact of reducing Federal income tax rates on Guam; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CHAPPIE:

H.R. 2621. A bill to authorize the Secretary of the Interior to convey certain lands in Placer County, Calif., to Mrs. Edna C. Marshall, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. D'AMOURS:

H.R. 2622. A bill for the relief of Maj. Bradford S. Goodwin, Jr., U.S. Army; to the Committee on the Judiciary.

By Mr. DONNELLY:

H.R. 2623. A bill to waive certain time limitations with respect to awarding a medal of honor to James L. Cadigan; to the Committee on Armed Services.

By Mr. HEFTEL:

H.R. 2624. A bill to authorize the Secretary of the Navy to sell certain harbor craft to Indo-Pacific Fisheries, Inc.; to the Committee on Armed Services.

H.R. 2625. A bill for the relief of George A. Albert; to the Committee on the Judiciary.

By Mr. PATTERSON:

H.R. 2626. A bill for the relief of Orange County Fair Housing Council, Inc.; to the Committee on the Judiciary.

By Mr. RAHALL:

H.R. 2627. A bill for the relief of Maria Luna Tan; to the Committee on the Judiciary.

H.R. 2628. A bill for the relief of Generoso Blando; to the Committee on the Judiciary.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 110: Mr. BONIOR of Michigan, Mrs. BOUQUARD, Mr. CORRADA, Mr. CROCKETT, Mr. DE LUGO, Mr. DUNCAN, Mr. FORD of Michigan, Mr. FROST, Mr. GINGRICH, Mr. GRAY, Mr. GUYER, Mr. HOWARD, Mr. KILDEE, Mr. KOGOVSEK, Mr. MURPHY, Mr. MURTHA, Mr. PATTERSON, Mr. PEPPER, Mr. STOKES, Mr. TRAXLER, Mr. WYDEN, and Mr. YATRON.

H.R. 227: Mr. MITCHELL of New York.

H.R. 231: Mr. WALGREN.

H.R. 269: Mr. LOWERY of California and Mr. ROTH.

H.R. 391: Mr. DANIEL B. CRANE.

H.R. 654: Mr. DE LA GARZA, Mr. BEREUTER, Mr. CONTE, Mr. O'BRIEN, Mr. HYDE, and Mr. OBERSTAR.

H.R. 728: Mr. HAWKINS, Mr. KOGOVSEK, Mr. FORD of Tennessee, Mr. FAUNTROY, Mr. RODINO, Mr. CROCKETT, Mr. MITCHELL of Maryland, and Mr. GUARINI.

H.R. 750: Mr. GLICKMAN.

H.R. 852: Mr. JOHN L. BURTON, Mr. MOFFETT, Mr. PARRIS, and Mr. CHAPPELL.

H.R. 858: Mr. BEREUTER.

H.R. 861: Mr. PORTER.

H.R. 907: Mr. BEILENSON, Mr. JOHN L. BURTON, Mr. DELLUMS, and Mr. PANETTA.

H.R. 934: Mr. CROCKETT and Mr. GUARINI.

H.R. 1034: Mr. ASHBROOK, Mr. ANDREWS, Mr. BAFALIS, Mr. BETHUNE, Mr. BUTLER, Mr. CRAIG, Mr. DANIEL B. CRANE, Mr. DANNEMEYER, Mr. FORSYTHE, Mr. GUYER, Mr. KINDNESS, Mr. MARRIOTT, Mr. MARTIN of North Carolina, Mr. RUDD, Mr. SPENCE, Mr. WHITEHURST, and Mr. WINN.

H.R. 1100: Mr. FAZIO.

H.R. 1359: Mr. BROOKS, Mr. WON PAT, Mr. ATKINSON, Mr. MCCLOSKEY, Mr. MURPHY, Mr. MARTIN of New York, Mr. EVANS of Georgia, and Mr. SOLOMON.

H.R. 1360: Mr. BROOKS, Mr. WON PAT, Mr. ATKINSON, Mr. MCCLOSKEY, Mr. MURPHY, Mr. EVANS of Georgia, and Mr. SOLOMON.

H.R. 1361: Mr. BROOKS, Mr. WON PAT, Mr. ATKINSON, Mr. MCCLOSKEY, Mr. MURPHY, Mr. BEARD, Mr. EVANS of Georgia, and Mr. SOLOMON.

H.R. 1405: Mr. BENJAMIN.

H.R. 1454: Mr. CROCKETT, and Mr. GARCIA.

H.R. 1554: Mr. GRAY, Mr. LOWRY of Washington, Mr. OTTINGER, Mr. SOLARZ, Mr. VENTO, Mr. WON PAT, Mr. ZEFERETTI, and Mr. DELLUMS.

H.R. 1602: Mr. YOUNG of Alaska, Mr. MURPHY, Mr. OTTINGER, and Mr. FAZIO.

H.R. 1643: Mr. ROBERT W. DANIEL, JR., Mr. HOWARD, Mr. BARNARD, Mr. PAUL, Mr. HIGHTOWER, Mr. LUNGREN, Mr. DUNCAN, and Mr. FRENZEL.

H.R. 1711: Mr. LOEFFLER and Mr. EVANS of Georgia.

H.R. 1720: Mr. WEAVER, Mr. EVANS of Delaware, Mr. COURTER, Mr. BEDELL, Mr. CONYERS, Mr. LAFALCE, Mr. DWYER, and Mr. DYSON.

H.R. 1765: Mr. WAXMAN, Mr. CLAUSEN, Mr. MCCLOSKEY, Mr. SYNAR, and Mr. HIGHTOWER.

H.R. 1817: Mr. LUKEN, Mr. WILLIAMS of Ohio, Mr. YOUNG of Missouri, Mr. FITHIAN, and Mr. ANDREWS.

H.R. 1854: Mr. OBERSTAR, Mr. STARK, Mr. FORSYTHE, Mr. BEILENSON, Mr. EDGAR, Mr. GIBBONS, Mr. MILLER of California, Mr. MURPHY, Mr. FAZIO, Mr. WINN, Mr. SCHEUER, Ms. MIKULSKI, Mr. PEPPER, Mr. FISH, Mr. MCCLOSKEY, Mr. JACOBS, Mr. HUGHES, Mr. MINETA, Mr. MITCHELL of Maryland, Mr. CORRADA, and Mr. OTTINGER.

H.R. 1914: Mr. ATKINSON, Mr. CONYERS, Mr. DOUGHERTY, Mr. FISH, Mr. FORD of Tennessee, Mr. FORSYTHE, Mr. GUYER, Mr. PEPPER, Mr. STRATTON, Mr. STOKES, and Mr. WHITEHURST.

H.R. 1919: Mr. WOLPE, Mr. SCHEUER, Mr. WINN, Mr. EDWARDS of California, Mr. AKAKA, Mr. PRITCHARD, Mr. FLORIO, Mr. HAWKINS, Mr. STARK, Mr. ST GERMAIN, Mr. PANETTA, Mr. LONG of Maryland, Mr. ADDABBO, Mr. SANTINI, Mr. BROWN of California, Mr. CLAY, Ms. MIKULSKI, Mr. PHILIP BURTON, Mr. COELHO, Mr. LOWRY of Washington, Mr. PEPPER, Mr. MURPHY, Mr. ZEFERETTI, Mr. VENTO, Mr. BURGENER, Mr. KILDEE, Mr. STUDDS, Mr. FAUNTROY, Mr. RICHMOND, Mr. CLINGER, Mr. ROE, Mr. MINISH, Mr. LAFALCE, Mr. DYMALLY, Mr. MITCHELL of Maryland, Mr. RANGEL, Mr. LEHMAN, Mr. STOKES, Mr. MOTTL, Mr. FORD of Michigan, Mr. MILLER of California, Mr. FARY, Mr. DELLUMS, Mr. MCHUGH, Mr. ROYBAL, and Mr. YATRON.

H.R. 1932: Mr. HOLLAND, Mr. ANNUNZIO, Mr. BONIOR of Michigan, Mr. BROOMFIELD, Mr. DASCHLE, Mr. DUNCAN, Mr. FORD of Michigan, Mr. HERTEL, and Mr. KOGOVSEK.

H.R. 1969: Mr. BONER of Tennessee.

H.R. 2024: Mr. MILLER of California and Mr. SANTINI.

H.R. 2232: Mr. DERWINSKI, Mr. LAGOMARSINO, Mr. STOKES, Mr. MINETA, and Mr. KILDEE.

H.R. 2245: Mr. EMERSON, Mr. WILLIAMS of Montana, Ms. FERRARO, Mr. MILLER of California, and Mr. FISH.

H.R. 2327: Mr. MONTGOMERY, Mr. BEVILL, Mr. COLLINS of Texas, Mr. MCDONALD, and Mr. NICHOLS.

H.R. 2352: Mr. ROSENTHAL, Mr. DOWNEY, Mr. BINGHAM, Mrs. FENWICK, Mr. DERWINSKI, Mr. WEISS, and Mr. BARNES.

H.R. 2389: Mr. HOWARD, Mr. ROUSSELOT, Mr. PAUL, Mr. DERWINSKI, Mr. MCDONALD, Mr. LEATH of Texas, Mr. PEPPER, Mr. ARCHER, Mr. KILDEE, Mr. CONTE, and Mr. DICKINSON.

H.R. 2393: Mr. GOLDWATER, Mr. WEBER of Minnesota, and Mr. SMITH of Alabama.

H.J. Res. 155: Mr. ALBOSTA, Mr. BEDELL, Mr. BEILENSON, Mr. BENJAMIN, Mr. BOLAND, Mr. BONER of Tennessee, Mr. BROWN of California, Mr. CARNEY, Mr. DELLUMS, Mr. DIXON, Mr. DONNELLY, Mr. DOWNEY, Mr. DYMALLY, Mr. EDWARDS of Oklahoma, Mr. ERDAHL, Mr. ERTEL, Mr. FOLEY, Mr. FOUNTAIN, Mr. GEJDENSON, Mr. GREEN, Mr. HUTTO, Mr. JEFFORDS, Mr. KAZEN, Mr. LELAND, Mr. LUKEN, Mr. MCCLOSKEY, Mr. MCDADE, Mr. MARKS, Mr. MARRIOTT, Mr. MOLINARI, Mr. NEAL, Mr. NOWAK, Mr. PRICE, Mr. ROUSSELOT, Mr. RUDD, Mr. SABO, Mr. ST GERMAIN, Mr. SCHUMER, Mr. SMITH of New Jersey, Mr. SOLOMON, Mr. WOLF, Mr. WYDEN, Mr. YOUNG of Alaska, Mr. BENNETT, Mr. BONIOR of Michigan, Mr. CONYERS, Mr. FOWLER, Mr. GARCIA, Mr. MATTOX, Mr. MINISH, Mr. PATTERSON, Mr. RAILSBACK, Mr. ROYBAL, Mr. SHAMANSKY, Mr. SUNIA, Mr. TRAXLER, Mr. YOUNG of Florida, Mr. LANTOS, Mr. EVANS of Georgia, Mr. EVANS of Delaware, Mr. RATCHFORD, Mr. ROSE, Mr. SMITH of Iowa, Mr. WHITTEN, Mr. GILMAN, Mr. CARMAN, Mr. STOKES, Mr. BEARD, Mr. PERKINS, Mr. GRADISON, Mr. HANCE, Mr. ERLENBORN, Mrs. BOUQUARD, Mr. BRINKLEY, and Mr. RITTER.

H.J. Res. 162: Mr. SHAMANSKY, Mr. BEDELL, Mr. MINETA, Mr. DASCHLE, Mr. KASTENMEIER, Mr. BARNARD, Mr. DORGAN of North Dakota, Mr. HYDE, Mr. EVANS of Delaware, Mr. WILSON, Mr. BLANCHARD, Mr. CONYERS, Mr. HUBBARD, Mr. ZABLOCKI, Mr. DYSON, Mr. GUYER, Mr. CROCKETT, Ms. FIEDLER, Mr. FARY, Mr. MOLLOHAN, Mr. PARRIS, Mr. KEMP, Mr. PERKINS, Mr. LUKEN, Mrs. BOGGS, and Mr. ROYBAL.

H. Con. Res. 52: Mr. GUARINI, Mr. WILLIAMS of Montana, and Mr. GRAY.

H. Con. Res. 55: Mr. SHAMANSKY.

H. Con. Res. 61: Mr. EVANS of Georgia, Mr. EMERY, Mr. MCHUGH, Mr. RODINO, Mr. LEDERER, Mr. EARLY, Mr. PEPPER, Mr. GRAY, Mr. HAMMERSCHMIDT, Mr. LEE, Mr. BUTLER, Mr. ADDABBO, Mr. ERTEL, and Mr. SHUSTER.

H. Con. Res. 81: Mr. WHITEHURST, Ms. MIKULSKI, Mr. STOKES, Mr. FORSYTHE, Mr. SUNIA, Mr. YATRON, Mr. OTTINGER, Mr. CONYERS, and Mr. CORRADA.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

38. By the SPEAKER: Petition of the Ohio Civilian Conservation Advisory Council, Columbus, relative to the Federal young adult conservation corps program, and the youth conservation corps program; to the Committee on Education and Labor.

39. Also, petition of Mercedes Carney, West Park, N.Y., and others, relative to El Salvador; to the Committee on Foreign Affairs.

EXTENSION OF REMARKS

THE PANAMA CANAL APPROPRIATIONS AUTHORIZATION ACT, FISCAL YEAR 1982

HON. WALTER B. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. JONES of North Carolina. Mr. Speaker, today I am introducing a bill to authorize appropriations for operation of the Panama Canal in the fiscal year beginning October 1, 1981. The enactment of such legislation is required by the provisions of the Panama Canal Act of 1979, establishing the Panama Canal Commission as an agency in the executive branch of the U.S. Government for operation of the Panama Canal under the President and Secretary of Defense. Section 1302 of the act provides that no funds be obligated or expended for any fiscal year unless such obligation or expenditure has been specifically authorized by law. The purpose of this bill is to provide such authorization for fiscal year 1982, subject to the limitations and conditions included in the bill.

Section 2(a) of the bill authorizes appropriations of $420,520,000 for operating expenses and capital improvements at the Panama Canal during fiscal year 1982. This is the amount requested in the amendment to the budget submitted to the Congress on March 10, 1981.

Section 2(a) also places limitations on amounts that can be spent for certain specific objects, such as employee recreation and community projects, employment of consultants and administrative expenses of the Supervisory Board. These limitations correspond generally to those included in the authorization bill and Appropriation Act for fiscal year 1981 (Public Law 96-400).

The bill also divides the capital projects included in the President's budget for the Panama Canal Commission into four categories, and places a spending limitation on each. Increases in amounts spent for individual projects within any of the four categories is authorized after notice to the appropriations and cognizant legislative committees, with provision for veto of such increases by any of such committees. In any event, such increases may not result in an increase in the total amount authorized for each category or for all the included capital projects.

Section 3 of the bill provides in effect that meetings of the canal's Supervisory Board must be open to the public in accordance with the Government in the Sunshine Act (5 U.S.C. 552b). This provision follows the recommendation of the Panama Canal Subcommittee of the Committee on Merchant Marine and Fisheries in an oversight report unanimously adopted by the subcommittee after oversight hearings conducted pursuant to rule X of the Rules of the House of Representatives. The oversight report is published in full at page H10381 of the CONGRESSIONAL RECORD of October 2, 1980.

Under the provisions of the Congressional Budget and Impoundment Control Act, all bills to authorize appropriations for fiscal year 1982 must be reported not later than May 15. The Committee on Merchant Marine and Fisheries expects to report this legislation well in advance of that date, in order that there may be no delay in the enactment of necessary appropriations for operation of the canal without interruption while it remains in the control of this Government.

The text of the bill and a section-by-section analysis of the bill follows:

H.R. 2596

A bill to authorize appropriations for the fiscal year beginning October 1, 1981, for the maintenance and operation of the Panama Canal, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. That this Act may be cited as the "Panama Canal Appropriations Authorization Act, Fiscal Year 1982."

OPERATING EXPENSES AND CAPITAL OUTLAY

SEC. 2. (a) There is authorized to be appropriated from the Panama Canal Commission Fund for the use of the Panama Canal Commission for the fiscal year beginning October 1, 1981, not to exceed $420,520,000 required for necessary expenses of the Commission incurred under the Panama Canal Act of 1979, including—

(1) not more than $5,000 for the hire of passenger motor vehicles;

(2) not more than $776,000 for the hire of aircraft;

(3) not more than $136,000 for uniforms or allowances therefor, as authorized by sections 5901 and 5902 of title 5, United States Code;

(4) not more than $25,000 for official reception and representation expenses;

(5) not more than $272,000 for operation of guide services;

(6) not more than $60,000 for the maintenance of a residence for the Administrator, as authorized by section 5913 of title 5, United States Code;

(7) not more than $25,000 for disbursement by Administrator for employee recreation and community projects.

(8) not more than $520,000 for procurement of expert and consultant services as provided by section 3109 of title 5, United States Code;

(9) maintenance and alteration of facilities of other United States Government agencies in the Republic of Panama used by the Panama Canal Commission;

(10) not more than $3,724,000 for maintenance and alteration of facilities of the Government of the Republic of Panama, used by the Commission, of which the United States retains use pursuant to the Panama Canal Treaty of 1977 and related agreements;

(11) payment of liabilities of the Panama Canal Company outstanding as of September 30, 1979; and

(12) not more than $50,000 for expenses of the supervisory Board established pursuant to section 110 of Public Law 96-70 (93 Stat. 456), including travel and transportation expenses under section 5703 of title 5, United States Code.

(b) Not to exceed $19,766,000 of the funds appropriated pursuant to the authorization in subsection (1) of this section may be expended for acquisition, construction and replacement of facilities, structures, equipment, and improvements thereto required by the Panama Canal Commission, including the purchase of not to exceed forty passenger motor vehicles of which twenty-eight are for replacement only. Amounts appropriated pursuant to this subsection are authorized to remain available until expended.

(c) Of the sums referred to in subsection (b) of this section, not more than the following amounts shall be available for the following purposes:

(1) for transit projects, $13,764,000;

(2) for general support projects, $3,252,000;

(3) for utilities projects, $1,870,000;

(4) for quarters improvement projects, $880,000.

(d)(1) Subject to the limitations prescribed in paragraph (2), the amount which may be expended for any individual project within any category of projects contained in paragraphs (1) through (4) of subsection (c) may be increased above the amount specified for that individual project in the budget estimate submitted to the Congress by an amount necessary to meet increased costs in such project due to inflation or other unforeseeable factors, if the Board of the Panama Canal Commission has approved such increase and has notified in writing the Committee on Merchant Marine and Fisheries of the House of Representatives, the Committee on Armed Services of the Senate, and the Subcommittees on Transportation of the Committees on Appropriations of the House of Representatives and the Senate of the Commission's approval of such increase, the reason for such approval, and the new cost estimate for the project concerned. Any of the committees referred to in this subsection may disapprove the increases in amounts for any individual project as proposed by the Commission.

(2) In no event may—

(A) the total cost of all projects within any of the categories of projects contained in clauses (1) through (4) of subsection (c) exceed the amount authorized by law for that category, or

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

(B) the total cost of all capital projects authorized by this section exceed the amount appropriated for such projects.

(e) There is authorized to be credited to amount appropriated pursuant to this section, for payment to other United States Government agencies, an amount equal to the amount of funds received from officers and employees of the Commission or commercial insurers of Commission employees for expenditures made for services provided to Commission employees and their dependents by such other agencies.

MEETINGS OF BOARD

SEC. 3. None of the appropriations authorized in this Act may be expended for meetings of the Board established by section 1102 of the Panama Canal Act of 1979 (93 Stat. 456) unless such meetings are open to the public in accordance with the provisions of the Government in the Sunshine Act of September 13, 1976 (90 Stat. 1241, 5 U.S.C. 552b).

SECTION-BY-SECTION ANALYSIS, PANAMA CANAL APPROPRIATIONS AUTHORIZATION ACT, FISCAL YEAR 1982

SEC. 1. Short Title.

SEC. 2. Paragraph (a) authorizes a total appropriation of $420,520,000 for necessary expenses of the Panama Canal Commission in F.Y. 1982. This is the amount requested in the revised budget submitted March 10, 1981.

Paragraph (a) specifically authorizes appropriations for 12 categories of expense as follows:

(1) hire of passenger motor vehicles—$5,000.

(2) hire of aircraft—$776,000.

(3) uniforms and uniform allowances—$136,000.

(4) entertainment and representation—$25,000.

(5) guide services—$272,000.

(6) maintaining residence of Administrator—$60,000.

(7) employee recreation and community activities—$25,000.

(8) experts and consultants—$520,000.

(9) maintenance and alteration of facilities of other U.S. Government agencies.

(10) maintenance and alteration of facilities of the Government of Panama—$3,724,000.

(11) payment of liabilities of Panama Canal Company outstanding as of September 30, 1979.

(12) expenses of Supervisory Board—$50,000.

In the absence of information as to the amounts included in the budget for the 12 enumerated objects, the amounts authorized for fiscal year 1981 have been used with two exceptions. The item for hire of passenger motor vehicles authorized last year was in the amount $495,000 for funding a one-year contract for shuttle bus service. Such a contract is not the hire of vehicles within the meaning of 31 USC 638a which requires authorization for the hire of vehicles. Authorization for the operation of the bus service is included in the operating expenses in the first clause of section 2(a).

The 1981 appropriation did not contain a limitation on expenses of the Board. The justification material submitted by the Commission in support of the budget includes $92,000 for such expenses in comparison to $44,000 in 1980 and $89,000 estimated for 1981. The $50,000 included in this bill is based on the 1980 actual with provision for inflation.

Paragraph (b) of section 2 would authorize expenditure of $19,766,000 of the total amount of the appropriations authorized in section 2(a) for capital acquisition and improvements. This amount is authorized to remain available until expended. The paragraph further authorizes acquisition of 40 passenger automobiles, of which 28 are for replacement. The numbers of vehicles follow the January appropriation request, although they are a substantial increase over the numbers included in the 1980 authorization bill and appropriation act (31 total of which 19 were for replacement).

No limit is specified for the dollar amount to be expended for new automobiles inasmuch as this amount is controlled by general law applicable to all agencies.

Paragraph (c) of section two divides the authorized capital projects into four categories and specifies the amount of the total authorization available for each. The types of categories are those included in last years authorization bill and appropriation act, and the amounts authorized for each are those requested in the Commission's budget submitted by the President in January.

Paragraph (d) of Section 2 is based on a similar provision in the 1981 authorization bill and appropriation act authorizing increases in the amounts authorized for individual projects in each category of capital projects after the approval by the Commission's supervisory Board and notice to the legislative and appropriations Committees of Congress. Provision is included for disapproval of the increases by any of the Committees as notified. Increases in the total authorized for each project or in the total amount authorized for all projects are specifically prohibited.

Paragraph (e) of section 2 authorizes the crediting to the appropriation of amounts received by the Commission for services to employees by other agencies. This language follows the 1981 authorization bill and appropriation act as well as the 1982 budget request.

Section 3 of the bill provides that none of the appropriations authorized may be expended for meetings of the Commission's supervisory Board unless such meetings are open to the public in accordance with the Government in the Sunshine Act of September 13, 1976 (5 U.S.C. 552b). This requirement is included because of adoption of regulations by the Board providing for closed meetings, notwithstanding the requirement of the 1976 act, applicable to executive agencies generally, requiring open meetings. The subject was explored fully in the oversight hearings held by the Panama Canal subcommittee on July 28, 1981, and the subcommittee unanimously recommended that open meetings be held in accordance with the Act. The Commission has not acted on that recommendation.●

RESOLUTION IN OPPOSITION TO THE PROPOSED DEFERRAL OF CETA FUNDS

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. HAWKINS. Mr. Speaker, I rise to speak on the subject of the proposed CETA deferrals which the President announced in his message to Congress on March 10, 1981. It is my intention to oppose the deferrals in title II(d), welfare demonstration program, summer youth, YACC, and research and development and evaluation. To that end, I am introducing today a resolution which would disallow these deferrals.

While I will also oppose the CETA PSE title VI rescissions at the appropriate time, today, because of time constraints, I will limit my comments to only the deferrals of title II(d) PSE.

There exists a great urgency particularly in dealing with the President's deferral message as it relates to title II(d) to the fact that a great many CETA prime sponsors find that the new and reduced allocation levels leave them with absolutely no funds with which to continue their II(d) programs beyond March 17. While these prime sponsors were informed by DOL that the expense of giving the customary 2 weeks' termination notices would be covered by the Department, the message is clear that the program will be terminated immediately.

In the case of the city of Los Angeles alone, this means that on March 17 a total of 3,000 termination notices were sent out. Of this total, 1,300 went to persons involved in training and employment programs operated by 29 community-based private nonprofit organizations. All participants were drawn from the structurally unemployed, and 52 percent were hired from local welfare rolls.

For other cities the situation is not much better, and within a few months it is estimated that the title II(d) program will be virtually nonexistent. At the same time, the unemployment ranks will be so inflated by this anticipated action that the Department of Labor has reserved $245 million of its CETA funds to cover the UI liability created by the termination of the PSE title II(d) and VI programs.

Mr. Speaker, the fact that the President's proposals are tantamount to ending programs sanctioned by Congress, without any congressional review is reprehensible; but this, coupled with the fact that the programs he is cutting means the difference between hope and desperation for millions of Americans, is unacceptable.●

PEN, SWORD, AND MIGHT

HON. IKE SKELTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. SKELTON. Mr. Speaker, Maj. Gen. W. D. Crittenberger, Jr, USA (ret.), recently brought to my attention an article from the Wall Street Journal pointing out our need for military leaders as opposed to bookkeeping managers. It is entitled, "Pen, Sword and Might."

The article follows:

PEN, SWORD AND MIGHT

Regarding Irving Kristol's Feb. 23 editorial page article "A Letter to the Pentagon":

Mr. Kristol is exactly right about the demoralization of the American military. Before we resigned recently as regular line officers (in the Navy and Army, respectively), we observed examples too numerous to count of the symptoms and effects he describes. Several of our fellow law students are also former military officers, some of rather high rank. To a man they agree that the military's problems stem from the officer corps' obsessive desire to be managers rather than warriors. As James Fallows observed last year in Atlantic Monthly, George Patton probably would never reach general officer rank in today's Army.●

MUST MX BE A SHELL GAME?

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BEDELL. Mr. Speaker, yesterday I introduced House Concurrent Resolution 94, expressing the sense of Congress that the MX/MPS basing system should be halted until we negotiate an effective SALT limitation on Soviet ICBM's and warheads.

The New York Times this morning took up this issue in a lead editorial entitled, "Must MX Be A Shell Game?" The Times editors first noted the primary environmental and cost objections to the current MX basing plans and recommended the so-called SUM submarine alternative. Equally important, however, the editors spoke directly to the issue of SALT, stating that "(t)he shell game makes little sense without SALT limits on the Soviet missile buildup."

I agree fully with the views expressed in this editorial and recommend its reading to my colleagues. The text of the editorial follows:

[From the New York Times, Mar. 18, 1981]

MUST MX BE A SHELL GAME?

Why, Defense Secretary Weinberger has been asking his military advisers, does the mobile MX missile have to be part of a "shell game"? Why must it be based in concrete shelters in Utah and Nevada, tearing up the countryside and fomenting wide public resistance? Why not base it at sea, perhaps aboard small submarines in deep ocean, a few hundred miles off the Atlantic and Pacific Coasts?

The new Secretary says he has found Pentagon minds all made up: the present "shell game" plan with 200 missiles shuttling among 4,600 shelters is the best answer to the vulnerability of silo-based ICBM's. But to his credit, Mr. Weinberger has not settled for that answer. He has now put his questions to a panel of outside defense experts, to report to him in June.

There are two fat objections to the MX plan favored by the military. It did not foresee the surge of public opposition in the Western states. Environmental lawyers could tie things up in court for years. In the background, there is "an element of the unreal," as Mr. Weinberger has noted, in building so complex a system, of almost Rube Goldberg dimensions and costing $34 billion, to conceal such a small number of missiles. Is there no other way?

Yes: Put the MX on submarines, which will provide automatic concealment in two million square miles of ocean.

Then why hasn't the Pentagon gone in that direction already? Because existing submarine-launched missiles are not as accurate as land-based missiles and are not as responsive to command and control. Current missile subs are scattered over the globe and unable to communicate without revealing their location. And shifting MX to submarines would eliminate one leg of the strategic "triad"—bombers, land-based missiles and submarine-launched missiles.

But those arguments do not apply to small offshore submarines, aided by coastal guidance and radio systems. Such vessels should be able to achieve survivability, with missile accuracy and communications at least comparable to a land-based MX system and at no greater cost, according to preliminary findings of a study by the Congressional Office of Technology Assessment.

The study identifies two main problems with this system, known as the small-submarine underseas mobile plan. Some unforeseen breakthrough in antisubmarine warfare might one day create a simultaneous threat to both the Trident and coastal submarines. Shortages of shipyard capacity might delay deployment until the early 1990's.

But the originators of the small-sub concept, Sidney Drell of Stanford and Richard Garwin of I.B.M., are convinced that the small sub is practical. It would differ enough from the big Trident sub so that no single antisubmarine warfare breakthrough would threaten both systems. Also, small submarines are being made in West Germany and some could be bought there until American models are available.

The small-sub idea also has other virtues. It could begin adding invulnerable missiles to the American inventory from the very first submarine deployed. The shell-game system, by comparison, would gain nothing for American security until there were more shelters than Soviet warheads capable of destroying them. To build that many shelters would take nearly until 1990, by which time construction of a small submarine fleet could also be well under way.

Mr. Weinberger is right to take a new look at the small-sub system. The Air Force would not be overjoyed to put its new missiles on Navy vessels. But the system has advantages at a time when the strategic arms treaty is in doubt. The shell game makes little sense without SALT limits on the Soviet missile buildup, which could require 8,250 MX shelters by 1990 and 12,250 by 1995. Small subs could survive a SALT failure.

More important, the small-sub idea offers a valuable bargaining chip. Deployment could be curtailed in return for a favorable SALT agreement. That would save money while adding a reasonable quota of survivable missiles to the American arsenal.●

AGRICULTURAL RESEARCH

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington report for Wednesday, March 18, 1981, into the CONGRESSIONAL RECORD:

AGRICULTURAL RESEARCH

Most of the talk in Washington these days has to do with cuts in the federal budget. It may be a bit out of step—but it is necessary nonetheless—to point to one item in the budget which should not be cut. In fact, that item—agricultural research—should probably be increased.

Agricultural research goes back at least to the settlers of the 1660's who experimented with Indian corn in order to survive. Presidents Washington and Jefferson argued for improved agriculture and conducted experimental work. President Lincoln launched such research at land grant colleges, and there was a revolution in farm production by the end of the Civil War. A second revolution occurred after World War II. Farm productivity has increased by one-half since 1950, with two-thirds the labor force and the same amount of land under cultivation. Greater productivity has been due primarily to new technologies and practices developed through research.

The federal government supports 47% of the nation's agricultural research. The United States Department of Agriculture (USDA) is spending roughly $800 million on major research this year. About $400 million goes to the USDA's 150 domestic research facilities. Another $200 million, with state monies, funds the cooperative research program at state universities, a program which concentrates on the immediate needs of local agricultural interests. Research in Indiana ranges from agricultural production and marketing to conservation and human nutrition. Work on the erosion of soil, the improvement of soybeans and wheat, the control of insects, and the genetics of animals is also underway.

Federal funds for agricultural research appear to have been spent well. Economists say that consumers and farmers reap a return of nearly 50 cents above costs on every federal dollar so invested. This return compares favorably to that of private industry, which typically earns no more than 20 cents above costs on each dollar it invests in research. The main benefit comes in the form of lower retail prices for food. It may be hard to believe after a trip to the supermarket, but Americans spend less of their income on food than do people in any other industrialized country. This benefit is available despite the fact that spending for agricultural research equals only 2% of the total federal research budget.

The outstanding record of agricultural research has not silenced all critics. Some people contend that current trends in research have made agriculture too dependent on dangerous pesticides that pollute the water and destroy natural predators, on large machines that consume too much energy and encourage the consolidation of farmland, and on techniques of selective breeding that limit genetic diversity and invite catastrophe. While such criticisms cannot be dismissed out of hand, most observers believe that agricultural research has done much more good than harm.

Agricultural research will be facing significant challenges in the years to come. On the one hand, worldwide demand for food is rising. The world's rapidly growing population may number 6.35 billion by the end of the century, and more countries are striving to improve the quality of the food their people eat. On the other hand, meager supplies of grain and higher prices for the

energy used by farmers may lead to shortages of food in many places. Worse still, American agriculture may be reaching a "productivity plateau" from which the yield per acre of basic crops cannot be raised. The reservoir of untapped agricultural technology may be nearly exhausted.

The agricultural boom of the 1950's and 1960's was due mainly to chemical and mechanical innovation and an abundance of energy, soil, and water. As agricultural research seeks to address new challenges, however, it will bump up against several limits. Farm expenditures for petroleum have more than doubled in the past five years, and prices for fuel are expected to increase more than 20% in 1981. Three million acres of farmland are lost to urban sprawl, industrialization, and water projects each year, and an annual average of nine tons of soil per acre is lost through erosion. The national demand for water will be almost half again as great by the year 2000, and much water will be unavailable for farm use on account of pollution and diversion to other uses.

How will the Americam farmer produce more food with fewer resources? More research is the answer, and it is taking many forms. Because of the high cost and adverse environmental effect of chemical pesticides, farm scientists are working to develop "natural" mechanisms for the control of pests. They are investigating how plants might be bred to draw nitrogen from the air, thereby reducing the need for fertilizers. Other research is moving along, too. For areas where the soil is saline, farm scientists are screening varieties of crops that would be able to tolerate salt. They are studying how satellites might be used to gather data on plots of land anywhere in the world.

Research has helped make American agriculture an immensely productive enterprise. We must see to it that investment in such research continues to have priority among federal initiatives.●

NURSING HOME PATIENTS RELIEF ACT

HON. MARTIN OLAV SABO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. SABO. Mr. Speaker, we hear a lot of discussion these days about how States need greater flexibility in administering Government programs. Today I am introducing a bill which would provide some of that needed flexibility while addressing a severe problem faced by older couples.

The bill would amend title XIX of the Social Security Act. It would give States flexibility in establishing income contribution and resource standards for couples to qualify for medicaid when one spouse is in a nursing home.

Under the present system, a person must often forgo income and live in impoverished circumstances when his or her spouse resides in a nursing home and medicaid funds are needed.

The most common example of this dilemma occurs among older couples who have retired on the husband's pension. The husband is often the first to require nursing home care. When he does, HHS guidelines require that most of his pension be used to pay for his care before he is eligible for medicaid. There is then often not enough pension income left over to provide the healthy wife with a decent standard of living.

Even though the couple had been an economic unit with the wife contributing to its sustenance and even though the couple had planned to live out their days sharing the husband's pension, the wife is left with far less than half the couple's income. She often can no longer afford to live on her own and is typically forced to go into a nursing home, too. Such a situation costs the Government money and erodes the freedom and dignity of the healthy wife.

The bill I am introducing today would allow the Secretary of HHS to approve State medical assistance plans which contain more flexible standards than current rules allow. Under this bill, States could pass laws which would allow these couples to qualify for medical assistance while retaining enough income to support the healthy spouse. No State would be required to pass such a law. In States where current rules are adequate, no change need be made. However, in States where the cost of living is high, the legislatures would be able to pass a law providing the necessary flexibility to insure their older couples the medical assistance they need.●

U.S. INTERVENTION IN EL SALVADOR

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. HARKIN. Mr. Speaker, Tuesday, March 24, marks the first aniversary of the assassination of Archbishop Oscar Romero of El Salvador. This month is also the first anniversary of our Government's first military assistance to the government which refused to investigate or prosecute those who were responsible for the archbishop's murder.

The rape and murder of four American churchwomen dispelled whatever illusion was left that the present junta in El Salvador is moderate or responsible. The American people, led by church groups of every faith, have forcefully rejected the official justification for increased U.S. involvement in the civil war in El Salvador. It is time for us, as elected representatives of the American people, to speak out as well.

A government which permits the wanton murder of American churchwomen and American labor advisers, the assassination of the beloved archbishop, the torture, mutilation, and murder of thousands of men, women, and children is no bastion of pro-Americanism. If this kind of government is what the free world has to offer in place of communism, then it is no wonder that the people themselves reject not only our country but our values as well. America stands for something better.

John Kenneth Galbraith discussed the decline of the Soviet Empire over the last 20 years in an article in yesterday's Post. In it, he stressed that Soviet efforts to expand their sphere of influence in the Third World have been a disasterous failure. He also warns U.S. policymakers of making the same kind of heavy-handed mistakes. How ironic it would be if the United States squandered a precious resource—the example our Nation sets in comparison to the Soviet Union—by intervening in El Salvador to prop up a hated government in the name of anticommunism.

I would like to include with my statement the December 16th statement by the Maryknoll Sisters on the deaths of four American churchwomen in El Salvador.

MARYKNOLL SISTERS' RESPONSE TO STATE DEPARTMENT PRESS RELEASE ON SPECIAL PRESIDENTIAL MISSION TO EL SALVADOR

MARYKNOLL, N.Y.—The deaths of Sisters Ita Ford, Maura Clarke, Dorothy Kazel and Miss Jean Donovan have focused international attention on El Salvador. We are profoundly saddened by their deaths; but they are only one example of the thousands of deaths which took place this past year, the great majority of which have occurred at the hands of the security forces. Our concern today is for all the people of El Salvador.

On December 12th, the State Department issued a public statement regarding the actions and findings of the special Presidential Mission to El Salvador. Their report leaves us with many questions; but we would like to respond in a general way to two important statements, which are made therein.

The statement reports:

"The Special Mission reported that thus far there was no direct evidence of who committed the crime especially because of the circumstantial evidence of possible security force involvement in the case. The Mission urged the authorities of El Salvador to conduct a complete, thorough, and professional investigation of these murders so that these questions can be answered and those responsible be brought to justice."

We would remind the U.S. government that from the evidence which we have been able to gather, which includes statements from Church officials, the American Embassy, international organizations and high U.S. government officials, there is a probability that the security forces are involved in the deaths of these four women.

As to whether or not we believe the Salvadoran government would be the indicated authorities to make an investigation, we go to the words of Bishop Rivera y Damas made in a statement on December 6th, in response to the deaths of our Sisters:

"Although those directly responsible for this persecution want to minimize their part in it by invoking the violence of the rightists and leftists without any trouble, or by being backed by a very powerful political-military machine, nevertheless, in the almost four years that the Church has suffered persecution, it has been evident that the majority of the acts of persecution against the Church has been perpetrated by members of the Security Forces and paramilitary organizations. Thus, we deny the versions that at times some members of the government have affirmed, which would blame other social groups for this persecution.

"Therefore, we place the responsibility of the persecution of the Church, and specifically of those assassinated—the pastoral workers as well as the priests—on the security forces and the extreme right-wing groups. And as a consequence, we also lay this responsibility on the government junta, who by exercising the supreme command over the armed forces, is accountable for the actions of their members. We regret that the regimes pervious to the junta and also the revolutionary junta itself, have not fulfilled their promise to investigate the criminal assassinations of Msgr. Romero, the priests, religious and pastoral workers.

"That is why their statements lose credibility and why we cannot accept their excuses, made after the facts, nor the promises of investigations."

The State Department also states they expect there will be changes made within the Salvadoran government structure and that the U.S. is ready to resume its assistance to El Salvador "upon such progress." In response, we state strongly that we do not believe that a reshuffling of the junta members or military would be in any way a sign to resume U.S. aid. Only the immediate end to repression by the security forces could signal any significant progress in El Salvador. Again, we quote and support the same statement of Bishop Rivera y Damas:

"Only an immediate and effective halt to the repression and the persecution would show a decisive will to terminate both, and so to exonerate the junta of their responsibility to some degree. And only the immediate halt to the repression and the persecution would give any credibility to the repeated offers for dialogue to bring peace to the country. In any other way, all possibilities for achieving true peace in the country through non-violent means are being choked off.

"And so, we beg the government of the United States, as did our martyr Archbishop Romero in a prophetic gesture, that it not provide military aid to our government. Because in spite of the declarations as to the intent of the assistance, any military aid only facilitates the repression of the people and the persecution of the Church."●

THE MEANING OF FREEDOM

HON. CARROLL A. CAMPBELL, JR.

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. CAMPBELL. Mr. Speaker, I am proud to include in the RECORD today for the review of my colleagues an essay by Tammy Alicia Woolbright, an eighth grade student at D. R. Hill Middle School in Duncan, S.C., titled "The Meaning of Freedom," Tammy's essay truly captures the spirit of America.

Tammy's essay was written in response to the Spartanburg, S.C., Sertoma Clubs' National Heritage Week essay contest. It not only won the individual school contest, but took grand prize in the area contest as well.

My thanks to D. R. Hill Principal James D. Henderson for providing me with a copy of this thoughtful essay, and my congratulations to Tammy and to her mother, Mrs. Jane C. Wilson of Inman. Tammy is a fine citizen and does this Nation proud.

The essay follows:

THE MEANING OF FREEDOM

(By Tammy Alicia Woolbright)

Freedom, a word that we consider just that—a word—is the hope, the joy, the bright light at the end of a dark tunnel for people all over the world. This one idea that emerged from the single want of our forefathers has been nurtured and has grown into the basic principle of a great nation, the United States of America.

In times of crisis such as the recent capture of Americans in Iran, we are forced to realize how fortunate we are. Fifty-two more Americans have shown the remainder of us the true meaning of freedom. They have reminded us of the value of the freedom that our forefathers fought so hard to gain, defend, and keep for themselves and their descendants.

The true meaning of freedom cannot be defined within one phrase. It is, in truth, many meanings to many people. These meanings can be small or large but each is just as important as the word itself. To people in Poland, it means only working five days a week; to children, it means a butterfly floating across a meadow on the wind. To soldiers returning from war, freedom means peace and Old Glory as well as our flag of red, white, and blue. To the hostages, it means being able to walk outside without captors by their sides or blindfolds upon their eyes.

Freedom is the controlling of your life and not having it controlled for you. Freedom is the right to speak as you think, and do things you like, which may be outlawed by communist governments. To artists, it is the right to paint what is really in their hearts. To others, it is the right to worship as one pleases.

Freedom, like every other thing, has its boundaries. The boundaries or laws protect your freedom and other's freedom as well. They restrain freedom from becoming wild and dangerous.

Freedom is a privilege we as Americans all have in common. Are we willing to defend our rights to hold our greatest privilege or are we going to sit back and slowly watch it disappear from our lives? Let us pledge to preserve and defend our freedom as we hope our descendants will. The world is depending upon us alone to preserve the rights of freedom. Will our heritage be remembered in history as a short lived hope and only for a moment a reality?

Let us instill the honorable cause of freedom in our children so it will continue to be the bright light and small candle in a world of darkness and despair. Do not let the future of America die. Today, the choice is ours.●

NONIMMIGRANT ALIENS

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. NICHOLS. Mr. Speaker, I am joining with the other members of the entire Alabama delegation to introduce legislation which would give the President the power to immediately order deported broad categories of nonimmigrant aliens.

This legislation is necessitated by the recent deplorable events which occurred in Iran when our fellow citizens were taken hostage.

Our research reveals that the Federal courts have unquestionably stated that the Congress has broad constitutional authority to determine what aliens shall be permitted entry into the United States, the period they may remain, and the regulation of their conduct once so admitted.

Our legislation would provide that upon a finding by the President that an act of terrorism or other hostile act has been committed against one of our citizens, corporations, and so forth, by or with the assistance of a foreign government or in a foreign state and with the acquiescence of that government and, also, upon a finding by the President that it is in the Nation's interest to limit entry into or expel from U.S. nonimmigrants or that state, the President may sign an Executive order expelling these nonimmigrant aliens.

Nonimmigrant aliens fall into the following categories: Diplomats, business visitors, tourists, crewpersons, aliens in transit, trade missions, students, representatives accredited to international organizations, fiancees, aliens temporarily performing services of an exceptional nature, foreign press and media, and aliens participating in State Department programs.

I am convinced the people in my district, as well as, throughout the State of Alabama perceived the United States as being completely impotent in dealing with the very hostile Iranian Government. This measure would give to the President greater leverage in correcting this inbalance and we expect our legislation to draw broad bipartisan support.

Thank you.●

OIL CONSERVATION AND UTILITY RATES

HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. CORCORAN. Mr. Speaker, I would like to share with my colleagues a thoughtful analysis of some of the

major problems facing the U.S. electric utility industry. The author, Peter Navarro of the Harvard University's Energy and Environmental Policy Center, discusses issues which my colleagues and I who serve on the Energy and Commerce Subcommittee on Energy Conservation and Power debate regularly, but these are questions which ultimately the full House of Representatives must face:

OIL CONSERVATION AND UTILITY RETURNS

(By Peter Navarro)

When the price of oil hurdled past the $30 per barrel barrier in 1979, the electric utility industry crossed an important threshold: It became cheaper to build, operate and fuel new coal or nuclear power plants than it was to continue to operate and fuel existing petroleum power plants. Specifically, at $30 per barrel, it becomes economic to displace roughly two-thirds of utility baseload oil consumption with new coal or nuclear plants. When natural gas prices are decontrolled, the same will be true of baseload gas-fired power plants.

The rational economic response of utilities to this sudden "economic obsolescence" of their petroleum plants should be feverish construction of new coal and nuclear plants to replace them or, where feasible, the conversion of these petroleum-guzzling economic dinosaurs to coal. Such a response would be most welcome both to national policymakers intent on reducing the three million barrels per day of utility petroleum consumption in the U.S., and to ratepayers, who would benefit by lower rates that will result from replacing petroleum with more economical coal or nuclear.

Instead, the industry appears to be largely ignoring the new economics of "petroleum displacement." Indeed, rather than accelerating new construction, it is delaying or canceling previously scheduled capacity. The National Electric Reliability Council (NERC) of Princeton, N.J., reports over half of the new capacity scheduled for 1979 through 1988 was delayed an average of 20 months. That could mean additional petroleum consumption of up to 2.2 billion barrels over the next decade. At the same time, fully two-thirds of economically feasible capacity has yet to be converted.

The obvious question is why has the industry failed to respond to the new economics? Part of the answer is, undoubtedly, difficulties with permitting and environmental laws and uncertainty over petroleum prices. But unquestionably the single most important factor is the dramatic deterioration in the industry's financial health since the Arab oil embargo.

RELUCTANT MANAGEMENT

Whereas previously the industry was characterized by bond ratings predominantly AAA and AA, it now falls predominantly into the A and BBB category, indicating an over 200-basis point increase in its cost of debt capital at today's rates. At the same time the average market-to-book ratio has plunged well below one; thus any new equity issue implies a "dilution" of existing shareholders' stock. The result is that management is very reluctant to issue new equity shares for fear of diminishing the value of existing shareholders' stock and equally reluctant to issue new bonds because of the rise in its cost of capital. Moreover, the lower-rated utilities can't even issue new bonds because of indenture provisions or the "prudent man" rule, which prohibits institutional investors from buying bonds below BBB. The result is a severe capital constraint which has forced the industry to shift its planning objective away from its traditional mandate to provide least cost reliable service to a strategy of minimizing new power plant construction.

What accounts for the industry's dramatic fall from financial grace? Some suggest it is mismanagement, but such an explanation is too facile. While some utilities are in worse shape than others, all are in serious financial straits. Bad management could hardly be that pervasive.

The other obvious candidates are higher energy prices and soaring capital costs. But while inflation is a large part of the problem, the root of the problem is electric utility regulation. Regulation has not—and in some cases simply will not—allow utilities to earn a rate of return (ROR) commensurate with their current cost of capital.

The statistics are startling. Because of regulatory lag, no major regulated utility was able to realize its "allowed ROR" in 1980. Moreover, in almost every case, the realized ROR was below the utility's current cost of capital. But clearly, if a utility cannot earn a current return on new investment, then any capital expenditures subject it to a loss. Thus it is not surprising that utilities are reluctant to build. While such construction would reduce petroleum imports and lower electricity rates, it increases financial risk and reduces shareholders' real income.

Interestingly, many utilities are justifying their failure to build new capacity under a newly unfurled banner of conservation—signaling an apparent convergence between an industry formerly wed to the "hard path" of new construction and energy doves who advocate a "soft path" solution to the "energy crisis." But delaying new power plant construction in the name of conservation ignores the economics of reducing oil use and will lead us not out of the import trap but deeper into it.

From the standpoint of national energy policy, the primary purpose of conservation is to reduce petroleum imports. To the extent that it achieves this goal, conservation is an undeniable "good." Conservation is "bad," however, when it is used as an excuse to curtail otherwise economically rational power plant additions to displace oil.

Unfortunately, many proponents of conservation mistakenly regard it as a substitute for new construction. But one must carefully differentiate between construction necessary to meet load growth and that undertaken to economically displace petroleum. To understand this distinction, observe the risks and rewards of believing the "hard" versus "soft" path forecasts.

NERC has projected an average annual increase in electricity demand of 4.1% over the next decade, implying a 50% increase in capacity. On the other hand, the Solar Energy Research Institute (SERI) has suggested that zero or slightly negative growth rate is possible, implying little "need" for new powerplants.

Suppose that utilities build to meet NERC's forecast and NERC is right. Then, the lights stay on, and our petroleum problem may even improve slightly since the new economic non-petroleum plants will be used more and existing petroleum plants less. But if growth is actually less, then in many areas each new megawatt of non-petroleum capacity will replace a megawatt of petroleum plant; and petroleum consumption, along with electricity rates, will be less than they otherwise would be.

Suppose, however, that the industry believes SERI and builds less. If SERI is right, our petroleum problem gets no worse but neither does it get much better, and regions such as New England and states like California and Florida will continue to rely on petroleum for over half of their electricity.

But what if SERI's forecast turns out to be wishful thinking conservation, and people simply don't respond? What if it underestimates the shift to electric heat or Detroit begins to mass produce electric cars? Unlike with overforecasting, the penalty for underforecasting is real. Both imports and electricity rates will rise sharply as utilities run existing petroleum plants at higher capacity factors to meet incremental demand. Moreover, as the threat of blackouts emerges, there will be a mushrooming of "short construction cycle" oil and gas combustion turbines—a response that will extend import dependence into the next century.

THE REAL POINT

The real point is not which forecast to believe but rather that new capacity does not necessarily trade off with the gains from conservation. While that tradeoff has some validity in regions like the Midwest that use little petroleum to generate electricity, it is equally true that in heavily petroleum-dependent areas the gains from conservation must go hand in hand with the gains from new capacity which produces electricity from non-petroleum sources.

The mistaken notion that conservation is always a substitute for new contruction is most frequently heard in the regulatory arena as a dispute over "reserve margins," which measure the percentage of capacity a utility has over peak demand. The traditional rule of thumb has been 20%; margins above that "safe" level are supposed to signal "goldplating" to boost utility profits. But the new economics of petroleum displacement require a more modern view: The 20% rule should be viewed merely as a lower bound below which no utility should fall for *reliability* reasons, but above which a utility may want to go for *economic* reasons.

The Department of Energy's National Electric Reliability Study has brought this distinction into sharp focus. The study determined what reserve margins provided the least cost electricity to ratepayers in different regions. It found "economic reserve margins" to rise with the amount of petroleum in a region's generation mix. For example, if New England, which depends on oil for over 50% of its electricity, were to build to a 27% "reliability" reserve margin, the cost of electricity generation would be 9.9 cents/kwh; but that cost could be cut in half if it built to an "economic" 78% reserve margin. Similarly, DOE found the economic reserve margin for the Southern California-Nevada region to be 70%, and 49% for the Flordia-Southern Companies region.

These results vividly illustrate that there is economic justification for building new power plants on the basis of petroleum displacement. There is then no difficult choice to make between the soft path of conservation and the hard path of new power plant construction. That is a false dichotomy. There is only a sprint as quickly as possible down the "smart path" that encompasses both options—the pursuit of economically rational petroleum displacement through conservation and new construction.●

LEGISLATION TO GET STARTED ON FILLING UP OUR CRITICAL STOCKPILES

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. McDONALD. Mr. Speaker, I am today introducing legislation to purchase certain materials for our strategic and critical materials stockpile. Many critical materials essential to wartime operation of our industry are either not available in the United States or only available in small quantities in the United States. Such items would have to come from overseas and the fact is that the U.S. Navy no longer controls the seas. Even if the U.S. Congress approves the new Reagan defense budget, it will be years before our Navy can return to No. 1 position in the world. Deficiencies in national stockpile, on the other hand, can be remedied in a much shorter time.

The legislation I am introducing today calls for the purchase of three items: silver, platinum, and nickel. According to the stockpile goals of the Federal Emergency Management Agency, we have no nickel in the stockpile. The goal is to acquire 204,335 short tons of nickel. My bill would provide the sum of $12,000,000 for the acquisition of nickel. At today's prices this would provide one-fourth the amount needed. The United States imports 77 percent of its required nickel. Nickel is used in the electroplating and in conjunction with chromium in the manufacture of stainless steel. This bill would also provide $95,000,000 for acquistion of platinum. Platinum is used as a catalyst in the manufacture of gasoline, as well as in the production of fertilizers, and in the electronics industry. Southern Africa has 86 percent of the world's known supply of platinum. In the midst of a possible world war III, there will be no U.S. Navy ships available to escort ships to the United States from southern Africa. Our stockpile is 861,360 troy ounces short of that item for wartime needs.

The last item in my bill is $131,000,000 for the purchase of silver. Silver is not a deficit item in our stockpile, or at least not according to the last administration which has proposed selling it. However, this body has seen fit to reject the sale of silver on several occasions, and this is the correct view, I feel. I am hopeful the Reagan administration will have a different opinion. Silver is a precious metal and is still needed in many weapons—the MX missile among them as well as our submarines. Silver is a precious metal and should also be held as a national reserve for use as currency, if needed, among other things.

In introducing this legislation I am aware that my proposal does not cover all our stockpile shortages, but it is a start. We must be prepared, if need be, to fight a prolonged war. We just cannot afford to let some of our defense industry grind to a halt in wartime over lack of materials.●

GOVERNMENTS CAN TERRORIZE PEOPLE TOO

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. HARKIN. Mr. Speaker, Pat Kinney is a writer at the Ames Daily Tribune, a newspaper which is published in my congressional district in Iowa. He has written a very perceptive column which I would like to share with my colleagues.

Mr. Kinney has noted the fatal flaw in the administration's so-called anti-terrorism campaign. He reminds the administration that they must not gloss over the fact that governments can terrorize people, too.

I insert Mr. Kinney's editorial at this point in the RECORD:

[From the Ames Tribune, Feb. 18, 1981]

TERRORISM

(By Pat Kinney)

The Reagan administration has launched an all-out propaganda campaign against international terrorism, which the administration says is centered in Moscow.

Such rhetoric could be considered saber-rattling, and the motives behind this campaign should be fully explained by the administration.

Hardly anyone doubts the Soviet KGB has done some terrrible things during its existence. It's also reasonable to conclude that anti-American, anti-NATO terrorist groups are aided by nations with similar sentiments, including the Soviet Union.

So what else is new? The Western intelligence community monitors activities of anti-Western terrorist groups and nations which support them.

And let's not forget the record of our own Central Intelligence Agency in wreaking havoc on unfriendly governments. Anti-Western forces don't monopolize covert activity.

Former CIA director William Colby, speaking on ABC-TV's Nightline program Monday night, said combating Soviet-backed terrorism is nothing new. If we've heard all this before, why is the Reagan administration and some members of the news media suddenly beating us over our heads with it again?

Secretary of State Alexander Haig has said international terrorism has become the greatest threat to human rights today. In these days following the hostage crisis, many persons would agree and say it's time to crack down on terrorism.

But is fighting terrorism the Reagan administration's main objective? Or, by making the USSR (and communism) synonymous with terrorism, is the Reagan administration asking us for a blank check to intervene anywhere it says there's a threat?

Will the administration use its "anti-Communist terrorism" campaign to justify increased support for the human rights-violating dictatorships in El Salvador, South Korea, or any other repressive government which serves only our short-term interests?

Hopefully, Reagan administration officials recognize that "anti-Communist" or "anti-terrorist" governments aren't necessarily "pro-humanity." Governments can terrorize people, too.

In the presidential debate, candidate Reagan said we should work to change repressive policies of governments with our sphere of influence. We should hold our new president to that task.

Let's hope our government won't be selective in its campaign against terrorism.●

CUTTING THE FAT OUT OF THE BUDGET

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mrs. SCHROEDER. Mr. Speaker, recently, the Committee on Post Office and Civil Service reported its budget recommendations to the Committee on the Budget. Although the committee found itself unable to comment on reductions in postal subsidies and Federal employee pay because the Reagan administration failed to supply sufficient details, the committee did consider and adopt recommendations lowering the amount of money spent on the civil service agencies of the Federal Government. Overall, the committee recommended a slash of $15.3 million from the Carter budget and $3.3 million from the Reagan budget.

We, on the authorizing committee, know where there is waste, duplication, and fat in the agencies under our jurisdiction. The Committee on Post Office and Civil Service acted responsibly in identifying those areas for the Budget Committee. Today, I am sending to Chairman ROYBAL of the Subcommittee of Treasury, Postal Service and General Government of the Committee on Appropriations a letter describing the cuts recommended by the Committee on Post Office and Civil Service. I hope that this subcommittee considers the views of our committee in marking up the fiscal year 1982 appropriations bill.

I insert a copy of my letter to Chairman ROYBAL in the RECORD at this point:

COMMITTEE ON POST OFFICE
AND CIVIL SERVICE,
Washington, D.C., March 18, 1981.

Hon. EDWARD R. ROYBAL,
Chairman, Subcommittee on Treasury, Postal Service and General Government, Washington, D.C.

DEAR MR. ROYBAL: The Committee on Post Office and Civil Service recently unanimously adopted the budget recommendations of the Subcommittee on Civil Service concerning the appropriate funding levels

for the Office of Personnel Management, the Federal Labor Relations Authority, the Merit Systems Protection Board, and the Office of Special Counsel for Fiscal Year 1982. The sum total of the budget recommendations is significantly lower than the total sum provided in the President's budget request of March 10, 1981.

Specifically, the Committee recommended a salaries and expenses budget for the Office of Personnel Management of $113.9 million with the reductions to come out of staffing services, Civil Service Reform Act evaluation, and technical assistance to state and local governments. The Committee recommended that the Federal Labor Relations Authority receive a budget of $19.8 million to discharge its new and expanded functions and reduce its backlog. Further, the Committee recommended that the budget of the Merit Systems Protection Board be reduced to $13.8 million, with the cuts to come out of Merit System Review and Studies and out of the General Counsel's office. A slight increase in funding for the appeals functions was recommended. Finally, the Committee recommended that the Office of Special Counsel be funded at a level of $5.2 million to handle the cases sure to develop during the Presidential transition.

I would hope that the Committee on Appropriations would consider the views of the Committee on Post Office and Civil Service in establishing funding levels for these agencies. Further details on the proposed spending levels are available.

Warm Personal Regards,

PATRICIA SCHROEDER,
Chairwoman.●

BIGOTRY REARS ITS UGLY HEAD

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. MARKEY. Mr. Speaker, an editorial from the News-Mercury Papers reminds us that bigotry and the destructive acts it fosters still infect our communities. For too long we have relied on civil rights legislation to provide equal education, employment, and housing opportunities. These measures, while essential to defeat discrimination, do not reach the deep feelings of bigotry harbored by many individuals. The growing number of incidents of racial and religious prejudice across our country can be seen as a reflection of this enduring intolerance. I commend the response of my native city of Malden and the publishers of the News-Mercury Papers and offer their actions as an example of how bigotry, especially among the young, must be confronted, if it is to be at all defeated.

The editorial follows:

BIGOTRY REARS ITS UGLY HEAD

Too often has the bigotry of the few besmirched an entire community. The unfairness of such implications is manifest.

Yet, if a community is disposed to ignore such a stain on its reputation and takes no overt action to cleanse itself of defaming elements, it is deserving of censure.

In recent months the City of Malden has been the scene of at least one virulent act of anti-Semitism in the form of vandalism and other verbalized harassment directed at a French-born Jewish shopkeeper operating a small market.

Until recently police investigators were stymied in their probe of a number of incidents including the spray-painting of anti-Semitic slurs on a wall of the market premises. Detectives now have testimony to the effect that two juveniles were responsible.

Parents of the two boys are said to have confessed the wrongdoings of the youngsters and at the same time expressed their sincere regret for these transgressions.

No decision has been made whether shopkeeper Marc Benayer will press charges against the juveniles but the police officer in charge of the case, Lt. John Mastrangelo, intends that a meeting involving the youths, their parents, Benayer and police officials be held to discuss the matter.

Mastrangelo is intent upon this course of action. He is right in his decision not to dismiss this case without first impressing upon the juveniles and their parents the import of the acts of vandalism and harassment for which they are responsible.

All too often these incidents are too lightly glossed over leaving the perpetrators with the impression that their trespasses were of minor consequence.

According to Martin Goldman of the Anti-Defamation League of B'nai B'rith, the Benayer case is one of 37 anti-Semitic attacks or acts of vandalism reported to his agency in 1980. There is no question many more such incidents occurred but went unreported.

There is a disposition among too many victims of anti-Semitic violation, as well as groups such as the Anti-Defamation League to keep such incidents out of publication. We are convinced this is the wrong way to effect any remedy for anti-Semitism, or at least intensely discourage its proliferation.

Perpetrators (juveniles probably excluded in most cases) of anti-Semitic transgressions—in fact those responsible for acts of bigotry inflicted upon persons of any race or religion—should be exposed for what they are and dealt with as dangerous antisocial violators of the law.

Adults who influence youths to commit acts of bigotry are guilty of an even greater crime. It is a form of debauchery that inflicts injury not only on the victim, but the young perpetrator as well.

The City of Malden has demonstrated it will not countenance the evil of anti-Semitism.●

MARCH 15—A TRAGIC ANNIVERSARY FOR ANATOLY SHCHARANSKY; A BLACK DAY FOR HUMAN RIGHTS

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. LENT. Mr. Speaker, this past Sunday was a black day for the cause of human rights. March 15, 1981, marked the fourth anniversary of the arrest of Anatoly Shcharansky, one of the most courageous fighters for freedom in the Soviet Union. It is a tragic anniversary for Shcharansky, whose struggle with the heartless Soviet regime has won the admiration of the world. When he was seized by the Soviet authorities on March 15, 1977, there was a worldwide reaction of shock and outrage. The reaction was so severe that the Soviet authorities waited more than a year before daring to bring Shcharansky to a show trial with trumped-up charges of treason, espionage, and anti-Soviet activity. He was sentenced to a 13-year prison term.

The real reason for the harsh Kremlin action against this heroic dissident was his success in alerting the world to the Kremlin's unrelenting persecution and oppression of Soviet Jews, and his courageous and unrelenting efforts to achieve freedom for himself and his wife.

Anatoly Shcharansky has never stopped fighting for the freedom to practice his religion in the country of his choice, since that day in 1973 when he applied for permission to emigrate to Israel. From that day he became a marked man, a target for harassment, surveillance, and persecution by the Soviet authorities. He underwent repeated questionings by the notorious KGB, the Soviet secret police. He was arrested a number of times. In 1975 the KGB went so far as to warn him that:

Your destiny is in our hands. . . . You have to know that no one in the West is interested in you and all that you are doing here and nobody will say a word in the entire world if there is one more Prisoner of Conscience in the Soviet Union.

The Soviet secret police could not have been more mistaken.

Shcharansky's arrest and imprisonment has brought a torrent of protests from around the world. His fate became a focal point for United States-Soviet relations. Members of Congress, Senators, and even the President of the United States joined to denounce the false charges brought against Shcharansky, and to demand he be set free.

With typical Soviet arrogance, the Kremlin ignored the tremendous outburst of protest against Shcharansky's arrest. In fact, recently, we have received reports indicating that the Soviet authorities have intensified their persecution of this brave man. As if 4 years of confinement have not been sufficient, we learn that Shcharansky has written that all meetings with members of his family have been forbidden for this entire year. He may write only one letter every 2 months, instead of two letters each month as had been previously permitted. Shcharansky's wife, Avital, fears that her husband is being held in solitary confinement, which would mean that his food allotment and exercise privileges have been reduced.

Mr. Speaker, such heartless persecution must not be allowed to continue.

We in the Congress must unite in protesting this brutal treatment of a most heroic man, whose only crime is his desire for freedom. If we allow this sort of inhumane persecution to continue without protest, it will simply encourage the Soviets to increase their persecution of the thousands of Soviet Jews who seek, with Shcharansky, to breathe the sweet air of freedom in Israel. I urge my colleagues to join me in redoubling our demands for freedom for Anatoly Shcharansky and for every Soviet Jew who wishes to leave the Soviet Union. The stronger our protests, the more likely they will be heard, even behind the walls of the Kremlin.●

LEGAL SERVICES COMMITTING SUICIDE

HON. F. JAMES SENSENBRENNER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. SENSENBRENNER. Mr. Speaker, last month, I exposed an extensive lobbying effort was being orchestrated with taxpayers' funds by the Legal Services Corporation staff to secure passage of its reauthorization. At the time, I requested an investigation of these practices by both the General Accounting Office and the Department of Justice.

In the Milwaukee Journal of Sunday, March 15, 1981, columnist James J. Kilpatrick wrote that if the Legal Services Corporation dies, it will have done itself in.

Mr. Kilpatrick has supported the Legal Services Corporation over the years, but apparently the lobbying activity was the final straw in his eyes. So that the Members will have the benefit of Mr. Kilpatrick's wisdom, I am including it in the RECORD.

LEGAL SERVICES COMMITTING SUICIDE

(By James J. Kilpatrick)

This is a hard column to write. For the past seven years, in lonesome opposition to fellow conservatives in Congress and in the press, I have been sticking up for the Legal Services Corporation. Now President Reagan wants to abolish it. It hurts to abandon a favorite cause, but maybe the time has come to let it go.

If Congress concurs, it will be said of the Legal Services Corporation that Reagan and the New Right "killed it off." Don't believe it. This would be a case of suicide, not homicide. The Legal Services Corporation, through its own failure to heed repeated warnings against its own activism, will have done itself in.

STRIVE FOR IMPOSSIBLE

The concept was so good. Call me a starry-eyed idealist if you will, but some American ideals deserve a starry-eyed devotion. One of these is carved in stone above the Supreme Court: "Equal Justice Under Law." It is an impossible ideal, to be sure, but no matter. We ought to strive for the impossible now and then.

The idea behind the Legal Services Corporation was to put some element of balance in those famous scales of justice. The idea was to see that the poor person got a fair shake in his encounters with the civil law. Was he being wrongly evicted from his home? Was he being unfairly persecuted by a creditor? Was he being denied some public benefit that rightfully was his? Was he trapped in some impenetrable maze of regulations?

Almost 40 years ago, as a young reporter, I covered what were known as the Civil Justice Courts. Here was a rough form of stamp style. Every city has such tribunals. Here merchants and doctors and loan sharks sue for unpaid bills. Landlords seek eviction orders. Many defendants never appear at all. Other defendants stand in bewildered resentment. They never heard of a garnishee. "Judgment granted . . . Judgment granted . . . Judgment granted." Ordinarily the poor fellow never stands a chance.

MISSION TO HELP

Thus in 1974 came the Legal Services Corporation, with a mission to help. And it has helped. Through 323 local programs employing 5,000 lawyers, the corporation has gone to bat for thousands of poor persons in need of legal assistance: domestic relations, child custody, housing problems, welfare checks, divorce, employment. Such humble causes are overwhelmingly the business of the LSC.

But the corporation is heavily and unhappily influenced by ideological activists who have grander ideas. They see their role as a remaking of society. Many of the younger LSC lawyers are fresh caught from law school. Often their energy is surpassed only by their immaturity. Their passions cannot be fired by the humdrum fuel of a custody case. They want to be aggressive.

One of the corporation's oldest hands, research director Alan Houseman, circulated a fire-breathing staff memorandum on Dec. 29. He feared for the survival of "committed, aggressive and political staff." He pleaded for "aggressive advocacy," which he defined in terms of "legislative and administrative representation, litigation and community education." He foresaw possible restrictions that would prevent the LSC lawyers from suing local governments.

LOBBYING EFFORT

The Houseman memorandum outlined a comprehensive lobbying effort to preserve not only the Legal Services Corporation but other social programs also. He suggested battle plans for opposing Reagan appointees who might be "hostile to aggressive legal services." He anticipated "severe problems with the Senate." He charted strategies for effective lobbying, and in a companion memorandum he proposed specific lobbying assignments for members of the LSC staff—for Dan, Mary, Mario, Judy, Bruce, Bernie, Gerry, Steve, Alan, Andy and others.

Observers differ on whether the law prohibits the corporation from using public funds for such lobbying. That issue is almost immaterial. The question is whether the corporation, under present law and present leadership, is capable of adhering faithfully to the humble but important duties for which it was created. The Houseman memoranda raise almost insurmountable doubts.

The concept is worth saving. Heaven knows it is! I will cling to the ideal willy-nilly. But perhaps some other mechanism—block grants to the states, or pro bono services by private attorneys—would be better. If the corporation dies, the need will still be there.●

TOWARD A JUST AND LASTING PEACE IN NORTHERN IRELAND

HON. JOHN LeBOUTILLIER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. LEBOUTILLIER. Mr. Speaker, within the context of world turmoil and human suffering, the events which continue to occur in Northern Ireland command special attention, and deserve swift action to bring about a just and lasting peace to that troubled land.

It is, therefore, with great pride, that I bring to the attention of the House of Representatives, the efforts of the New York State Assembly, which seeks, through an official legislative resolution, to persuade the world community to work toward a resolution of conflict in Northern Ireland and the restoration of true peace.

I urge all those in positions of leadership to take note of the sentiments and proposals of this resolution, and adopt a similar commitment to the cause of those people in Northern Ireland who seek only to be free.

The resolution follows:

LEGISLATIVE RESOLUTION—STATE OF NEW YORK

Whereas, there have been many contributions made by men and women of Irish ancestry to the State of New York, to the building of our Nation, and to the Cause of Freedom everywhere since the earliest times; and

Whereas, the fact that Ireland is artificially partitioned against the wishes of the overwhelming majority of the Irish people; and

Whereas, The Irish people in the six-county area of Ireland known as "Northern Ireland" are denied basic civil and human rights, and are unable to obtain either adequate protection or equal justice under law; and

Whereas the explosive situation in "Northern Ireland" presents an imminent and realistic threat to the peace and is, therefore, the legitimate concern of all men; and

Whereas, it is in the best interests of the United States that there be a just and equitable solution to this problem in order that peace, order, justice and well-being be restored to that part of the world; and

Whereas, for humanitarian reasons, as well as out of respect for the principles of freedom, liberty, natural law, justice and history, we hereby take notice of the dangerous and deplorable state of affairs in Ireland: Now, therefore, be it

Resolved, That this Legislative Body respectfully, yet firmly, urges, memorializes and petitions the President and the Congress of the United States to manifest our country's traditional position as guardian of freedom and republican-democracy, the dignity of all mankind, freedom of conscience, and mankind's universal natural rights, by taking such affirmative action as will tend

to persuade all concerned parties, and the world commonwealth of nations, to seek a speedy, just and equitable solution to the dangerous situation in the "North" of Ireland, and to formally express the moral opinion that:

"The Irish people ought to be permitted to exercise the Right of National Self-Determination, thus returning the disputed six counties of northeast Ireland to the Irish Republic, unless a clear majority of all the people of Ireland, in a free and open plebiscite, determine to the contrary"; and be it further

Resolved, That copies of this resolution, suitably engrossed, be transmitted to the Honorable Ronald Reagan, President of the United States, to the Honorable Alexander Haig, Secretary of State of the United States, to the President of the Senate of the United States, to the Speaker of the House of Representatives of the United States and to each member of the Congress of the United States from the State of New York.●

WHAT IS HAPPENING IN EL SALVADOR?

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. ROSENTHAL. Mr. Speaker, the American people have great cause for concern about El Salvador and the crisis there. The Reagan administration is not helping us to understand what the fighting is about. It certainly appears that the President and the Secretary of State are determined to commit the prestige of the United States to something they called the established Government of El Salvador. Based upon what I know now, I will oppose such a policy, especially the extension of military aid to this established Goverment's armed forces.

The proper role for the United States in El Salvador is not a partisan question. Both the Carter and Reagan adminstrations decided to support the current government of military officers and token civilians, and to present this junta as the last and best hope for a middle way in a society that has disintegrated and is at war with itself. The key difference between the Carter and Reagan handling of the crisis is the latter's decision to blame the unrest there on the Soviet Union and Cuba, and to use this crisis as the time and place to give international communism a bloody nose.

It is more than likely that the leftwing rebels in El Salvador are armed by the Communist bloc, yet it is foolish to conclude that an arms-supply relationship determines the character of the men and women using the weapons. The United States gives vast amounts of military aid to Saudi Arabia, does that make the Saudis democratically inclined? Obviously not.

El Salvador is a profoundly unfortunate country. It is poor, disease ridden, densely populated, and for more than 150 years it has been badly governed. A succession of tyrannies have ruled in behalf of a privileged class that controlled all the land, commerce, and trade. Within the past 10 years reform-minded politicians, with the aid of the Catholic Church and the trade unions, tried to take control of the country away from the military and the rich.

The contest between those who held the power and the money, and those who wished to raise the living conditions of the people, is the principal reason for El Salvador's current misery. I am inclined to believe that the reformist Salvadorans took their inspiration from the simple and natural desire to see their people healthy and sheltered. The same instincts any of us would have.

Serious attempts at reform began in October 1979, when some 40 young officers in the Salvadoran Army ousted President Carlos Humberto Romero in a bloodless coup. Unfortunately the leaders of the coup disagreed amongst themselves, and the rightwing elements in the army backed by the wealthy business and commercial communities tried to reverse the move toward reform.

Not only have the efforts of the reformers been thwarted, but they and their families have been the objects of terror and murder. Fourteen thousand Salvadorans have been murdered in the last years; compared to the population of the United States, this is equivalent to 750,000 Americans. Among the dead in El Salvador were prominent reform politicians, trade union leaders, respected teachers, and scholars. Even the archbishop of the Catholic Church was murdered while celebrating Mass. Few people dispute the fact that either the Government's troops or the paramilitary forces of the right were responsible for the majority of the killings.

Because the Government of El Salvador is not in complete control of its armed forces, I believe it is unwise for the United States to give it further military aid. We will have no way of knowing to what ends such arms will be used.

The Salvadoran people are now working out what course they want their country to take. I oppose all forms of military intervention, and I believe we should use our good offices to keep El Salvador free of outside military interference. Military aid per se does not insure that. In fact such assistance would only invite more arms supply from the Communist bloc.

El Salvador is not Vietnam. However, I see our Government making mistakes in judgment similar to those we made when we embarked upon military assistance to the Diem regime and its military successors. The President and Secretary of State have accepted the view that the crisis is caused by outsiders without having looked for or considered the indigenous social and economic forces which bred it.

It is important to understand the complexity of Salvadoran politics. We do not have a simple contest between decent moderates and violent leftwing guerrillas. At one time the present junta counted among its leaders prominent Social Democratic politicians. Most of them have left, many to join in an uneasy and highly volatile coalition with the Marxist revolutionaries. In El Salvador today the center has dissolved, and the United States cannot create what the Salvadorans themselves have failed to bring about.

This is not my view alone. It is shared by some members of the State Department, and our former Ambassador to El Salvador. Almost every Latin American nation, and even our NATO Allies, have already communicated to us their displeasure with our policies and their grave reservations about its wisdom.

The American people know too little about this crisis. We should not be asked to pay for any adventure, domestic or foreign, until we are properly informed.●

MIDDLE EAST BASES

HON. JAMES A. COURTER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. COURTER. Mr. Speaker, as a member of the House Armed Services Committee, I have had the opportunity to visit a number of nations friendly to us. Our allies and friends are virtually unanimous in the advice given to members of the Armed Services Committee who recently returned from the Far and Middle East. With regard to the Soviet Union, they expect us to act like a superpower. We must get over the Vietnam syndrome and defend our global security interests. In earlier decades, our insularity was a virtual guarantee of our security. We were referred to as Fortress America. Today, it is the United States that is at a geostrategic disadvantage, with allies and resources separated from us by thousands of miles of ocean.

Mr. Speaker, because I believe very strongly in this Nation's need to have the capability to protect its allies and interests, I would like to submit, for the RECORD, a brief article that concerns itself with an important component of our national defense strategy, the need for overseas bases or facilities. I am convinced that this article's message, regarding the strategic value of Israel and Egypt, is important for all of us to read. The article is a re-

print of an editorial appearing in the February edition of the newsletter Jinsa, a publication of the Washington based Jewish Institute for National Security Affairs. Our Senate colleague, RUDY BOSCHWITZ of Minnesota, is one of JINSA's advisers.

MIDDLE EAST BASES

American interest in Middle East bases is back in the news. The new administration in Washington is far from convinced that the plans of the previous administration for a Rapid Deployment Force that could be moved from the United States (CONUS) to a Middle East trouble spot is a satisfactory approach to maintaining the balance of power in the Middle East and Persian Gulf or thwarting Soviet operations against friendly nations in that region. Nor are they necessarily in agreement with the "trip-wire" concept that underlaid the Carter administration's planning. The idea was to move a force, no matter what its size, to face a potential Soviet invasion. Its very presence was planned to be a deterrent. Today there is doubt such a force would slow down a Soviet operation, particularly in a high stakes game involving oil supplies. There is concern, too, that an American force rapidly defeated could lead to unpleasant negotiations that might spell the end of our influence in the Middle East and the disintegration of the Western alliance system.

Which is why there is a new look at the matter of bases. Some urgency is felt in Washington. A stronger U.S. presence in the Middle East as soon as possible might help stabilize the situation and certainly would give us some opportunity to prevent the defeat of our forces should they be needed.

To say this much invites the question: which bases and where. And that in turn raises some knotty questions—among them whether the countries in the region will permit the United States to establish bases. The last administration finessed this matter a little, by seeking "facilities" instead of bases. However, it was left unclear exactly what a "facility" was in fact and whether and under what conditions we could use these assets. During the last days of the Carter administration proposals were floated to fund facilities in Oman and also at Egypt's Ras Banas base. However, no formal agreement seems to exist to cover Ras Banas or the Omani bases, and private "understandings" are equally murky.

Does this mean that the search for bases by the United States is bound to lead to dead ends or shaky arrangements we will not be able to depend on in a crisis? That need not be so.

There are, after all, a wide range of agreements the U.S. can reach with key allies to strengthen our position in the area. Some of the agreements do not require a formal presence of U.S. troops or squadrons of U.S. aircraft. It is not so hard to move either troops or aircraft, after all. Much more difficult is building the infrastructure we need to do a job, and having the equipment and supplies on hand for our fighting men. Certainly we do not have to do all this ourselves.

Israel, for example, has extraordinarily good facilities and excellent technicians trained to handle U.S. equipment of the most modern kind. Because she is a stable country unaffected by the caustic intra-Arab policies.

Making use of Israel as a resource makes sense and saves the American taxpayer money in the bargain.

Money is saved because we do not have to spend millions on costly repair equipment or send technicians and specialists en masse 6,000 miles from home. We do not have to build fuel storage depots, or train men to guard installations and keep them well run. All of that is already there. What we need to do is supplement the facilities already on the ground, and work out specific agreements covering use. We should, of course, not expect any of this for free. But it is a lot less expensive to use what is there.

Working with Israel implies very strongly working with Egypt. Given the problems in the Middle East and the special politics and sensitivities, the initial framework of a three-way alliance needs to be put in place. It is politic today to do this in pieces and parts. It has not, of course, escaped notice that some of the elements are already in place—but it is the American component that has been lacking.

For the past few years Israel has been treated as a certain embarrassment to the United States.

Obviously we have to get beyond that attitude if anything is going to be done to strengthen our strategic hand. The positive attitude of the President implies strongly that action will be taken.

Perhaps the old idea of walking before running applies as well as anything else. By analogy, we have been walking, but in an altogether peculiar way. Our first task is to walk regularly. Specific arrangements as posited above gets us to that plateau. It gives us a grounding from which the bigger matters such as access to key bases (e.g., Ras Banas, Etzion, Haifa, Masira) can be worked out to the satisfaction of all concerned.●

THE FEC'S ABUSE OF POWER

HON. DANIEL B. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. DANIEL B. CRANE. Mr. Speaker, I think that sometimes we create new agencies and new bureaucracies which are supposed to deal with a particular problem, but which usually wind up with too much power. We are derelict in allowing the exercise of administrative and judicial power to flow away from the representatives of the people to the unelected "fourth branch" of Government—the bureaucracy.

One ominous example of that abuse of power has come to my attention lately. It concerns the attempt by the Federal Election Commission (FEC) to force a small, independent publisher of newsletters to register with it as a political committee. It is ominous because if the FEC succeeds, it will have repercussions on first-amendment rights throughout the print and broadcast media. It is an abuse of power because evidence suggests the FEC is misapplying the laws in this case while apparently ignoring requests made of it, which it is bound to obey, under provisions of the Freedom of Information Act.

The case concerns Phillips Publishing, Inc., a Washington-based publisher of 10 newsletters which cover a wide variety of topics. One of its publications is a bimonthly newsletter of facts, commentary and opinion called the Pink Sheet on the Left. Nearly a year ago, it criticized the Presidential aspirations of Senator EDWARD KENNEDY, recounted in detail his liberal-left voting record, and encouraged readers to use the information about his record as a way of showing why he should not be President.

Senator KENNEDY's campaign committee complained, claiming the Pink Sheet and Phillips Publishing, Inc., should register as a political committee and be subject to all the burdensome, prying reporting requirements which go with it. The FEC decided it agreed with every one of Senator KENNEDY's charges, and has unrelentingly tried to get the publisher to register.

There is one major problem in all this, however. The law under which the FEC was constituted specifically exempts from FEC regulation legitimate news, opinion, commentary or other editorial matter which is presented in regularly published or disseminated media. The Pink Sheet has been in existence and issued every 2 weeks for almost 10 years. And Phillips Publishing has no ties whatsoever with anybody's political committee, party or candidacy. What's more, the first amendment guarantees Phillips Publishing, Inc., the right to comment as it wishes even in spite of the FEC. But while the FEC has been pursuing Phillips Publishing, Inc., it has so far refused to respond to the company's requests under the Freedom of Information Act to determine whether there is reason to believe the FEC Commissioners assembled and acted illegally when they voted to go after Phillips.

As the widely respected watchdog group, the Reporters Committee for Freedom of the Press, has observed, if Phillips Publishing, Inc., and the Pink Sheet are forced to give in to the bureaucrats, then all newspapers, broadcasters and publishers will be in jeopardy if they express political opinions. The Reporters Committee, in a 13-page brief filed with the FEC, says that its actions constitute nothing more than harassment.

Mr. Speaker, I think this case has serious implications for all of us. Plainly, it is a major concern when the power of Government collides with the rights of the people under the Constitution. It is therefore my opinion that the FEC is well advised to drop its dubious attack on Phillips Publishing, Inc. It should devote itself to handling serious political abuses rather than creating new ones of its own.

Editor & Publisher editorialized against the FEC's abuse of power in its

February 14 issue, and the Washington Post published an article on this subject on February 20, 1981. The articles follow:

[From Editor & Publisher]

PITFALLS IN CAMPAIGN ACT

When the Federal Election Campaign Act of 1971 was passed, then amended in 1974, there was great fear that it might be used eventually to prohibit editorial comment by newspapers on qualifications of candidates. Observers agreed that would be unconstitutional. So Congress excluded from outlawed campaign activities any "news story, commentary or editorial distributed through the facilities of any broadcasting station, newspaper, magazine or other periodical publications, unless such facilities are owned or controlled by any political party, political committee or candidate."

It appears now that some of the original fears were justified—give a federal bureaucrat an opening and he will try to drive a truck through it.

Almost simultaneously the Federal Election Commission has brought action against two publications—Reader's Digest, the largest magazine in the country, and The Pink Sheet on the Left, a political newsletter representing one of the smallest publications. They are not being questioned by the Commission for what they printed but for what they did in conjunction with that publication.

It is beside the point that both publications are involved because of anti-Ted Kennedy material in the last campaign. It might have happened had they been for or against any other candidate. The newsletter, avowedly anti-Kennedy in its content, included that sentiment in its subscription solicitation material seeking funds to help defeat that candidate. The Reader's Digest launched an investigation of the questions still unanswered after Chappaquiddick and before publication did what all magazines do, sending advance copies to print media and videotapes of its research material to broadcasters.

The Federal Election Commission claims both publications violated the law by soliciting funds to defeat a candidate, in the case of the newsletter subscription campaign, and by spending money to distribute the tapes and thus influence an election, in the case of the Digest.

We believe the Commission is trying to do what Congress specifically prohibited—defining editorial comment and opinion, whether it appears in a subscription solicitation letter or in material distributed prior to publication to other media for publicity reasons, as a "campaign contribution."

It is not too difficult to see that the camel's nose is being stuck under the tent. The Federal Election Commission, in our opinion, would like to eliminate any endorsement of a candidate in print or on the air as representing a "campaign contribution," and may find a way to do it in spite of any congressional exclusion to the contrary.

[From the Washington Post, Feb. 20, 1981]

TIME FOR THE FEC TO DECIDE

(By Bill Green)

The Federal Election Commission is tripping over its own procedures and, unless it finds a way out, it could create absurdly distorted political news coverage.

The commission finds itself entangled with Reader's Digest, one of the nation's most widely circulated magazines, and Pink Sheet on the Left, a conservative, anti-communist biweekly publication with a circulation of about 14,000.

Both are in the middle stages of a process that begins automatically when the commission receives a complaint alleging election law violations.

Reader's Digest published an article on Sen. Kennedy and Chappaquiddick early last year. In preparing for the article, the magazine's editors had an engineer and an oceanographer conduct studies. On Jan. 14, copies of the issue and videotapes from one of the studies were sent out to television networks and other media. Both the story and the tapes received national attention.

Seven months later, an Oregon resident complained to the commission that Reader's Digest had violated election laws by making improper corporate political expenditures that had a negative effect on the senator's compaign.

Phillips Publishing Inc., long in business, produces Pink Sheet on the Left. The company sent out a four-page letter to potential and regular subscribers soliciting subscriptions and funds to place the newsletter in college libraries. The letter emphasized the Pink Sheet's opposition to Sen. Kennedy. In March, the Kennedy for President Committee complained to the commission that Phillips Publishing is a political organization opposing a candidate and should, therefore, have registered with the commission.

Legal counsel for both the Reader's Digest and the Pink Sheet denied the allegations and attempted to stop the commission's investigations.

But the commission's machinery, once started in motion, and unless stopped in court, has to run its course like some giant windup leviathan. The key that begins the process is a complaint that anyone can submit. Once received, a copy of the complaint goes to, in these instances, Reader's Digest and Pink Sheet. Thus begins a series of legal queries and responses until, in the last step, the commission may find, or fail to find, probable cause. Then there's conciliation or enforcement, depending on additional legal negotiation.

However, the act that established the commission specifically excludes from unacceptable political expenditures "any news story, commentary or editorial distributed through the facilities of any broadcasting station, newspaper, magazine or other periodical publication, unless such facilities are owned or controlled by any political party, political committee or candidate."

In other words, the commission need never begin investigative procedures involving favorable or unfavorable political news articles, or the normal promotion of such articles, in established media. The costly, labyrinthine process simply does not have to start if the commission would use the authority of its own act when it first receives a complaint. It would be tougher to dismiss a complaint, to be sure, but the commissioners are not appointed to avoid judgment.

If the commission insists on following the pattern it has established, every news organization in the country taking a position on any national candidate could find itself having to prove in exhausting, unnecessary and ridiculous detail that it is not a political entity and has not illegally used corporate funds in performing its clear First Amendment prerogatives.●

THE 125TH ANNIVERSARY CELEBRATION OF THE HOREB LODGE OF B'NAI B'RITH OF NEW HAVEN

HON. LAWRENCE J. DeNARDIS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. DeNARDIS. Mr. Speaker, the month of March has been dedicated to a celebration of the 125 years of existence of the Horeb Lodge of B'nai B'rith of New Haven, Conn.

It is an event of major significance to the Jewish community in New Haven, and one that is being celebrated throughout the month with special activities, religious services, and a grand ball.

B'nai B'rith, an organization that has grown in popularity and prestige over the years, is not just another civic or community organization. It has followed consistently the preamble to its constitution which says:

B'nai B'rith has taken upon itself the mission of uniting persons of the Jewish faith in the work of promoting their highest interest and those of humanity; of developing and elevating the mental and moral character of the people of our faith; of inculcating the purest principles of philanthropy, honor, and patriotism; of supporting science and art; alleviating the wants of the poor and needy; visiting and caring for the sick; going to the rescue of victims of persecution; providing for, protecting and assisting the aging, the widow, and the orphan on the broadest principles of humanity.

The Horeb Lodge is a service organization that is part of B'nai B'rith. Originally founded by Jewish immigrants from Germany, it was later joined by the Eastern European Jews. Their services to their community were originally philanthropic and fraternal with death benefits, sick benefits, and others. They were needed badly by the immigrants of the time, and served a worthwhile purpose.

As B'nai B'rith grew nationally and expanded its basic operations, so the Horeb Lodge grew, expanded, and also changed. Their basic objectives, however, remained the same. Today, Horeb Lodge sponsors Hillel Foundation for Jewish Education, disseminated in college-level young people. They have youth programs, youth camp programs, vocational guidance programs to counsel high school students, and career counseling.

It is Horeb Lodge of B'nai B'rith which helped lay the foundation for what has become the Anti-Defamation League. During World War II, when problems of anti-Semitism developed, B'nai B'rith developed a watchdog type of committee in every city, including New Haven. A group of members of the Horeb Lodge served as guardians of the good name of a Jew, and watched for and reported acts of

discrimination. The interest in this aspect of the work of the lodge brought membership to its highest level.

It was through the Horeb Lodge of B'nai B'rith that the mission of uniting persons of the Jewish faith in the work of promoting their highest interest, and those of humanity, was undertaken. It was—and is—successful.

The work of the Horeb Lodge is of major value to the community it serves. As they continue to grow and expand, the celebration they have planned for March 1981, is well deserved, and one that is shared by all of us who so strongly identify with service to our fellow man and woman.●

ENCOURAGED SUPPORT OF NAIROBI CONFERENCE ON ALTERNATIVE ENERGY—I

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BEDELL. Mr. Speaker, I am beginning today a series of reports on what I believe to be one of this year's most significant international events: The United Nations Conference on New and Renewable Sources of Energy (UNCNRSE), scheduled for August 10–21 in Nairobi, Kenya.

The conference would be an ideal forum for the United States to affirm its commitment to alternative energy development, while alleviating the development problems of underdeveloped counties. I am concerned, however, that this opportunity may be lost for failure to gain the attention and support of the new administration and Congress. Over the coming weeks, then, I intend to highlight the many positive aspects of UNCNRSE including its potential for a cooperative approach to international energy development; the opportunity for private U.S. alternative energy investment abroad; and, perhaps most importantly, the long-term gain for the United States in encouraging energy self-reliance within developing countries.

As many of you are aware, I have been long and deeply involved in renewable energy development here in the United States, particularly alcohol fuels. The Nairobi Conference is unique in that it is the first conference on any aspect of energy that the U.N. has sponsored.

The decision to convene the Nairobi Conference was taken in 1978 at the 33d session of the General Assembly. Its stated objective is to promote an awareness, acceptance, and of new and renewable energy sources. The Preparatory Committee has already agreed to a provisional agenda, and technical preparations are well underway.

The Conference will cover 10 energy sources and 14 related technologies. Eight panels of international energy specialists have identified the present and potential use of solar, wind, geothermal, biomass conversion, ocean energy, fuelwood and charcoal, oil shale and tar sands, and hydropower. Two further studies are being prepared on animal draft power and the use of peat for fuel. In addition, there are six crosscutting panels that will focus on the main obstacles to renewable energy development: Financing; research, development, and technology transfer; information flows; education and training; industrial issues and rural energy. Finally, a synthesis group is meeting to cull the findings and recommendations of the technical and crosscutting panels into a single document.

The Conference itself will serve as the focus of a concerted international effort to promote and develop a wide range of energy alternatives. These efforts deserve our encouragement, and I sincerely hope that my colleagues will offer their support.

For further details, I am pleased to call my colleagues' attention to a recent article, "The U.N. Takes Up the Challenge of the Energy Transition," by Mr. Morris Miller, UNCNRSE Deputy Secretary-General.

THE U.N. TAKES UP THE CHALLENGE OF THE ENERGY TRANSITION

"Humanity now faces one of the most momentous adjustments in modern history, with little time to prepare for it."—Lester R. Brown in the foreword to Rays of Hope: The Transition to a Post-Petroleum World, by Denis Hayes, 1977

THE BACKDROP AND THE OBJECTIVES OF THE U.N. CONFERENCE

Little time to prepare for it? We were already up to our shoulders in "the momentous adjustment" when these lines were written in 1977, four years after the 1973 oil price "shock". Four more years have passed and we are up to our nostrils and the situation gets much worse by the day, driven by a double-barrelled energy "crisis", one revolving around oil and the other around fuelwood.

The decision to convene the U.N. Conference on New and Renewable Sources of Energy (UNCNRSE) in Nairobi in August 1981 can only be understood against the backdrop of the situation which gave rise to it. This Conference might be considered one of the major steps being taken by the world community to navigate the adjustment or the transition to a new energy future which, over the next few decades, must entail a radical shift away from oil and gas. The challenge is to make this shift quickly, yet smoothly and equitably, that is, favoring the poorer developing countries which can least afford the added pains of the adjustments required.

In a few broad-brush strokes one can reveal the dynamics and the desperation of the situation. The oil-importing developing countries are now running an annual balance of payment deficit of about $50 billion and this is projected to increase to about $60 billion over the next two years as the price of oil rises and their energy requirements increase by virtue of the growth of population and the economy. The implication of this is simply that these countries have been going into deeper and deeper debt to finance imports for survival and/or development and have now reached a breaking point in their borrowing capacity, or, to put it differently, lenders and donors have stretched themselves to their limit, or at least, as far as they wish to go or dare to go. Developing countries which need to import oil thus face a dire choice between spending their scarce foreign exchange on oil or on food or other essential imports.

As if this were not enough, if these countries were to grow at the rate they experienced in the years before 1973, their oil imports, by the year 2000, could be expected to triple (from 8 billion barrels per day to 25). Even with much slower rates of growth and much greater economy or efficiency in the use of oil, imports of oil could be expected to double over the next two decades. This spells even more debt, more belt-tightening (especially by the poorest) and incredible strain for the present economic order.

Add to this what some call "a second energy crisis", namely, the one related to fuelwood and the picture is even more bleak and desperate. While oil is essential for the "modern sector" of every nation's economy and now accounts for over half of the world's energy supply, wood which accounts for a much smaller percentage, from 4% to 12% depending on various estimates, is as essential. It fills a "basic need" for the world's poorest, the 1½ billion who live in the "rural sector" and on the periphery of the modern sector in urban slums. For them, the search for fuelwood is a matter of survival, it provides the energy to heat and cook. This scavenging process takes more and more time and accelerates the depletion of the world's forest cover which is going on at a rate of 8 acres per seconds or ⅓ of the total in 20 years. And the rate is accelerating, as a vicious circle sets in: topsoil gets exposed and washed away, soil nutrients are reduced, agricultural productivity and incomes decline, reliance on "free" fuelwood increases . . .

The pressing question is how to slow down, stop and reverse this process. This would call for an effort which, by World Bank estimates, involves the planting of 50 million hectares of fuelwood by the year 2000 just to satisfy the projected demand for wood for heating and cooking, or, to put it another way, a rate of planting which is 5 times present levels taking a global average but which in some countries, calls for a rate of planting 15 times greater.

Both the oil and the related fuelwood crises are intensifying to explosive proportions, especially in the rural areas and urban slums of the poorer oil-importing developing countries where living standards, already abysmally low, are being further reduced.

Under these circumstances, it should be abundantly clear why greater reliance on alternate sources of energy has become an essential cornerstone of hopes for a brighter future. Since 1973 the world community has become painfully aware that the end of the fossil age of energy is in sight. The key question is what would replace these sources of energy.

Coal could become resurgent in its traditional form but it may be impeded by environmental concerns; however, it environmentally is more acceptable as well as more convenient in liquified and gaseous forms;

Nuclear could break out of its stalled trajectory, especially in the form of breeder reactors and fusion though the questions of safety and related issues will remain to constrain its potential;

Solar could once again emerge as the dominant source of energy, a role it played over the millenia before the coming of coal ushered in the fossil fuel era two centuries ago.

Can we consciously make decisions as to these energy options? To do so given the global nature of today's energy network, the decisions call for U.N. involvement. This is the ultimate rationale for the U.N. Conference and for its mandate in terms of time frame and scope.

Given the urgency of the situation, the Conference will focus on the next two decades while keeping the long-term 50-year transition period as a frame of reference. The General Assembly has specified that the focus shall be on a limited list of energy sources labelled "new and renewable", such as solar, biomass, fuelwood and charcoal, hydro, wind, ocean, draught animals, tar sands and oil shale, peat and geothermal (some of which are neither renewable nor new). However, the Conference will consider each of these within a broader energy-development framework within which they will be assessed as alternatives to oil, gas, coal and nuclear power.

Since the Conference is a response to a complex of problems which are global in amplitude, the analysis and discussion will be oriented to the global nature of the energy supply problems, that is, it will be designed to generate proposals for resolving problems which transcend national boundaries and calls for joint action. Proposal of a universal nature which are resolvable by individual countries acting alone will not, of course, be excluded, but the emphasis will be on the global proposals that can constitute items in a Programme of Action which the U.N. and others can be expected to implement.

HOW THE CONFERENCE IS STRUCTURED AND SCHEDULED

The Conference is organized to consider in some depth six of the major institutional constraints which seem to impede the introduction and diffusion of specific alternate energy sources which are judged to be "ripe" (requiring little work on their technological development) or "near-ripe" (requiring research and/or demonstration with a likelihood of being "proven" within the next two decades).

(a) Technical Panels

Eight of these have been organized to consider solar, biomass, hydro, wind, ocean, geothermal, tar sands and oil shale, and fuelwood and charcoal. (Peat and animal draught power are being handled by consultant studies without benefit of panel discussion and revision). Their task is to indicate trends in energy technologies and thereby identify which are promising, that is, judged to be likely to be "significant contributors to the total energy supply. This judgment involves assessment not only of technologies from a scientific/technological perspective but also in terms of (i) costs relative to alternative sources, and (ii) socially and environmentally acceptable.

(b) Ad Hoc Groups of Experts

Six groups of experts are now (during the months of December 1980 and January 1981) in the process of meeting to focus on policies which could influence the rate and manner of introducing the technologies and related programs which the Technical Panels have identified as promising. The Secretariat is preparing background papers which the groups of experts are expected to modify. The emerging documents from each group will spotlight each of the following six major constraints which impede the rapid "market" penetration of the "new" sources of energy:

(i) Financial barriers to funding energy technologies or programs which, because of their newness or scale, are riskier than "proven" technologies;

(ii) Information flow bottlenecks stemming from the newness of technologies or programs;

(iii) Research, development and demonstration inadequacies and imbalances in terms of where the R and D is carried out, to what needs it is oriented, and other associated impediments to this crucial process of technological diffusion;

(iv) Education and training inadequacies and imbalances in terms of where the education and training takes place, what is taught, to whom, etc.;

(v) Rural energy infrastructural system weakness by virtue of geographic dispersion and the back of adequate financial, informational and educational institutions; and

(vi) Industrial sector weakness which makes it difficult to provide components or complete systems for the new energy technologies and to be flexible to expand or change products or processes to take advantage of new energy sources.

From this cross-cutting process of analysis and discussion there should emerge a synthesis which will be discussed by a Synthesis Group in mid February 81. From this, in turn, the elements of a Programme of Action could be identified and discussed at a Preparatory Committee meeting at the end of March.

WHAT CAN REALISTICALLY BE EXPECTED OF THE CONFERENCE

For various reasons it would seem very optimistic to expect all of the sources of energy which the Conference is mandated to examine to contribute more than 10–15% of total (minimal) energy requirements anticipated by the year 2000 and 25% by the year 2030 even if all of the institutional constraints were overcome. But to supply even these percentages would be a formidable challenge involving a tripling or quadrupling of alternate energy output. Nonetheless, this would seem to be a reasonable first goal.

The Conference, however, cannot project the possible or likely contribution of each of these sources since their application is conditional on very regional and time-specific factors, including anticipated projections of costs of oil, gas, coal, nuclear and other alternatives. It suffices for the Conference to try to lower the constraints so that each energy source can realize its fullest potential, whatever that may be. This would call for the Conference to bring forward actionable proposals regarding information and financial flows, research and development, education and training, etc.

Questions will still remain to be answered: where is the rest of the energy supply to come from? What can be done to accelerate the introduction and diffusion of these other sources which, presumably, are deemed to be socially and environmentally acceptable? What are the global energy-environmental relationships? This Conference is but the first step in a long process.●

TRIBUTE TO MR. WILLIAM FRANK

HON. BOB TRAXLER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. TRAXLER. Mr. Speaker, it gives me great pleasure to rise before this distinguished body today to call attention to the exemplary service and citizenship of World War I veteran William Frank of Bay City, Mich. I wish to join with his colleagues of Disabled American Veterans, Robert King, Jr. Chapter No. 9, fellow veterans, area residents, and friends in paying this much deserved tribute to William Frank.

Mr. Frank is among those who have walked the longest mile for this Nation's liberty and security. Since returning to civilian life he has earned the sincere gratitude and affection of all the members of his post and the community. Today, we recognize not only the longevity of his service, but also his dedication and duty to our community interests.

I am proud to offer Mr. William Frank my heartiest congratulations and commendation for his fine record of service. His dedication to our Nation should be emulated by all American citizens.●

NAZI WAR VICTIMS—CLAIMS AGAINST EAST GERMANY

HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. WEISS. Mr. Speaker, during the 94th Congress, under the leadership of our colleague, JONATHAN BINGHAM, we enacted legislation, Public Law 94-542, to provide for the settlement of claims against East Germany for the wrongful taking of property due to the racial and religious persecution by the Nazi regime before and during World War II.

Unfortunately, it subsequently became apparent that a large number of persons were unable to successfully make claims against the East German Government under Public Law 94-542 because of a decision which had been made by the East German Government in 1951.

Under Public Law 94-542, claims could be presented to the Commission by persons who were U.S. nationals at the time of the loss of the property. The German Government decreed the "time of loss" to be September 6, 1951, and the Foreign Claims Settlement Commission followed this 1951 date in its determinations. The problem arises, however, because many of the

Nazi war victims living the the United States were not yet U.S. citizens as of September 6, 1951, although most did become citizens by the time Public Law 94-542 was enacted, or by the time when the United States recognized the German Democratic Republic, 1974. Thus, the rights of these permanent, taxpaying U.S. residents who had fled the Nazi horrors were cut off because their citizenship had not yet been finalized.

All legal remedies for these people were also cut off by the East German Government because they were no longer residents of East Germany as of 1951. Thus, because of action by the East German Government, and language used in the enactment of Public Law 94-542, many of these claims have been either not submitted, or denied by the Commission.

To remedy this situation, I am proposing legislation which would allow the filing and consideration of claims against the East German Government by any person who was: First, a permanent U.S. resident as of September 6, 1951, the time of loss, who was waiting to become a U.S. citizen; and second, who, as of the date of the enactment of Public Law 94-542, had become a U.S. citizen. It would, of course, be necessary for the Commission, based upon this changed definition, to reopen the filing period for claims against the East German Government, for a short period. This is also provided for in the proposed legislation.

It should be emphasized that the U.S. Government does not pay these claims itself, and thus, this legislation would not burden the Federal Treasury.

Those of us now in Government can do little to restore the lives or well-being of those millions of people who suffered the outrages and inhumanities of the Nazi regime. We should, however, do what we can, in any small way, to remove the roadblocks to the compensation that may be due some of the victims. It is for these reasons that I urge you to join me in cosponsoring this legislation. A copy of the bill follows:

H.R. 2619

A bill to amend title VI of the International Claims Settlement Act of 1949 (relating to claims of nationals of the United States against the German Democratic Republic) to permit the determination of claims of persons who were aliens lawfully admitted for permanent residence in the United States as of the date of loss and by September 4, 1974, citizens of the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. This Act may be cited as the "International Claims Settlement Act Amendments of 1981".

SEC. 2. Section 601(1) of the International Claims Settlement Act of 1949 (22 U.S.C. 1644a(1)) is amended—

(1) in subparagraph (a) after "United States" by inserting "or who is an alien lawfully admitted for permanent residence in the United States and by September 4, 1974, a citizen of the United States";

(2) in subparagraph (b) by striking out "natural persons who are citizens of the United States" and inserting in lieu thereof "persons described in subparagraph (a)"; and

(3) by striking out the last sentence.

SEC. 3. Section 602 of the International Claims Settlement Act of 1949 (22 U.S.C. 1644b) is amended—

(1) in the first sentence after "claims by nationals of the United States" by inserting "who were ineligible to have their claims considered by the Commission prior to the enactment of the International Claims Settlement Act Amendments of 1981"; and

(2) in the second sentence by striking out "this title" and inserting in lieu thereof "the International Claims Settlement Act Amendments of 1981".

SEC. 4. Section 609 of the International Claims Settlement Act of 1949 (22 U.S.C. 1644i) is amended after "date for filing of" by inserting "those".●

INCREASED FUNDS FOR RADIO FREE EUROPE AND RADIO LIBERTY

HON. TOBY ROTH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. ROTH. Mr. Speaker, I would like to express my wholehearted support for the President's decision to increase funding by $4 million to Radio Free Europe and Radio Liberty, and I urge my colleagues to endorse this effort.

Now more than ever, we need to communicate to nations which lie in the path to Soviet expansion, as well as to those currently under Soviet domination, the advantages of freedom.

These efforts are of paramount importance to the continuing peace and stability of the free world. I applaud this new emphasis on carrying the message of freedom to those whose access to information is rigidly controlled.

I know that my colleagues will see the pressing necessity to use every peaceful means to curb the rising tide of Soviet hegemony. Radio Free Europe and Radio Liberty are effective avenues to this end.●

A CHALLENGE FOR TOXICOLOGISTS

HON. JAMES G. MARTIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. MARTIN of North Carolina. Mr. Speaker, many scientists have wondered at the political factors that have diverted a great part of cancer research funds away from cancer research, to pay instead for animal testing. The results have been twofold: scares have been created about chemicals generally, even on evidence of very weak effects; and less research attention has been possible for solving the riddles of toxicological effects within animal cells. Testing is not research.

In a recent statement, printed in the March 2, 1981, edition of Chemical and Engineering News, Dr. Joshua Lederberg, a geneticist, Nobel Laureate, and president of Rockefeller University issued a challenge for toxicologists. It is a challenge to science in general, and to Congress as we contemplate science policy.

Dr. Lederberg's comments should be studied for it serves as an important reference in our future considerations of risk-benefit assessment.

His statement was condensed in Chemical and Engineering News, from which this is taken:

A CHALLENGE FOR TOXICOLOGISTS

With all of the enormous expansion both in quality and in quantity—that is, in the variety and total material—of the chemical industry, I believe today that we're in a far healthier position than we were 30 years ago. Thirty years ago, there were fewer substances being emitted, but the abandon that they were being dealt with! You had workers walking knee deep in solvents and paying absolutely no attention to them. Since then, there has been a sharp increase in vigilance. With respect to a wide variety of substances, I am quite confident that the average exposure to many of these chemicals is down by a factor of 100 or 1000 compared to what it was in the early 1950's, just on account of the awareness that has been generated, the public sensitivities about these matters. There is no major industry today that does not now have a deeply ingrained environmetal apparatus—procedures, bureaucracy, and doctrine—with respect to control of environmental problems. This is an enormous advance over what was the case 30 years ago.

We have at this point, of course, the responsibility to work out procedures that will provide for appropriate surveillance of new substances, for prevention of human exposure where it really is of some consequence. This in turn presents an enormous challenge to scientific enterprise; it is just beginning to be met.

If there is any message that I would like to see conveyed it is the gross inadequacy of our present knowledge base to face properly the enormous environmental challenge that we have at the present time.

I think the testing of substances could be greatly improved, improved above all by better understanding of the mechanisms by which these substances work. Right now there is almost no rationale for deciding whether the mouse, the rat, the rabbit, the guinea pig, or the monkey is going to be the better model for effects on human behavior. In fact, very few substances have been tested using more than one species in order to build up a body of theory to project in what way the human is likely to be more or less like other animals.

For that reason I have felt particular priority should be to that discipline that

hardly exists today. Which I would call comparative toxicolgy. When it comes to toxic substances the prevailing doctrine is to find the most sensitive animal and if you can get a toxic effect, there is potenital hazard in man. Therefore, under most circumstances, you need to abolish the substance if you can produce cancer in that animal. Well, I can't argue against that in any affirmative way, with the present state of our knowledge, but it is obviously fraught with all kinds of difficulties and false positives. It is being excessively rigorous in a few cases when there are 10,000 other things that haven't been looked at yet.

First of all, understand that the one or two or three hundred millions of dollars a year that we're now spending on routine animal tests are almost all worthless from the point of view of standard-setting. It may be appropriate for setting alarms.

I would think the most immediate solution is to redeploy some of our resources. The resources are not only money, there is the time and effort. The whole quality of the field of toxicology has been so drowned by the requirement to do these kinds of tests that that, in itself, had made it a less respectable discipline from the point of view of more fundamental biological interests.

The point I am trying to come down to is that it is simply not possible with all the animals in the world to go through new chemicals in the blind way that we have at the present time, and reach credible conclusions about the hazards to human health. We are at an impasse. It is one that has deep scientific roots, and we had better do something about it.●

RED BAITING: NO ANSWER FOR EL SALVADOR

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. OBERSTAR. Mr. Speaker, those of us who oppose military aid to the Government of El Salvador have heard the charge that we are helping the leftists take control of that country. The charge is just plain absurd. I find it difficult to imagine that anyone actually believes that those who oppose U.S. involvement in El Salvador want to see a Communist victory there.

I do want to see moderate, democratic elements strengthened in El Salvador. Sending military aid does not accomplish that goal, nor does it address the history of oppression and poverty of the overwhelming majority of the population of El Salvador. As former Senator Aiken, Republican of Vermont, once said, "No people were ever starved into democracy."

Military aid to El Salvador places the United States in the position, in the words of former Ambassador White, of arming some of the world's most dangerous men, the El Salvadoran security forces who last year killed thousands of their fellow citizens.

The United States cannot afford to let its foreign policy be determined by red baiting, and by the self-serving statements of those who seek to portray political opponents as "soft on communism."

I believe any thinking individual would agree that the Roman Catholic Church is not pro-Communist, either in El Salvador or the Soviet Union. The church in Latin America is a crusader for social and economic justice and, consequently, has suffered the persecution of governments which oppress their own people.

On March 5, Archbishop James Hickey, of Washington, D.C., testified before the House Foreign Affairs Committee on behalf of the United States Catholic Conference. Archbishop Hickey's testimony outlines the basis for a responsible American policy toward El Salvador. He speaks with knowledge and a deep commitment to the people of El Salvador. From Archbishop Hickey comes one of the best examples of commonsense foreign policy that I have read during the entire debate on El Salvador.

I urge my colleagues to read his testimony, which appeared in Mr. EDGAR's statement in the RECORD of March 17, 1981, page 4605.

INTRODUCTION OF COAL INCENTIVES ACT OF 1981

HON. RICHARD C. SHELBY

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. SHELBY. Mr. Speaker, Congressmen TOM CORCORAN, KENT HANCE, and CLEVE BENEDICT are joining me today in introducing the Coal Incentives Act of 1980, a bill which would encourage the production and use of domestic coal.

The United States needs to reduce its dependence on imported oil by maximizing the utilization of our domestic resources. Our most abundant domestic source of energy is coal, which constitutes over 80 percent of our fossil fuel energy reserve, yet supplies only 18 percent of our energy needs. In many States, coal miners are unemployed.

In our attempt to deal with the energy problem, we have established numerous schemes to restrain demand, encourage alternative sources of energy, and compel people to switch to abundant fuels. What we have failed to address is the restraint on our ability to utilize coal. One of the major problems in converting to coal is the 1977 amendments to the Clean Air Act. The Clean Air Act should be an important tool in assuring a healthy environment while allowing sustained economic growth and increased use of domestic energy resources. However, in many areas of the country, the 1977 amendments to that act have made it impossible to utilize coal, and in other areas, the 1977 amendments have pushed the cost of using coal to a point where there is virtually no difference between the cost of imported oil and the cost of domestic coal. Thus, industry lacks the economic incentive necessary to convert.

The public health goals of the Clean Air Act are laudable. However, in evaluating the benefits of environmental regulation, we must be aware of their impacts on other areas of national concern. Our reliance on imported energy is a major national security problem which can no longer be ignored. We cannot continue to enact and implement overly restrictive environmental legislation in a vacuum and ignore the energy, economic, and national security implications of what we do.

The bill we are introducing today is designed to balance our energy and environmental objectives. Title I of the bill modifies some of the most restrictive features of the amendments to the Clean Air Act enacted in 1977, features which effectively eliminate coal as a source of energy independence. The bill is intended to strike a balance between the desire for a healthy environment and the need for energy independence without either of these goals precluding our attaining the other.

Among other things, the bill requires cost/benefit analyses, including the energy impact of air quality standards. If a major stationary source satisfies all applicable standards, it would not be subject to more stringent limitations for a 10-year period. The bill would also moderate the standards for local coal exemptions under section 110(f). Sources which voluntarily convert to coal would be given additional time to meet air quality standards.

Title II of the bill provides tax incentives for pollution control equipment, which are necessary to encourage the utilization of coal. The energy tax credits enacted as part of the Energy Tax Act of 1978 and the Crude Oil Windfall Profits Tax of 1980 are generally not applicable to public utility property. The bill would apply these credits to public utility property such as equipment necessary to permit the use of coal in electric generating facilities. The current restriction on energy tax credits for coal preparation plants, which limits the credit solely to plants at the point of use, would be deleted.

Mr. Speaker, Congressmen TOM CORCORAN, KENT HANCE, CLEVE BENEDICT, and I believe that the Coal Incentives Act of 1980 represents a significant step in the direction of encouraging the production and utilization of domestic coal in an environmentally acceptable way. We simply must put this

valuable resource to work for the benefit of all Americans.●

THE FARMER GRAIN PROTECTION ACT

HON. THOMAS E. COLEMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. COLEMAN. Mr. Speaker, today I am introducing legislation to protect farmers from an extremely unjust situation—that of having grain stored in commercial grain elevators impounded by the courts when those elevators file bankruptcy. This occurred recently in southwest Missouri, and a Missouri farmer who rightfully owned about 30,000 bushels of soybeans was forced to defy Federal marshals to retrieve his grain. This farmer simply could not wait for the intricacies of the law to be examined under our bankruptcy statutes. The courts could not stay Mother Nature. The farmer had to sell those soybeans and pay off his loan at the local bank so he could buy seed and meet his other production costs to plant the next crop. We are not talking about a situation that can be relaxed while lawyers on both sides of the issue decide what to do with the grain, the assets and the creditors of the bankrupt elevator. We are talking about spring planting time—in the Midwest, it is that window of a few weeks when seeds must get into the ground. The time factor for a farmer is critical; the situation in southeast Missouri is not an unusual or isolated case. These bankruptcies occur numerous times during a year, and the Congress must correct it soon.

We cannot afford to have American farmers idled through no fault of their own by a grain elevator company which is either poorly managed or perhaps even undergoing criminal investigations.

My bill—the Farmer Grain Protection Act—would amend the bankruptcy law to allow farmers easy access to their grain when they can produce proof of ownership, at the time of a company's filing bankruptcy. Essentially, this is an insurance policy for farmers who must store their grain off the farm.

In this time when many farmers are hard pressed to keep up with rising production costs and high interest rates, the Congress must take steps to ease other burdens farmers may be forced to carry. Times are not good throughout our economy and situations like the one we have been witnessing in southeast Missouri could very well be only the first of many to come.

It is my hope that the Congress will act quickly on this legislation and will act to alleviate this unreasonable process of the bankruptcy laws as it pertains to grain stored under custodial contract. Thank you, Mr. Speaker.●

SETTLEMENT OF CLAIMS WITH CZECHOSLOVAKIA

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BINGHAM. Mr. Speaker, with my colleagues, Messrs. BONKER and LAGOMARSINO, I am today introducing legislation that would finally settle our long-standing dispute with the Government of Czechoslovakia over private property claims. Under this legislation, U.S. claimants would be paid in full for validated losses of property expropriated by the current regime in Czechoslovakia. That payment would be made from interest on funds that would be realized from the sale of gold belonging to Czechoslovakia. The principal amount received for the gold would be returned to Czechoslovakia after payment of claims from the accrued interest.

This problem, Mr. Speaker, has a long and rather sad history. Twice in the past 20 years the Government of Czechoslovakia and the Government of the United States have entered into good-faith negotiations to settle these claims, and twice our Government has initiated settlement agreements, only to have implementation of those agreements blocked by the Congress. In the meantime, of course, the claimants have received nothing. Many are now quite elderly, and in need of the claims payments due them.

The history of this dispute and the negotiations that have taken place, however, have been dramatically eclipsed by recent events. The sharp increase in the price of gold in 1978–79 has fundamentally changed the parameters of the dispute. Prior to those increases, the value of the Czech gold in our possession was only about $8.4 million, or 8 percent of the total amount of the claims—$105 million, principal and interest. When the price of gold peaked some months ago at about $950 per ounce, the value of that gold had ballooned to $268 million, more than twice the amount of the claims. Even at today's price of about $475 per ounce, its value is $134 million, well in excess of the claims. It would be foolhardy and unfair of the U.S. Government to ignore this change, or to fail to have it reflected in what we consider a reasonable and equitable settlement for our citizens.

A settlement of about 40 cents on the dollar of the principal amount of the claims, although rejected by the Congress, was perhaps not totally unreasonable at a time when we controlled Czech gold assets valued at only about $8 million. But at a time when we have assets worth well in excess of the claims, a mere 40 cents on the dollar could hardly be considered equitable. True, our settlements with other countries, including the most recent one with the Chinese, have averaged about 40 percent of the principal amount of the claims. But in no other settlement have we controlled assets in excess of the total amount of claims as we now do in the case of Czechoslovakia. Whatever the relative amount of our past settlements, they have always closely reflected the absolute amount of any assets we held. In the case of Czechoslovakia, the notion that a reasonable and equitable settlement from our point of view should reflect, among other things, the value of the assets under our control suggests that we can settle for nothing less than full payment of principal and interest. Even having done so, Czechoslovakia stands to get back a substantial sum in gold or cash—more, certainly, than the gold was worth prior to its recent appreciation, and depending upon what happens to the price of gold in the coming months, more even perhaps than it will be paying out to American claimants. That is all the more reason, however, that we should and must insist upon full payment of our claimants.

Mr. Speaker, this bill provides for a unilateral action by the United States to pay the claimants, but it does not preclude a negotiated settlement. Indeed the bill directs the Secretary of State to continue to seeks such a mutually acceptable settlement, and a period of 3 months is provided for such further negotiation before any unilateral action by the United States would be authorized.

Much has been said, Mr. Speaker, about the right of the United States under an agreement to which we are a party with France and Great Britain, and under the principles of international law generally, to liquidate the Czech gold in our possession for purposes of payment of claims, as authorized by this bill. I was once quite skeptical about that myself. I will not try to review all the legal arguments here. They are elaborate and complicated. Suffice to say that the Subcommittee on International Economic Policy and Trade, which I have the honor to chair, and the Subcommittee on Europe and the Middle East, chaired by our colleague from Indiana (Mr. HAMILTON) examined both the legal and practical questions associated with this issue in considerable detail in hearings last year. We concluded at that time, and it is still my conclusion, that the argument made by the State Department that we are obligated to obtain the concurrence of the British and French in any action we take, and that we are thus constrained by our

agreement with those countries from unilaterally liquidating the gold and paying claims, is tenuous at best. Equally compelling legal arguments can be made in favor of our right to unilateral action. Given such parity in the legal arguments, I believe we can and must take the course that delivers the greater equity to our claimants.

I am not without hope, Mr. Speaker, that even in the short time that would be allowed after the enactment of this bill the Czech Government might come to find it in its own interest to enter into an agreement that would fully reimburse American claimants, rendering this legislation unnecessary. Such an agreement would have to be approved by the Congress under section 408 of the Trade Act of 1974. In light of the delays that have occurred and the advanced age of many of the claimants, such agreement would hopefully come soon, for justice much longer delayed will be justice denied these claimants.

Another feature of this legislation, Mr. Speaker, is that it would allow for the consideration of claims of persons who became citizens of the United States after 1945, or whose claims arose after 1958. To adjudicate those claims, the Foreign Claims Settlement Commission would be authorized to reopen the Czech claims program. This legislation would authorize payment of any such claims certified by the Commission.●

CORA P. BEEBE

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. PURSELL. Mr. Speaker, I would like to take a moment to pay a special tribute to a University of Michigan alumnus, Ms. Cora P. Beebe, who has been appointed the Assistant Secretary for Administration in the Department of the Treasury. Ms. Beebe is well known to those of us on the Labor, Health and Human Services, and Education Appropriations Subcommittee for her outstanding contributions to education. As the Director of the Division of Planning and Budgeting in the Office of Education, she was always an excellent witness before our subcommittee, and we valued greatly her expertise concerning Federal education programs. Education's loss is Treasury's gain, and I am sure I speak for all members of the subcommittee in honoring Ms. Beebe and wishing her success in her new position.●

ILLICIT DRUG TRAFFIC

HON. E. CLAY SHAW, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. SHAW. Mr. Speaker, the first bill that I have introduced in the 97th Congress deals with an issue that I feel deserves immediate attention—the illicit drug traffic in the United States. We must combat the epidemic proportion of drugs pouring through our borders with the most effective defense. To impose high penalties on those involved in the distribution is a fine idea; however, it treats the symptom and not the disease. H.R. 2420 goes right to the source and diminishes the availability of these drugs to our country. This legislation will once again enable countries to use foreign assistance money for the spraying of a herbicide to eradicate marihuana.

To understand this issue, it is necessary to examine its history. Mexico was the first country to use paraquat to combat its large problem with heroin crops. Because of the success of the program, the Mexican Government began to use paraquat on what they considered to be their No. 1 drug abuse problem—marihuana. Due to the fact that 85 percent of the marihuana entering the United States at that time was grown in Mexico, the then Department of Health, Education, and Welfare (now called Health and Human Services—HHS) under Secretary Joseph Califano, created a computer-simulation model of the impact of paraquat treated marihuana on the health of approximately 50 to 100 persons in the southwest region of the United States, who were predictably at risk of suffering irreversible lung damage. A report was released in March 1978, stating:

* * * that marihuana contaminated with the herbicide paraquat could lead to permanent lung damage for regular and heavy users of marihuana and conceivably for other users as well * * *

The National Institute on Drug Abuse released a report and a health warning stating that:

* * * if a person smokes 5 marihuana cigarettes every day for one year, each cigarette containing 500 ppm of paraquat, permanent lung fibrosis would develop * * *

Both of these studies were based on worst case situations. The U.S. Department of Agriculture (USDA) furnished a technical review of the HHS data. The review stated that the USDA scientists reviewed the exposure data and noted that the projection of 50 to 100 marihuana smokers, estimated to be exposed each year to 500 micrograms or more of unaltered paraquat in marihuana smoke, is a worst-case estimate which was arrived at after several computer-simulation assessments were made. Some assumptions utilized in the assessment do not appear valid.

According to the report of the Select Committee on Narcotics Abuse and Control regarding the use of paraquat, HHS made these assumptions:

First, that all of the smoke from a marihuana cigarette is inhaled by the smoker.

Second, that all of the smoke from the cigarette is retained by the smoker.

Third, that all of the unaltered paraquat in the smoke from the marihuana cigarette is available to the lung.

Based on the findings of the HHS simulation model, the International Security Assistance Act was amended stating that its funds may not be made available for the purpose of spraying herbicides to eradicate marihuana plants if the use of that herbicide is likely to cause harm to the health of persons who may use the marihuana.

Based on the information released as a result of these reports, many feel there is sufficient reason to question their findings in relation to paraquat usage. For example, at this time, not one case of herbicide poisoning has been reported. In addition, the United Nations Narcotics Laboratory study of 1978 does not support the notion that paraquat is harmful to one's health.

Since the validity of the HHS findings are being questioned, the issue of health safety was taken into consideration when drafting my bill. As insurance, my bill will direct the Secretary of HHS to monitor and report to the Congress the impact of the paraquat program on the health of those who come into contact with treated marihuana.

The effectiveness of this type of program escapes question. The United Nations Fund for Drug Abuse and Control, along with other drug enforcement officials agree that spraying is the only measure assuring success. The Mexican Government's program is a shining success. The Mexicans can boast a smaller field size, a drastic dropoff of the crop and the shift in position from a primary to a secondary supplier of marihuana to the United States, as a result of the program. In addition, paraquat is environmentally safer, less toxic, and has a shorter knockdown time—the amount of time it takes to kill the plant—than any other herbicide.

After carefully reviewing the HHS report, studying all of the remarks made by drug abuse and control specialists, and studying the effectiveness of such a program, I conclude that H.R. 2420 deserves immediate attention and consideration. The result will be an effective program to combat drug traffic into our country while monitoring the health of our citizens and will enable the United States to

aid other countries who wish to participate in the program.●

DECONTROL TO COST OHIO AS MUCH AS $29.6 BILLION

HON. DENNIS E. ECKART

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. ECKART. Mr. Speaker, I recently received a copy of a report released by the Energy Action Coalition which concerns the probable economic effects of the decontrol of natural gas prices on the Northeastern industrial region of our country. I offer it for submission into the CONGRESSIONAL RECORD and strongly recommend its study by my colleagues.

Immediate decontrol will cost Ohioans between $17.5 billion and $29.6 billion more than current costs over the next 5 years. Furthermore, those same energy costs will have serious indirect effects on food prices, industrial growth, and new home construction. Certainly, these difficulties will translate into even greater national problems.

One final statistic for my colleagues to ponder. Immediate natural gas decontrol will cost Ohio consumers each between $994 and $1,408 per year just to have their heating fuel pumped from beneath ground level to the wellhead. Thank you.

The material referred to follows:

DECONTROL TO COST OHIO AS MUCH AS $29.6 BILLION

WASHINGTON.—According to a study released today by the Energy Action Educational Foundation, "the decontrol of natural gas prices will cost Ohio between $17.5 billion and $29.6 billion more than continued controls between now and 1985."

Comparing the cost of continued controls to two decontrol alternatives (accelerated and immediate decontrol), Energy Action found that the state's industrial users would incur increased gas costs ranging from $6.5 billion to $11.0 billion over the five year period. Residential users would have to pay between $7.6 billion and $12.9 billion over the same period. "This works out," said Energy Action director Edwin Rothschild, "to between $994 and $1,408 per year for the average residential user for just the cost of gas at the wellhead."

In addition, the study found that commercial users in the state would have to pay between $3.1 billion and $5.2 billion more for their gas from 1981 through 1985.

"The effect of higher natural gas prices resulting from decontrol," said Rothschild, "will not only be felt directly by consumers in the form of higher utility bills, but indirectly in the form of higher prices for food, clothing, housing, automobiles, medicine and other necessities of life. This is so because the industries which manufacture these products will pass through the increased cost of gas."

"Decontrol," the study said, "will drain between $35.9 billion and $25.4 billion out of the state's economy and direct it to the major oil companies, producing states and foreign governments. As a result the state's economy will face a reduced industrial base supporting fewer jobs, increased inflation and an increased tax burden for all taxpayers due to the reduced tax base."●

MICHIGAN BEANS GET EXPRESS TRAIN SERVICE TO MEXICO

HON. DONALD JOSEPH ALBOSTA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. ALBOSTA. Mr. Speaker, last year during the debate on the Staggers Act, which substantially deregulated the railroads, many of us expressed our concern about the effect deregulation might have on agricultural shippers and short-line railroads. Today, I am happy to report an early success story from my own district in Michigan which shows that railroads can work with shippers of farm products and with smaller railroads to the mutual benefit of all. Through innovative marketing, the Chessie System, which serves Saginaw, Mich., was able last year to arrange for large shipments in unit trains of a basic food staple to Mexico. This resulted in the opening of a new market for the farmers of Michigan and also relied on the close cooperation of a major rail carrier, the Chessie System, and a number of Michigan short-lines—the Ann Arbor, the Detroit and Mackinac Railroad and the Tuscolo and Saginaw Bay railroads. The Chessie System is to be commended for its imaginative use of the new freedom given to railroads by the Staggers Act.

Last fall the Chessie System began the first of 17 shipments from Saginaw of unit trains full of pinto and black turtle beans grown in Michigan and destined for Mexico. These types of beans are the main staple of the Mexican people's diet and were shipped during the fall months to Mexico because of the severe drought that occurred in that country and, as a consequence, there resulted a critical shortage of these staple food products.

Full credit should be paid to the Chessie System for coordinating these movements. The cargoes of Michigan-grown beans were collected from over 25 separate points on the Chessie System as well as from elevators on the Ann Arbor, the Detroit & Mackinac Railroad and the Tuscolo and Saginaw Bay Railways. These rail lines are in the heart of the rich bean-producing areas of Michigan. The trains that carried these movements averaged approximately 70 cars per train and moved approximately 112,000 metric tons during the months of September through January.

As most of my colleagues know, last year the ICC, in an effort to give the railroad industry more flexibility, deregulated agriculture commodities. The transportation package which was developed by Chessie to make these successful shipments possible incorporated this new approach to rail service. The flexibility permitted by the removal of regulation allowed savings to shippers in transportation costs based on incentive rates and tonnages shipped. These rail shipments effectively utilized the three short-line railroad carriers operating in central Michigan as gathering lines for the unit-train movements. All cars on each train were handled by a single customs house broker at the Mexican border. Permits from connecting southwestern rail carriers were obtained in advance, thus enabling the unit trains from Michigan to enter Mexico without the normal delays.

Again, this whole successful effort was put together primarily because of the excellent cooperation of the Michigan bean shippers, the Chessie System Railroads and the various participating Michigan short-line carriers and offers good evidence that the relaxation of Government controls can in certain cases work to the advantage of agriculture producers, the railroad industry and ultimate consumers.

I would like to commend to the attention of my colleagues the recent article in the winter 1981 issue of Michigan Dry Bean Digest which outlines the success of this program.

[From the Michigan Dry Bean Digest, Winter, 1981]

MICHIGAN BEANS GET EXPRESS TRAIN SERVICE TO MEXICO

(By Howard Robinson)

SAGINAW, MICH.—The State of Michigan's first opportunity to produce Pinto and Black Turtle Beans to cover major contracts with the Mexican Government occurred in 1980 and results have been proclaimed a big success by Michigan farmers and shippers and Mexican consumers.

This was in spite of unfavorable fall weather in Michigan and a decision by the Interstate Commerce Commission to deregulate these food products.

Some 14 inches of rain drenched the bean growing areas of the State of Michigan during the planting/growing/harvesting season between June 1 and October 5. In spite of this abnormal rainfall, Michigan's farmers managed to harvest sufficient tonnage to meet Mexican contract minimums.

The ICC's action, to include dried beans as one of a number of commodities to be exempted from its regulation, was an effort on the part of the agency to give the railroad industry a greater opportunity to compete on equal grounds with other transportation modes.

Of major concern to the Dried Bean Industry was that existing tariff rates published at the time contracts were negotiated were no longer applicable. With this exemption, railroads were then free to increase rates without intervention by the ICC, and transportation costs could be raised substantially above the level provided for in the contracts.

Substantially increased rates did not occur. Instead, a transportation package was created by Chessie marketing specialists

who incorporated a new approach to providing rail service.

The final package, which was worked out in a meeting of contract holders and Chessie, using the flexibility permitted by removal of regulation, provided savings to Michigan's shippers in transportation costs based on volume incentive rates.

One shipping industry observer, commenting on the package, said, "To suggest that solving the problems of getting tonnage into the elevators for bagging and shipping, and negotiating a satisfactory transportation price package was taking care of the tip of the iceberg may be a overstatement."

Many problems still faced the bean shipping industry before its product reached Mexican receivers. A.N.V., Wickes Agriculture, and Michigan Elevator Exchange, the principal Michigan contract holders, were faced with the problem of securing suitable box cars in large numbers. They also had to arrange for permits to move each car through embargoed Texas/Mexico river boundary crossings where upwards of 7,000 carloads of traffic were already lined up waiting to cross. To accomplish these and many other necessary functions in time to have all committed tonnage in Mexico prior to a December 31 deadline, were just a few of the problems they faced.

While this article was written a few weeks before shipping was completed, shippers have no doubt that the terms of each contract involving Michigan's Pinto and Black Turtle Beans will be met, and that all tonnage will be in Mexico by December 31. Basis for this confidence was the creation of a Run-Through train system which was designed to solve many of the contract holders problems of getting its production to market expeditiously.

Implementation of this program by Chessie System marketing specialists was not a "one-man" job, and could only be accomplished with excellent cooperation of such shipper organizations as Valley Marketing, Northern States Bean, Agri Sales, Wickes Agriculture, Michigan Elevator Exchange, and other rail carriers. The others who cooperated in the venture included a number of Michigan railroads—the Tuscola & Saginaw Bay, the Ann Arbor, the Detroit and Mackinac, and the Michigan Northern, which all agreed to participate.

The Chessie marketing/shipping program worked this way:

First, it was decided to collect cars originating on the C&O and participating lines each week and originate a train every Sunday at Chessie's Saginaw Yard. Next, a schedule of alternate routings to be used was drawn up so that permits could be secured well in advance of shipping dates. Carrier Agreements were written and signed with other origin carriers making it possible to include cars from elevators on their lines in Chessie's weekly trains. This afforded shippers the benefits of Run-Through service, the same as would be provided for shippers served by C&O, and would eliminate the need for their shippers to secure individual permits.

Cars from the TSBY were interchanged to the C&O at Vassar, Michigan, from the D&M at Bay City, from the Ann Arbor at Alma, and from the Michigan Northern at Reed City, Michigan, on previously agreed-upon schedules and moved to Chessie's Saginaw Yard for inclusion in that week's Sunday train.

Once the schedule of weekly routings was agreed upon by shippers, Carrier Agreements were signed with railroads participating in the routes beyond Chessie's gateways of Chicago and St. Louis.

These carriers included the A.T.S.F., Southern Pacific and Missouri Pacific, which were contacted by Chessie and asked to supply permits for entire trains instead of individual cars.

These carriers were extremely cooperative in providing permits for each train, and in moving the blocks of cars intact from their interchanges with Chessie at either Chicago or St. Louis to the river crossing designated in the permit they supplied.

This 1980 version of "Express Train," freight service provided by Chessie and its connections from Saginaw to the border took as little as three and one half days to move a distance of more than 1,600 miles.

It was then determined that, if there were no more than two border crossing custom brokers, delays at the borders must be anticipated. To eliminate the possibility of such delays and expedite movements, Chessie approached the contract holders seeking their agreement to utilize the services of only one customs broker at each of the five Texas river crossings—at Presidio, Eagle Pass, El Paso, Laredo, and Brownsville.

The agreements were made. Each week contract holders were given by Chessie's Saginaw coordinator the permit number, the border crossing, the custom house broker, and the specific routing to be used for each train, all necessary information used by contract holders and shippers in treating identical documentation covering the cars moving in each train.

One other potential problem brought to the attention of Chessie personnel involved the distribution of cars after they crossed the border into Mexico.

Cars containing Black Turtle Beans were moved to Mexico City and distribution was coordinated from there. However, Pinto Bean carloads were moved directly to the consumption point, many of which were located short of Mexico City.

To assist Mexican officials in this distribution system Chessie System blocked Black Turtle and Pinto Bean cars prior to their departure from Saginaw Yard. When the trains departed, all Black Turtle cars were at one end of the train, and all Pinto cars were at the other.

Probably the item of greatest concern to Michigan's bean shippers was the railroad's ability to supply cars in numbers greater than would be normal.

The box cars supplied had to be in good condition, be able to handle 60 tons of lading and be available to shippers when requested in order that elevators would be kept in a fluid condition.

Chessie anticipated the weekly box-car needs and moved a continuous flow of cars toward Saginaw. Michigan's other origin carriers were similarly efficient in meeting car requirements.

Chessie representatives had an opportunity to detail the Michigan Bean Shipping Program to Mexican officials at a July meeting in the Mexican Embassy in Washington.

U.S.D.A. officials who were assisting Mexico with their transportation program also were in attendance. Manuel Bravo, of Conasupo, Mexico's food purchasing agency, stressed the urgency of moving this tonnage as rapidly as possible and was most appreciative of the joint shipper/railroad efforts which made Run-Through service from Michigan possible.

As a result of this meeting Chessie arranged to send Conasupo's Mexico office each Monday morning by teletype a full consist of all cars on each train, and agreed to call the Mexican Embassy in Washington each Monday with details of cars and tonnages.

Shipping experts agree to the success of this undertaking as proof that if U.S. shippers and railroads work together, solutions to transportation problems can be found, and opportunities can be used to the mutual advantage of both, whether commodities are exempt or not.

It is expected that 1980's successful joint effort will give the State of Michigan the inside track if Mexico decides to place orders for Pintos and Black Turtles in 1981.●

IN HONOR OF THE NEW ROCHELLE HIGH SCHOOL HUGUENOTS FOOTBALL TEAM BEING NAMED THE NO. 1 FOOTBALL TEAM IN THE STATE OF NEW YORK

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. OTTINGER. Mr. Speaker, I would like to bring to the attention of my colleagues that the New Rochelle Chamber of Commerce and the city of New Rochelle recently saluted the New Rochelle High School Huguenots football team for their accomplishments during the 1980 football season.

I would like to extend congratulations to the New Rochelle High School Huguenots for achieving the distinction of being named New York State's No. 1 football team by the New York State Sports Writers Association, and to their coach, Mr. Harold Crocker, for being named the No. 1 high school football coach.

This is the second time in 4 years that the Huguenots have been so honored. Their continued accomplishments bring distinction to their school and community.●

BIAGGI PRAISES PRESIDENT REAGAN'S ST. PATRICK'S DAY MESSAGE

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BIAGGI. Mr. Speaker, as chairman of the 121-member bipartisan Ad Hoc Congressional Committee for Irish Affairs, I wish to call to the attention of my colleagues the fine St. Patrick's Day statement of President Ronald Reagan.

It has long been the contention of the ad hoc committee that the United States can and should play a positive role in advancing the cause of peace and freedom in Ireland. We on the ad hoc committee share the President's

deep concern and opposition to violence and feel it impedes the path of peace.

Along with my colleague, HAMILTON FISH, I have sent a telegram to the President seeking a meeting with the ad hoc committee so we might engage in a dialog on future directions of U.S. policy on Northern Ireland.

The full text of the President's statement as issued from the White House Press Office on March 17 follows:

THE WHITE HOUSE,
OFFICE OF THE PRESS SECRETARY,
March 17, 1981.

STATEMENT BY THE PRESIDENT

St. Patrick's Day is not only the feast day of a great man of God, it is a symbol of the commitment of the Irish people to freedom, to justice and to the values upon which western civilization is built.

We in the United States know the great contribution made by citizens of Irish ancestry. From our Revolution to the present day, Irish-Americans have been at the forefront of the defense of freedom. By their labor and by their sacrifices, they have been a major force in building our Nation.

It is therefore gratifying on this St. Patrick's Day to be able to pay tribute to the great role Ireland and the Irish have played in defending and renewing the values we cherish.

But we are also conscious of the violence, bloodshed and despair which now haunt all the people of Northern Ireland. This tragedy cannot go unnoticed by the United States which owes so much and has such close ties to the Irish.

As an American proud of his Irish ancestry and as President, I recognize the vital importance to our Nation and the western alliance of a peaceful, just and swift solution to current problems in Northern Ireland.

The United States will continue to urge the parties to come together for a just and peaceful solution. I pray and hope that the day will come when the tragedy of history which now afflicts Northern Ireland will be overcome by faith, the courage and the love of freedom and justice of the Irish.

We will continue to condemn all acts of terrorism and violence, for these cannot solve Northern Ireland's problems. I call on all Americans to question closely any appeal for financial or other aid from groups involved in this conflict to ensure that contributions do not end up in the hands of those who perpetuate violence, either directly or indirectly.

I add my personal prayers and the good office of the United States to those Irish—and indeed to all world citizens—who wish fervently for peace and victory over those who sow fear and terror.●

MORATORIUM ON THE KILLING OF WHALES

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BONKER. Mr. Speaker, I am today submitting for myself and Representative JONES of North Carolina a resolution calling for an indefinite moratorium of the commercial killing of whales and otherwise expressing the sense of the Congress with respect to conserving and protecting the world's whale populations.

Since December 1971, when the United States banned all whaling for commercial purposes by U.S nationals, our Government's policy has been to seek a worldwide ban on the commercial exploitation of whales. As chairman of the House Foreign Affairs Subcommittee on Human Rights and International Organizations, which oversees U.S. participation in the International Whaling Commission—IWC—and as a congressional adviser on the U.S delegations to the previous two IWC meetings, I have actively supported our attempts to secure the IWC's adoption of an indefinite moratorium on commercial whaling. This resolution reaffirms our commitment to this goal and endorses other proposals that have been made in the IWC to enhance protection of the world's endangered whale populations.

Other proposals that would make a substantial contribution to the conservation of whales include: strengthening the IWC's management procedures through expanded scientific research, participation by all IWC members in the Commission's International Observer Scheme and improved enforcement of quotas and other regulations, and extending the ban on the use of the cold—nonexplosive—harpoon to include minke whales.

The resolution urges the IWC to continue to collect and study information on the important question of aboriginal/subsistence whaling, and reaffirms the U.S. position that the IWC has the authority to regulate the take of narwhal and beluga whales. Finally, the resolution calls upon the United States to make the fullest use of diplomatic channels and all other available means in promoting these objectives. We would hope that our country's representations on these matters are made at the highest diplomatic levels and that certification procedures under the Pell and Packwood-Magnuson amendments are undertaken in cases of violations.

Mr. Speaker, the continued commercial slaughter of whales by a handful of nations is indefensible. The whale harvest is one of the most inhumane hunts in the world, particularly when the cold harpoon is used. On economic grounds, not only are the whaling industries of Japan and the Soviet Union, which account for nearly three-quarters of the world's commercial whale catch, heavily dependent upon government subsidies, but natural and synthetic substitutes exist for all whale products, including sperm whale oil. In Japan, actual consumption of whale meat amounts to less than 1 percent of total annual protein consumption.

The International Whaling Commission's decision at its 32d annual meeting in 1980 to allow a total commercial take of 13,851 whales in the 1980–81 season is a far cry from the U.S. goal of bringing an end to commercial whaling. I encourage my colleagues to join with me and Representative JONES in cosponsoring this resolution.●

LEGAL SERVICES CORPORATION—A PROGRAM WORTH SAVING

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BROWN of California. Mr. Speaker, I would like to call to the attention of my colleagues two editorials that appeared recently in support of the Legal Services Corporation.

The Reagan administration has proposed to eliminate funding of the Legal Services Corporation and to consolidate this program in the block grant activities of the States. As this proposal would have the effect of emasculating this program, I urge my colleagues to support its continued funding.

The Legal Services Corporation is not a single bureaucratic agency, but rather is the hub of a network of legal aid offices and backup centers. It is probably one of the most efficiently run agencies the Government funds with only 2 percent of its budget going to administrative overhead. It would be impossible to find another federally funded program that has a more dedicated and effective staff whose average income is less than $16,000.

The problem with the Legal Services Corporation is not that it is ineffective but rather that it is too effective in representing the rights of the poor and disenfranchised. Much of the current law protecting tenants' rights, worker safety, voting rights, and other areas of the law, has been the result of the efforts of LSC attorneys.

The administration suggests that increased pro bono work by the legal community will fill the void left by LSC. I find this hard to believe. The combined efforts of LSC and the present pro bono activity meets only 10 percent of the existing legal needs of the poor. The legal community recognizes the need for LSC. The ABA and innumerable bar associations and other legal organizations have endorsed continued support for the Legal Services Corporation.

I urge my colleagues to continue their support for this program.

[From the Washington Star, Mar. 9, 1981]

LEGAL SERVICES: GOVERNMENT AT ITS BEST

(By Edward W. Brooke)

The president and the Congress, in their rush to reduce federal spending, risk terminating one of the most successful public efforts for the poor—the civil legal services program.

As a U.S. senator, I represented hundreds of thousands of poor people, primarily in Massachusetts but elsewhere across the nation, too, who got legal help through the program. I also served on the Appropriations Committee that annually reviewed and approved funding for the national Legal Services Corporation, which is the congressionally created private nonprofit organization that funds over 300 local Legal Services programs in every part of the country.

The civil legal services program has had a profound and lasting effect on the lives of the poor. Operating through no-frills neighborhood offices, talented, committed and grossly underpaid attorneys and paralegals give poor individuals and families a chance to use, and occasionally to alter, our legal system.

The results are dramatic. In Massachusetts, for example, the elderly poor, people with serious illness, tenants whose landlords don't pay bills have been protected against arbitrary utility shutoffs this winter, because of Legal Services.

JOBS, HEALTHY CHILDREN

There are better job incentives for welfare mothers and more possibility for long-term stable employment, because of Legal Services. The chances of little children being poisoned by lead paint in their houses and apartments has greatly been reduced because of Legal Services.

Of all the programs the federal government now supports, Legal Services should be one that Ronald Reagan would rush to defend. It would be difficult to find another public effort that responds so effectively to the President's repeated concerns:

"Making government work for the people." No one in this country is more subject to government regulation than the poor. Their jobs, food, shelter and incomes are affected by daily decisions of local, state and federal bureaucrats and lawmakers. A major part of Legal Services' work is making that system responsive to their clients by cutting through red tape and minimizing interference in their personal lives.

"Minimizing paperwork and eliminating unnecessary bureaucracy." The Legal Services Corporation is the model of administrative efficiency. Overhead costs are less than 3 percent of its total budget. Its application procedures are simple. It does not require a single page of paperwork from state or local officials. Money is appropriated by Congress and flows immediately and directly to those who provide legal services to the poor.

"Eliminating waste, fraud and abuse." Legal Services lawyers are law enforcement officers for the poor. They have repeatedly and successfully challenged mismanagement of public programs and bureaucratic violations of statutes designed to benefit and protect their clients.

"Local control." Legal Services is not run from Washington. Poverty lawyers work for private nonprofit organizations, with boards of directors composed of local attorneys, clients and other interested citizens. Program design, management, and priorities are locally determined. They vary significantly from one community to another, according to local needs and circumstances.

Legal Services is not a big money item and the real pressures on the president to "get Legal Services" are not budgetary. They are political. Our legal system is an adversarial one. It generates controversy. That seems particularly true when it is used effectively for the poor.

TAKING ON THE POWERFUL

The great bulk of Legal Services involves routine matters that never attract any interest beyond the parties immediately involved. However, poverty lawyers have taken on some of the most powerful private and public interests on behalf of their clients. They have successfully challenged unsafe labor practices of corporate agriculture on behalf of seasonal farm workers. They have put a stop to unfair credit practices that unjustly robbed the poor of their meager income. They have required warranties of habitability from slum landlords. And they have forced state and local officials to comply with federal law.

The aggressive representation of poor clients has created powerful political enemies. From the beginning, they have tried to undermine and destroy the program. They had their last best chance in the early '70s, when Howard Phillips was appointed to OEO to dismantle Legal Services. Those same opponents, mobilized through the National Committee to Defeat Legal Services, are intent on getting President Reagan to pick up their banner.

DISTINGUISHED SUPPORTERS

But Legal Services has influential friends as well. In spite of the rhetoric of some extremists this is not a program of some radical fringe. Much of the impetus for its creation in 1965 came from the American Bar Association and the leadership of distinguished Americans like Lewis Powell, now a Republican-appointed Supreme Court justice. It has always enjoyed bipartisan support in the Congress.

It is not insignificant that my views and those of the respected conservative commentator, James J. Kilpatrick, come together in support of Legal Services. It will not be often, I suspect, that our views on political issues so converge. There can be little room, however, for thoughtful conservatives, liberals and moderates to disagree on an issue so fundamental to a society based on law.

The final decision on Legal Services will have minimal budgetary consequences one way or the other. It will have a lasting human impact for the poor, and major consequences for the system of justice in this country.

[From the Washington Post, Mar. 10, 1981]

AN EQUAL CHANCE FOR JUSTICE

The trouble with the Legal Services Corporation is not, as the Reagan administration seems to believe, with what it does or who pays its bills. During the seven years of its existence, this organization has helped thousands of poor people assert their legal rights. But the help it has provided doesn't get to the real problem: the exorbitant cost of justice and legal services in a country that stakes so much on the idea that people must, and will, obey the law.

The system of justice now works like this. The rich—we use that term somewhat loosely—and the corporations are well served; they hire the very best lawyers and pay them fees that often can only be described as mind-boggling; their legal rights are fully and, usually, brilliantly protected. The poor, through the aid this corporation and other publicly funded groups provide, are reasonably well-served; they have at their command a corps of eager lawyers, most of them young, who want to make the country a fairer place in which to live. The citizens who fall in between—the low and moderate-income people—are served hardly at all; they cannot afford the best, they do not qualify for aid, and they generally make do with little or low-quality legal assistance.

The administration's proposal to wipe out federal funding for the Legal Services Corporation would only make this situation worse. It would strip from the poor the key incentive most people have to obey the law and follow the rules: the belief that if you are right and the other person is wrong, the law and the lawyers will see that justice is done.

Maybe this corporation could be folded out of existence as part of a total reform of the way legal services are delivered. Maybe the money for its activities should be provided in a different way. But it would be reckless for the federal government to walk away so abruptly from this project. The poor, having had a taste of what the law can accomplish in their behalf, are not likely to—and should not—accept quietly a return to the old days when their rights counted for nothing.

The ultimate irony in this proposal is that it would cut off legal services to the poor while continuing to subsidize legal services to corporations and many rich people. Legal fees are often business expenses, which are, naturally, tax deductible. Perhaps this administration, with its love for user charges, can think of a device that would channel some of that money or a part of the hefty, six-figure incomes the big-time lawyers take home into providing legal services for the rest of the community. The law—and the lawyers—will not be fulfilling the ultimate promise of this country until everyone has an equal chance at justice.●

TUITION TAX CREDITS—POOR EDUCATIONAL POLICY

HON. JULIAN C. DIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. DIXON. Mr. Speaker, just last week I received a letter from the president of one of our Nation's most prestigious private universities.

I point this out, because his letter outlines a number of reasons why tuition tax credits represent a poor way to aid education or individual students.

At a time when the administration wants to limit eligibility for student loans, it is ironic to float support for tax credits which will cost from $4 to $6 billion, and provide limited access compared with need-based programs.

I would like to share this letter from President Donald Kennedy, of Stanford University, and encourage consideration of his insightful arguments.

STANFORD UNIVERSITY,
Stanford, Calif., March 10, 1981.

Hon. JULIAN C. DIXON,
Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DIXON: Although the President has not included Tuition Tax Credits in his first initiative, it is clear from the number of bills already introduced that you will have the responsibility of voting on this issue during this session of Congress. I am writing to you early in the process because I am deeply troubled by several issues raised by this approach to student aid at postsecondary institutions. Let me make it clear that I shall address the issue only from the perspective of higher education.

From that perspective, I can assert with confidence that Tuition Tax Credits cannot be defended either as aid to education or as student aid. As you know it is frequently claimed to be both, simultaneously. That is, to put it charitably, logically impossible. If the proposed $250 credit is to be absorbed in higher education, then it will be of no benefit to students and their families; if, conversely, it is to provide any enhancement to the ability of parents to pay for their children's education, then universities and colleges must set tuition as though the benefit did not exist. There is no way to reconcile the two.

In fact, a $250 tax credit will not assist a single student to come to Stanford or any other independent institution. Neither will it be helpful to most students who choose to enroll at a public college or university, nor can it stand inspection as an aid to higher education. That is why most of the major Associations representing independent and public colleges and universities, after debating the issue thoroughly, have voted to oppose Tuition Tax Credits.

Let me summarize some of the major reasons for this opposition. I believe they are compelling:

1. Current student aid programs can certainly profit from reform—perhaps most notably from the imposition of income ceilings on eligibility for Guaranteed Student Loans. But the central element of those programs, carefully built in by Congress over the last twenty years, is their focus on delivering aid to those students who need it, and/or enabling those students to attend the institution best suited to their interest and aptitudes. Together these provisions constitute a remarkable accomplishment in educational policymaking by the government.

This achievement would be seriously endangered by Tuition Tax Credits. When the Packwood-Roth-Moynihan Bill, the most likely legislative vehicle during the 97th Congress, was introduced on February 24th, reported estimates of its cost ranged between slightly over 4 billion and 6 billion. Most analysts agree that about two-thirds of the cost will be for students enrolled in colleges and universities. It is hard to imagine that 2.7 billion can be given up for Tuition Tax Credits without endangering the current programs which so effectively serve students with real need. Indeed, those programs already appear as targets for devastation in the OMB budget proposals.

I cannot resist noting the irony of placing limitations in the Guaranteed Student Loan Program (projected to save several hundred million) while expressing enthusiasm for Tuition Tax Credits, which have no income cap at all and will cost over 4 billion dollars—all at a time when there is strong bipartisan support for budget reduction.

2. Proponents declare that a great advantage of Tuition Tax Credits is the ease of obtaining the benefit—one line of the tax form. Does this mean no regulations will have to be written? Of course not. On the surface, it may appear simple—but the IRS must determine which institutions and eventually which individuals are eligible. While I have enormous respect for the ability of the IRS to collect revenue, I am not comfortable with its ability to be an arbiter of educational policy, or to simplify the administration of any program. Furthermore, the simplicity argument begs the real issue—which is equity, and not administrative convenience.

3. It has been suggested that an important reason for including colleges and universities is to heighten the chance for success against a court challenge to Tuition Tax Credits for elementary and secondary schools. This may be viewed by some as clever politics, but it surely makes for bad policy. The issues should be faced separately, and college students should not be employed as political shields for this measure.

I would welcome the opportunity to discuss in greater detail the issues raised by Tuition Tax Credits for colleges and universities. At the very least, I urge you to meet with college and university representatives in your district before you decide how to vote on this proposal.

Sincerely,

DONALD KENNEDY,
President.●

HOUSING AS A SPECULATIVE COMMODITY

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. ROSENTHAL. Mr. Speaker, the New York Times for March 18, 1981, contains an article entitled "Housing, Inflation, and Taxes" by Rolf Goetze, which I would like to call to the attention of my colleagues. Mr. Goetze, who will be a witness at hearings to be held by the Subcommittee on Commerce, Consumer, and Monetary Affairs on March 30, 31, and April 1, 1981, on condominium conversion, makes the point that our tax laws help to encourage housing as a speculative commodity. He also discusses the role of tax laws on condominium conversion, the decrease of affordable rental housing, and the impact of housing speculation on inflation. A more extensive discussion of these issues was published by Mr. Goetze in the Boston magazine, "Working Papers," for January-February 1981.

The article follows:

HOUSING, INFLATION, AND TAXES

BELMONT, MASS.—Interest rates, energy scarcity, and demographic changes are widely perceived as principal causes of unaffordable and scarce housing, but the Federal tax code is equally a factor, and is more readily modifiable.

Homeowners' tax deductions for mortgage interest and property taxes are rapidly soaring, from under $10 billion in fiscal 1977 to an estimated $35 billion in fiscal 1982. These deductions, officially called "tax expenditures," have become a major focus in the search for additional Federal revenues.

In regions and areas of greatest housing demand, among them the Sun Belt and rediscovered urban neighborhoods, they no longer stimulate adequate production; instead, they inflate the value of the existing stock, rewarding affluent owners the most.

The Federal income tax encourages overinvestment in home ownership by individuals in the highest tax brackets, and as they buy more housing than they need, as tax shelters, they soak up mortgage credit and leave too little housing for others currently without such tax advantages.

Of the $22 billion in homeowner deductions in fiscal 1980, 25 percent were taken by relatively few households—those with incomes over $50,000. In effect, a high tax bracket reduces the cost of a mortgage to the point where affluent households, instead of investing in reindustrialization, cannot afford not to buy appreciating housing.

Curbing housing-cost inflation is a particularly appropriate goal these days for another reason: The cost of housing strongly influences the Consumer Price Index. In turn, the index directly raises the Federal budget through indexed assistance payments such as Social Security, and also shapes salary and wage increases throughout the economy.

There is considerable experimentation directed at making housing credit more affordable, ranging from tax exempt housing bonds to innovative terms for conventional lending. But seen from the public standpoint, not all housing investments are equally productive.

New construction and upgrading of existing stock are sorely needed and benefit the economy, but the after-restoration trading-up of well-situated "urban treasures certified by preservationists" is speculation in a collectible—but at taxpayers' expense—because home ownership is particulary tax-sheltered. An increasing share of tax expenditures now go to housing as a speculative commodity.

Effective tax policy should encourage productive housing investments while discouraging speculation. Does this require more regulations and call for a greater Government role? Not at all. A simple modification of the Internal Revenue Service's basic income-tax form, the 1040, could largely achieve this. It could replace homeowner tax deductions by a single homeowner tax credit of 25 percent of mortgage interest and property taxes combined, and could cap this Federal tax credit at $2,500 per homeowner so that it would help everyone toward buying or owning a median-priced home.

Such a change in tax policy would foster more moderate-income home ownership, preserve rental apartments by slowing their conversion to condominiums, free up mortgage money, shift investor attention to more-productive investments, reduce the call on direct Government assistance to aid the disadvantaged, and help balance the Federal budget over a period of time. Of course, the only ones harmed by this modification would be those vocal, influential interests that count on inflation to continue, and consider housing a speculative commodity.

Many who take the standard deduction or are in tax brackets lower than 25 percent—both actual and potential homeowners—would benefit. This shift would initially cost

the Treasury no more than the current homeowner deductions, and eventually a lot less. As participation in home ownership broadened, each owner would receive a more modest tax benefit. The substantial tax savings currently claimed by the most affluent would be transferred down the income ladder.

A 25 percent tax credit would reaffirm the basic American commitment to a decent home but prevent giving away so much to the most affluent. While it would not directly address less-tractable rental-housing problems, a $2,500 cap would allow all homeowners to shelter up to $10,000 annually in interest and property-tax payments, helping anyone to own a median-priced home. However, taxing the excess spent above this would ease housing competition, improve the general housing situation, and reduce inflation. As the cap took effect, Federal revenues would increase, improving the prospects of balancing the budget.●

COAL INCENTIVES ACT OF 1981

HON. CLEVE BENEDICT

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BENEDICT. Mr. Speaker, I am pleased to join my colleagues from both sides of the aisle and around the Nation, RICHARD C. SHELBY of Alabama, TOM CORCORAN of Illinois, and KENT HANCE of Texas, in introducing the Coal Incentives Act of 1981. The provisions of this bill will encourage major energy users and utilities to convert to our most abundant energy resource.

Our national security requires that we take immediate steps to reduce our dependence on foreign oil and substitute coal wherever possible. Conversion by utilities now dependent on oil for 37 percent of their electric generation would clearly reduce our imports and remove the present upward pressure on utility rates. Decontrol is not the cause of rising utility rates. The cause is a continued reliance on petroleum for generation.

Since the embargo of 1973 the price of oil has risen 1,100 percent. During the same time period the inflation adjusted price of domestic steam coal has risen a fraction of this amount. Despite this, coal is responsible for about 15 percent of electric generation. Clearly, there are some major obstacles to conversion. The Coal Incentives Act of 1981, which amends the Clean Air Act and the Internal Revenue Code of 1954, is a response to the environmental and economic constraints that have prevented the shift to our most abundant energy resource.●

WORKING TOGETHER—OR WORKING TO WIN ELECTIONS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. PICKLE. Mr. Speaker, about 6 to 8 weeks ago, I noticed that should a Democrat raise a question about any aspect of the President's economic proposals, he or she would immediately be attacked as disrespectful, uncooperative, and just downright nigh un-American.

The interesting thing about these attacks is I do not feel that they were being orchestrated by the White House, or the President. Just the opposite, in fact, as I feel that the President and his team know that to do the things needed to fight inflation there must be mutual respect and patience. I think that the President knows that there is not a monolithic Democratic view or a monolithic Republican view in Congress.

The attacks seemed to come from strictly new right political groups, or from people who think that they are helping the President by painting all Democrats as mean-spirited and disrespectful toward the President. In the long run, however, this will hurt the President and his programs as votes begin to be cast more in a partisan manner. If this happens, many of his programs will not become law, and as things get worse, he will get just as much blame as Congress.

Recently, James Reston wrote an interesting column about only one aspect of all of this. I submit his column to be reprinted in the CONGRESSIONAL RECORD since it makes some interesting points.

[From the Washington Star, Mar. 12, 1981]

HEARTS, MINDS, AND DEDUCTIONS

(By James Reston)

The Battle of the Budget will be fought on two levels: in the Congress, and between private organizations that support or oppose President Reagan's economic program.

The second level is particularly interesting, for its object is to influence public opinion, and whoever wins could be decisive in the final votes on Capitol Hill.

It would be helpful at the start of this momentous debate to know something about how this expensive exercise outside Congress is to be financed, and specifically whether funds raised to influence public opinion are to be tax deductible.

For example, a group of Reagan's friends and supporters, including Justin Dart and Charles Wick, have created an organization called the Coalition for a New Beginning. Its leader is William Fitzgerald, a 73-year-old Omaha financier who is likely to be co-chairman of the coalition. Anne Armstrong, former U.S. ambassador to Britain, is likely to be his principal associate.

This organization will raise funds, explain the economic condition of the country as they see it and publicize the Reagan administration's proposed remedies through such devices as mass-mailing appeals, speakers' bureaus, Op-Ed page articles, closed television circuits to audiences throughout the country, and various types of direct advertising. Joe Baroody of the Washington public relations firm of Wagner & Baroody is helping with the planning.

Reagan was asked at his last news conference whether the names of financial contributors to such programs would be published. Wouldn't disclosure of the contributors assure the public against any conflict of interest?

The President replied that there couldn't be any conflict of interest because "we didn't have anything to do with it. We know that such a program is going forward and we have no contact with it at all."

Sen. Robert Byrd of West Virginia takes a more suspicious view. The Republicans, he noted, are in a much better position to raise funds than the Democrats. "It smacks of the selling of America to me," he said.

Fitzgerald of the coalition disagrees. He says the program will merely be "informational" and "educational."

No appeals will be made to the voters to lobby their congressmen or punish those who oppose the Reagan policies. The coalition will work through the U.S. Chamber of Commerce, the National Association of Manufacturers and the Grange, and also try through other organizations to broaden its appeal to citizens of all political persuasions.

The possibilities of these private coalitions are immense, as the Democrats discovered in the last election, when private committees helped carry the Senate for the Republicans. Like Reagan, Fitzgerald indicated that there would be no disclosure of the names of contributors, and under present IRS rules, no limit to the tax-deductible funds that could be contributed by corporations.

A BUSINESS EXPENSE

A corporation, for example, could not deduct contributions from its taxes if the coalition engaged in direct "grass-roots lobbying." But it the campaign is for "information" or "education," a corporation can deduct its contribution as a business expense if it has reason to believe that the campaign will improve its business to the extent of its contribution or above it.

This rule of thumb is, of course, subject to interpretation by the IRS, but the coalition leaders are confident that such contributions will be deductible and that this will make a wide appeal not only to businessmen but to a great many middle-class citizens.

The Democrats have another view. What they regard as "education" when they do it is condemned as "lobbying" at public expense when the Republicans do it.

They do not pretend that they can hope to raise anything like the vast sums available to the Republicans—especially in relation to the Reagan economic program, which they feel favors the rich and big business more than it helps the poor or the middle class.

Also, they feel there is a risk of divisiveness in this campaign. For even before the Congress has had a chance to study the Reagan proposals in detail, the coalition, with Reagan's support if not at his initiative, seems to be appealing to the people over the head of the Congress.

As Byrd says, raising millions in hidden contributions from rich corporations to help put over an austerity budget that hurts the poor and distorts representative government

is an odd thing to do in the name of "education."●

SUPPORT FOR THE PRESIDENT

HON. CARROLL HUBBARD, JR.

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. HUBBARD. Mr. Speaker, the job at hand is to rebuild America's industrial might, straighten out the economy, and reclaim our preeminence in the world. It will not be easy. Sacrifice will be required. I would like to share with my colleagues the views of my constituent, E. Morton Brashears of Hopkinsville, Ky., about the administration's course of action. Mr. Speaker, I submit the following:

I have been following your statements in the press and on the radio from time to time as you visit in Hopkinsville and western Kentucky. Generally, I'm pleased with your position on most issues, especially with what you said regarding your cooperation with the new President.

There are those among us who are actually trembling over the thought of having their social welfare benefits reduced or taken away, but how can we do otherwise? I believe it was Adam Smith in his "Wealth of Nations" years ago who said, "What is prudence in the conduct of every private family, can scarce be folly in that of a great kingdom."

So far, I am one hundred percent behind President Reagan. It's the only program left.

Sincerely,

MORTON BRASHEARS.●

THE WATER PRICING REFORM ACT OF 1981

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. MILLER of California. Mr. Speaker, I am introducing today the Water Pricing Reform Act of 1981, a bill which is as timely in its goals of fiscal responsibility as it is in its thrust at proper management of our Nation's water resources.

This legislation tracks exactly four major policy goals enunciated by the Reagan administration:

First, the bill would strengthen the free enterprise system by removing a massive Federal intrusion into the Nation's agricultural industry, an intrusion based on subsidies which are inconsistent with the free enterprise system;

Second, the bill would utilize realistic pricing as a means of encouraging conservation, much as the administration seeks to achieve with the decontrol of oil and natural gas prices. What is sound economic and resource management policy with respect to energy, it would seem, would also be sound with respect to our federally developed water resources;

Third, the bill would reduce Federal assistance to losers and aid winners by continuing to deliver Federal irrigation benefits to the most healthy and growing agricultural districts, but phasing out generous subsidies to marginally profitable and less productive areas; and

Fourth, the bill would address one of the key problems under challenge from the administration—Federal programs which began with the good intentions of aiding the small or the poor, but which have grown uncontrollably and now benefit a large number of well to do. Irrigation is a program where Federal subsidies just grew and grew, and now we find billions of dollars in Federal taxpayers' money being used to subsidize some of the wealthiest agricultural interests in the United States.

Throughout the county in recent months, the threat of drought has made millions of Americans painfully aware of our limited water resources. In many areas, water shortages are due to insufficient reservoir storage capacity. But in the West, a major reason for water scarcity is profligate use, frequently at public expense, with billions of dollars in subsidies to some of the wealthiest economic interests in the Nation.

Four years ago I first introduced a version of the legislation I am reintroducing today. It is more timely in 1981 than it was in 1977; the public is more aware of the water crisis; and it is more urgent, for fiscal rather than for environmental reasons, that it be enacted at the earliest possible date.

We know that water, like energy, is price sensitive. Presume, if you can, that the biggest energy consumers, knowing of oil shortages, refused to conserve their consumption; that, instead, they built more energy-consumptive plants, and passed along the additional costs of that energy to the general public. Suppose they waived off all efforts to encourage conservation and efficient use, and demanded more public dollars for their own special uses.

Would this Congress approve such expenditures? Would the public support such spending? Would the cost-conscious administration endorse such a ludicrous plan?

Of course not. Yet substitute water for energy in my scenario and you will correctly identify the current water policy situation in much of the West.

Studies have shown that water priced at $1 to $3 an acre-foot—about 325,000 gallons—is used at just 40-percent efficiency. Increase the price to $10 an acre-foot—still a bargain in most areas—and efficiency increases by 50 percent.

The unreasonably low prices for federally developed water costs taxpayers billions of dollars, and the benefits flow to a small number of interests. These projects were authorized and constructed by the Congress not merely to encourage agricultural expansion, but to preserve small family farming.

Following exhaustive studies, we now know that the beneficiaries are often other than small farmers. The recently completed environmental impact statement on the reclamation program, for example, concluded that 0.9 percent of the farm operations—owned and leased—control 20 percent of the land in the reclamation program. The top 2.6 percent of operations, those of 960 acres or more, enjoy 31.4 percent of all the land, while those farming less than 160 acres—74 percent of all operators—control just 23 percent of the land in the program.

The subsidies in the water program are staggering. Many irrigators secured long-term, water service or repayment contracts whose prices were fixed at the time of the preconstruction feasibility study for a period of more than 50 years.

Repayment is not for the entire cost of the project, as is often promised, but is rather nearly discounted by the contractor's payment capacity, another significant public subsidy.

The most sizable subsidy results from the interest-free loans which are extended to irrigators over a 40- to 50-year repayment period.

Of six projects recently studied by the General Accounting Office in its investigation, "Federal charges for irrigation in projects reviewed do not cover costs," March 13, 1981, GAO concluded that irrigators repay no more than 7 percent, and in some cases as little as 2 percent, of the real cost to taxpayers of these profitmaking projects. I appreciate the argument that these Federal investments produce food and fiber which benefit the Nation. I assume that many businesses would be a great deal more productive and profitable if they were underwritten by billions of dollars in taxpayers' subsidies. But that is not our economic system.

The time certainly has passed for us in Congress to perpetuate the fiction that these projects pay for themselves or that they benefit only small farmers. Many of the beneficiaries, in fact, are among the largest farmers in this country. Yet, current practices allow the Interior Department to set their water rate charges as though the farms were 160 or 320 acres. The result is that the "ability to pay" is minimal while the profits are extreme. In the case of the Westlands Water District, Interior has calculated the real cost of unsubsidized delivery at more than $70 an acre-foot, and the district's repayment capacity at over

$50 an acre-foot. Westlands pays only $7.50 an acre-foot, and Interior is now considering a contract which would allow them nearly 1 million acre-feet of water for 27 years at a price of only $9.09 an acre-foot. Even with the interest subsidy, the cost of delivering that water today exceeds $12 an acre-foot. We must act decisively to prevent these fiscal abuses from reoccurring, because each of them binds this Congress, and the Nation's taxpayers, to decades of unjustified and costly public subsidies.

The responsibility for repaying irrigators' subsidies falls not only on the general taxpayer, but on other project beneficiaries who are already carrying their full load. Under current law, irrigation subsidies are paid in part by power users, which is why utility rates in the Central Valley project, in areas like Sacramento, Santa Clara County, Roseville, and Palo Alto, have skyrocketed in recent years and will continue to grow.

Moreover, WAPRS recently unveiled a new pricing scheme which would also require municipal and industrial (M. & I.) users to pay for the subsidies enjoyed by irrigators who, in California, consume 85 percent of our water. This passing of the hat seems particularly unfair since M. & I. users not only already pay fully for their water, but pay an interest rate, too.

My legislation would end these illogical and irresponsible practices by putting the financial responsibilities for future contracts and projects where it has always properly belonged: on the irrigators who profit from these projects.

I want to make it very clear that this legislation in no way addresses the controversial acreage limitation or residency requirements of the Federal reclamation laws. Here we are addressing only the issues of fiscal responsibility and appropriate management of Federal resources. There should be no partisan ideological or regional dissention from the principles outlined in this bill.

A section-by-section description of the bill follows:

SECTION-BY-SECTION DESCRIPTION

SECTION 1. Short title, "The Water Pricing Reform Act of 1981."

SEC. 2. Requirements for contract compliance.

SEC. 3. Preservation of existing contracts.

SEC. 4. (a) Future contracts for existing projects to require recovery of all construction costs allocable to irrigation, plus operation and maintenance (O & M) costs.

(b) New project contracts to require repayment of construction charges, O & M, and interest at a rate of not less than 2% or more than the existing rate on U.S. securities.

(c) Secretarial authority to supplement charges to encourage conservation and efficient use.

(d) Annual re-calculation and readjustment of prices.

(e) Establish 10-year maximum duration period for a water service contract.

SEC. 5. Reduce repayment term and require initiation of repayment on a timely basis.

SEC. 6. Repeal "ability to pay" subsidy.

SEC. 7. Restrict speculative water resales for profits by federal contractors.

SEC. 8. Public participation and congressional review of major water service contracts.

Mr. Speaker, let us not wait for a national water crisis to cripple this Nation before we act to instill commonsense economic order into the Federal water program. Does it make sense to sign away vast quantities of water at $9 an acre-foot, as the Interior Department is now considering, when it costs taxpayers $12 to deliver that water? Should we initiate construction of projects which will use massive public subsidies to irrigate low-quality lands, and which will never be paid for by the beneficiaries?

Would anyone operate their private business so irresponsibly? Would any Member of this House spend his or her own money so wastefully?

The evidence for this legislation has mounted steadily. The pricing system I recommend is similar to that currently used by States, including California, and it is almost the same as one which unanimously passed the House Interior Committee last year.

Just this week, GAO has released a major study which concludes that there are massive and unjustifiable subsidies in many water contracts, and which concludes: "* * * more of the Federal investment could be recovered from the farmers and still allow them a positive net income from the Federal water."

GAO determines, as did the Interior Committee and the Interior Department last year, that "* * * the original rationale[s] for building the Federal projects and increasing the subsidy * * * have been reached and the projects should be reevaluated in the light of current economic and social conditions."

This modernization of water pricing is the timely goal of the water pricing reform act, which I am today introducing.●

ONE HUNDRED YEARS OF A JOB WELL DONE

HON. FRANK J. GUARINI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. GUARINI. Mr. Speaker, a few short months ago United States Testing Co., Inc. of Hoboken, N.J. celebrated its century birthday. I want to take this opportunity to commend the United States Testing Co. and its many fine employees for a job well done in serving the public over the last 100 years.

It is encouraging to find a company that has so much to celebrate in our present business climate. The story of the United States Testing Co. is a microcosm of American business enterprise. In 1880 the company started with one small lab in the heart of the New York City commercial district. In 100 years it has grown into a diversified company with 900 employees in 31 laboratories, a true success story.

The United States Testing Co. is an independent organization that provides services and products in the fields of testing, research, inspection, surveillance, and testing instruments. Its clients include commerce, industry, and the Government. Often its labs are called upon to render independent judgments on a company's own findings.

Mr. Speaker, we have become increasingly aware in the last few years of the importance of testing. It is essential both to quality and to safety. I am proud to serve a district that includes an organization that contributes to the betterment of our society. I am proud of the achievements of the United States Testing Co. during their 100 years of existence, and I wish them the best for another 100 years.●

THE RIDESHARING TAX INCENTIVES ACT OF 1981

HON. BOB EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. EDGAR. Mr. Speaker, I am pleased to introduce the Ridesharing Tax Incentives Act of 1981 to contribute to the development of energy-efficient alternatives to the single-occupant automobile. This bill incorporates several of the provisions from Senate bill S. 239 introduced by Senator DURENBERGER.

During the past 10 years, the United States has been subjected to two interruptions in the supply of crude oil from the Middle East. The threat of future interruptions continues to hang over us. Accompanying these shortages were price increases of unbelievable magnitude that put an enormous strain on our economy and the personal finances of our citizens.

We have good cause to be worried about our petroleum supplies. One-half of the oil we consume is used for transportation and one-half of that amount is used by the automobile. Since significant decreases in the flow of oil can bring the country to a halt, it is imperative that we exercise every option to decrease our need for this expensive and increasingly scarce commodity.

Americans enjoy the highest level of personal mobility in the world thanks to the automobile. The United States

has 663 automobiles per 1,000 population compared to 241 per 1,000 population in Europe and 85 per 1,000 population in the rest of the world. We want to preserve that mobility. However, we have to recognize that the automobile must be used more efficiently in the future. Each day over 80 million Americans travel about 19.4 miles on the round trip to and from work. Approximately 52 million of these commuters make the trip in a single-occupant automobile. Three-quarters of the seats in these commuting vehicles are empty. There is tremendous potential to use these vehicles more efficiently with a minimal impact on the personal mobility of our citizens.

I think it is fair to ask how we got into the present situation. Certainly the most obvious reason is that Americans like their cars and enjoy the freedom and mobility they offer. However, this inclination toward the automobile was reinforced by huge Federal subsidies for highway construction, the neglect of our mass transit systems, the suburbanization of America supported by Federal programs, and the acceptance of free parking as an untaxed benefit. In addition, the regulatory and institutional structure that developed over the years posed formidable barriers to ridesharing. Until a few years ago, vanpooling was illegal in most States, insurance for vanpools was unobtainable, cheap parking and the lack of interest in commuter transportation on the part of employers encouraged people not to pool, and there was no funding program to support collective transportation. In short, we did everything in our power to make sure people drove alone.

I am happy to say that things have dramatically improved. Many of the legal, regulatory, and insurance barriers have been removed, employer interest in commuter transportation has grown, and funds are now available for transit and ridesharing programs. But human nature changes slowly, and we are talking about a fundamental alteration in the lifestyle of most Americans.

Last year, the President's National Task Force on Ridesharing was requested to develop recommendations for actions to hasten the acceptance of ridesharing by the American public. This group was chaired by Mayor Tom Bradley of Los Angeles and included the chief executive officers of several major corporations as well as transportation professionals from the public and private sector. They concluded that much more needed to be done to promote ridesharing and recommended actions for all levels of government as well as the private sector. At the Federal level, they recommended that tax incentives be provided to employers, individuals and third party vanpool contractors. It is this recommendation that will be implemented by the legislation I am introducing today.

Mr. Speaker, over the past few years a number of proposals have been advocated to limit the demand for petroleum. These include decontrol of oil prices, a tax on gasoline, rationing of gasoline, redesign of the automobile, and a synthetic fuels program. All of these cost a great deal of money and in some cases are extremely difficult to administer. My object is not to make value judgments concerning these approaches, but simply to point out that ridesharing can provide significant energy savings at relatively low public cost and can also provide large economic benefits to commuters and employers in the form of lower outlays for gasoline, maintenance, and parking spaces. Ridesharing is not proposed as a substitute for other actions, but it can be an effective complement to any other energy-saving program that is implemented.

A Congressional Budget Office study indicates that in terms of Btu's consumed per passenger mile of commuting, vanpooling is 700 percent more efficient than the single-occupant auto. Put another way, the Federal Highway Administration estimates that each vanpool takes five automobiles off the road and saves 5,000 gallons of gasoline each year. The average vanpool commuter is estimated to save $800 per year over the cost of driving alone.

At a time when we are considering a number of expensive and complicated programs to save energy, I think it is important that we understand the important role that ridesharing can play as a low cost, but significant, contributor to the solution of our energy problems.

Mr. Speaker, title I of the proposed legislation provides a tax incentive to the individual who buys a van—commuter highway vehicle—and uses it for ridesharing. Current law only offers ridesharing incentives to the business which purchases a van for employee programs. The measure I am introducing would amend the 1978 Energy Tax Act to provide the same incentive to the individual for ridesharing that is currently available for the purchase of home insulation or storm windows. Any individual who purchases a van and uses it for ridesharing over a 3-year period would be eligible for a 15-percent tax credit based on the cost of the van.

Title II of this legislation is designed to remove some of the ambiguity in current law regarding employer programs to support and encourage ridesharing and mass transit use by employees. This bill would exclude from taxable income of the employee, any payment by an employer made as a subsidy for the cost of mass transportation, vanpooling or carpooling. If the employer provides busfare or transportation to and from work in a vanpool, the cost of that transportation would not be included as income for tax purposes. This provision will provide equitable treatment for transit riders and poolers vis-a-vis the solo auto driver who has always received free parking as an untaxed benefit.

Title III amends the current law to increase the tax incentive for businesses purchasing or leasing vans for use in employee ridesharing programs. It adds vanpool vehicles to the list of energy properties qualifying for the business energy tax credit and sets the energy percentage at 10 percent. This brings the total investment credits for the purchase of vanpool vehicles to 20 percent.

Title III makes two additional changes in the existing business incentives for ridesharing. Current law restricts the investment tax credit to vehicles used by the taxpayer's employees. Under these provisions, it is not possible for a third party ridesharing management firm to receive the credit for vans leased to the employees of a client company. Third-party ridesharing firms offer great promise for small companies with few employees. Ridesharing management allows the employees from several small firms in one location to be pooled for more efficient commuter transportation. Title III provides an incentive for this arrangement by removing the word taxpayer from the current law.

Current law also restricts the investment credit to vehicles on which 80 percent of the mileage is used for ridesharing purposes. This prevents a business from purchasing a van primarily for business purposes, using it occasionally for pooling, and claiming the credit. This limitation is known as the 80/20 rule.

In many cases, corporations purchase the vans and essentially loan them to the driver. The driver is responsible for maintenance and fuel, for recruiting the riders and collecting the fees. As an incentive to encourage employees to serve as drivers, the company will allow the driver to use the van in nonworking hours for personal and family purposes. The 80/20 rule restricts the attractiveness of driver incentive mileage as an inducement to volunteer as a driver. Therefore, this bill eliminates the mileage condition and requires that the vehicle be used in commuter service for 176 days per year.

Title IV of the bill provides a business tax credit for a series of costs that businesses might incur as administrative overhead for an organized employee ridesharing program. These costs include assigning personnel to manage the program, adjusting working hours to facilitate ridesharing, computer matching of potential riders and drivers, surveying the commuter

transportation habits and needs of the employees, distributing information on ridesharing vehicles, contracting for assistance in managing a ridesharing program, providing liability insurance for ridesharing vehicles and maintaining emergency vehicles for use of employees who commute in ridesharing vehicles to work.

This credit is limited to the amount actually incurred by the company in providing the service or to an amount based on a sliding scale whichever is less. If less than 15 percent of a company's employees participate in a qualified ridesharing program, this credit has no value. However, if more than 15 percent participate, the company is eligible for the credit and the value of the credit per employee increases as the percentage participating increases. Many companies provide administrative assistance to the ridesharing programs organized for their employees. Title IV of this bill offers a powerful incentive for other companies to get involved in ridesharing programs.

A final note about the Commuter Assistance Act is that the tax credits of titles I, III, and IV will be terminated at the end of 1985. I feel that ridesharing will sell itself once people try it. What it needs now is an extra push to get going. Within a few years, ridesharing should take off on its own.

I expect this legislation to generate widespread support from employers, transportation professionals, and transportation operators. I look forward to the passage of this legislation and the positive effects of ridesharing as part of our national energy policy.●

EL SALVADOR

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. MOAKLEY. Mr. Speaker, I am deeply concerned by the increasing bloodshed in El Salvador; violence which has claimed 12,000 lives over the past year. I am equally concerned about our Nation's role in this conflict because I strongly believe that as the world's largest democracy this Nation should be promoting freedom, justice and peace not contributing to violence, terrorism, and political instability.

The United States can and must play a constructive role in El Salvador and I believe this can best be achieved by working for a political settlement rather than a purely military solution. To help work toward this goal, I have joined my colleague, Representative GERRY E. STUDDS, in cosponsoring H.R. 1509, a bill to terminate all U.S. military assistance to El Salvador.

By cutting military aid, America will signal to the Duarte government and to the world that it will not be identified with repression and murder of political, labor, and religious leaders. Nor will the United States accept the coverup of investigations into the murders of the three nuns, a religious lay worker, and the two labor representatives—all of whom were U.S. citizens.

This is a first step. The United States must also seek a solution which will promote the interests of all parties to the conflict in El Salvador as well as protect the strategic concerns of the United States in Latin America. Our Government should work through international organizations, such as the United Nations and the Organization of American States (OAS), and frontline nations of the area to begin the negotiation process at the earliest possible date.

Included in this effort should be an enforcible cease fire and a halt to all arms shipments from any source to El Salvador. By doing this, I believe we can pave the way to a settlement, possibly modeled on the recent successful inclusive nonpartisan conference in Zimbabwe, which led to a government with both national and international support.

We can no longer treat our Nation's backyard as our playground and I will strongly stand behind efforts to bring the dissenting parties to the conference table. Negotiation, not military escalation, is the road to peace and the United States can, by working with its American neighbors, start down this promising road.●

CONGRESS MUST MAINTAIN ITS COMMITMENT TO HIGHER EDUCATION

HON. DENNIS E. ECKART

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. ECKART. Mr. Speaker, as a member of the Postsecondary Subcommittee, I had the opportunity to hear the testimony of Education Secretary Terrel Bell in support of the Reagan administration's proposed amendments to the Higher Education Act of 1965. I heard the Secretary speak of such factors as budgetary control, education and administration costs, and the needs of financial institutions. At no time, Mr. Speaker, did I hear any information about the possible results students themselves would face.

I was particularly appalled at the administration's sweeping assumptions regarding student ability to earn money to help in financing a college education. The administration proposes that in order to qualify for an annual Pell grant, which is the foundation program of Federal student assistance, a student must contribute $750 toward his or her education. I have no qualms with expecting students to put what they can toward the costs of their schooling. However, there is extremely high unemployment among teenagers today—almost 20 percent at last report. For minority students, this figure is more than 34 percent.

The average cost of 1 year at a private 4-year college or university is more than $6,000, and these costs can only be expected to increase. Higher education costs at public universities have also dramatically increased. Fewer and fewer families can afford to carry the full tuition burden of such inflated figures. Living costs add another dramatic amount to the total dollars needed each year by a student pursuing a degree. More and more students will be forced to chase the same dwindling supply of jobs just to stay in school.

In the early 1970's, when I was attending law school, the unemployment rate for my age group was less than one-half its present level. I worked to help finance my education because my father was one of those people earning too much money to qualify for student assistance programs, but was earning too little to take advantage of tax loopholes which would have helped to conserve money for my college tuition. As a result, I joined a union and worked unloading boxcars at what was then a very top wage. Even with the money I was able to save from this labor, I had to take out substantial loans to finance my education.

Mr. Speaker, one particular letter I received from a woman in the Cleveland area really brings all of my concerns into clear focus. Mrs. R. C. of South Euclid, Ohio, put it this way:

DEAR MR. ECKART: I am deeply troubled about the proposed cuts for college student loans. Is there a greater priority than educating our country's youth, the future leaders of our nation? The bright and talented students who happen to be in the struggling middle-class will be discriminated against. Only the wealthy or the poor who qualify for grants will be able to attend college.

As an example, we are poor, yet we are considered middle-class by many standards. We are college educated, earning $30,000 per year with my husband working at three teaching jobs to support our family consisting of children ages 14, 16, and 18. This covers the basic necessities, absolutely no luxuries. It has been impossible to put away any savings for college, let alone retirement, which will come all too soon. My husband is 59 and will be 60 years old when our oldest child enters college. All three of our children are honor students and talented. Because our only asset is the equity in our house, we are considered too well off for grants. Are we expected to mortgage our house at our advanced age to educate our children when my husband has so few years left to work?

Our only hope to educate our children was with the aid of student loans. The consequences of eliminating this aid to millions of deserving struggling families who are in

similar circumstances as we are most disturbing. I urge you to consider our plight. I implore Congress to place a priority on higher education.

Mr. Speaker, students now planning to enter college, students in college, and students seeking advanced educations will be adversely affected by the proposals. This Congress has repeatedly reaffirmed its bipartisan commitment to make higher education opportunities available to our young people. I do not believe this Congress should approve the program recommended by the President without making major changes. The fate of today's youth, our investment in our country's future, as well as the well-being of many small educational institutions hang in the balance. This Congress should not reverse its commitment to higher education opportunities which are a major foundation of our country.●

TRIBUTE TO TOM IORIO

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 11, 1981

● Mr. STRATTON. Mr. Speaker, as chairman of the New York delegation in the House, I want to join—somewhat belatedly—in paying tribute, as many of my colleagues have already done, to Mr. Thomas D. Iorio, former Deputy Sergeant at Arms of the House of Representatives, who passed away only a few days ago.

Tom Iorio first came to the House in 1945 under the sponsorship of our former colleague, Congressman John Rooney of Brooklyn, and in the intervening years Tom came to be known and respected not only by the Members from his State of New York, but by every Member of the House.

Tom's special assignment was to arrange voting pairs for Members who were unavoidably absent when important votes were to occur on the floor. Tom performed that important function in a very commendable fashion and won the confidence of every Member, since Tom Iorio had come to understand the views and interests of hundreds of Members of the House.

Tom also provided much of the leadership for the annual trip of Members and their families to New York City as guests of the city.

In 1976, Tom Iorio received the John W. McCormack Award given to House employees who have rendered outstanding service to the House.

We shall indeed miss Tom's friendly personality in this Chamber.

To his wife, Clara, and to the other members of his family, I extend our deepest sympathy.●

NURSING RESEARCH

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. PURSELL. Mr. Speaker, during times of tight budgets, Government, needless to say, must look to keep its most effective programs and cut back on those that, in a relative sense, do not produce as useful results. This is especially true with respect to various research activities.

One aspect of health research that falls in the category of a very effective program is that of nursing research. Studies in this area are being translated into practical applications in scores of hospitals across the Nation and the potential benefits of such research are almost unlimited.

In this regard, I would like to share with my colleagues an article that appeared recently in the Chronicle of Higher Education.

[From the Chronicle of Higher Education, Nov. 10, 1980]

DESPITE PROBLEMS, RESEARCH INCREASES AT NURSING SCHOOLS

(By Cheryl M. Fields)

At the University of Michigan, nursing researchers found that patients were more successful in keeping their blood pressure down if they signed contracts agreeing to meet specific goals designed to control their hypertension.

At the University of Rochester, an experiment found that the length of hospital stays and recuperation periods after gallbladder surgery could be significantly shortened if nurses provided pre-surgical instruction designed to help patients prepare psychologically for the experience.

At several universities, research nurses found that suffering and anxiety among patients, including those with severe burns, could be reduced by "relaxation therapy"—techniques for controlling pain by conscious relaxation.

Such projects demonstrate the growing involvement of nursing schools in research designed to provide a scientific basis for nursing practice.

Many nursing leaders stress the difference between nursing and medicine. Biomedical research is concerned with the causes of disease and its treatment, they say, while nursing care aims to help patients cope with illness, learn how to care for themselves, and get better more quickly.

SHIFT TO COLLEGES SPURS RESEARCH

The shift of nursing education in recent decades from hospital-based schools of nursing to colleges and universities, the growing number of graduate nursing programs, and the demands of an increasingly complex health-care system have spurred the development of research on nursing care, says Barbara C. Hansen, chairman of the commission on research of the American Nurses' Association.

But the number of nurses trained to conduct research is still relatively small in comparison with the size of the profession and the demands upon it, says Ms. Hansen, who is associate dean of nursing at the University of Michigan's school of nursing, and assistant professor of physiology in the medical school.

Nursing research is increasing, but investigators must vie with biomedical teams and other scientists for funds. They also must fight attitudes that are not always sympathetic to what research nurses are trying to do.

Ms. Hansen serves on a panel in the National Institutes of Health that evaluates proposals for grants in physiology, and, she says, "the problems that nurses are interested in are not seen as high priority by other members."

"For example, few consider the feeding problems of institutionalized elderly patients as high priority. Even if good proposals to study this are submitted, they are not slightly rated; they do not produce as much excitement as proposals that may bring about some kind of cure."

In addition, she says, a lack of postdoctoral training positions for nurses means that evaluators sometimes question the research capabilities of nurses who submit proposals.

On the federal level, there is only one small grant program, in the Health Resources Administration of the Department of Health and Human Services, that is totally devoted to nursing research. President Carter tried unsuccessfully to rescind the $5-million appropriated for that program for fiscal 1980.

Even though Congress refused to cut the funds, Ms. Hansen says, nurses will have to fight hard in the present era of tightfisted budgets to get funds for the program.

Some officials in the Department of Health and Human Services have proposed transferring the program to the National Institutes of Health, which finances the majority of federally supported health research. Nursing researchers have opposed that move, Ms. Hansen says unless the program is listed as a specific "line item" in the institutes' budget. Otherwise, she adds, nurses fear the money would just "disappear"—or be split among the 11 institutes, making each share too small to accomplish much.

Nursing researchers have managed to obtain a few grants from some of the National Institutes of Health, as well as from such agencies as the Center for Disease Control, the Food and Drug Administration, and the Health Care Financing Administration, says Ms. Hansen. But, she says, the researchers have not yet moved aggressively enough in tapping other potential sources of financing.

SMALL GRANTS NEEDED

Officials in the government agencies also need to be more open to the potential value of nursing studies, she says, and there is "a tremendous need for small-grant funding for research projects by young investigators."

Another problem for nursing researchers is that so many other disciplines are involved in health studies, says Joanne S. Stevenson, associate professor of nursing at Ohio State University.

From her service on panels that screen grant proposals, she has concluded that not enough "fundable proposals for studies of nursing-care delivery" are submitted. "Pharmacists and dentists, as well as hospital administrators and doctors, all propose a variety of studies for the provision of nursing care," she says.

Another issue that affects both the competition for federal grants and the nursing

schools' relationships with medical schools and with other disciplines on the campuses is that nursing research often cuts across disciplinary boundaries and may require research techniques drawn from several fields.

Because of this, nurses just entering research often need to bring in consultants from other fields to help them design sound projects, Stephen J. Zyzanski, director of research in the department of family medicine at Case Western Reserve University, told nursing researchers at the recent convention of the American Nurses' Association.

HELP FOR YOUNG INVESTIGATORS

The use of such consultants in evaluating applications for research grants before they are submitted is especially valuable for young researchers, he said, and can help limit the scope of studies to manageable size.

Ms. Stevenson agrees that collaboration is often necessary, but cautions inexperienced investigators to take care in choosing collaborators.

"People at different ages want different things. With academics in the 25-to-35 age group, you need to negotiate quid pro quo's because they are totally absorbed in advancing their own careers," she says. "In the 35-to-45 age group, people are rising on the career ladder and many have some energy available to help others, but they may also be overcommitted.

"From about age 45 on, after they have tenure and are in a more settled position, many faculty members will have energy available to help younger colleagues. . . . From about 55 to 60 they are generally at the height of their prestige and may be excited by working with other disciplines after years of helping students in their own fields. This can be a very useful group for young nurse researchers."

Even careful attention to these facts won't solve all problems, Ms. Stevenson says, noting that for her own research on alcoholism among women, she carefully chose an advisory committee that had experts from other fields, including a biochemist and an exercise physiologist.

One problem, she says, was that she discovered that the older professors who were helping her "do not control the research labs. The lab directors are in the 30-to-40 age group, so even with my advisory committee formed, I still did not have access to the labs I needed.

"The younger men were not interested in nursing research and weren't supportive of my subject. The only time they were interested was when I began talking about how much I would pay them for use of their labs."

Besides the difficulties in getting resources and in winning respect for their work, nursing researchers face obstacles in the dissemination of the results of their research.

At the University of Michigan they are trying to translate the results of nursing studies into practical applications at more than a dozen hospitals in the state.

NO DEGREES FOR 80 PERCENT

Unlike doctors, most staff nurses in hospitals read few or no research articles in nursing journals, says Maxine E. Loomis, professor of nursing. And since about 80 percent of registered nurses do not have baccalaureate degrees, many are not attuned to the importance of translating research into practice.

Jo Anne Horsley, director of the project, says research must be carefully adapted to the particular situation in each hospital.

But she says investigators have found that nursing administrators and staff nurses typically are eager and receptive to sound scientific knowledge when it is available "in a clinically acceptable state."

Despite the obstacles facing nursing research, the potential is tremendous and nurses have the opportunity to enhance their position, says Ada Jacox, professor of nursing at the University of Maryland.

Hospitals are being asked to carry out "quality assurance" programs, she says, but many administrators "do not know research design or how to use computers. Nurses could go in and do the research."●

COAL INCENTIVES ACT OF 1981

HON. KENT HANCE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. HANCE. Mr. Speaker, today I am pleased to join TOM CORCORAN of Illinois, RICHARD C. SHELBY of Alabama, and CLEVE BENEDICT of West Virginia in introducing the Coal Incentives Act of 1981, to encourage the use of domestic coal.

The United States is constantly seeking to reduce its dependence on imported oil by maximizing the utilization of our domestic resources. Our most abundant domestic source of energy is coal, which constitutes over 80 percent of our domestic fossil fuel reserve, yet supplies only 18 percent of our energy needs. We are producing each year 100 million tons of coal less than we are actually capable of producing. In many States, coal miners are unemployed.

In our attempts to deal with the energy problem we have come up with numerous schemes to restrain demand, encourage alternative sources of energy, and compel people to switch to abundant fuels. None of these policies has led to any real increases in coal use because we have failed to address the restraints on our ability to utilize coal. One of the major problems in converting to coal is the 1977 amendments to the Clean Air Act. The Clean Air Act should be an important tool in assuring a healthy environment while allowing sustained economic growth and increased use of domestic energy sources. In many areas of the country, however, the 1977 amendments to the act have made it impossible to utilize coal, and in other areas, the 1977 amendments have pushed the cost of using coal to a point where there is virtually no difference between the cost of imported oil and the cost of coal. Thus, any economic incentive to convert to coal is eliminated.

The public health goals of the Clean Air Act are laudable. In evaluating the benefits of environmental regulations, however, we must be aware of their impacts on other areas of national concern. Our reliance on imported energy is a major national security problem which can no longer be ignored. We cannot continue to enact and implement overly restrictive environmental legislation in a vacuum and ignore the energy, economic, and national security implications of what we do.

The bill I am introducing today is designed to balance our energy and environmental objectives. The bill modifies most restrictive features of the amendments to the Clean Air Act enacted in 1977, features which effectively eliminate coal as a source of energy independence. The bill is intended to strike a balance between the need for a healthy environment and the need for energy independence without either of these goals precluding our attainment of the other.

Among other things, the bill requires cost-benefit analyses, including the energy impact, of air quality standards. If a major stationary source satisfies all applicable standards, it would not be subject to more stringent limitations for a 10-year period. The bill would also moderate the standards for local coal exemptions under section 110(f). Sources which voluntarily convert to coal would be given additional time to meet air quality standards.

The bill provides tax incentives for pollution control equipment which is necessary to permit the utilization of coal and allows coal preparation plants at the mine to be eligible for energy tax credits. The bill adopts the procedure used in previous national emergencies for national defense-related construction. The energy tax credits previously enacted by the Congress, which are generally not applicable to public utility property, would be made applicable to public utility property for equipment necessary to permit the use of coal in electric-generating facilities.●

THE FEDERAL BUDGET AND THE CITIES

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. OTTINGER. Mr. Speaker, the U.S. Conference of Mayors has just released its 10th annual budget analysis entitled, "The Federal Budget and the Cities." This excellent report examines the budget in light of urban needs and national priorities. The report points out gross inequities in the President's fiscal year 1982 budget, noting that the proposed cuts would be a disaster to the Nation's poor and to our cities. Over 60 percent of the proposed cuts in budget authority will

fall on the poor and the working poor and 66 percent of the total cuts in budget authority will fall on our cities.

In the days ahead, we will be making difficult decisions on national spending priorities and I urge my colleagues to study the document prepared by the conference during their deliberations on the fiscal year 1982 budget. To facilitate this process, I am inserting into the RECORD the introductory section from the conference's budget report.

THE FEDERAL BUDGET AND THE CITIES

OVERVIEW

The FY82 budget proposed by the Reagan Administration promises to restore economic health to the nation but is a disaster for the cities. Federal grants to state and local governments would be cut significantly, from $54.9 billion in FY81 to $47.2 billion in FY82, a drop of over 14 percent in outlays and nearly 25 percent after accounting for inflation. This will result in a serious reduction in services to the poor and to the working people in cities across the country.

Reductions in federal assistance to cities are also planned for future years. Grants to states and localities, excluding payments to individuals, would decline from 8.4 percent of the total budget in FY81 to 4.9 percent in FY86.

The Administration's FY82 budget cuts are grossly inequitable with respect to the cities. Although total state and local grants, according to the Office of Management and Budget (OMB), represent only 14.2 percent of the federal budget (including payments to individuals channeled through these governments), fully 66 percent of the total cuts in budget authority proposed by the Reagan Administration would fall on these programs. Thus, while the Administration asserts that this is a "growth" budget with a six percent rise in federal outlays from FY81, it is not a growth budget for the cities.

Moreover, over 60 percent of the proposed cuts in budget authority would fall on the poor and the working poor. Clearly, the "safety net" concept originated by the Reagan Administration is an arbitrary one, failing to count a wide range of programs which aid the poor.

Altogether, President Reagan proposes total FY82 outlays which are $44.0 billion below the level proposed by President Carter in January and $48.6 billion below the level needed to maintain programs at their current service levels. Revenues would be cut by a larger amount—a total of $61.4 billion in FY82—resulting in a somewhat larger budget deficit than that proposed in the Carter budget, but still somewhat lower than last year's.

Such reductions in federal spending and taxes are consistent with President Reagan's announced intention of reducing the scope and role of the federal government by turning over more responsibilities to the private sector and to state and local governments. The Reagan Administration's long-range forecast in the budget is to reduce the relative size of the federal government from 23 percent of GNP in FY81 to 19 percent in FY86, a dramatically sharp decrease with major ramifications for local governments.

The abdication of federal responsibility for a wide range of urban programs and some income transfer programs, which is reflected in the Reagan budget, is troublesome. Cities do not have the resources readily available to offset the decline in federal aid, especially since many cities are confronted with mandatory limitations on spending or revenues. The unfortunate results of federal retrenchments are likely to be sharp reductions in service levels, the termination of benefits for literally millions of needy families, and potentially large increases in property taxes. The negative impact on cities, if all the cuts were to be adopted, cannot be overstated.

The U.S. Conference of Mayors recognizes the need to bring inflation under control. Inflation has hurt our cities terribly. As part of the fight against inflation, we are willing to make our programs more cost-effective. But, we do believe that simply transferring burdens to local governments will do little or nothing to alleviate inflation.

We are concerned about proposed cutbacks in programs which generate employment, especially in view of the rise in unemployment which is forecast by the Administration. The Administration's economic scenario predicts a rise in the unemployment rate to 7.7 percent by the end of the year and the persistence of high unemployment throughout FY82—unemployment which is concentrated in the cities. And yet, despite the fact that the unemployment forecast is the most gloomy part of the Administration's economic projections, there are proposed cutbacks in the Comprehensive Employment and Training Act (CETA) jobs and wide range of other employment-creating programs. By our estimates, the total direct effect of the cutbacks will be a loss of over one million jobs; many more jobs will be affected as the cutbacks reverberate throughout the economy.

In addition, the budget proposes abolition of the Economic Development Administration and a major cutback in Urban Development Action Grants activities. These programs have stimulated private sector investment in cities and created or retained thousands of jobs. The budget cuts will severely affect local governments' ability to form and maintain public-private partnerships, which have been so successful in recent years. Still, these and other such programs are scheduled to be cut or eliminated altogether in the Reagan budget.

The Conference of Mayors has long supported the principle of consolidating categorical programs into block grants with a corresponding reduction in federal mandates. We are concerned that the block grant proposals of the Administration will not simply be consolidated at the state level but will be designed with the active participation of Mayors. In addition, we are hopeful that the structure of these block grants will not ignore the considerable expertise which city halls have developed in administering social service, health and education programs.

There are many proposed reductions in urban programs and benefit programs which concern us. The cutbacks in these programs and their impact on cities are described in the following pages. Among our concerns are the following:

Proposed elimination of over 300,000 CETA public service jobs and over 400,000 employment and training opportunities for young people, through massive reductions in four different youth employment programs.

Proposed cuts of $1.1 billion in FY82 mass transit capital grants, resulting in no funds for future rail starts and major reductions in the Urban Initiatives program and Interstate transfer grants.

Termination of all grant and loan activities of the Economic Development Administration in FY82, and major cuts in FY81, which will eliminate an important tool for cities to create and retain employment.

Proposed elimination of all funds for the Environmental Protection Agency's (EPA) Wastewater Treatment Construction Grant program, a cut of $3.7 billion in FY82 and $1.7 billion this year.

Substantial reductions in federally-assisted housing with $5 billion in FY81 authority rescinded and overall FY82 levels $10 billion lower than FY81 appropriations, resulting in a cut of 90,000 assisted units.

Major reductions in Small Business Administration Loan Programs, and termination of the Community Services Administration business development programs.

Slashes in the Food Stamps program, child nutrition programs. and the Special Supplemental Food Program (WIC)—cuts which will eliminate benefits for 400,000 Food Stamps households, 14.5 million children and 700,000 pregnant women and children.

Failure to request funds for the state share of general revenue sharing and elimination of a refundable tax credit which President Carter had requested to offset the burden of rising Social Security taxes on state and local governments.

Terminate nearly all Interior Department programs of benefit to cities, including the Urban Parks program, the Land and Water Conservation Fund and historic preservation funds.

Significant cuts in aid to state and local education systems as part of an overall restructuring of programs (including Title I of the Elementary and Secondary Education Act) into block grants as well as cuts in vocational education and impact aid, and the withdrawal of any funds for the education portion of the youth initiative proposed by the Carter Administration.

Cuts in airport construction grants, by eliminating all grants for the largest 36 airports.

Elimination of all criminal justice programs for state and local governments, with the elimination of the juvenile justice programs of the Office of Juvenile Justice and Delinquency Prevention, and failure to request any funds for the Law Enforcement Assistance Agency.

Abandonment of a 17-year commitment to provide direct funds to local agencies to stimulate community action and provide legal services to the poor through the Community Services Administration and the Legal Services Corporation.

Reduction in many health programs, including public health programs and Medicaid and a 25-percent cut in programs to be consolidated into the new health and social services block grants.

Cuts in the weatherization programs of the Department of Energy and a wide range of urban energy conservation programs, as well as elimination of funds for the Solar and Conservation Bank.

Major reductions in funds for Conrail, Amtrak, low-volume freight lines, and the Northeast Corridor Rail Program.

Clearly the U.S. Conference of Mayors is and ought to be concerned about these cuts. Reductions of this magnitude in urban programs threaten the redevelopment and viability of our cities and the economic well-being and health of city residents.

Yet, we are hopeful that the Congress will review the proposed budget and take action to achieve greater equity with respect to

cities and the poor. We know it will be a year of budget restraint and cutbacks, but the burdens of such cuts should not be borne disproportionally by any one group. We look forward to working with the Congress to formulate a budget which better meets the needs of our citizens.●

MILITARY AID TO EL SALVADOR SHOULD NOT BE CONTINUED

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. KILDEE. Mr. Speaker, I would like to voice my concern about the administration's decision to send military equipment and American military advisers to El Salvador.

Quite frankly, I think that such an action is sending the wrong signal and may lead to the escalation of violence there. It could make finding a moderate solution to the problems even more difficult.

I would point out that the violence in El Salvador has come from both the right and the left. There is strong evidence that elements of the military have been involved in the violence from the right. It is distressing to see one of the rightist leaders interpreting the provision of military aid as encouragement for a military coup.

It is also distressing to see credence given to the propaganda that anyone in El Salvador who calls for social and economic justice is a left-wing terrorist. It is personally offensive to me when right wing groups in the United States and El Salvador refer to Roman Catholic organizations as guerrilla operations. It was in the poorest of taste when one American group issued a press release implying that the murdered American nuns were advocates of violence and had ties with guerrilla organizations. As the example of Archbishop Romero should demonstrate, demands for social and economic justice are not synonymous with advocacy of violence. He was brutally assassinated during a church service in which his message was to condemn all violence.

By providing military assistance to El Salvador, we may very well be reinforcing elements in the military which have participated in the violence and have no commitment to democratic processes. Furthermore, by supporting the military we may be creating a self-fulfilling prophecy. By reinforcing those who are opposed to democratic change, we may be giving greater credibility to those who advocate violent change.●

THIRD WORLD DEBT IS OURS

HON. RON PAUL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. PAUL. Mr. Speaker, on Monday, March 9, the Chicago Sun Times published an article on the Monetary Control Act which this House passed last March 27. The article, entitled "Third World Debt Is Ours" is must reading for every Member who has been contacted by constituents angry over the cavalier way this body—and the other body, for that matter—passed this act last year.

The article is authored by the dean of the Walter Heller College at Roosevelt University in Chicago, Douglas Lamont. Dean Lamont points out that the Fed can mount a rescue operation of foreign governments under the terms of the Monetary Control Act. Consider the implications of this passage:

Once the Sudanese government [for example] guarantees its debts—that is, puts its sovereign responsibility behind all principal and interest owed, the Fed will purchase Sudan's bonds. Their debt becomes America's debt. Through this financial arrangement, the Fed will monetize Sudan's debt, add it to our own money supply, and breed more inflation. Throughout the third world, government officials are being shown America's new lender of last resort law by commercial bankers. * * * Once their $500 billion in debt is monetized by the Fed—that is, brought into our money supply—we will have no hope of solving our inflation problems.

I urge the Members to read this article and then act to undo the damage we did last year when we passed the Monetary Control Act.

THIRD WORLD DEBT IS OURS

INTERNATIONAL BUSINESS

(By Douglas F. Lamont)

The poor countries of the world are dangerously close to involuntarily defaulting on their $500 billion in debt to western banks and governments.

A reminder of this grim possibility can be found in a little noticed change in the Depository Institutions and Monetary Control Act of 1980. It also gives an important glimpse of how Americans will pick up the tab for these 100 poor countries so the world's financial system will be saved from a chain of bank failures.

Under the act, the Federal Reserve can purchase the debts of foreign governments, their semi-state agencies and their state enterprises. The Fed becomes the lender of last resort to countries that have temporary liquidity problems, such as Sudan and Brazil. It can mount a rescue operation of foreign governments to prevent them from going insolvent.

Sudan, for example, came the closest of any less-developed country to not paying interest on the $450 million owed to western banks. For Americans, there are good foreign policy reasons to see that Sudan, a moderate, western-oriented country just north of communist Ethiopia on the strategic Red Sea, remains stable.

With the Russians setting up a naval base in the Dahlak Islands, a part of Ethiopia's troubled Eritrea province, the West must protect friendly countries from both political and economic subversion. A major confrontation could come between the Soviet Union and the United States over access to this region's resources.

But western reaction so far shows mainly a sensitivity to the financial issues and indicates little shift in perceptions about Sudan's economic future. Leading banks, including Citibank and Chemical Bank, agree to finance new loans totaling $60 million subject to one important condition: Sudan must pay $120 million in overdue interest before April 1. Where will it get the money?

Here's where the Depository Institutions and Monetary Control Act comes in. Once the Sudanese government guarantees its debts—that is, puts is sovereign responsibility behind all principal and interest owed, the Fed will purchase Sudan's bonds.

Their debt becomes America's debt. Through this financial arrangement, the Fed will monetize Sudan's debt, add it to our own money supply, and breed more inflation.

Throughout the third world, government officials are being shown America's new lender-of-last-resort law by commercial bankers. The 1980 Act is the new magic formula for saving these less-developed countries from recognizing that their post-colonial dreams of grandeur are failures.

Once their $500 billion in debt is monetized by the Fed—that is, brought into our money supply—we will have no hope of solving our inflation problems. The signals from the Sudan and Brazil are grimmer than anyone in Washington has led us to believe.●

TERRORISM

HON. WILLIAM M. BRODHEAD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BRODHEAD. Mr. Speaker, I wish to share with my colleagues an editorial from the Detroit Jewish News on the timely and controversial subject of terrorism. This editorial focuses on the alleged relationship between the Soviet Union and the Palestine Liberation Organization, and points out that this relationship represents a threat not only to Israel, but to the peace and stability of the world as a whole. I commend it to the attention of all those who are concerned about the growing problem of terrorism:

[From the Detroit Jewish News, Mar. 13, 1981]

THE ROOTS OF TERRORISM

Without the support and encouragement provided by the Kremlin, the worst of all evils for mankind might never have reached its present stage of terror.

It has never been a secret and now it is becoming more explicitly evident that the chief support for the terrorists is provided by Russia.

It is becoming equally more evident that from Cuba have come the training forces for the PLO and for the forces of evil that are menacing Israel and other areas in the free world.

Media Analysis Center as just made public a chronological record of the USSR ties with the PLO and its chief leaders, notably Yasir Arafat, from June 19, 1977 to Jan. 8, 1981. It provides a list of 97 occurrences of Soviet relationship with the PLO, including many of the most horrifying acts of terrorism.

The Media Analysis Center provides these facts of the evil partnership:

1. This chronological record of USSR-PLO relations attests to the degree of intensity that marks the contacts between the two sides. Arafat visits Moscow often, as do other leaders of the Fatah and of other PLO groups, who either accompanying him or arrive in the USSR or its satellites on their own. Nor is this the only form of ties between the PLO and the USSR; as the survey shows, the Soviet embassy in Beirut is in constant touch with the PLO hierarchy.

2. The high frequency of these contacts and their complex nature on the various planes—against the backdrop of the PLO's relatively low weight on the inter-Arab strategic plane—throw light on the vitality of the connection (for the PLO) with the USSR in order to form a firm image in the eyes of the Arab leaders and of the West.

3. The frequency and complexity of the contacts show also that the PLO is aware of the fact that its essence and the nature of its aspirations are consistent with the essence of the USSR's interests in the Mideast (outside the realm of the Arab-Israeli conflict), whereas they conflict with those of the U.S.

4. The nature of the relations between the PLO and the USSR explains the organization's standing as a means (one of many) in the hands of the USSR (which is an irreplaceable support for the PLO) which uses it to promote its objectives in the region: agitation, harming the conservative and pro-Western regimes that control the oil sources, and undermining the Western strategic interests.

5. With the start of the peace contacts between Israel and Egypt, as the PLO joined the pro-Soviet "rejection front," Soviet support for the PLO increased. This enhanced support stems from Moscow's assumption that the PLO—together with more important radical Arab elements in the Mideast—can serve as a means to torpedo Western moves and achievements. Against this backdrop stands the USSR's readiness to supply military equipment to the PLO and to train the terrorists to operate the equipment can be understood. However, the nature of the relations between them also points up why Moscow is not ready to supply the organization with military equipment in a quantity and quality that would increase its freedom of maneuver.

6. The PLO's activity under the baton of the USSR (and of Syria) aimed at undermining the West's standing in the Middle East is not confined only to the plane of the war against Israel, but characterizes also its support for the Soviet invasion of Muslim Afghanistan—as it lines up in one camp together with the radical and anti-Western states of Syria, Libya, South Yemen and Ethiopia. This irregular stand of the PLO—in relation to the stand of most other Arab states—is consistent with the position adopted by the organization's representative in the Islamic foreign ministers' conference in Dakar. when it defended the USSR against the charge that it had intervened in Africa's internal affairs (Al Ahram, July 11, 1978). Arafat demonstrated another divergent pro-Soviet position when he met on July 4, 1978 with a South Yemen minister in a period when Arab leaders tended to keep their distance from South Yemen, which has colluded with the USSR in an effort to take over Muslim Eritrea (which is so vital to the Western strategic interests in the Red Sea). The organization's involvement in Iran is also coordinated with the USSR, to the point where its closeness to the leftist circles there has caused friction between it and Khomeini and Bani-Sadr (the Economist Foreign Report writes on May 16, 1979 that the USSR is transferring arms to the Iranian left through the PLO).

7. One of the conclusions to be drawn from the above, and from the survey, is that the life expectancy of the USSR-PLO connection does not stem from (nor is it connected with) any temporary policy of the organization or of the USSR, but is a long-term outgrowth of the fundamental substance and ambitions of the two partners.

8. The intensity and complexity of the USSR-PLO connection refutes the Western illusion that to give this organization a state would sever it from Moscow. In contrast to other organizations in Africa and Asia which did not resort to Soviet aid after they realized their immediate goal (independence from unacceptable local or Western rule) and subsequently turned to a certan cooperation with the West; the PLO's essence, the essence of its aspirations, its relatively small weight in the inter-Arab power struggles, and the power struggles and rifts that characterize its organizational structure—all these show why the PLO needs the USSR's closeness, and why the USSR regards any connection with it as a secured long-term investment.

It becomes increasingly clear that the Soviet aid gives comfort to the terrorism, that it is a menace to the world and to the Arabs as well.

An official PLO admission has just confirmed these charges. The admission is that hundreds of Palestinians have graduated from the Soviet Military Academy.

"Scores and hundreds of Palestinian officers eligible to command major sectors such as brigades have graduated from soviet military academies," Brigadier Mohammed Ibrahim al-Shaier, head of the PLO's Moscow office, revealed in a lecture in Beirut and published in Beirut newspapers. He said there are also some 2,000 Palestinians studying in Soviet schools and the PLO received 300 scholarships a year, mostly for scientific and technical studies.

"During PLO chief Yasir Arafat's visit to Moscow last year agreement had been reached on Soviet-Palestinian coordination 'in all matters of joint interest,' Shaier said. There have been recurring reports that the USSR has been training Palestinians."

The exposed facts now emerge as an offical record. The menace is appalling. This is no longer an issue affecting Israel's security. It is also an admonition to the world to act for a halt to such actions. If permitted to continue, the peace of the entire world will be at stake.●

THE WRAPAROUND LOAN—A GOOD DEVICE

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. PICKLE. Mr. Speaker, over the years, one mortgage banker in my community of Austin, Tex., has had the patience to discuss with me how mortgage bankers help finance housing. His name is Hugh Higgins, and I have been impressed with his far-looking concepts of how to have the private sector handle much of our housing needs.

In recent days, I saw an article in the MortgageBanker magazine written by Hugh Higgins, along with a professor from DePaul University, Mr. Richard T. Garrigan. The article makes it clear that the lender can make good money off a wraparound loan. But the figures are clear—the homeowner can make a better deal too.

Our regulatory agencies are pondering how to handle wraparounds in several instances. I think that this is a good article for them to review in making those decisions.

I insert Hugh Higgins' article in the CONGRESSIONAL RECORD at this point:

WRAPAROUND LOANS

(By Richard T. Garrigan and Hugh K. Higgins, Jr.)

The recent turbulent interest rate environment has created unprecedented asset and liability management problems for members of the mortgage lending community. High interest rates combined with efforts by the savings and loan industry to shift much of the interest rate risk to the consumer, however, are creating significant opportunities for those mortgage bankers who service FHA and VA mortgage loan portfolios.

Before considering the financial attributes of conventional, single-family wrap-around mortgage loans, some background information on both the scope of the opportunity and the basic characteristics of wrap-around loans is necessary. Table 1 shows the dollar amount of FHA and VA one-to-four family mortgage loan originations for the years 1974 through 1978. These years were selected for consideration for two reasons: first, the remaining term for loans having an original amortization term of 30 years would range from 23 to 28 years; second, while the maximum allowable interest rate for loans originated during these years was adjusted seventeen times, the rates during this five-year period ranged from a low of 8 percent to a high of 9½ percent.

TABLE 1.—MAXIMUM ALLOWABLE INTEREST RATES AND AMOUNT OF FHA AND VA 1-TO-4 FAMILY MORTGAGE LOAN ORIGINATIONS BY YEAR FOR THE YEARS 1974–78

[Dollar amounts in millions]

Year	Maximum allowable interest rates in effect	FHA	VA	Total
1974	8¼, 8½, 8¾, 9, 9½	$4,532	$7,889	$12,421
1975	8, 8½, 9	6,265	8,836	15,101
1976	8, 8½, 8¾, 9	6,998	10,426	17,424
1977	8, 8½	10,469	14,882	25,351

TABLE 1.—MAXIMUM ALLOWABLE INTEREST RATES AND AMOUNT OF FHA AND VA 1-TO-4 FAMILY MORTGAGE LOAN ORIGINATIONS BY YEAR FOR THE YEARS 1974–78—Continued

[Dollar amounts in millions]

Year	Maximum allowable interest rates in effect	FHA	VA	Total
1978	8½, 8¾, 9, 9½	14,581	16,026	30,607
Total		42,845	58,059	100,904

Source: U.S. Department of Housing and Urban Development.

As revealed in this table, the greatest spread in maximum allowable interest rates during any one year occurred in 1974, which had a low of 8¼ percent and a high of 9½ percent. During both 1975 and 1976, the range was from 8 to 9 percent. In 1977, the two rates in effect were 8 and 8½ percent, while in 1978, the rates ranged from 8½ to 9½ percent. Further examination of this table shows that the level of VA originations exceeded those for FHA during each of the five years. Of greater importance, however, the combined value for total originations increased from $12.4 billion in 1974 to $30.6 billion in 1978. The steady increases in originations during 1975 and 1976 were overshadowed by the sharp increase to $25.3 billion in 1977. While survival rates for these mortgages are not available, given the time frames involved, the bulk of these mortgage loans remain outstanding.

The wrap-around mortgage loan is a junior mortgage lien having as its principal balance the sum of 1) the balance outstanding on an existing first mortgage loan, and 2) the additional funds advanced by the wrap-around mortgage lender. Under a wrap-around loan, the borrower pays debt service payments to the wrap-around lender on the entire debt, and the wrap-around lender agrees to make debt service payments on the underlying debt, but only to the extent that it receives such payments from the borrower. In the hypothetical case given here, the borrower is a buyer of a single-family residence on which there is an existing FHA 203(b) loan, while the wrap-around lender originating the loan is a mortgage banker who is servicing the existing mortgage debt. The wrap-around loan is attractive to the borrower because it is a fixed-rate, level-payment, long-term mortgage loan whose interest rate is less than would be required in typical financing. Although it is a second lien, the loan does not contain either a balloon payment provision or a "Rule of 78" prepayment penalty clause. On the other hand, it is attractive to both the mortgage loan originator and a permanent investor because of its income generating characteristics.

STRUCTURING A WRAPAROUND

Just how a properly structured wrap-around loan can produce both a lower relative cost to the borrower and a higher return to the lender is clarified in Table 2. This table presents the basic assumptions for a hypothetical wrap-around loan. These assumptions depict an existing FHA 230(b) loan carrying an 8.5 percent interest rate. Following three years of monthly debt service payments of $371.39, the original loan amount of $48,300 has been amortized to $47,104.74. The property is sold for $67,000 at this point with the buyer being financed through a high-ratio conventional wrap-around of $61,200 bearing an interest rate of 11 percent. The $591.78 monthly payments on the wrap-around loan will permit its amortization over a term that is identical to the 27 year term remaining on the FHA loan. It is important to note that while the gross loan amount is $61,200, given the $47,104.74 FHA loan remaining outstanding, the net investment by the wrap-around mortgage lender is $14,095.26.

TABLE 2

Property Cost in 1977	$50,336.
Existing FHA 203(b) first mortgage loan:	
Original amount	$48,300.
Amortized balance	$47,104.74.
Original amortization term	30 yrs (360 mos).
Remaining amortization term	27 yrs (324 mos).
Interest rate	8.5 percent.
Monthly debt service	$371.39.
Servicing fee	44 percent.
Property sale price in 1980	$67,000.
Conventional wrap-around mortgage loan:	
Amount	$61,200.
Amortization term	27 yrs (324 mos).
Interest rate	11 percent.
Monthly debt service	$591.78.
Servicing fee	0.375 percent.
Net investment	$14,095.26.

Based on these assumptions, the financial flows for the first month of the wrap-around loan are shown in Table 3. The first part of the table simply presents the breakdown between interest and debt amortization for both the wrap-around and the FHA mortgage loans. The next item shown is the $208.21 net interest earned on the wrap-around loan during the first month. When this amount is divided by the $14,095.26 net investment and multiplied by 12, a high 17.72 percent annual return on investment is derived. Thus, while the borrower is paying an interest rate of 11 percent, the retention of the existing 8.5 percent FHA loan permits the wrap-around lender to achieve a leveraged return of just under 18 percent. This financial leverage and the high return it produces will continue to exist for the life of the wrap-around loan. Some variation in monthly yields will occur, however, because of differences in the level of amortization for the existing and wrap-around loans.

TABLE 3.—WRAPAROUND MORTGAGE LOAN FINANCIAL FLOWS FOR THE MONTH

Wraparound loan:	
Debt service payment	$591.78
Less: Debt amortization portion	30.78
Interest received	561.00
Existing FHA loan:	
Debt service payment	371.39
Less: Debt amortization portion	37.73
Interest paid	333.66
Net interest earned:	
Interest received	561.00
Less: Interest paid	333.66
Servicing fee	19.13
Interest earned	208.21

Yield on net funds advanced: ($208.21 ÷ $14,095.26) × 12 = .1772 (17.72 percent).

MORTGAGE BANKER'S PERSPECTIVE

The development of a conventional wrap-around mortgage loan program by a mortgage banker offers many potential advantages. First, the opportunity exists for the mortgage banker to be a very competitive (perhaps the most competitive) source of fixed-rate mortgage financing in those cases where qualifying existing FHA or VA mortgages exist. Origination fee income and discount points will generally be based on the gross amount of the wrap-around loan. The potential impact upon servicing income is dramatic. Given the harsh realities of the marketplace, when a home financed through an existing FHA or VA mortgage is listed for sale, chances are that the mortgage banker servicing the loan will not be the source of financing for the new loan. Were a wrap-around lending program in place, the mortgage banker would not only stand a good chance of retaining the servicing fee on the existing loan but would also derive an equal or possibly larger servicing fee on the wrap-around loan. For example, during the first year of the hypothetical wrap-around loan's existence, the servicing income of the FHA loan (assuming a .44 percent GNMA pool fee) would be $206.33. Were the wrap-around loan to provide for a .375 percent servicing fee, additional income of $228.88 would result. Therefore, the benefit to the mortgage banker during the 12 months following the wrap-around loan's origination is the difference between zero income and $435.21. Each mortgage banker can readily estimate the annual number of targeted loans required to achieve a significant level of income from an active wrap-around loan program.

A substantial increase in income generally would entail very limited added servicing costs. Given a reasonable number of wrap-around loans, the accounting system requirements are not an impediment. In addition to maintaining the existing impound accounts, the mortgage banker would establish one for private mortgage insurance. The only other requirement would be to establish an account for the wrap-around loan's permanent investor.

So much for the good loans, but what of servicing costs for defaulted loans? In this case, there is obviously a need to mesh the servicing requirements of the private mortgage lender with those of the FHA or VA. The government-insured or guaranteed mortgage servicing requirements, of course, are quite demanding. For this reason, the approach taken in this article is that the lender orginating the mortgage loan is the same lender who is servicing the underlying FHA or VA loan. Potential problems concern the distribution of partial payments, the need for a decision on the part of the permanent investor (and possibly the private mortgage insurer) on whether to keep the underlying loan current, and the requirement by the private mortgage insurer that the lender be in a position to tender good and merchantable title before a private mortgage insurance claim is paid. The mortgage banker establishing a conventional wrap-around mortgage loan program, must, therefore, have policies and procedures in place so that the servicing requirements for wrap-around loans can be effectively met.

One further point deserves mention. In offering these loans to prospective borrowers, the mortgage banker must deal with the fact that two insurance premiums will have to be paid in the case of an existing FHA loan. As an ongoing expense incurred by a borrower, the combined cost of these premiums will be something more than 0.5 percent but less than 0.65 percent. This expense should be considered in establishing interest rates for individual loans. Obviously, in the case of existing VA loans, only the cost of private mortgage insurance need be considered.

PERMANENT INVESTOR'S PERSPECTIVE

The permanent investor will be one who perceives the unique risk/reward characteristics of conventional wrap-around loans insured through private mortgage insurance. Among qualifying investors are federally-chartered savings and loan associations

whose regulations essentially treat wrap-around loans as if they were first mortgage liens. At the other end of the spectrum, pension funds are decidedly a potential source of funds.* Both FNMA and FHLMC are excluded for the specific type of second mortgage financing described here.

In structuring these loans, the mortgage banker should be sensitive to the fact that the high yields are partially a function of the wrap-around mortgage's second lien status. And while the potential rates of return are sufficiently high enough to justify funding fixed-rate investments, the issue of risk of loss of principal should be faced head on. To facilitate the sale of these loans, it is recommended that suitable levels of private mortgage insurance be obtained so that the net investment is at all times protected against risk of loss. Thus, in addition to yield considerations, the amount of net investment should be based on strict standards as to loss exposure. These standards, in turn, are to be based upon the anticipated claim levels likely to be submitted to a private mortgage insurer in the case of defaulted loans. Through proper structuring, the net investment on these loans can be fully insured against loss of principal.

CONCLUSIONS

The overriding point of this article has been to demonstrate that billions of dollars of potential value exist in FHA and VA mortgages because of their low interest rates and "assumable" natures. In general, sellers of homes whose properties are financed with such mortgages would prefer receiving cash for their equities as opposed to selling through land contracts or making seller-financed second mortgage financing available. What many sellers do not fully realize, however, is that their below-market rate FHA or VA loans, while technically liabilities, are in reality assets of considerable value. Wrap-around loans can permit home sellers to tap these values because the lower-cost, fixed-rate financing will permit more prospective buyers to qualify as purchasers, leading to more rapid sales at generally higher prices.

Mortgage bankers have much to gain by meeting this inherent demand for equity financing. The resulting image from the setting up of a conventional wrap-around program is that of a progressive, innovative, consumer-oriented lender. And best of all, the mortgage banker can significantly enhance the value of its servicing portfolio.●

* A discussion of the role of pension funds as permanent investors appears in Richard T. Garrigan's article "Opportunities For Pension Funds in Wrap-around Loans," Real Estate Review, IX (Winter 1980), pp. 30-37.

FEDERAL SUPPORT OF SEX EDUCATION PROGRAMS FOR TEENAGERS

HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. WEISS. Mr. Speaker, I believe it imperative for the Congress to confront the needless hardship we will impose upon millions of young people if we follow the administration and eliminate funds for sex education and contraception for teenagers. A report released this week by the Alan Guttmacher Institute indicated that if current trends continue:

* * * 4 in 10 of today's 14-year-old girls will have at least 1 pregnancy, 2 in 10 will have at least 1 birth, and more than 1 in 7 will have at least 1 abortion while still in their teens—despite the fact that the great majority of teen pregnancies are unwanted by the teenagers themselves.

Unless young people are given detailed information about sex and contraception before they are sexually active, they will continue to have increasing numbers of pregnancies, out-of-wedlock births, and abortions, Federal funds for sex education programs are critically needed in the effort to curb what has been termed "the epidemic of teenage pregnancy." The following article, written by Carol Bellamy, president of the New York City Council, appeared in the Washington Post and provides an excellent overview of this problem and compelling reasons for continued Federal support:

THE PERFECT PROGRAM NOT TO CUT

The budget thunder out of Washington these days finds many people running for cover, carrying their favorite programs, like valued possessions, to higher ground in the hope that the coming flood won't wash them away. Most are running scared and confused with no coherent resistance, no principled opposition. The New Deal's out, austerity's in, and woe to those who dally while the budget-cutters sharpen the ax.

For once, New York City may be in a position to offer some advice on budgets; we certainly know a thing or two about how to cut them. And we have learned a lesson: When it comes to cutting the budget, you need the skill of a neurosurgeon, not the sweep of the butcher. Unless cuts are carefully crafted, they may result in greater costs down the road. Simply stated, we have found that an ounce of prevention is worth a pound of cure.

So far, the Reagan administration has not heeded this valuable lesson. One of the most flagrant examples of misguided budget-slashing came recently from Human Services Secretary Richard Schweiker, who called for the elimination of federal funding of sex education and contraception for teenagers, thus ignoring social reality. Teen-age pregnancy is epidemic throughout America; last year in New York City alone, 14,259 teen-agers gave birth. What happens to these mothers? If they survive childbirth, when their chances of dying are 60 percent greater than for women in their 20s, almost three out of every four (72 percent) will end up on welfare. In New York City alone, the yearly welfare costs for these new teen-age mothers is $39 million.

The tragedy is even more dramatic in human terms. Many of these children are inadequately cared for or are abused and end up in foster care, where they languish for years. When child abuse occurs, not only the direct perpetrator will be responsible. So will all of those who remove the thin preventive safety net that now exists for at least some of these teen-agers. Does it make any sense to eliminate the marginal expense of current sex education and contraception programs? Does anyone really believe that prevention isn't the wisest course here?

One wants to give the Reagan administration the benefit of the doubt. But one fears there may be a method in its madness—perhaps this budget-cutting isn't so blind after all. Remember the campaign, and all the Moral Majority-inspired talk about the "decline of the family"? Sex education and contraception, it seems, threaten the family's hegemony and must be stamped out.

If necessary, we can remind the Reagan administration that the challenge for government policymakers today is to mount a concerted response to the tremendous behavioral changes that are redefining the American family. Today, 58 percent of all husband-wife families have two or more wage earners, 32 percent of married couples have no children living at home and one out of seven families is headed by a single parent. It is estimated that more than one-half of the country's 21 million teen-agers over 15, and approximately one-fifth of those under 15, are sexually active.

Withholding information about birth control will not preserve the family. President Reagan would better serve us all by recognizing the changes now taking place in the nature of the family unit and confronting the challenges of the future, rather than looking back to a past that no longer exists.●

BLUEPRINT FOR A HOUSE THAT WORKS: PART III

HON. TRENT LOTT

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. LOTT. Mr. Speaker, last December the President's Commission for a National Agenda for the Eighties released its final report, "A National Agenda for the Eighties." Chapter 5 of that report, entitled "Democracy, Politics, and Institutions in the Eighties," contains an incisive analysis of the current fragmented nature of our Government and thus the difficulty in reconciling competing demands made on the system and in making coherent national policy.

We need look no further than our own House for one of the primary sources of this fragmentation problem that threatens to paralyze our system. As the Commission report notes, our committee jurisdictions are tangled, overlapping, and duplicative, and the multiple referral of bills only exacerbates this problem. The proliferation of subcommittees has further added to the confusion and delay. Finally, our oversight of Federal agencies and programs is uncoordinated, irregular, and lacking in clear priorities.

To address this problem of fragmentation in the legislative branch, the Commission has recommended a reduction in the number of subcommittees, realining committee jurisdictions by function, greater use of ad hoc legislative committees, limiting the multiple referral of bills, and strengthening our oversight and budget processes.

Mr. Speaker, I find myself in agreement with the critique and recommendations of the President's Commission

with respect to the Congress. In fact, my own package of committee improvement amendments, House Resolution 100, closely parallels the recommendations of the President's Commission. My House rules amendments would limit all committees, except appropriations, to no more than six subcommittees, and all Members to no more than four subcommittee assignments; they would eliminate the joint referral of bills while retaining split and sequential referrals; and they would establish a procedure for a more formal consideration and adoption of committee oversight agendas at the beginning of each Congress. Moreover, to further strengthen our committee system, my amendments would require majority quorums for the transaction of business, eliminate proxy voting, require equitable party ratios on committees, and provide for adoption of an overall committee staff ceiling resolution at the beginning of each year.

I am currently circulating for cosponsors of House Resolution 100, which I will reintroduce on April 15, and invite my colleagues to join me on this blueprint for a House that works. A more detailed explanation and the text of my resolution can be found in the March 4 CONGRESSIONAL RECORD at page 3545.

At this point in the RECORD, Mr. Speaker, I include the pertinent portions from chapter 5 of the Commission report, and commend it to the reading of my colleagues. Excerpts from the chapter follow:

[From "A National Agenda for the Eighties," the report of the President's Commission for a National Agenda for the Eighties, December 1980]

CHAPTER 5—DEMOCRACY, POLITICS, AND INSTITUTIONS IN THE EIGHTIES

The Problem of Fragmentation. No society has been able to pursue all of its goals simultaneously, but the establishment of priorities for the United States in the Eighties will be difficult for several reasons. First, the organization and procedures of our institutions make it increasingly difficult for our political leaders to select among hard choices. Second, our people are (with some reason) cynical about the capacity and good judgment of the government and may resist the attempts of leaders to pursue some goals at the expense of others. Finally, the federal government is involved in more aspects of people's lives than ever before, and so there are more opportunities for the public to be disappointed by the government's performance.

An example of the difficulty our national institutions have had in making coherent national policy is in the field of welfare reform. As Chapter 4 points out, the United States has not one but at least five different types of government welfare programs: government aid to members of the poor, government provision of minimum standards, government insurance against loss of income, government aid for purchasing essentials, and government provision of opportunity.

Of course, a multiplicity of approaches need not be bad. A diverse population may require flexibility in bringing welfare to its people. But many critics agree that we have not too much flexibility but too little. The nature of our political process locks us into anachronistic approaches to welfare which limit the nation's ability to deal with modern problems; our social welfare system is a collection of uncoordinated programs, passed on an ad hoc, program-by-program basis. There is widespread agreement that the programs are too profuse and too complex to serve average citizens well. The programs are also criticized because they are marred by inefficiencies, they contain strong work disincentives, and they are increasingly costly.

There are two major reasons for the inability to reform the welfare system: (1) the presence of "iron triangles" or "subgovernments"—informal alliances of organized interest groups, executive agencies, and Congressional committees; and (2) the fragmented organization of Congress and the executive branch. Comprehensive welfare reform has been stymied by the presence of the iron triangles because such alliances are committed to the support of existing programs. More ambitious proposals failed in part because some of the client groups felt that they would not fare as well under new as under existing programs. Over the years Congressional committee members have also developed loyalties to, and built reputations upon, particular programs. The decentralized committee structures have helped to lock legislators into a program-by-program view of social policy. Consequently, representatives have been reluctant to deemphasize these programs in favor of a more comprehensive approach. And, of course, the same commitment to particular programs and clients also characterizes policymakers in the executive branch.

Comprehensive reform has also been difficult to accomplish because of the fragmented organizations of Congress and the executive branch. The complexity of the income security system is inherent in the very structure of the federal Congressional committee system and executive branch. It is estimated that 119 Congressional committees and subcommittees and 17 departments and agencies have some jurisdiction over the welfare system. This situation is exacerbated by the large number of state, county, and municipal government units which share program policymaking, funding, and administrative roles.

This section suggests several strategies for improving national policymaking: strengthening the parties, reforming federal elections, and improving the organization and procedures in Congress and in the executive branch. Putting into effect any of the proposed methods to restore substantial economic growth, or securing the passage of policies for energy conservation and development, welfare, or health, will require stable, coherent, decisive political leadership in government. The President, our only nationally elected leader, is still the person to whom groups turn when their demands are not satisfied elsewhere. But coherent and long-term leadership will, in turn, only become possible in our democracy through the creation of working political majorities—in the parties, in the Congress, in the executive branch, and among the levels of government in the nation at large.

There is a widespread belief that in recent years society has become increasingly fragmented and government increasingly bogged down. We are well aware that correcting this situation requires great subtlety. The line between paralysis of action and tyranny of the majority is much finer than one might think. Great care has to be taken to ensure that in bringing about working majorities, the rights of minorities are fully protected and that Congress, the President, and the political parties are all held accountable for their actions.

Much of the current difficulty in reconciling competing demands can be traced to the transformation of our political parties. In recent years our parties have become so weakened that they have considerable difficulty in carrying out their functions as a medium for compromise. Public support of the two major parties has declined seriously since the mid-1960s. In interviews, fewer adults say that they have strong confidence in the parties. The proportion of citizens of voting age who identify themselves as strong Democrats or strong Republicans has declined, and a larger proportion view themselves as independents. The amount of split-ticket voting has increased.

Unfortunately, even though the national parties have less support among the electorate, nothing else has arisen to replace them as a means of achieving compromise among the conflicting demands of citizens and as a link between citizens and elected officials. There has been a proliferation of interest groups, which can perform some, but not all, of the functions of parties. Such groups are quite valuable in communicating the needs of their members to elected officials. They are also increasingly effective (through grassroots organizing and through their Political Action Committees) at rewarding some officials and punishing others. The one feature of parties that is not shared by these groups is the capacity to reconcile competing interests and to compromise for the good of the nation as a whole.

The parties no longer have the central role they once had in the selection of candidates, either for the Presidency or the Congress. For the Presidency, a multitude of primaries, dominated by media events, has replaced party officals in the selection of nominees. In Congressional campaigns, parties have an even smaller influence on the selection of candidates. Candidates depend on ad hoc reelection committees, committed primarily to their elections, and on the organizational and fundraising abilities of organized interest groups.

The way in which candidates are recruited has made incumbents independent of the parties for their elections. This independence raises serious questions about the ability of Presidents to get unpopular measures passed, even within their own parties. Of course, every President is better able to influence public opinion than the Representatives and Senators are; every President has a "bully pulpit" which is not available to individual members of Congress. Unfortunately, the power to exhort the public is not usually sufficient to get an administration's program passed, because the members of Congress know that their futures are determined independently of the President's.

Incumbents are not judged on the basis of how well the system as a whole operates, but on how well they are able to explain their individual acts. There is an unfortunate tendency for Presidents to blame "do-nothing" Congresses, for Congress to blame "inefficient" bureaucracies. The point is not that our institutions are blameless, but that it is too easy for individuals to escape responsibility for how well the entire government works.

Particularly in Congress, the tendency to deny responsibility for how well the system as a whole works makes it easier for lawmakers to ignore the cumulative consequences of individual decisions. Many observers believe that our present system of policymaking favors policies that distribute tangible benefits, such as large construction projects, to a relatively large number of Congressional districts because such policies are attractive to members of Congress eager "to bring home the bacon." There is a tendency for members of Congress to vote for individual programs without thinking of the long-term cumulative consequences. There has been some progress in reconciling specific programs with overall goals since the formation of the Congressional budget process, but the political process is still not very effective at producing long-term, decisive policy, particularly in areas where the social and economic impacts and consequences of such policy are destined to work to the advantage of some and the corresponding disadvantage of others.

The widespread public perception that our institutions are not working effectively is reflected in increased cynicism and declining participation in traditional forms of political activity. Over the past two decades, the number of people who vote in national elections has dropped substantially at the same time that public disaffection with the government has grown. Several public opinion surveys since the mid-1960s have attempted to analyze citizens' belief in the responsiveness of government to the public. These surveys have shown that between the mid-1960s and the late 1970s the percentage of people who showed disaffection from government almost doubled, from 31 percent in 1964 to 60 percent in 1976.

Much of this disaffection is doubtless a consequence of the changing role of government in the past 50 years—government is involved in more activities than before, so that there are more opportunities for public dissatisfaction to arise. More people are also putting more demands on government than before, and so there is also the potential for alienation when their demands are not met. But some public alienation surely reflects the widespread belief among citizens that the government has responded inadequately to such troublesome problems as energy, inflation, and international economic competition.

Although the focus here is on the performance of our national institutions, individual citizens should also be encouraged to participate in political life. As the Quality of Life Panel points out in its report, unless there is also improved individual participation in the political process and understanding of issues, necessary broad public support for difficult policies (e.g., on energy) simply will not emerge. Encouragement of individual participation in citizenship activities is also needed, for the sake of the citizens themselves and their communities, as well as for the well-being of the nation as a whole.

The Coalition-Building Approach. Our recommendations are aimed at both public and political institutions. The urgent need for strong, reflective leadership does not, however, justify a major overhaul of the Constitution. There is a heavy burden of proof on proponents of Constitutional change to show that the asserted benefits clearly outweigh the unforeseen costs of changing a Constitution that has worked well for so long. The case in favor of Constitutional change is not strong enough to warrant the risks and unintended consequences that it would bring. In the past 50 years, American political institutions and democratic processes have served us remarkably well through a world depression and war, ongoing acrimonious international rivalry with the USSR, the civil disorders of the Sixties, and the major political crisis of Watergate. Our government has often displayed wisdom, resilence, courage, and, perhaps most important, long-term vision and foresight in projects such as the Marshall Plan of 1948.

Changes in our political institutions must also be based on sensitivity to the needs of many different groups, coupled with a commitment to the protection of minority rights. On many serious issues, there is a legitimate commonality of interests among diverse groups. It is important that the process of building coalitions focus on discovering where the shared interests lie on specific issues and on enlarging the base of support for policy alternatives among a broad range of groups. Our goal is to encourage the development of majorities on some of the most vital yet particularly troubling issues of the times. Such majorities could encourage the Congress and the executive branch to take more effective action on specific issues.

Thus, a degree of reform of American political institutions is needed, not in the expectation that any such mechanical correctives will of themselves give birth to more accountable and efficient two-party government, but in the more modest hope that certain changes will reduce some of the current procedural and structural impediments to coalition building.

Congress. Strengthening the parties will not by itself greatly improve the capacity of Congress to make difficult decisions. Because of its decentralized structure, Congress has great difficulty in dealing with important issues decisively and with dispatch. Recent changes in the seniority system have diffused power among a greater number of members of the House of Representatives, yet such disperal has, in turn, sometimes made action even more difficult to take. For different reasons, the number of Congressional subcommittees has proliferated, and each subcommittee carries significant authority in its domain to delay or block legislation. The problem is not that Congress consistently makes bad decisions, but that sometimes decisions are unduly delayed. Congress should make an effort to reduce the number of subcommittees—particularly the number of those with legislative responsibility.

There was a variety of proposals for reorganization at the committee level during the Seventies, but only minor changes have occurred. The Senate proved more willing to reorganize itself than did the House, but it still suffers from an unwieldy structure. It is sometimes difficult to obtain agreement on a policy or a piece of legislation because so many decisionmakers are involved. Moving in the direction of greater organization by function could yield a more effective organization and would also more closely parallel the organization of the executive branch, thus making the task of oversight easier.

In the absence of committee reorganization (which may simply prove too difficult to obtain), it is important that party leaders and caucuses continue to experiment with other means of strengthening party discipline and unity. Mechanisms for ensuring that subcommittees and committees are accountable to party leaders might, for example, include greater use of ad hoc committees, such as the House Ad Hoc Committee on Energy, to shortcut unwieldy or unresponsive committees. Another means for ensuring that timely decisions are made would be to give party leaders the power to set time limits as part of the process of multiple referral of bills. Presently, it is too easy for a single committee to delay important legislation. This is to say that there should not be multiple referrals of legislation—different committees can often bring valuable different perspectives to a piece of legislation—but we need to ensure that decisions are made in a timely fashion.

Finally, two of the most important Congressional tasks are overseeing the administration of the executive branch and allocating the federal budget. In these areas, it is not essential that working majorities emerge so that decisions can be reached. Congress has shown concern for improving its oversight, but there remains room for improvement, notably through closer coordination of oversight functions among committees with overlapping jurisdictions and through the establishment of oversight priorities that would ensure the systematic and regular review of all agencies. The creation of the House and Senate Budget Committees, the Congressional Budget Office, and the use of procedures to reconcile separate appropriations with an overall budget ceiling have helped Congress' ability to control the budget. Congress should, however, initiate at least biennial appropriations (instead of the current practice of yearly allocations) to allow for a more thorough Congressional review of programs and to enable agencies to improve their planning processes.●

DISSENTING VIEWS OF RON PAUL

HON. RON PAUL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. PAUL. Mr. Speaker, I would like to call the attention of my colleagues to the dissenting views which I have filed to the House Banking Committee's semiannual report on monetary policy.

I had hoped that a new administration would lead to a new policy at the Federal Reserve, a policy that would eliminate inflation, record interest rates, and the growing threat of recession and unemployment, but my hopes have been dashed. The Fed has indicated that it intends to continue the same disastrous programs it began last year.

As an alternative I have proposed a three-point program to end inflation and to put us on the road to a sound monetary system. The program is very simple, and it could easily be put into effect, if there were the will, either at the Fed or in the Congress, to do so.

First, the Fed should freeze reserve requirements at their present levels. Lowering the requirements will cause inflation; raising the requirements will cause deflation.

Second, the Fed should cease all buying and selling of securities. Buying securities is inflationary; selling securities is deflationary.

Third, the Fed should close the discount window. Making direct loans from the Fed to depository institutions, whether the loans be at market, below market, or above market rates.

If we are to return to a free society, we must end Government intervention in the economy, particularly the most sensitive part of the economy, the monetary and credit systems.

DISSENTING VIEWS OF RON PAUL

During 1980, we witnessed—and suffered from—the complete failure of monetary policy at the Federal Reserve. For years, the Fed had been focussing on interest rates as the guide to what it should do, and the Fed suffered scathing criticism from the Monetarists for doing so. What the Fed should do, said the Monetarists, is to forget interest rates and concentrate on M growth. The dean of the Monetarist school, Milton Friedman, preferred M_2 as the correct barometer, but other Monetarists insisted that any M would do, since they all move virtually in unison.

On October 6, 1979, the new Chairman of the Federal Reserve Board of Governors, Paul Volcker, announced the Fed's conversion to Monetarism, and stated that henceforth the Fed would be targeting M growth rather than interest rates. The result has been, in Jude Wanninski's phrase, a "gyrating standard." The more the Fed "intervenes to attempt to hit its targets, the more the gyrations, the less the unit of account is worth to the exchange economy. It is as if the Bureau of Weights and Measures, in attempting to maintain the yardstick as standard of measure, erred in the morning and came up with 35 inches, then shot for 37 in the afternoon so the average would come to 36."

We have now seen the horrendous results of this policy, and even Milton Friedman announced that he had changed his mind in the Wall Street Journal for January 30, 1981. He now proposes that the Fed control the monetary base directly, for "the base consists of the Fed's own liabilities, on which it has accurate day-to-day figures." Epistemology has always been a weak point in the Monetarist system, and it now appears that at least one of the Monetarists has begun to realize the importance of a sound epistemology.

Fortunately or unfortunately, there is always a lag between the latest fashion in academic economics and the monetary policy adopted by the government. The Monetarists are changing their minds, but we here in Congress are still trying to make a policy work that brought us stupendous M growth in the five months preceding the election; record prime, mortgage, and Treasury bill rates; and a sense of irrationality in the whole economy.

I would like to suggest something quite different, a policy designed to allow President Reagan to achieve his economic goals, and then some. To quote Jude Wanninski:

"The object of monetary policy should not be to put money into or take money out of the consumer's pocket, but to provide producers—and consumers—with a unit of account that does not change in value, thus permitting goods and services to be traded over long periods of time."

Under the gold standard, bonds were issued with 100 year maturities at 6 percent interest. It is that kind of stability that is necessary for the long range planning of a capitalist society. And it is that kind of stability that has been totally absent under the present monetary regime.

There are several immediate steps that could be taken to achieve this stability. First, freeze all reserve requirements at their present levels. Further decreasing or increasing of such requirements would be either inflationary or deflationary. All discretion on pegging reserve requirements should be removed from the Fed.

Second, the Open Market Committee should be abolished, and the Fed prohibited from buying or selling any securities whatsoever. Buying securities is inflationary; selling is deflationary.

Third, the Fed should close the discount window. Making loans directly from the Fed to depository institutions is always inflationary, whether the loans are made at market, below-market, or above-market rates.

In short, the Fed and the Congress must stop trying to second and third guess the economy. The Monetarists, who are opposed to most government intervention in the economy, are arch-interventionists when it comes to the most sensitive and fragile aspect of the economy, the monetary system. It's such government intervention that must be abolished if there is to be any genuine progress toward deregulation.

Ultimately, of course, the nation's monetary policy should not be decided by the Federal Reserve System at all, but should be monitored by the Bureau of Weights and Measures. A gold dollar, consisting of a weight of pure gold, should be the unit of account of the government, and the government's role should simply be to punish fraud, not to intervene by supplying money and draining off money. Such interventionist policies will always fail.●

HAS THE U.S. EXPORT PROBLEM BEEN SOLVED?

HON. LES AuCOIN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. AuCOIN. Mr. Speaker, in its rush to trim the Federal budget—a goal that few will dispute—the administration has set its sights on the Export-Import Bank, proposing direct loan reductions of $6.7 billion over the next 5 years. The reasoning is that the Bank provides loans to profitable corporations and therefore such financing is an unnecessary subsidy. Under the guise of our worthy efforts to balance the budget, we are gutting one of the mainstays, America's export program.

Of course, the argument that the Bank is expendable because it only supports profitable corporations is specious; and under closer scrutiny it breaks down.

In a response to this attack, Dr. Penelope Hartland-Thunberg, director of economic research at the Georgetown Center for Strategic and International Studies, has written a concise report. She points out that the long-term decline in U.S. exports has not been reversed and that, in cutting the lending authority of the Bank, the United States faces the real danger of unilateral disarmament at the onset of an insipient export credit war.

Dr. Thunberg, formerly a member of the board of national estimates of the Central Intelligence Agency and the U.S. Tariff Commission, notes that price alone does not win orders, and that conditions of sale are far more important to the successful export effort. Conditions of sale include the competitiveness of our financing any transaction.

The report is a special supplement to the excellent U.S. Export Competitiveness Series, sponsored by CSIS under the executive direction of Ambassador Michael Samuels.

Mr. Speaker, this supplementary report spells out clearly the perils of cutting back on Exim. I commend it to the attention of my colleagues and ask unanimous consent that it be inserted in the RECORD at this point.

The article follows:

HAS THE U.S. EXPORT PROBLEM BEEN SOLVED?

(By Penelope Hartland-Thunberg)

FOREWORD

In the last few weeks, the subject of export credit financing and the role of the U.S. Export-Import Bank has taken on a new dimension in light of the intention of the Reagan Administration to cut drastically the lending authority of the Eximbank over the next few years. Although the Bank's lending programs have a significantly different relationship to the federal budget than the spending programs of other government agencies, the Administration has recommended direct loan reductions of $6.7 billion over the next five years and the virtual elimination of the discount loan programs.

Over the last two years, the Center for Strategic and International Studies in its U.S. Export Competitiveness Project, has conducted a comprehensive study of the decline of U.S. export performance. This project has produced 13 studies to date on the various components of this critical issue and will release seven additional reports in the months ahead. A clear conclusion of this project is that the United States has an urgent export imperative. Maintaining and increasing U.S. exports must be pivotal to the building of a strong international economic policy.

In view of the vital contribution of the Eximbank to U.S. export performance, CSIS is pleased to issue the following report as a special supplement to the U.S. Export Competitiveness series. Dr. Penelope Hartland-Thunberg, a senior economist for CSIS, finds that evidence does not support the claim that the long-term decline in U.S. exports has been reversed. In fact, the probabilities favor a continuation of the present dollar's strength that will act as a sustained depressant on future U.S. exports. By cutting the lending authority of the Eximbank, the United States faces the danger of "unilateral disarmament" at the onset of an export credit war now fomenting among the industrialized nations.

The Center is proud to present this important contribution to the current Eximbank funding debate.

MICHAEL A. SAMUELS,
Executive Director.

March 1981.

HAS THE U.S. EXPORT PROBLEM BEEN SOLVED?

In 1978, the then Assistant Secretary of Commerce, Frank Weil, observed "Each year, within a year or so from the commencement of strong export program, the financial winds change and the balance of payments problem grows less. Thus each time . . . there is a risk that if our current account deficit shrinks, as we hope it will, that the will behind the effort will be sapped away by other priorities.[1]

Indeed, since those words were spoken, current account deficits of about $15 billion dollars in 1977-78 have been replaced by a surplus of $5 billion. U.S. exports have grown by 25 percent or more during each of the past two years, and the U.S. trade gap has declined by nearly $5 billion.[2]

Today in the pressure of budget-cutting in President Reagan's White House, the current healthy level of U.S. exports is being cited as evidence that money can be saved by cutting such export-aids as the loan activities of the U.S. Export-Import Bank. Has the competitive position of U.S. business in world markets really shifted permanently for the better? Or was the Assistant Secretary of Commerce uncommonly prescient in 1978 when he suggested that "other priorities" might once again sap a long-range export effort?

Our examination of the basic determinants of U.S. competitiveness suggests that the sanguine explanation of the improvement in U.S. trade and payments is just that—merely optimistic.

BASIC DETERMINANTS OF COMPETITIVENESS

The competitive position of a nation's exports in world markets is basically a function of its export prices and the uniqueness of its goods. There are very few goods entering world trade today which are truly unique, in the ense that no useable substitute for them exists. Although one item or one supplier may be preferred over another other things being equal, a less preferred item or supplier will be chosen if the price difference is sufficient or if some other consideration compensates for the degree of uniqueness in the preferred item. Certain of the most technologically advanced computers are truly unique for certain purposes, but the number of such truly unique products can probably be counted on one hand. Thus in the vast bulk of international transactions, the determining factor in exports and imports will be price.

The concept of price which is relevant to a consideration of the competitive position of any country is an all-inclusive one, including the time and place of delivery and the time and place of payment.

Differing conditions of sale among different potential suppliers frequently are far more important than the price of the narrowly defined product alone in determining which supplier will win the order. This is especially true for "large-ticket" items like aircraft, telecomunications systems, "turnkey" projects involving factories, dams, power systems or other custom-designed industrial enterprises or systems. Where millions of dollars are involved, differences in design among different suppliers are likely to be minor compared with differences in conditions of sale in determining which bid is accepted. In 1980 Eastern Airlines chose the European-produced Airbus over the Boeing 767, despite the fact that the American product was preferred for its purposes. It did so because the credit terms available with the Airbus made its overall price irresistible. Later Transworld Airlines was induced to order the 767 rather than Airbus because, according to the (London) Economist (February 14, 1981) "Boeing practically gave away" its price thus absorbing the credit differential.

For small-ticket items the condition of sale which is probably most important in determining export competitiveness in today's world is the currency in which payment is to be made. With fluctuating exchange rates, the current strength or weakness of a currency can be the determining factor in the choice among potential suppliers. Soundly based econometric studies have demonstrated the close relationship between currency values and total level of exports.[3] For the United States, for example, it has been established that the volume of exports will rise or fall twelve to eighteen months after a price change which occurs due to an exchange rate shift.

Price competitiveness in this broad sense is very much subject to the influence of differences in government policies among the trading nations of the world. Differences in financial or monetary policies, undertaken for reasons related to the level of employment or inflation within a country, affect interest rates and exchange rates. On a less aggregative level, differences in national policies regarding such internal matters as environmental controls, business taxes of all kinds, human rights regulations, labor standards and protections can in their cumulative effect have a profound influence on price competitiveness. It is now generally recognized that the competitiveness of American business in world markets has suffered a dual disadvantage of increasing intensity during the past decade or so stemming not only from the cost-increasing impact of regulations of the U.S. government but also from the cost-decreasing impact on U.S. foreign competitors of the export support programs of foreign governments.

CURRENT POSITIONS OF U.S. EXPORT COMPETITIVENESS

Both the U.S. Congress and the Executive Branch acknowledge the role of U.S. government policies in depressing U.S. exports; it is therefore expected that major steps will be taken this year to remove or amend a number of the more burdensome laws and regulations. The U.S. tax burden on U.S. businessmen abroad is likely to be reduced and the antiboycott law simplified; the Foreign Corrupt Practices Act will probably be made more realistic; antitrust policy as it applies to U.S. business abroad is likely to be adjusted. In addition, the government-wide review of federal rules and regulations as they add to business costs will result in an additional source of relief for U.S. exporters.

At the same time, however, the executive branch has recommended the emasculation of the one U.S. government effort which has had the effect of helping to counter the competitive disadvantage to which U.S. exporters are subjected by foreign government subsidies of their competitors' export credit terms. The reduction in U.S. Export-Import Bank credits proposed in the 1981 U.S. budget comes at a most unfortunate time. As a recent issue of the (London) Economist noted, (February 14, 1981) "A credit war has broken out among the rich exporting countries of the west." (p. 78). A four-year-old gentleman's agreement among OECD countries to adhere to the same credit terms for certain categories of foreign buyers fell apart last year, in large part because of the intransigence of the French. Thus, just as the time when our chief competitors in Europe and Japan have declared credit warfare by making the terms of their officially-supported credits more liberal and more imaginative, the United States is being asked by the executive branch to declare "unilateral disarmament in the trade field."[4]

The forms of direct and indirect subsidies provided by foreign governments to their exporters vary greatly and recently have become increasingly difficult to identify. The important question, however, is whether other developments affecting U.S. exports favorably are likely to be sufficient to counterbalance the unfavorable effect of the credit war and U.S. "disarmament," so that over-all U.S. exports will not suffer. The executive branch acknowledges that the cuts in lending could hurt U.S. exports, (Journal of Commerce, February 13, 1981) but their citing the current healthy U.S. export level implies that in their thinking other factors will compensate for the injury.

Skepticism about such claims is warranted because it is widely accepted by competent students of the international economy (e.g. Federal Reserve Bulletin, January, 1981, p. 10) that the current improved competitive position of U.S. exporters is the result of the 1977-78 depreciation of the dollar. Since late 1978, however, the dollar has risen slowly and by the end of 1980, the real effective exchange rate (its trade-weighted value allowing for differences in national rates of inflation as computed by Morgan Guarantee Bank) had returned to its 1977 level.

During the second half of 1980 the dollar rose 7 percent on the average and since then has risen even further against most European currencies. The effects of the dollar's strength will appear in trade data for late 1981 and early 1982, in a decline of U.S. exports and an increase in U.S. imports following the well-established lag of 12 to 18 months.

The dollar's recent strength is traceable primarily to extraordinarily high U.S. interest rates, secondarily to slower economic growth during 1980 in the United States than in our major trading partners. Slower U.S. growth depressed U.S. imports more than relatively higher (although slowing) growth rates abroad depressed our exports. The outlook for the next year or two, however, is for a combination of interest rate factors and growth factors both operating to depress U.S. exports.

U.S. interest rates are likely to remain high by historic standards as a result of continued inflationary pressures and the ef-

---

[3] The seminal article in such studies, for example, was Junz, H. and Rhomberg, R., "Price Competitiveness in Export Trade Among Industrial Countries," American Economic Review, May 1973.

[4] Ambassador Michael A. Samuels in speech before the Scripps Howard Newspaper Editors, Williamsburg, Virginia, September 8, 1980, processed.

forts of the monetary authorities to control them. Further, any decline in U.S. interest rates is likely to be accompanied by declining rates abroad because European governments are currently chaffing at being forced into tighter money policies than they wish because of pressures on their exchange rates. Thus the interest rate differential in favor of the dollar will probably endure, sustaining the attraction to foreigners of dollar investments and thereby keeping the dollar strong. A strong dollar, moreover, contributes to the U.S. fight against inflation by keeping import prices low. The probabilities thus favor a continuation of dollar strength and thus a sustained depressant on future U.S. exports.

High interest rates, moreover, will have serious repercussions on the most rapidly growing developing countries which have become important markets for the manufactured exports of the industrial nations and currently absorb one-third of such U.S. exports. The rapidly growing LDCs have been the big borrowers. A large part of their outstanding indebtedness is on a floating interest rate basis. The sharp rise in rates between 1979 and 1980 added 50 percent to their interest payments and contributed significantly to their financial difficulties. Their imports are already growing more slowly under the combined weight of higher prices for oil imports and interest payments; the trend toward deceleration in U.S. exports to these countries is likely to continue at least for the next year or so.

Economic growth in the major industrial countries during 1981 is expected to decline and to be lower than it was in, 1980.[5] These facts imply that cyclical factors of declining growth abroad will reinforce the depressing effect of exchange rate factors on U.S. exports. Consideration of the aggregative forces affecting U.S. trade thus do not argue in support of a counterpoise to U.S. "disarmament" in the export credit war.

Despite these aggregative trends are there perhaps specific developments that might influence this conclusion? As we have noted export credits are an important element in international competition primarily for the large-ticket items, the very expensive exports. Since most of these are custom-tailored for the requirements of the purchaser, they are less vulnerable to exchange rate changes than are consumer goods. This, however, is another way of saying exchange rate changes are usually smaller than other factors like interest rate differentials which combine to determine price bids including conditions of sale.

Relevant to a consideration of the trend in U.S. competitiveness is the change in the U.S. share of world exports of manufacturers. In fact it was persistent decline in this share from over 20 percent in the 1960s to a low of 17 percent in 1978 that sparked the original concern in the United States over a decline in U.S. competitiveness.[6] The inexorable decline in the U.S. share was finally broken in 1979 when the share rose from 17.0 percent to 17.4 percent. Available preliminary data for the first half of 1980 show a continued improvement. The change in direction, welcome as it is, however is neither sufficiently robust nor of sufficiently long duration to indicate unequivocally that the declining trend has been reversed. In fact there is a serious danger that U.S. "unilateral disarmament" at the onset of an export credit war could bring about a reversal of the reversal that is being so roundly welcomed.

How long are U.S. exports likely to suffer the effects of cut-throat competition from Europe and Japan in the export credit war? No one can answer the question of course, but it seems safe to conclude that the warfare will last longer if the United States is a nonparticipant than it would if this country, accounting for one-quarter of global GNP, were to be a serious combatant. The intransigence of the French, which was the reason for the failure to renew the previous international agreement on minimum credit terms, would probably evaporate quickly if they became convinced that the U.S. Congress and the U.S. Executive were serious about a threat to meet any government-sponsored credit terms offered by U.S. export competitors. Such a threat, backed by action if necessary, would probably cost the U.S. government less in expenditure than "unilateral disarmament" will in lost revenues.

SUMMARY

History appears to be repeating itself. The Reagan White House is recommending a cut in the funding of the U.S. Export-Import Bank. "Other priorities" may once again sap a much needed, long range effort to reverse the trend in the decline of U.S. exports. The reason supporting this cut is the current healthy level of U.S. exports; however, our research suggests that this approach is overly optimistic. The evidence does not support the claim that the long term decline in U.S. exports has been reversed. Accordingly we do not believe it wise for the United States, in the current export credit war, to disarm itself unilaterally by cutting the Eximbank funding.●

THE HOUSE SETS AN EXAMPLE

HON. ROY DYSON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. DYSON. Mr. Speaker, several weeks ago I sent a letter to President Reagan expressing my opposition to the proposed 16-percent increase in salaries for Members of Congress, Federal judges, and high-level Federal officials. In an affirmation of what I said in that letter to the President I voted against the pay raise. My reasons were simple; We, as America's leaders, have to set an example for the rest of the country.

People all over the United States are being asked by their local, State, and Federal officials to "tighten their belts." The President, in his program for economic recovery, has asked us to restrain ourselves even further as we pare down the Federal budget. There is no question that we are facing austere economic conditions and in my own mind there is no question that with the proper course of action we will overcome our economic difficulties. The real question which faces and will continue to face the Congress is setting an example that the rest of the country can look to and find support.

I am very pleased that the House rejected the pay raise proposal. It is a symbol that the Congress is looking out for the best interests of the country and not for itself. It is also a symbol of the direction the Congress will take in sharing in the task of setting this country back on the right track of prosperity. I know that the people of Maryland's First District are ready to do their share.●

ILLEGAL DRUGS—ROSS PEROT

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. COLLINS of Texas. Mr. Speaker, Ross Perot is leading the fight to end the drug traffic in Texas. We all agree that drugs are the No. 1 social and criminal problem in the United States. Yet, so many times drugs is a subject we talk about and we are not moving in for firm action.

Gov. Bill Clements appointed Ross Perot as chairman of Texans' War on Drugs Committee which is a citizens committee composed of 16 prominent Texans.

Ross is one of the Nation's leading businessmen serving as chairman and chief executive officer of Electronics Data Systems which is a company that he founded. His hard-hitting Navy experience that carries through from his days at Annapolis gives him the drive for leadership in this essential war against drugs. The Dallas Morning News had an excellent summary of Ross Perot's activities. Here is a summary of the high points in the Dallas Morning News story.

[From the Dallas Morning News]

ILLEGAL DRUGS

Illegal drug use is the No. 1 social and criminal problem in the United States. Consider these facts:

Roughly 80 percent of the convicts in the Texas penal system were involved in drug-related crimes, primarily involving theft to support individual drug habits.

Between 75 and 85 per cent of the persons arrested in sting operations are stealing to support drug habits.

Four out of 100 12-year-olds in our state used marijuana in the past month.

One out of eight high school seniors is a daily marijuana smoker.

More than 7,500 medical studies presenting the damage done by marijuana have been published. The medical evidence is overwhelming that marijuana is a powerful, damaging drug, particularly when use by teen-agers whose minds and bodies are still developing. Drugs, including marijuana, interfere with normal growth at the cellular level.

The part of the brain that allows a person to focus, concentrate, create, and conceptualize is adversely affected by the use of drugs, and over a period of time, can be permanently damaged.

Medical studies show permanent, irreparable damage to the female reproductive system with long-term use of drugs, including marijuana.

The immune system is adversely affected, producing a significant increase in infections. A single marijuana cigarette every other day for a year over a period of several months will produce a 41-percent decrease in the white blood cell count.

Drugs, including marijuana, affect the ability to react. A single normal strength marijuana cigarette will result in a loss of 42 percent of a person's driving skills. Two cigarettes will cause a 63 percent decrease in driving skills.

Drugs, including marijuana, reduce our mental capacity. Newly acquired knowledge goes into short-term memory and is then transferred into long-term memory. Use of drugs reduces the ability of short-term memory to retain information and transfer it into long-term memory.

With 62 percent of our 21-25 year-old age group experimenting with drugs, unless we change this trend, our economic structure will deteriorate over a period of time.

The Texans' War on Drugs Committee has concluded that we must do three things to combat drugs in our state effectively.

1. We must educate parents and children throughout the state. Only the parent, working with the child, can effectively prevent the child from experimenting with drugs. We have studied all the prevention programs. Programs in the schools, churches and youth groups can provide support, but the primary responsibility rests with the parent.

Next September, with the help of the Texas Medical Auxiliary, the Junior Leagues, and the Parent Teacher Association across our state, we will be working with the parents of every child in every grade in every public school in Texas to protect our children.

2. We need to enact legislation to reduce the availability of drugs in our state. Our committee has several bills pending before the legislature.

The first bill is Senate bill 393-House Bill 730, which will force drug smugglers to think twice about bringing drugs into Texas. Currently, our state is one of the "easiest" Gulf Coast states for drug smuggling since the penalty for getting caught is not as great as in the other four states. This bill will provide stiff penalties against drug smugglers.

Drug dealers who get caught selling to children will be hit hard if S.B. 397-H.B. 729 is passed. Convicted dealers will be denied probation or suspended sentences, unless a jury recommends otherwise.

3. We need uniform law enforcement and prosecution of major drug dealers in every area of Texas. Wherever we have soft spots in our state, major drug dealers set up operation.

EL SALVADOR

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. FAUNTROY. Mr. Speaker, I enthusiastically join my distinguished colleague from Massachusetts who has provided this body with such fine leadership on the question of El Salvador.

Tragically, the Reagan administration, in pursuit of a military solution in El Salvador, is ignoring the opportunity for a political solution and is further polarizing the situation, isolating the United States from most of the political forces of El Salvador and our friends in the region.

A story in the Washington Post of March 13 indicates that the weight of public opinion and indeed world opinion against such a reckless policy must be bringing the administration to its senses. This is certainly true of the mail and calls I am receiving from my constituents in the District of Columbia which has been unanimous in its opposition to the provision of military assistance to the junta in El Salvador.

The reality is the administration's policy is counterproductive and simply cannot stand the test of public scrutiny.

I congratulate Congressman STUDDS on his leadership and his authorship of H.R. 1509 of which I am a proud cosponsor.●

STATUS OF THE CONGRESSIONAL BUDGET FOR FISCAL YEAR 1981

HON. JAMES R. JONES

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. JONES of Oklahoma. Mr. Speaker, the House Budget Committee today is notifying the Speaker of the House of the current levels of congressional action on the budget compared to the spending ceilings and revenue floor established by the second budget resolution for fiscal year 1981. In order to keep Congress advised of the effect of its spending and revenue actions compared to the overall totals set in the most recently adopted budget resolution, periodic reports are required by section 308(b) of the Budget Act. Under the act, a point of order lies against any measure that would cause the spending ceilings or the revenue floor established by a concurrent resolution to be breached.

This report is based on the revised CBO 1981 economic forecast and spending and revenue reestimates for fiscal year 1981. In the January 15, 1981, Presidential budget submission, the estimates of spending and revenues were revised to reflect the latest economic and programmatic information. A complete review of these reestimates has been conducted and agreed upon by the Budget Committees and CBO; the committee will begin the review of the March 10 revisions within the next few weeks. The incorporation of these reestimates will bring current level to $19,595 million over the resolution in budget authority, $27,625 million over the outlays and $3 billion in revenues over the revenue floor. These revised spending levels will prevent any consideration of spending legislation and urgent supplementals requested by the President until the second resolution for fiscal year 1981 is revised.

I expect that a revision to the second resolution for fiscal year 1981 will be reported to the House approximately April 14, 1981, as title I of the first concurrent resolution for fiscal year 1982. The committee is hopeful that the congressional timetable for completion of the first resolution for fiscal year 1982, which will incorporate the revision of the second resolution for fiscal year 1981 will be completed by May 15, 1981.

The spending increases reflected in these reestimates have not been due to actions taken by Congress since the passage of the second budget resolution. The increases are primarily due to changes in the economy, including higher interest and inflation rates than were assumed in the second budget resolution. These factors escalate the cost of Federal programs tied to the economy. Interest alone has gone up $6 billion.

A copy of my letter to the Speaker and of the committee's report are attached:

COMMITTEE ON THE BUDGET,
Washington, D.C., March 17, 1981.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker, House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: On January 30, 1976, the Committee on the Budget outlined the procedure which it had adopted in connection with its responsibilities under Section 311 of the Congressional Budget Act of 1974 to provide estimates of the current level of revenues and spending. I am herewith transmitting the status report under H. Con. Res. 448, the Second Budget Resolution for Fiscal Year 1981. This report reflects the resolution of November 20, 1980, and estimates of budget authority, outlays, and revenues based on all completed action on spending and revenue measures as of the close of legislative business March 13, 1981.

Sincerely,

JAMES R. JONES,
Chairman.

REPORT TO THE SPEAKER OF THE U.S. HOUSE OF REPRESENTATIVES FROM THE COMMITTEE ON THE BUDGET ON THE STATUS OF THE FISCAL YEAR 1981 CONGRESSIONAL BUDGET ADOPTED IN HOUSE CONCURRENT RESOLUTION 448

REFLECTING COMPLETED ACTION AS OF MAR. 13, 1981

[In millions of dollars]

	Budget authority	Outlays	Revenues
Appropriate level	694,600	632,400	605,000
Current level	714,195	660,025	608,000
Amount over resolution	19,595	27,625	3,000
Amount under resolution			

BUDGET AUTHORITY

Any measure providing budget or entitlement authority for fiscal year 1981, if adopted and enacted, would cause the appropriate level of budget authority for that year as set forth in H. Con. Res. 448 to be exceeded.

OUTLAYS

Any providing budget or entitlement authority which is not included in the current level estimate and which would result in outlays for fiscal year 1981, if adopted and enacted, would cause the appropriate level of outlays for that year as set forth in H. Con. Res. 448 to be exceeded.

REVENUES

Any measure that would result in a revenue loss for fiscal year 1981 of more than $3,000 million, if adopted and enacted, would cause revenues to be less than the appropriate level for that year as set forth in H. Con. Res. 448.

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., March 17, 1981.

Hon. JAMES R. JONES,
Chairman, Committee on the Budget,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: In response to your request, this is to advise you of our most recent estimates for the current levels of new budget authority, outlays and revenues for fiscal year 1981. The tabulation below is based on a comprehensive review of spending and revenue estimates that incorporates Congressional action to date, a changed economic outlook, administrative actions, and new programmatic information. The attached material provides more details on the tabulation below and the results of our comprehensive review of budget estimates.

[In millions of dollars]

	Budget authority	Outlays	Revenues
1. Enacted	614,269	583,293	608,000
2. Entitlement authority and other mandatory items requiring further appropriation action	8,699	9,348	.....
3. Continuing resolution authority	91,227	67,385	.....
4. Conference agreements ratified by both Houses	.....	.....	.....
Current level	714,195	660,025	608,000
Second concurrent resolution	694,600	632,400	605,000
Amounting remaining:			
Over resolution by	19,595	27,625	.....
Over floor	.....	.....	3,000

The current level budget authority and outlay estimates shown above are on a full year basis. Most of the funds normally provided through the foreign assistance, labor, health and human services, and education, legislative branch, and treasury, postal service appropriation bills, however, are now available under continuing appropriations authority contained in P.L. 96-536. This authority expires June 5, 1981. Our estimate of the total budget authority and outlays, with discretionary items funded under P.L. 96-536 estimated only through June 5, 1981, is $699,491 million in budget authority and $650,615 million in outlays.

Sincerely,

ALICE M. RIVLIN,
Director.

PARLIAMENTARIAN STATUS REPORT SUPPORTING DETAIL, FISCAL YEAR 1981 AS OF CLOSE OF BUSINESS MAR. 13, 1981

[1] Less than $500,000.
[2] Additional appropriation action is required to continue funding beyond June 5, 1981. The amounts shown represent annual amounts provided under this public law.
Note.—Detail may not add due to rounding.

FISCAL YEAR 1981 BUDGET ESTIMATES
(Mar. 17, 1981)

At the close of the 96th Congress, action had been completed on most of the 1981 budget. Nine of the thirteen regular appropriation bills had been enacted, and spending for programs included in the other four appropriation bills was covered through June 5, 1981, by the second continuing resolution. As shown in Table 1, outlays resulting from these actions, plus spending for certain entitlements and other mandatory items requiring further appropriation action, were estimated to be $630 billion, slightly below the second budget resolution ceiling of $632.4 billion. Revenues were estimated to be $613.4 billion, or $8.4 billion above the second resolution floor of $605 billion. The budget deficit stood at $16.6 billion, well below the $27.4 billion deficit specified by the second budget resolution.

TABLE 1.—BUDGET ESTIMATES FOR FISCAL YEAR 1981

[In billions of dollars]

	Budget authority	Outlays	Revenues	Deficit
Enacted at the close of the 96th Congress, with the continuing resolution through June 5	682.0	623.8	613.4	−10.4
Entitlements and other mandatory items requiring further appropriation action	6.3	6.2	.....	−6.2
Subtotal, current level at close of 96th Congress	688.4	630.0	613.4	−16.6
Additional spending if continuing resolution is extended to September 30	15.5	10.1	.....	−10.1
CBO reestimates due to change in economic outlook and other developments	10.3	19.9	−5.4	−25.3
Revised current level	714.2	660.0	608.0	−52.0
Second budget resolution	694.6	632.4	605.0	−27.4

Without any new budgetary actions by the 97th Congress, however, the budget outlook for fiscal year 1981 has changed sharply during the past few months. The latest estimates show a budget deficit of $52 billion. Most of the increase in the size of the deficit can be attributed to higher outlay estimates. An extension of the second continuing resolution to September 30, the end of the fiscal year, would add an estimated $10.1 billion in outlays. Spending reestimates by the Congressional Budget Office (CBO), based on a changed economic outlook, administrative actions, and new programmatic information, total another $19.9 billion in increased outlays. Finally, 1981 revenues under current law are now expected to be $5.4 billion lower than estimated in December.

NEW ECONOMIC ASSUMPTIONS

The most striking change in the economic outlook for the 1981 fiscal year period is higher interest rates. Interest rates rose sharply in the October-December 1980 quarter, and are now expected to be very volatile but remain at relatively high average levels throughout the remainder of the fiscal year. Inflation is also expected to be somewhat higher during fiscal year 1981 than was assumed for the second resolution, which will raise the costs of indexed programs such as Social Security. The budget reestimates assume, for example, that the July 1981 cost-of-living adjustment for Social Security, will be 12.0 percent, compared to 10.7 percent assumed for the second budget resolution.

TABLE 2.—ECONOMIC ASSUMPTIONS

[Dollars in billions]

	Second budget resolution		Latest CBO scorekeeping assumptions	
	1980	1981	1980	1981
Gross national product:				
Current dollars	$2,570	$2,841	$2,629	$2,933
Constant (1972) dollars	$1,422	$1,437	$1,482	$1,499
Incomes:				
Wages and salaries	$1,332	$1,469	$1,344	$1,481
Nonwage income	$446	$502	$474	$543
Corporate profits	$232	$237	$245	$242
Unemployment rate (percent)	7.3	8.0	7.2	7.8
Consumer Price Index (percent change year-to-year)	13.3	10.3	13.4	10.8
Interest rate, 3-month Treasury bills (percent)	11.0	10.6	11.4	12.5

As shown in Table 2, the latest scorekeeping estimates for the levels of gross national product (GNP) are higher than assumed for the second resolution. This is the result of higher inflation and a major revision in the GNP series announced in December by the Department of Commerce. Real economic growth in 1981 is expected to be about the same as projected for the second budget resolution. Taxable incomes are also expected to be somewhat higher in 1981 than assumed for the second resolution.

REVENUE REESTIMATES

The largest element in the $5.4 billion reestimate of current law revenues for 1981 is a $4.3 billion decrease in estimated windfall profit tax receipts. This decrease is based on lower than expected collections in 1980 and a revised outlook for world oil prices. Corporate income taxes have also been reestimated downwards by $2.5 billion to reflect actual collection experience in 1980. Estimated individual income tax receipts have been lowered slightly, as a result of a technical adjustment in the relationship between income taxes and taxable incomes based on the recent revisions in the GNP series.

The latest estimate for social insurance taxes and contributions is about $400 million above the previous estimate, largely because of the revised forecast for wages and salaries. Estate and gift taxes are also expected to be somewhat higher based on the latest data. Aside from the reduction in windfall profit tax receipts, some increase in other excise taxes is expected because of higher prices. Finally, miscellaneous receipts have been reestimated upwards by approximately $900 million. Federal Reserve profits are expected to be higher than previously estimated because of higher interest rates. In addition, the Panama Canal Commission has been directed to reimburse the Treasury $350 million for monies advanced to the Commission in 1979. Table 3 summarizes the CBO reestimates by major revenue source.

TABLE 3.—REVENUE ESTIMATES FOR FISCAL YEAR 1981

[In billions of dollars]

Major source	Current level at end of 96th Congress	CBO reestimates	Revised current level
Individual income taxes	282.6	−0.6	282.0
Corporation income taxes	70.7	−2.5	68.2
Social insurance taxes and contributions	185.7	.4	186.1
Excise taxes	46.7	−3.7	43.0
Estate and gift taxes	6.3	.6	6.9
Customs duties	7.8	−.4	7.4
Miscellaneous receipts	13.6	.9	14.5
Total revenues	613.4	−5.4	608.0

SPENDING REESTIMATES

A major part of the $19.9 billion in spending reestimates can be attributed to the changed economic outlook for fiscal year 1981. Net interest costs are projected to be $5.7 billion higher than estimated for the second budget resolution. The projected volume of mortgage loans and other asset sales by various revolving funds have also been revised downward because of higher interest rates. The estimated net outlays for these funds administered by the Farmers Home Administration, the Government National Mortgage Association, and the Veterans Administration have been increased by $1.5 billion. Higher interest rates also will raise the costs of the student loan insurance program, by about $300 million.

The immediate decontrol of domestic oil prices announced on January 28 by President Reagan will have the effect of increasing 1981 outlays for the strategic petroleum reserve program by $1.6 billion, assuming no change in the 200,000 barrels per day average fill rate proposed by the Carter Administration. This increase in outlays will occur because the program will have to pay approximately $30 dollars per barrel more for its purchases. Under a continued phase out of controls on domestic oil prices, the program would have been able to purchase price-controlled lower-tier oil.

Higher fuel prices will also add to Defense Department spending. The 1981 Defense appropriation bill contained about $8.2 billion for fuel. More recent estimates indicate that fuel price increases will require an additional $1.2 billion in budget authority and $1.0 billion in outlays. Without further appropriation action, the Defense Department could invoke Feed and Forage Authority (Revised Statutes 3732) to fund these higher fuel costs.

The remaining $9.8 billion in outlay reestimates are based on new information about spending trends and other programmatic developments since the adoption of the second resolution. The major reestimates are described in the following paragraphs. Table 4 summarizes the major spending reestimates by budget function category.

National defense

In addition to the projected higher fuel costs by the Defense Department in 1981, the cost of the October 1, 1980 payraise for Defense employees is estimated to be about $600 million higher than assumed for previous scorekeeping estimates. The latest estimates assume that a smaller part of the October 1 payraise will be absorbed by the Defense Department, based on President Carter's 1982 budget estimates.

Energy

Outlays for various energy programs in 1981 are expected to be $2.5 billion above previous estimates. As stated earlier, $1.6 billion of this increase can be attributed to President Reagan's administrative action in January to immediately decontrol domestic oil prices. In addition, strategic petroleum reserve outlays are expected to be about $300 million higher than previously estimated because of the accelerated fill schedule planned by the Energy Department.

TABLE 4.—SPENDING REESTIMATES FOR FISCAL YEAR 1981

Subtotal	−2.6	−2.6
Total	10.3	19.9

[1] Less than $50 million.

Uranium enrichment outlays are also estimated to be about $200 million higher because receipts from uranium enrichment activities are expected to be lower, and spending on constructing the gas centrifuge plant is proceeding more quickly than previously estimated. The $1.3 billion increase in budget authority for uranium enrichment reflects use of contract authority provided in the 1981 appropriation bill. Naval petroleum reserve receipts for 1981 have been revised downwards primarily as a result of the sale of reserve oil to the strategic petroleum reserve at a lower price than assumed for the second resolution.

Agriculture

Projected outlays for farm price supports have been reduced by over $400 million from previous estimates, largely as the result of larger than expected sales of corn by the Commodity Credit Corporation (CCC) and increased redemptions of corn loans. These larger sales and loan redemptions are estimated to lower CCC outlays by over $700 million. The latest estimates of outlays for the tobacco and soy bean programs are also lower by more than $200 million. Partially offsetting these reductions are increases for dairy price supports and foreign export credits. As a result of more milk production and less consumption than expected, milk price support outlays are now estimated to be $390 million higher than previously projected. Net outlays for export credits will be almost $200 million higher because of lower repayments by Poland.

Net outlays by the agricultural credit insurance funds administered by the Farmers Home Administration are projected to be almost $200 million higher in 1981 because of higher interest costs and fewer sales of assets than previously expected.

Commerce and housing credit

Outlays by the Federal Savings and Loan Insurance Corporation are expected to be higher in 1981 because certain large payments anticipated in 1980 did not materialize. These payments—to purchase the assets of failing savings and loan associations—are now expected to occur in 1981. Additional assistance is also expected to be needed for other thrift institutions experiencing problems during fiscal year 1981 because of high interest rates. The total effect is estimated to add almost $950 million to 1981 outlays.

Net outlays by the Government National Mortgage Association are projected to be over $850 million above previous estimates largely as a result of lower mortgage asset sales and higher discount points. Credit unions are requiring increased assistance because of high interest rates and other economic conditions. As a result, outlays by the National Credit Union Administration have been revised upwards by over $200 million for 1981. Estimated outlays for HUD housing programs have also been increased by over $200 million, reflecting planned expenditures for the renovation of HUD-owned multifamily properties and recent spending trends for the housing for the elderly or handicapped fund.

Transportation

The reestimates in this function include $2.1 billion in budget authority and outlays for settlement of a property dispute between the government and the Penn Central Corporation and its creditors. The settlement payment, made on January 15, covers the negotiated value or properties transferred from Penn Central to the Consolidated Rail Corporation which was formed by the Congress in 1976 to operate rail service previously managed by bankrupt railroads. Last year's rail deregulation legislation allowed the Department of Transportation to borrow the necessary funds from the Treasury, without prior appropriations.

First quarter (October-December) obligations from the highway trust fund occurred at a much higher rate than expected, reflecting pent-up demand by states that had been constrained by the 1980 obligation ceiling. The shift of obligations to early in the fiscal year will result in higher 1981 outlays. CBO's current estimate of outlays for the federal-aid highway construction program is $8.5 billion, which is $840 million higher than CBO's previous scorekeeping estimate. Urban mass transportation fund outlays also have been reestimated upward by over $800 million, based on actual spending patterns during the first quarter and an expected faster first-year spending of new capital grants.

The Panama Canal Commission, pursuant to instructions in the 1981 transportations appropriations bill, will reimburse the general fund of the Treasury for monies provided to the Commission for 1979 operation. This reimbursement, which will amount to $350 million, will be recorded as both a miscellaneous receipt and an outlay in the budget, with no effect on the deficit.

Community and regional development

Outlays for both community development block grants and urban development action grants have been reestimated upwards by more than $200 million as a result of actual spending trends in the first quarter of fiscal year 1981. Small Business Administration (SBA) disaster loan outlays are also expected to be $200 million higher in 1981 than previously estimated. Spending from the 1980 supplemental appropriations bill was slower than projected and, as a result, more will be spent in 1981. In addition, flood insurance outlays are expected to be $75 million higher than previously estimated based on analysis of recent loss experience.

Education, training, employment and social services

Student loan insurance outlays have been reestimated upward by $365 million as a result of higher interest rates and a higher projected new loan volume. Student financial assistance outlays will also be higher in 1981 by about the same amount because actual costs for the 1980-1981 school year were higher than anticipated. The Pell grant program needed approximately $300 million more in 1980 appropriations to fund the program level approved by the Congress; these funds were borrowed from the appropriation for the 1981-82 school year. Other Department of Education programs will also have higher outlays in 1981 than previously estimated. Based on actual spending patterns in 1980 and first quarter outlays for 1981, CBO has revised its outlay estimates for impact aid, handicapped education grants, and other education programs upwards by almost $350 million.

Grants to states for social services are now expected to have outlays of $3.2 billion in 1981, $65 million higher than previously estimated largely as a result of delayed spending from the 1980 appropriation. Budget authority for the program has been reduced by almost $700 million, reflecting a technical accounting change.

Health

Medicare costs have been reestimated upwards by $1.2 billion, largely because of a higher than normal increase in the utilization of hospital and other medical services in 1980, a trend which is expected to continue in 1981. The normal annual increase in hospital days for Medicare patients has been about 3 percent. The actual increase in 1980 was about 7 percent. CBO's latest estimates assume that the increase in 1981 will be about 4.5 percent. The upward spending reestimates for Medicare are partially offset by almost $500 million in estimated savings contained in the 1982 Carter budget. These savings are expected to come from reduced payments for hospital malpractice insurance and from tightening of the reasonable cost limits for hospitals.

Outlays for Medicaid grants have also been raised by over $200 million, based on actual 1980 spending and obligation experience and a revised estimate of 1981 savings from cost management improvements. Outlays for other health programs have been revised upwards by almost $400 million based on more recent information on spending rates.

Income security

Social Security outlays for 1981 have been reestimated downwards by over $600 million, largely as a result of new programmatic information about actual beneficiary levels and average payments. The higher inflation outlook is expected to raise the July 1981 cost-of-living adjustment for Social Security benefits from 10.7 percent assumed for the second budget resolution to 12.0 percent. This will increase 1981 outlays by somewhat more than $300 million, and 1982 outlays by $1.3 billion over previous estimates. The increase for 1981, however, is more than offset by the downward adjustment for new programmatic assumptions.

Unemployment compensation outlays for 1981 are expected to be about $500 million higher than previously estimated, despite the latest economic forecast for somewhat lower unemployment rates than assumed for the second resolution. The reason is a $1.2 billion upward reestimate for trade adjustment assistance outlays. During the past year, many workers in automobile steel and tire/rubber factories have been certified for trade adjustment assistance benefits. Delays in paying these benefits in fiscal year 1980 will result in higher 1981 outlays. In addition, the automobile industry's continuing economic problems are expected to cause currently certified workers to suffer more frequent and lengthier layoffs than originally projected. Estimates for other unemployment compensation benefits have been lowered by about $700 million as a result of assumed lower unemployment, actual first quarter outlays, and various reconciliation act provisions affecting the programs.

Projected outlays from the civil service retirement and disability fund have been raised by over $200 million because of higher than anticipated retirement rates in 1980 which are now expected to continue in 1981. The actual net increase in retired annuitants in 1980 was 10,000 higher than expected. As a result, the 1981 net increase has been revised upwards by 10,000 to 52,000.

Estimated outlays for the supplemental security income program in 1981 have been increased by over $200 million, as a result of the higher cost-of-living adjustment now projected and an updating of programmatic assumptions on beneficiary levels.

The foster care program has been transferred to the human development services account from the assistance payments account. Budget authority and outlays for this program are about $250 million in 1981. Outlays for assistance payments have been revised upwards by about $200 million, based on new programmatic data and new economic assumptions. Most of the increase is due to higher than expected costs of child support enforcement activities.

Veterans benefits and services

The fall 1980 school enrollment by veterans was much higher than expected. As a result, about 200,000 more veterans are now projected to receive GI Bill training benefits in fiscal year 1981 than previously estimated, for a cost increase of almost $500 million. In addition, net outlays for veterans housing programs in 1981 are now expected to be over $400 million higher than previous scorekeeping estimates, largely as a result of fewer asset sales because of high interest rates.

General Government

The latest Administration estimates for claims and judgments are about $150 million above CBO's earlier scorekeeping estimates, largely as a result of increased outlays for Indian claims. In addition, the 1981 outlay effect from the 1980 furniture rescission, which had been recorded in this function, has been distributed to other functions in accordance with the latest Administration estimates.

Interest

Outlays for interest on the public debt are now projected to be $91.9 billion in fiscal year 1981, $6.3 billion above CBO's previous scorekeeping estimate. The increase is caused by higher interest rates and a higher budget deficit than assumed for the second budget resolution.

Interest receipts from off-budget agencies have been reestimated upward by almost $400 million, based on the higher interest rate assumptions. Interest deposits in tax and loan accounts similarly have been reestimated upward by over $200 million. These reestimates have the effect of reducing budget outlays since they are recorded as offsetting receipts. Other offsetting receipts and accounts in the interest function have also been revised upwards by over $300 million, based on the OMB's latest estimates contained in President Carter's 1982 budget.

Allowances

The allowance for civilian agency payraises on October 1, 1980 has been revised upwards by about $500 million from previous scorekeeping estimates, which assumed a greater level of absorption than proposed by the Administration. The 2 percent reduction in the 1981 HUD-Independent Agencies appropriation bill for controllable items and a similar reduction in the Legislative Branch appropriations have been distributed to other functions, based on the latest Administration estimates.

Undistributed offsetting receipts

Sales of oil and gas leases on the Outer Continental Shelf (OCS) are now expected to produce $3.0 billion higher receipts than assumed for previous scorekeeping estimates. The two Gulf of Mexico sales held in September and November produced $1.8 billion more receipts than expected, and the third Gulf of Mexico sale scheduled for July 1981 is now expected also to produce near-record bonuses.

Interest payments received by trust funds are now expected to be $300 million lower than previously estimated because of smaller trust fund balances. The payments by federal agencies to various employee retirement funds are also expected to be somewhat lower in 1981 than previously estimated.●

EL SALVADOR

HON. RON WYDEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. WYDEN. Mr. Speaker, I am grateful for the opportunity to add my voice to the growing number of Americans who are expressing serious reservations about our increased involvement in El Salvador.

No good purpose is served by the shipment of arms and military advisers to this beleaguered country. The solution of El Salvador's internal problems should be decided by the Salvadorans themselves, in an environment free from superpower intrusion.

We all realize that America cannot just look the other way when presented evidence of Soviet involvement in El Salvador, through Cuban proxies. But the appropriate response is not to ship armaments just because they are. This kind of one-upsmanship can only lead to escalated involvement by both superpowers. Have we not learned our lesson?

A proper American response should be one of encouraging the continued implementation of reforms by the Duarte government, while insisting on an end to the gross abuses of human rights by the military and extremist elements.

It is my hope, and the hope of many Oregonians, that the administration will soon realize that we must seek a different course in our policy toward El Salvador.●

TERRORISM IN EL SALVADOR—ITS GLOBAL SIGNIFICANCE

HON. JOHN LeBOUTILLIER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. LEBOUTILLIER. Mr. Speaker, the master naval strategist, Sir Winston Churchill, coined the phrase "soft underbelly" to refer to Western Europe's vulnerability to assaults from the south along the Balkan coast of the Mediterranean.

In recent years, America has acquired its own "soft underbelly," and today stands vulnerable on its southern flank.

U.S. naval strategists have long recognized the area implicitly defined by the Monroe Doctrine as vital to U.S. national security interests. Backing policy with power, the United States has traditionally maintained a position of strength in the Caribbean and Central America so secure that no other power could possibly mount a challenge—until recently.

Today, partly as a result of President Carter's policies and partly as a result of Cuban-Soviet strategic and ideological intrusions, the Caribbean and Central America are moving rapidly away from U.S. influence and charting a new and increasingly dangerous course.

With much fanfare, Jimmy Carter assumed the Presidency with a new plan for Latin America and a new generation of policymakers determined to secure its success. In general, the Carter administration advocated U.S. acceptance of Marxist-Leninist regimes in Latin America and assumed that underdevelopment and unrest in the area was caused by American imperialism and intervention. In particular, the President and his advisers urged ideological pluralism, respect for human rights, relinquishment of sovereignty over the Panama Canal, reconciliation with Cuba, recognition of Cuban claims to Guantanamo, reconsideration of the status of Puerto Rico, support for socialist Jamaica, elimination of public and private military aid programs, and withdrawal from U.S. air, Army and naval bases in and around the Caribbean. During the 4 years following Carter's inauguration in January 1977, all of these objectives have been either achieved or attempted.

The result of these policies is devastatingly clear. The geostrategic situation in the Caribbean and Central America has shifted 180 degrees. Throughout the entire region, the United States finds itself on the defensive.

The unfolding of Soviet global strategy centering on the interdiction of oil and nonfuel mineral supplies feeding the economies of the United States, Western Europe, and Japan has also had its impact. The lifeline of the American economy runs from the Middle East through the Indian Ocean—Cape of Good Hope—Atlantic passage and reaches its focal point in the Caribbean rim and basin. Seventy-five percent of all the oil imported into the United States—43 percent of

the total consumption—transits the Caribbean. Moreover, the United States is dependent on other lands for 93 out of 95 strategic minerals. Just as the satellization of Mozambique and Angola in southern Africa jeopardize the West's reserves of cobalt, chrome, and ferromanganese, Soviet-Cuban advances in the Caribbean jeopardize their shipment to the United States and its allies.

The emergence of the Soviet Union as a great naval power gives credibility to this strategy. From what was historically a coastal defense force, the Soviets have built and launched a true blue water capability of global proportions. Whereas the United States has reduced its Navy by over 50 percent in the last 10 years from 976 to less than 450 ships, the Soviet Navy has registered the greatest gains in its entire history. Today, the Soviet Navy is estimated by intelligence sources to be in excess of 2,700 ships.

This fleet has allowed the Soviets to dramatically increase its out of area operations. Soviet naval incursions into the Caribbean, the Indian, Pacific, and Atlantic Oceans—as well as other vital waterways—constitute a direct threat to historic Western and U.S. sealanes. The Soviet capacity to support military land operations in areas such as the Middle East, Southeast Asia, and Africa has already profoundly influenced the course of political events in those areas. Based upon their recently acquired maritime and sea-air logistic muscle, the Soviet Union has established a string of bases and allies which threaten to make the United States a secondary strategic power. The Soviet invasion of Afghanistan and the support of the revolutionary force in Angola and the Horn of Africa—compared with the near complete lack of American strategic resolve—offers the most compelling recent evidence of the shift in the balance of global political power.

In the Western Hemisphere, the Soviet Union, with the assistance of Cuban revolutionary forces, has established a beachhead in Nicaragua for extending its influence throughout Central America with a view of interdicting the vast reserves of 44 billion barrels of oil yet available to America in Mexico. Using neutralist Costa Rica as a sanctuary, Cubans, East Germans, Panamanians, and other international brigades joined the Sandinistas in invading Nicaragua. The Sandinistas were defeated in the field, but the dispatch of U.S. arms to Panama for transshipment to the Sandinistas, U.S. interdiction of Israeli, South African, and Argentine weapons destined for Somoza and the U.S. embargo of munitions for the Nicaraguan National Guard, delivered the Nicaraguan nation to the communist camp.

Since the downfall of Somoza, Nicaragua has become increasingly a Soviet satellite. The Sandinistas have nationalized the banks, insurance companies, mines, fishing, timber, and grain production. Private schools, including religious ones, have been taken over by the Government. Block-committee surveillance structures modeled after the Cuban Committee for the Defense of the Revolution have been established to provide political education, organization, surveillance, and military training. Cuba has provided thousands of teachers to help the Sandinistas adopt a Cuban-style education reform program that seeks to totally remove parental influence and encourage political indoctrination of all citizens from age 6. Free elections have been labeled as "unnecessary and too expensive" and will not be held until "illiteracy has been eliminated and the population properly educated." Moreover, on March 23, 1980, Pravda announced an agreement between Central Committee members Boris Ponomrev, A. P. Kirilenko and I. V. Arkhipov and Sandinista leaders to establish a Moscow-Managua axis.

From this beachhead, the Soviet Union plans to extend its influence in the Western Hemisphere by supporting leftist revolutionary forces presently at work to undermine the Governments of El Salvador, Honduras, Guatemala, and eventually, Mexico.

The crisis presently raging in El Salvador must be seen against the background of global geopolitical developments and, in particular, within the framework of a Soviet attempt to increase penetration of the Western Hemisphere.

During the past decade the Soviet Union has projected a four-tiered approach to the use of military power. First, in response to America's voluntary decision to limit its strategic nuclear delivery systems in favor of arms control, the Soviet Union undertook the most massive buildup in history designed to outclass the United States in every aspect of strategic programs. Second, under cover of this strategic nuclear strength, the Soviet Union sustained the direct combat of Cuban and Vietnamese proxy forces through the use of a whole array of naval forces, long-range air transports, and weapons shipments. This use of force decided the outcome of conflicts in Angola, Ethiopia, and Indochina. Next, clearly bouyed by a new-found confidence that the correlation of forces had turned in its favor, the Kremlin committed substantial conventional forces of its own in the invasion of Afghanistan. Finally, running throughout this entire period, the Soviet Union and its surrogates have provided massive support for terrorists operating in every area of the world.

It is the fourth tier of military power—international terrorism—which today threatens friendly governments in every corner of the globe.

Under the rubric of "national liberation movements" and "struggles for human rights", so called freedom fighters have received the entire infrastructure of terror from the Soviet Union and the KGB. Money, guns, training, background information, communications, propaganda—all have been made available. Israeli military intelligence states that from 1974 to 1979 practically all weapons used by Palestinian terrorists are weapons originating from the Eastern bloc through such intermediaries as Libya, Syria, and Algeria. Extensive guerrilla courses for the Palestinians have been organized in the Soviet Union, East Germany, Czechoslovakia, Hungary, and Bulgaria. Today, Palestinian guerrilla formations total over 16,000 men with hundreds more coming online each month.

For over a decade the PLO has been actively assisting the Sandinista National Liberation Front (FSLN) presently ruling Nicaragua. Founded in 1963, the Sandinistas have been trained not only in Cuba, but also in the subterranean networks of the PLO and its affiliates in the Middle East. Yassir Arafat himself publicly boasted in Managua in July 1980 that the Sandinistas have received training and indeed had fought with the PLO in the Middle East.

At the present time, Nicaragua harbors the terrorism of the PLO for export. During the assault on the Somoza government, thousands of armed terrorist-guerrillas from Argentina, Chile, Colombia, Panama, Honduras, Venezuela, and Mexico joined the Sandinistas forming international brigades paralleling those of the Spanish Civil War. Terrorist training bases were established throughout Nicaragua at Esteli, Montelimar—the former Somoza estate—Somotillo, Ocotal, Tamarindo, Puerto Cabezas, the Island of Soletiname—in Lake Nicaragua—and in several locations in the Punta Cosequina area a short distance from El Salvador. These training camps are presently being used to prepare terrorists for the assault on El Salvador, Guatemala, Honduras, and activity in South America.

The recent U.S. white paper released by the Department of State details the clandestine military support given by the Soviet Union, Cuba, and their allies to Marxist-Leninist terrorists fighting to overthrow the established Government in El Salvador. Before 1980, the guerrilla groups in El Salvador were ill coordinated and ill equipped, armed only with pistols and a varied assortment of hunting rifles and shotguns. Even then, on the basis of their own 1980 reports and contrary to recent misinformation, they claimed the killings of nearly 6,000 persons, including noncombatant in-

formers as well as Government authorities and military.

The U.S. Presidential elections served to stiffen terrorist activities. Fearing that the election of President Reagan would lead to increased assistance for the Duarte regime, the terrorists announced preparations for a final offensive to create an irreversible situation in the country. By mid-January 1981, when the general offensive was launched, they had acquired an impressive array of modern weapons and supporting equipment never before used in El Salvador by either the insurgents or government forces.

Of particular significance is the evidence found in captured documents of the Communist Party of El Salvador linking this offensive to foreign sources. These documents clearly show that in less than 6 months, Cuba and other Communist countries managed to equip the insurgent forces with an arsenal of modern weapons sufficient to launch a well-armed offensive. Weapons originating from the Soviet Union, Eastern Europe, Vietnam, and Ethiopia were sent to El Salvador via Cuba and Nicaragua. Moreover, it cannot be denied that Marxist-Leninist terrorists are playing a central role in the political unification and military direction of the entire effort.

Unquestionably, the terrorist activities in El Salvador represent a classic case of indirect aggression by Communist powers through Cuba. The much publicized "need" for the United States to use the situation in El Salvador to "send a symbolic message of strength to the world" is in fact a real need to respond to the aggression of international terrorists trained and supplied by the Soviet Union and other Communist powers. Also, the U.S. response—contrary to occasional suggestions—is not a mere public relations ploy. Indeed, it is a course of action designed to secure a vital national interest—the protection of the oil and ore lifelines on the U.S. southern flank.

In 1973 Soviet Premier Leonid Brezhnev told a meeting of Warsaw Pact leaders in Prague that the objective of Soviet foreign policy was world dominance by the year 1985, and that the central control of the West's sources of energy and raw material would reduce it to the condition of a hostage of Moscow.

While the timetable is new, the thought is not, Lenin had perceived the connection between the West and its colonial empires as the "weakest link" which, if destroyed, would lead to the economic and political collapse of the West. Khrushchev also saw advantages to such an approach. An aggrieved Third World, stirred by a strong spirt of nationalism and anticolonialism, and motivated by strong negative feelings toward the West, would provide many opportunities for a properly formulated Soviet foreign policy. The Western powers could be destroyed at its weakest point.

As the mission-ability of U.S. strategic and conventional forces have become increasingly problematical, the perception of the United States as a great power has declined. Acting below the threshold of danger, the Soviet Union has become free to range throughout the world at will relying on the use of proxy forces and international terrorist organizations. Such a war constitutes for the U.S.S.R. a low-cost, low-casualty, low-visibility form of attack. It precludes any risk to Soviet people, farms, or factories. It is described simply as "peaceful competition", or "peaceful coexistence", where the danger of superpower confrontation can be controlled and minimized. But to the West, it is a strategy that is deadly.

As has already been witnessed, the Soviets have much influence in Iraq, Syria, Libya, and Mozambique with the new state of Zimbabwe seen tilting more to Moscow than the West. Subversive and covert action activities have been extensively directed at South Africa, Namibia, Zambia, Chad, Zaire, Sudan, and Western Sahara, as well as Turkey, Oman, and Saudi Arabia. In the Caribbean and Central American region, Castro has close ties with Grenada, Guyana, and Nicaragua, and until recently, was on the verge of overthrowing the Government in El Salvador.

What lies behind all this activity? Undoubtedly, the Soviet Union has its eye on the critical oil and nonfuel resources coming from Africa and the Middle East. Without these resources, the Western economies would collapse. Second, the strategic sealanes and the chokepoints of the world's waterways—the economic lifelines of the West—are also targeted. In the Western Hemisphere, the Soviet Union seeks control over the Panama Canal as well as such critical resources as Jamaican bauxite and the vast oil reserves in Venezuela and Mexico.

To be sure, Soviet command of the seas would not only deny Western access to much-needed resources, it would effectively deny any future Western repenetration of the area in which they are available. Should this come about, the Soviet Union would stand poised to impose a new world order over the Eurasian/African land mass, a world order Marxist inspired and Soviet dominated. Moreover, if the Kremlin were to destabilize and effectively penetrate the Caribbean and Central American region, the United States would be forced to assume a fortress America posture. This would not, however, be a strong America. Without the vital resources contained in other areas of the world, the American economic, political, and social order would eventually come unraveled.

In short, there is a pattern behind Soviet activities around the world. For some time, the Kremlin has been engaged in a global geostrategic offensive designed to shift the world's balance of power by striking at the heart of the West's economic and political order. The means are at a low threshold of violence, but the goal is world dominance.

Today, the Western nations—caretakers of Judeo-Christian values preserved and fostered over 2,500 years of human history—stand in imminent peril. Through the appeasement policies of the recent past, the Soviet Union has been afforded a window of opportunity over the West which they are actively and aggressively pursuing. The events occurring in El Salvador are only a part of this larger effort. But, they are a part. Should they all succeed, as they have in many areas of the world, the West could be defeated without having fired a shot.

Only within this larger global context can current strategic developments in the soft underbelly of the Caribbean rim and basin be adequately assessed.●

EL SALVADOR

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. YATRON. Mr. Speaker, I join with my colleagues in support of H.R. 1509, which I believe will mitigate some of the turmoil and violence in El Salvador.

American policy with respect to El Salvador must be aimed at bringing an end to the internal strife and human suffering, establishing long-term stability, and preventing the installment of a Marxist, Soviet-dominated regime in that country. I fully support efforts to prevent Soviet-Cuban weapons from entering that country. However, I also believe that the United States should withhold military assistance to the junta until they end their oppressive tactics against the innocent population. Military aid, at this time, will only serve to aggravate the violence in El Salvador. We simply cannot associate ourselves with the malevolent acts perpetrated by the junta against innocent people.

Preventing the influx of Soviet weapons to the guerrillas and precluding security forces from using American weapons against the population will lessen hostilities, and facilitate instituting the necessary political reforms that will bring a lasting peace to that country. I believe that H.R. 1509

is a major step toward achieving our objectives in El Salvador.●

CURB AUTOMOBILE IMPORTS FROM JAPAN

HON. ELWOOD HILLIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. HILLIS. Mr. Speaker, yesterday, Congressman WILLIAM BRODHEAD and I sent President Reagan a letter signed by 41 other Members urging him to support efforts to curb automobile imports from Japan. I am inserting a copy of that letter in the RECORD at this point with the names of every Member who signed it.

Hon. RONALD REAGAN,
President, The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The automobile industry is one of the most important industries to the U.S. economy. The stimulus to growth that the industry provides to the American economy is not often recognized.

It is our understanding that your Administration is nearing a decision on the entire issue of automobile imports. We feel that it is important for you to understand that there is strong sentiment in the Congress for curbing Japanese imports.

The automobile industry accounts for 21% of the demand for American steel, 25% of the market for American cast iron and machine tools, and 22% of our aluminum, not to mention rubber, plastics, textiles, lead, electronic components and automotive glass. In the final analysis, 20% of American jobs depend directly or indirectly on the automobile industry. If your economic recovery program is to be successful, the U.S. automobile industry must be able to compete with Japanese imports and recover their loss of sales over the past two years.

It is apparent to us that the events which led to the near collapse of the industry over the last two years will also produce another year of poor sales in 1981.

Last year, Japanese imports accounted for 21.2% of all cars sold in the United States. So far this year, Japanese cars account for 23% of all cars sold in the U.S. Unless this trend is reversed, we run the risk of not only Chrysler, but Ford and GM facing serious financial troubles in the near future.

As you may know, import limitation bills have been introduced in both the House and Senate. Should the Japanese refuse to adopt some form of voluntary limits sufficiently low to protect U.S. manufacturers, we are confident that legislation will be forthcoming to place mandatory limits on Japanese imports.

We urgently request that you consider the impact of the automobile industry on the entire economy and act to slow the flood of Japanese imports. We fully understand the arguments in favor of free trade. However, the urgency of this situation and the importance of the automobile industry mandate that we act to prevent the industry from being dismantled.

Sincerely,

Mr. Elwood H. Hillis, Mr. William Brodhead, Mr. David Bonior, Mr. Robert Davis, Mr. Robert Young, Mr. Dale Kildee, Mr. Robert Roe, Ms. Barbara Mikulski, Mr. Ronald Mottl, Mr. William Ford, Mr. Lyle Williams, Mr. Dennis Hertel, Mr. John Dingell, Mr. Don Bailey, Mr. Adam Benjamin, Mr. William Broomfield, Mr. Cecil Heftel, Mr. Dennis Eckart, Mr. Donald Albosta, Mr. Andrew Jacobs, Mr. Tony Hall.

Mr. John Seiberling, Mr. Thomas Luken, Ms. Mary Rose Oakar, Mr. Clarence Miller, Mr. John Conyers, Mr. Bob Traxler, Mr. Bernard Dwyer, Mr. Ken Holland, Mr. Marty Russo, Mr. Donald Pease, Mr. Floyd Fithian.

Mr. Carl Purcell, Mr. Harold Hollenbeck, Mr. Howard Wolpe, Mr. William Gray, Mr. Austin Murphy, Mr. Les Aspin, Mr. Samuel Stratton, Mr. Tennyson Guyer, Mr. Philip Sharp, Mr. James Oberstar, Mr. James Blanchard.●

LEGISLATION INTRODUCED TO HALT TAX STRADDLES

HON. WILLIAM M. BRODHEAD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BRODHEAD. Mr. Speaker, the growing use of so-called tax straddles is rapidly becoming one of the most serious abuses of our Federal income tax system. By using this scheme, high-income taxpayers undertake a complicated series of transactions in the commodities market whose sole purpose is the creation of large, artificial tax losses. These transactions involve little or no risk, and provide essentially no potential for gain.

Together with my colleague, BEN ROSENTHAL of New York, I have introduced legislation to halt the use of tax straddles. Our bills, H.R. 1293 and H.R. 1338, would deny tax deductions for these paper losses. Senator PATRICK MOYNIHAN recently introduced similar legislation, S. 626. I am hopeful that this legislation will be enacted this year.

The following article from the Commodity Journal describes how tax straddles work, their enormous potential for tax avoidance, and the damage they cause in the commodities market. I strongly recommend it to my colleagues.

[From the Commodity Journal, March 1981]

TRANSACTIONS COST GOVERNMENT BILLIONS—SILVER STRADDLES: FUTURES TAX DODGE

(By Paul W. Wilderson)

It's that time of the year, once again, when the thoughts of most Americans turn increasingly to a common subject—income tax. And in recent years, as the April 15 deadline has loomed closer, more and more taxpayers have also begun to think of commodities. Although this might seem an odd juxtaposition of interests, it in fact has been grounded for many people in a solid economic base.

The connection between commodities and income tax was made in the early 1970s by the giant brokerage firm of Merrill Lynch, Pierce, Fenner and Smith, Inc. At that time, Merrill Lynch devised a plan by which customers who had experienced large financial gains during the year, could limit their tax liability by participating in certain commodity trades. Known broadly as tax straddles, these transactions are also commonly referred to as silver straddles or silver butterflies, based on the commodity most often involved and on their configuration when diagrammed on paper.

As the effectiveness of silver straddles in reducing taxes became evident, their popularity with taxpayers grew. As their popularity grew, however, the Internal Revenue Service also took an increased interest in them. The result was a 1977 IRS ruling that deductions taken for losses incurred in tax-straddle schemes were not allowable.

MARKET DISTORTIONS

The upshot of all this has been a myriad of pending court cases, none yet resolved, involving taxpayers, the IRS, and brokerage firms. The seriousness with which the tax straddle issue has been taken was evidenced recently with the nomination of Donald Regan as Secretary of the Treasury by President Ronald Reagan.

As chief of the world's largest brokerage firm, Regan possessed unchallengeable professional qualifications. Yet, when his name surfaced, eyebrows shot up and in some quarters serious reservations were expressed about his fitness for the position. The reason—Regan served as chairman of Merrill Lynch, the firm that pioneered the commodity tax straddle, the tax shelter that had cost the federal government billions of dollars. A writer in Barron's likened Regan's appointment to a general changing sides in the middle of a battle. With Regan now heading up the IRS, an equally apt analogy would have been the proverbial fox placed in charge of the chicken coop.

What is clear is that tax straddles have become a highly volatile subject within financial circles. Much of that is due to the fact that straddles have allowed many citizens to avoid paying large amounts of taxes. Just as important, but not as well known, however, are the dysfunctions that silver straddles cause in the commodity markets.

Because commodity tax straddles inject a large volume of fictitious trade into the commodity markets, they distort the statistical picture of those markets. Straddles also give a large element of unreality to the price structure of the markets, because the buying and selling has no real meaning in the markets; it is done merely for tax purposes. In general, the use of commodity tax straddles is a misapplication of the market system, which was designed to provide supply and demand information for commodity users.

SILVER BUTTERFLY

What is a silver straddle? Some refer to it as an "exotic" investment technique, and in truth it can become complex enough so that large brokerage houses refer all such business to specialists. In its basic form, however, the idea of the straddle is simple and straightforward. It involves setting up two silver deals that are mirror images of each other, one to buy and the other to sell. Thus, regardless of whether the price of silver moves up or down, one transaction will make a gain and one a loss. The loss is to be taken in the present year to provide a tax deduction. The gain will be delayed until the following year, when it can qualify for a lower tax rate.

As an example, a straddle participant might buy long—agree to purchase at a fixed price at some month in the future—a certain number of silver futures contracts.

At the same time he would sell short the same number of contracts—agree to deliver at a fixed price the same amount of silver in another future month. Any price change—up or down—will produce offsetting gains and losses in the two sides of this transaction.

If the price of silver falls, the long position will lose money because the investor is locked into an agreement to buy silver at a price higher than the market. He can then close out that position, realize the loss, and use it for the needed tax deduction. On the short side, the investor has locked in his gain because he will be selling silver at a price higher than the market price. That gain will be realized in the following year.

There can be a profit or loss in these transactions, resulting from the differential in prices of the months in which one is contracted to buy and to sell. However, because the two contracts largely cancel each other out, and because there is small chance of a wide price fluctuation, the prospects for a large profit or loss are small.

Because the chance of a large loss (or gain) on one of these transactions is not great, someone trying to create a large deduction to counteract a sizable gain made during the year will probably have his broker put together more than one of these transactions. This is where the complexity begins. When diagrammed on paper, these overlapping straddles often assume the shape of a butterfly, thus the term "silver butterfly."

ALLEGED BENEFITS

The benefits to an individual are numerous. In the first place, a loss for a tax deduction can be created. In addition, a taxpayer's rate can be reduced by as much as 42 percent. Ordinary income—taxed in the highest bracket at 70 percent—can be turned into a long-term capital gain, which is taxed at only 28 percent. Most investments have to be held for a full year to qualify as a long-term capital gain. Commodity investments, however, can qualify after only six months.

A commodity shelter also will defer income to a later year which, according to Jerome Kurtz, former Commissioner of Internal Revenue, is "a significant economic benefit." The taxpayer who accomplishes this, declares Kurtz, "receives the equivalent of an interest free loan from the government for the period of deferral."

The term "silver straddle" is used because, until recently, silver was the commodity most often involved in creating a tax straddle. That was because the price of silver was relatively predictable. When the Hunts moved into the silver market, though, and brought with them the wild fluctuations in price that culminated in the spring of 1980, those interested in tax straddles began to look to other commodities such as gold.

NO TAX DODGE

Although tax straddles are causing major dysfunctions in the commodity markets, it has been the tax issue that has created the major controversy. The IRS began its attack in 1977, but the story begins several years earlier.

In 1972, Merrill Lynch actively began looking for taxpayers with short-term capital gains that would be taxed at a high rate. To facilitate this search, the brokerage sent a promotional recording to its agents, describing the commodity tax straddle and explaining its purpose—"changing short-term situations with high tax rates into long-term, with a maximum tax rate of 25 percent to 35 percent. Said another way, tax straddles enable us to create, for a reasonable cost, the capital gains and losses we need to materially change the tax liability of high-bracket taxpayers."

In 1973, Harry L. Smith and Herbert J. Jacobson found the answer to their needs in the Merrill Lynch tax straddle department. Smith and Jacobson had begun to put up an apartment building on a piece of land that they owned, but sold it for a good profit before it was completed. Had they sold the land without the improvements, they could have qualified for a long-term capital gain. But since the building was begun less than six months earlier, they would be liable for taxes as high as 70 percent.

Merrill Lynch, however, came to the rescue. Two silver straddles were purchased for Smith and Jacobson that taken together formed a butterfly spread. Several days later another silver butterfly was purchased. From these transactions, Smith and Jacobson suffered a loss of just over $95,000. They claimed this immediately on their taxes. The gain side of the straddles, however, amounted to nearly $94,000. This they realized six months and four days later—in the following year—as a long-term gain. Thus they gained a large deduction and also replaced a short-term gain with a long-term gain and cut their tax rate from as much as 70 percent to as little as 25 percent. This they accomplished for an actual loss on the trades of about $1,000, plus $4,000 in commissions.

This was exactly the result Smith and Jacobson wanted. It also was the kind of transaction that proved the viability of the tax straddle department at Merrill Lynch. The IRS, however, was not as pleased, and in 1977 it disallowed the deductions taken in this case. Why? The IRS admitted that each step taken by itself was perfectly legitimate. But the agency went on to declare that "The various purchases and sales, each real without the other, neutralize one another and fairly shout to the world the essential nullity of what was done * * * The complicated and involved method of doing nothing had no purpose, save the erection of [a] facade * * *"

Smith and Jacobson refused to accept the ruling and instead brought suit against the IRS. They also sued Merrill Lynch. The case was set for November 1980, but by that time the plaintiffs had offered to pay some $50,000 in back taxes and drop the case. As it later turned out, Merrill Lynch had offered more than twice that sum to Smith and Jacobson to drop their suit against the broker. Understandably Merrill Lynch did not want a final precedent-setting court decision on this important tax case.

The IRS charged that Merrill Lynch tried to buy off Smith and Jacobson. Judge Arthur L. Nims seemed to feel that some kind of resolution was needed. "Are we going to gear up for trial after trial," he asked, "and have Merrill Lynch coming in at the last eleventh hour getting rid of the case?" Smith and Jacobson were not allowed to drop their suit and the case has been continued.

BILLIONS IN LOST REVENUES

The case of Smith and Jacobson is far from the only one in the courts involving commodity tax straddles. It is only the best known. There currently are hundreds of cases pending involving over $50 million. The IRS has singled out the commodity tax straddle as the number one abusive tax shelter, saying these transactions cost the federal government more than $3 billion a year in lost revenues.

Judge Learned Hand once noted that "anyone may so arrange his affairs that his taxes shall be as low as possible * * *" Jerome Kurtz, who recently resigned as head of the IRS, agrees that taxpayers are free to undertake any legitimate purposeful endeavor which also happens to lessen their tax burden. On tax straddles, however, Kurtz draws the line. Silver straddles and butterflies, he claims, are not undertaken for legitimate market reasons, but only for the purpose of tax avoidance. The major criteria that the IRS has set up for legitimate transactions on which losses can be claimed, are profit potential and risk.

In a statement before the House Subcommittee on Commerce, Consumer, and Monetary Affairs, Kurtz declared, "It is clear to us that transactions such as these are wholly tax-motivated and without any real economic substance." Because a constant spread position was maintained, there was very little chance for profit. Risk also is negligible because of the minimal margin requirements involved. In fact, most purchasers of commodity straddles know almost nothing about the transactions themselves. Their only concern is that they incur a tax loss with little risk—something that the brokers' promotional literature emphasizes and promises.

Roger Gray, a Stanford University professor and leading commodity theoretician who was hired by the IRS, claims that the chances of profiting on a silver butterfly are less than the 36 to 1 odds of winning at roulette. "It is inherently inconceivable," says Gray, "that butterfly spreads in silver futures * * * would have been traded for their profit potential."

NO PROFIT POTENTIAL

Why would anyone make a substantial investment in the commodity markets with little hope of making a profit? The only answer is to gain some other financial benefit. That benefit, of course, is a large tax writeoff. The purpose of the commodity markets, however, is not to provide individuals with tax deductions. When millions of dollars are invested for that purpose, and that purpose alone, a highly artificial situation is created. That money bears no real relationship to actual supply and demand. It only skews the overall market picture, causing a major dysfunction in the commodity markets.

The tax straddle situation has been deemed serious enough to warrant the introduction of a bill in Congress to outlaw the practice. Retired Congressman Charles Vanick (D-Ohio), who authored the bill, called the silver butterfly "the biggest loophole in the federal income tax system." Vanick was among a number of Congressmen who wanted assurances from the new Treasury Secretary that these types of tax avoidance schemes would not be tolerated in the future.

The IRS has, in fact, made a serious effort to crack down. The agency is specifically training tax examiners to look for commodity transactions that might be tax shelters. Returns now are audited on the basis of total positive income before any deductions or adjustments. Under the old system, there was relatively low audit coverage after large deductions were made. Now, anyone participating in a commodity tax straddle transaction is almost certainly assured of having his tax return audited by the IRS.

AFTER-HOURS TRADING SESSIONS

Although brokers are still distributing literature describing the tax straddle, they are not doing it with their previous enthusiasm. Coopers & Lybrand attached the following note to its straddle advertising: "Caution: Straddles could involve significant risks or economic loss as well as commission costs. Further, they are under attack by the IRS." After the 1977 IRS ruling, Shearson Loeb Rhoades, Inc. actively discouraged its customers from participating in tax straddles. Customers who still wish to undertake such a proposition are required to sign a statement that they are not doing so on the advice of Shearson Loeb Rhoades.

Other brokers such as Bache, Halsey, Stuart, Shields and E. F. Hutton have taken similar measures. Merrill Lynch has changed what was formerly its "Tax Straddle Office" to the more mundane and vague "Office of Financial Affairs."

Commodity brokers still insist, however, that there is risk involved with any commodity transaction. A recent article in The Washington Post reported that the futures industry "has organized a legal, legislative and lobbying campaign" to nullify the IRS ruling and prevent passage of the bill in Congress that would make commodity straddles illegal.

Another IRS effort involves the establishment of a liaison with the Commodity Futures Trading Commission, in order to gain information and assistance in tracking down tax straddle schemes. This is particularly crucial, because the CFTC has authority over the commodity exchanges such as New York's Comex, where special after-hours sessions facilitated the trading of silver straddles. These sessions, which had been going on under an "emergency rule" at Comex since before the CFTC was created in 1975, allowed traders to buy and sell silver straddles without competitive bidding. Critics charged that this system allowed brokers to obtain the prices they needed to achieve their desired tax objectives. In the summer of 1980, the CFTC moved to curb these practices at Comex.

MAJOR MARKET DYSFUNCTIONS

Although silver straddles have made headlines recently because of the billions of dollars they are costing the Internal Revenue Service, they should be of equal interest to commodity investors because of the effect they are having on the commodity markets. As noted by Thomas P. O'Hare, head of what used to be Merrill Lynch's Tax Straddle Department, "commodity straddles for tax purposes have come to be a rather large part of the overall commodity business."

Because of their volume and the fact that they have nothing to do with the original purpose of the commodity market, tax straddles prove to be just one more major dysfunction of an already artificial futures system that relies on paper trading of products that don't exist. In the opinion of CFTC chairman James M. Stone, "the use of commodity markets for tax avoidance is harmful to commodity markets." As Stone points out, the markets were designed to help commodity users determine the real supply and demand of goods, so that a fair evaluation of their future value could be made. "Anyone in the market for reasons other than supply and demand decisions," Stone believes, "is a potential source of distortion."

ABT CENSURES STRADDLES IN 1972

Tax straddles received scrutiny and opprobrium by The American Board of Trade long before they came to the attention of the IRS. In a July-August, 1972 Commodity Journal article dealing with badly needed reform in the commodity business, Joseph Bianco, administrative assistant with ABT, wrote: "Contributing * * * to * * * artificial price movements in commodities are 'tax spreads', or the initiation of a completely hedged position between two floor traders for tax purposes only. To the analyst, professional as well as amateur, the distortions in volume and open interest figures that result from tax spreading can be disastrous."

In 1973 a body of proposed legislation on commodity exchange reform was prepared by Yale Legislative Services of Yale University Law School, in conjunction with The American Board of Trade and the American Association of Commodity Traders. As stated at that time in Commodity Journal, one section of those proposals, "in another attempt to curb manipulation as resultant artificial prices, prohibits 'tax spreads' which are completely hedged positions initiated by two cooperating individuals for tax purposes only. These serve to distort market statistics as well as prices, and should be outlawed * * *"

It now looks as though what The American Board of Trade recommended nearly a decade ago as commodity futures market reform, will come to pass as the result of tax reform.●

"GET AMERICA WORKING" WEEK

HON. GEORGE M. O'BRIEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. O'BRIEN. Mr. Speaker, Star Publications of Chicago Heights, Ill., a member of the Williams Press newspaper group, owns 15 biweekly newspapers with a combined circulation over 90,000.

Troubled by recent unemployment statistics in Chicago's south suburban area, which it serves, the management of Star Publications has declared April 5 through 11, 1981, "Get America Working" week.

The 30 issues of their papers during that week will contain a job-wanted directory for people seeking employment. Inclusion in the directory will be free of charge to the unemployed in all the communities served by Star Publications.

I believe this idea is a fine example of community service. Star Publications is to be commended for its creativity in responding to the human tragedy of unemployment.●

TRIBUTE TO SCOUTMASTER EDWARD SZCZEPANSKI

HON. ADAM BENJAMIN, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. BENJAMIN. Mr. Speaker, allow me to take this opportunity to ask my colleagues to join with me in commending and congratulating Scoutmaster Edward Szczepanski who is receiving national recognition as Scoutmaster of the Year. Scoutmaster Szczepanski will be honored at dinner on March 21 at the parish center of the St. Stanislaus Church in East Chicago, Ind.

Each year there are only four scoutmasters in the entire country which are selected from various regions to receive this high honor. Scoutmaster Szczepanski has been chosen from a six-State eastern-central region to receive Scoutmaster of the Year for his outstanding service in scoutmaster work by the National Eagle Scout Association of the Boy Scouts.

Edward Szczepanski has been a scoutmaster of troop 7 in connection with St. Stanislaus Parish for 18 years. The distinguished troop is one of the oldest troops in the region, dating back to 1917.

Prior to this, he served as an assistant and committee member of troop 7 for 6 years. His 24 years of unselfish service and devotion to troop 7 have resulted in 51 outstanding young men achieving the rank of Eagle Scout. Of these 51 Eagle Scouts, 5 were his own children.

Scoutmaster Szczepanski is a World War II veteran and is very active in the American Legion Post 369. He has been very involved in community and church affairs and recently served as the president of the Holy Name Society. He is employed as an instrument service technician in the basic oxygen furnace section of Inland Steel Co.

I believe that he has shown exemplary conduct and devotion to his community. I know my colleagues and the citizens of the entire south-side community of East Chicago join with me to wish him even greater success in the future and to encourage him to persevere in his inculcation of the values and attitudes cherished in a free and democratic society.●

WHITE PAPER OR BLANK PAPER

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. EDWARDS of California. Mr. Speaker, I would like to take this opportunity to address my colleagues on the situation in El Salvador. As you may know, I am a cosponsor of Representative STUDDS' bill to cut off military aid to El Salvador and a signatory of several letters to the White House expressing disapproval of their policies. My stand on this issue is clear.

I am extremely disappointed by the way the White House has been able to manipulate the issues at hand in El Salvador. Through the production of a

white paper detailing the supposed Cuban and Soviet complicity in the revolution, they have managed to change the perspective from which we view our role in El Salvador. No longer are we supposed to be concerned with why the people of El Salvador would choose the painful course of revolution. The question is now, Are the Soviets and Cubans trying to send arms into El Salvador? I do not think it would surprise any of us to discover this is the truth. We should expect the Soviets to seize on any opportunity of domestic unrest to try to further weaken American influence abroad. The question remains, Why does the unrest exist in the first place?

There are many statistics which graphically illustrate the disparity of incomes in that country. The 4.8 million people of El Salvador are among the poorest in all of Latin America. The average worker earns under $4 a day, and less than half the work force is employed year round. The 2 percent of the population who own 60 percent of the land are known to enjoy great wealth. Perhaps the most alarming figures are the latest ones which show that there are only 0.3 physicians per 1,000 citizens, while there are 1.9 troops for the same 1,000.

The problems in El Salvador are not military. They are political and economic. However, a continued commitment by our Government to provide further military assistance and advisers threatens to force a military solution to the problems.

I would like to thank my colleague, Congressman STUDDS, for providing me the opportunity to make known my views on El Salvador. In addition, I insert into the RECORD an editorial which appeared in the Los Angeles Times which critically appraises the administration's assertions in the white paper on El Salvador.

WHITE PAPER OR BLANK PAPER?

(By John Dinges)

When the State Department released its report on Soviet-bloc support of guerrillas in El Salvador on Feb. 23, it also released 100 copies of a 1½-inch-thick packet of documents to support the Reagan Administration's decision to increase military aid to the Salvadoran government. The meat of the documents' original raw intelligence consists of 47 pages of handwritten jottings, memoranda and minutes of meetings, culled from confiscated guerrilla files.

Leaving aside the matter of the documents' authenticity, they unquestionably demonstrate that socialist countries have supported the efforts of the opposition to overthrow El Salvador's ruling civilian-military junta, and that immense quantities of arms and ammunition were on their way at the time the Salvadoran guerrillas launched their abortive January offensive.

But these very same documents—in addition to other intelligence reports available to the Reagan Administration that were not included in the White Paper—provide conclusions that fall far short of the Administration's portrayal of El Salvador as an arena of U.S.-Soviet confrontation.

The White Paper charges that 800 tons of arms were promised, and 200 tons were delivered, to the insurgents by the time of the offensive. The captured documents, however, indicate that far less quantities were promised or in shipment, and only about 10 tons ever actually crossed the border.

Battlefield evidence gathered since January, including the statements of a captured Nicaraguan soldier-turned-informer, reveals that the guerrillas were forced to depend on relatively antiquated rifles and other weapons purchased on the international black market.

In contrast to the Reagan Administration's interpretation that the Soviet Union masterminded the arms traffic, the documents reveal that the guerrillas' Communist Party representative encountered a cool reception in Moscow, and was deeply concerned that Soviet "indecisiveness" might jeopardize any promise of arms made by other socialist countries.

According to Robert Pastor, a Latin America expert in the Carter Administration, much of the information used in the White Paper, was in U.S. hands before Reagan took office, and had been taken into account in earlier policy decisions. The threat of an increased arms flow was a key factor in Jimmy Carter's decision to resume shipments of U.S. weapons to the junta shortly before he left office. But the documents did not alter the conclusion of experienced Carter analysts that the guerrillas were an indigenous movement, largely independent politically of outside forces. Nevertheless, citing the same intelligence, the Reagan Administration announced it was sending more military advisers and $25 million in additional military aid to El Salvador.

In historical terms, the White Paper and its support documents could become the functional equivalent of President Lyndon B. Johnson's now-discredited reports to Congress of North Vietnamese attacks on U.S. patrol boats, which led to the Gulf of Tonkin resolution in 1964—and eventually to the war in Vietnam.

Read literally, the Salvadoran documents portray a period of nearly a year in which a relatively haphazard coalition of guerrilla forces and civilian politicians forged a united general command, the United Revolution Directorate; obtained arms and logistical and political backing from socialist countries, particularly Nicaragua and Cuba; confronted serious supply bottleneck problems, and finally launched the offensive that sputtered into isolated skirmishes and sabotage after 10 days.

If the Soviet Union and Cuba were pulling the strings behind the guerrilla movement, as Secretary of State Alexander M. Haig Jr. has charged, evidence of such control is not to be found in the captured documents.

The State Department White Paper says that the documents show "commitments (by the socialist countries) to supply the insurgents nearly 800 tons of the most modern weapons and equipment, (and) the covert delivery to El Salvador of nearly 200 tons of those arms, mostly through Cuba and Nicaragua."

Yet, reading the documents, it is impossible to determine where these numbers come from. The State Department has declined further elaboration on its conclusions, and has stopped providing copies of the original documents. The highest figure mentioned anywhere in the documents is in a handwritten letter, dated Nov. 1, from a certain "Vladimir," who was identified by the State Department as the guerrillas' logistics coordinator in Nicaragua. He wrote that 150 tons of arms had arrived in Cuba, and that "this week" there would be a total of 300 to 400 tons destined for the guerrillas—but that plans to smuggle "109 tons" into El Salvador in November were "almost impossible." Another document, the minutes of a guerrilla general staff meeting in late September, reported that only four of 130 tons of arms in storage had been smuggled into El Salvador.

A U.S. intelligence officer with wide experience in Latin America during the past decade said the tonnages reported in the White Paper were "highly unrealistic . . . unless they slipped in a few tanks," and "hiding the weapons and protecting them from corrosion in tropical El Salvador would make such large quantities a liability."

Neither official battlefield reports nor journalists on the scene have reported large quantities of weapons captured from guerrillas.

Other sources of intelligence that tended to contradict the picture of huge arms shipments were available to Reagan analysts, but were not included in the packet of documents. For example, on Jan. 30, Salvadoran government forces captured a Nicaraguan, Lt. Orlando Tardencilla, who admitted that he led a group of 130 Salvadoran guerrillas in battle. According to Foreign Broadcast Information Service, which is operated by the CIA and distributed to other government agencies, Tardencilla said that the guerrillas received support "at the finance level, mainly so they may buy weapons on the black market . . . (Cuba) gives more money than arms so that the government does not get implicated. Although 12 tons of arms have been sent to El Salvador, this represents only 1% of what is at the disposal of the guerrillas outside the country."

The key document in Reagan's case that the Soviet Union is the mastermind behind the insurgency is a report of Salvadoran Communist Party chief Shafik Handal's tour of Vietnam, Ethiopia, Bulgaria, Czechoslovakia, Hungary, East Germany and the Soviet Union last June and July. It is the only piece of evidence that actually mentions the Soviet Union, with the exception of a passing reference in another document to a "Sov." being present at a meeting in Mexico City with socialist diplomats. According to the White Paper, Handal left Moscow "with assurances that the Soviets agreed in principle to transport Vietnamese arms."

The supporting document, however, reports that Handal "expressed his unhappiness with the denial of a meeting at the proper level and the non-resolution of the request for help." A few weeks later, according to the document, the Soviets granted his request to give military training to 30 (presumably Salvadoran) youths studying in Moscow, but ignored his request to ship the Vietnamese arms. The document concludes, "The Companiero (Handal) expressed his concern that the Soviets' indecisiveness could affect not only the help they might give but also (prejudice) the willingness to cooperate of the other parties of the European socialist camp . . ." There, in mid-sentence, the document provided by the State Department ends.

Carter Administration specialist Pastor said that until late last year intelligence reports showed relatively small amounts of arms entering El Salvador with Cuban help. Then Handal's mission was discovered, Pastor said, and in the second week in January a "quantum leap" in intelligence showed

large amounts of sophisticated weapons in the hands of the guerrillas as they opened their offensive. These reports were a major factor in the Carter decision to resume "lethal" aid—guns, ammunition and helicopters—coupled with an insistence that the junta continue its reform programs.

Pastor takes issue with the Reagan Administration's interpretation of the information cited in the documents. "They say the Cubans are directing it all. We say it is led, organized and directed by the Salvadorans, that the Soviets and Cubans are supporting it . . . exploiting it for their own ends. Even if the Soviet Union and Cuba went away, the problem would not go away."●

TO CELEBRATE 25 YEARS OF SERVICE

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. LUJAN. Mr. Speaker, the month of April marks a significant anniversary for a New Mexico organization which has provided outstanding service to the entire State and risen to the challenge of a demanding profession.

Today I wish to pay tribute to the New Mexico Association of Nurse Anesthetists as it celebrates its 25th anniversary of service. During that time the association has earned a reputation as a dedicated group of professionals who have gone that extra mile to perform medical service for thousands.

The New Mexico Association of Nurse Anesthetists has been particularly valuable to New Mexico's smaller communities. There have been times when there have been no practicing doctors available in these rural areas, leaving the job of providing desperately needed medical service to members of the association.

The tireless efforts by the 1,500 active members in the group to set and maintain high standards for their profession has been an example to the Nation. New Mexico was the first State to require certification for nurse anesthetists through the Nurse Practice Act. The act was adopted at the urging of the association and has served as a model for other States.

Next month's silver anniversary of the New Mexico Nurse Anesthetists Association is an event all New Mexicans join in celebrating. I'm sure my colleagues join with me today in extending congratulations and best wishes for the future to an organization which has made New Mexico and the Nation a better place in which to live.●

FATE OF EDA

HON. DONALD J. MITCHELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. MITCHELL of New York. Mr. Speaker, as Congress endeavors to bring about an economic recovery of our Nation and as we deliberate the fate of the Economic Development Administration, I think it is important for each of us to be aware of the experience and opinions of those individuals who are in the front lines of the battle for economic revitalization—the private businessmen.

Toward that end, I would like to share with my colleagues a letter from Richard L. Karpen, the president of a firm in my congressional district—the Library Bureau of Herkimer, N.Y. The Library Bureau's experience with the Economic Development Administration program has prompted Mr. Karpen to express his strong support for the preservation of EDA.

The letter follows:

LIBRARY BUREAU, INC.,
Herkimer, N.Y., March 10, 1981.

Hon. DONALD J. MITCHELL,
Member of Congress, Rayburn House Office Building, Washington, D.C.

DEAR CONGRESSMAN MITCHELL: As someone who has seen the endless benefits brought into a community by the Economic Development Administration, I am writing to express my full support for retaining this Administration.

Businesses today in need of financial support find it most difficult to compete for dollar assistance strictly through banking channels. This is especially true in New York State where the economy is depressed, and in our area where unemployment is high. These businesses are the backbone of the nation meeting the needs of many people and must be encouraged.

Specifically, I refer to the Library Bureau, Inc. (formerly Library Bureau Division of Mohawk Valley Community Corp.) of Herkimer, N.Y., a 105 year old company. It was formed in 1876 by Melville Dewey, inventor of the famous Dewey Decimal System cataloging method for libraries.

The Library Bureau (LB) is the largest manufacturer of wood and steel products for the library market in the USA. LB's products can be found at places like Notre Dame University, Yale University, Princeton University, New York University (more than a $1 million job), the Library of Congress and at hundreds of elementary and high schools throughout the nation. LB's products also can be found at U.S. Embassies and at U.S. Government Information Agencies around the world. The LB is pursuing the foreign library furniture market more zealously.

Library Bureau exists today because farsighted people from the political and banking sectors, Economic Development Administration, our employees and the community pulled together to save the LB and 276 jobs in the Mohawk Valley after Sperry Rand Corporation's announcement on March 29, 1976 that the LB was to be closed.

LB is a publicly held corporation of 3,500 stockholders who contributed $2,268,652 in equity, arranged bank loans of $1,700,000 with the Oneida National Bank and $400,000 with the Savings Bank of Utica and a $2,000,000 loan with the Economic Development Administration. These financings allowed LB to remain an active company in September 1976.

Since you were instrumental in making this action a part of the Congressional Record, you know the details of the formation of LB as a public company. You, along with John Ladd (Executive Director of the Mohawk Valley Economic Development District) and the United States Economic Development Administration played significant roles in keeping jobs in the Mohawk Valley, as well as assisting in the start up of a steel manufacturing facility in Vineland, New Jersey one year after the formation of LB. Vineland, N.J. is another depressed area in the United States and this steel facility today employs 75 people.

In order to put the EDA loan to LB in perspective, it should be noted that LB has contributed the following to the Mohawk Valley and Vineland areas over the past four years:

Paid gross payrolls of	$15,339,260
Purchased logs, lumber, steel and supplies in the local areas in excess of	10,000,000
Withheld Federal taxes totaling	2,210,044
Withheld FICA totaling	1,778,263
Withheld State taxes totaling	554,843

Reduced the original loans as follows:

(a) Oneida National Bank: from $1,700,000 to $200,000.

(b) Savings Bank of Utica: from $600,000 to $563,407.

(c) EDA Loan: from $2,000,000 to $1,637,806.

(d) NJEDA Loan and Guaranty Bank: from $871,000 to $702,050.

This is a gross loan reduction of $2,067,737.

We have also expended in excess of $500,000 in new machine tools to improve efficiency and decrease our product costs.

I believe, on the whole, that the LB and the EDA story has been a positive one. While it is difficult to measure the value of keeping jobs in a depressed area thereby minimizing unemployment costs, it is obvious from the statistics that the local economies have prospered from this action.

As I stated in the beginning of this letter, I totally support keeping part or all of the EDA, for without that function available, companies like LB in depressed areas would not exist.

Sincerely,

R. L. KARPEN,
President.●

JAY KUILEE: PACIFIC PALISADES' CITIZEN OF THE YEAR

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. DORNAN of California. Mr. Speaker, on Saturday night, March 21, 1981, the Pacific Palisades, Calif., Civic League will hold its 46th annual banquet. On this occasion, they will again present to the community the Citizen of the Year, chosen from

among those nominated for the honor by their fellow citizens.

Breaking with tradition for obvious reasons, the league this year will name two Citizens of the Year. The Palisades' most famous resident, none other than President Reagan himself, will be given the award of Honorary Citizen of the Year.

But the man who the community has singled out as their choice for Citizen of the Year is crime-fighter Jay Kuilee. Jay has been the driving force behind organizing a neighborhood watch anticrime program in the Palisades.

Recognizing the lack of attention the Palisades crime problem was receiving, Jay sponsored four meetings over the last year aimed at increasing public awareness of the problem.

Together with Citizens Against Crime, he has been active in organizing area residents in an effective cooperative effort at crime prevention through neighborhood surveillance. He has broken the city into more manageable units and designated area leaders, who plan to form a grassroots organization on every block in the community.

The idea is that every citizen will be mobilized in the fight against crime by watching for suspicious vehicles and keeping an eye on their neighbors' property.

Jay has also been instrumental in distributing crime prevention information to area residents, including tips on burglar-proofing of homes and suggestions on dealing with strangers.

Another significant achievement of Jay's has been his successful effort to obtain a 24-hour patrol car. Prior to Jay's work on this project, the L.A. police vehicle assigned to the Palisades was available to answer calls in neighboring districts. Now, there is a police car in the Palisades on call to residents at all times.

Mr. Speaker, it is primarily because of his outstanding dedication and enthusiasm for working with the community to make neighborhoods safer for everyone that the people of Pacific Palisades have singled out Jay Kuilee as their Citizen of the Year. It gives me great pleasure to add my congratulations to Jay on a job well done.●

THE ART OF SIMPLICITY

HON. JIM JEFFRIES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. JEFFRIES. Mr. Speaker, I would like to bring to the attention of this body a column written by Hugh Sidey which appeared in the Washington Star on March 14, 1981. Mr. Sidey does an excellent job of describing the first few weeks of the Reagan administration and its impact on the Federal bureaucracy. Perhaps, implementing simplicity is not an impossible feat after all.

The article follows:

THE ACT OF SIMPLICITY: MR. REAGAN'S METHODS

Ronald Reagan eats fewer jelly beans than contemporary folklore suggests. And he makes more decisions faster with less apparent anguish than has yet been reported. These two commitments are in proper perspective, which has surprised a lot of people.

It is one of the paradoxes of these times that the man judged too "simple" to govern by his late and unlamented political opponent has produced in record time one of the most complex and periliously balanced economic schemes in all history. It may not succeed. But it is what Reagan wants; a filigreed wonder hammered out on his White House production line.

There are other curiosities in the fledgling administration. Political diagnosticians and learned professors have for years declared that it was an immutable fact of bureaucratic life that a president had to have his people placed in 250 key jobs to control the federal government. Before Reagan had appointed 100 persons the bureaucracy had been shaken to its far corners. It is much too early to tell if Reagan will prevail and make the government work efffectively for him. But at this point he has a psychological edge.

THE SYMBOL OF AN IDEA

There are some obvious reasons. Reagan is the symbol of an idea whose time was coming. He has chosen talented and serious men and women who reflect his views. And there is a bit of truth in what Sam Rayburn used to say: "Any jackass can kick a barn down but it takes a carpenter to build one." Reagan's economic mission is to halt restrain and deny.

Yet, Reagan clearly has more going for him. One member of the Cabinet believes Reagan's most valuable leadership trait so far is that very "simplicity" so derided by critics. "He is a man of fixed principles and goals," explains a Cabinet officer. "When things get complicated and confused the president is the one who says, 'Wait a minute, I believe this and I want to do that.'"

It has been one of Washington's enduring curses that any proposal can be argued into oblivion by bureaucrats, congressmen and consultants. The president welcomes dissent. "The person who brings his dissenting views is not an outcast," says Edwin Meese, the man most involved in Reagan's decision process. "After a decision has been made there are no winners and losers."

The president also has mystified the scholars by his hybrid system of cabinet government. It works for him so far, though it does not fit any textbook charts. Reagan eschews deep, dark memoranda, Washington's plasma. "The president is a people person," explains Meese. "He wants to see things spark."

Eyeball to eyeball, Reagan works his way through decisions. They may come in a few minutes or take several days. Reagan assembles his "clusters" of Cabinet members and/or experts and soaks up the oral summations. Once he is satisfied he has the picture he gives an order and expects others to implement it.

There have been mistakes, leaks and trivial diversions along the way, but none have been crippling. The president ruled on each of the hundreds of budget cuts sent to the Hill. He made the specific decisions on just what equipment the U.S. should sell Saudi Arabia for its F-15 fighters (yes on fuel tanks, no on bomb racks). The hardware became a "policy" issue because of the sensitivity of Israel to the weapons. Likewise, the president ruled on the numbers of military advisers sent to El Salvador, but he did not decide how many should be in communications, weapons or operations.

USING THE BUREAUCRACY

Oddly, this man who is determined to subdue the bureaucracy uses it more than his predecessors. "The president has always believed that he should use the structure of government or change it," says Meese. "He does not believe in building a subterfuge." Reagan's managers have thus been instructed to work through the federal apparatus.

Because Reagan does have firm political compass settings, one engaged he likes to pursue a subject to the end. Headed his way now is the issue of new authority for intelligence agencies to counterspy in the U.S. to combat terrorism and espionage. Leaks on preliminary discussions far below the White House level have clouded the issue. Meese seems unperturbed and predicts Reagan will cluster his experts, then in a seamless motion hear the arguments and give his order.

That decision will come as hundreds of others from the president's urge to produce results. It will be about a four-jelly-bean action.●

AMERICANS WANT TO GET TOUGHER WITH CRIMINALS

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. ANDERSON. Mr. Speaker, as you know, I have introduced legislation, H.R. 27, which, when enacted, will provide for a mandatory, minimum 5-year prison sentence for those convicted of committing Federal crimes involving the use of a firearm.

Contained in the March 23, 1981, edition of Newsweek are the results of polls conducted by the Gallup organization which indicates nationwide support for stiffer treatment of lawbreakers and a lack of confidence in our judicial system's present sentencing structure. The polls are as follows:

First, leaving aside those cases in which there is a murder, how do you feel a criminal who carriers a gun when committing a crime should be sentenced?

[Percent]

Life in prison	15
5 to 10 years added to sentence	51
Sentence should not be the same as with no gun	20
Depends on circumstances	8
Don't know	6
Total	100

Second, how much confidence do you have in the courts to sentence and convict criminals?

[Percent]	
A great deal	5
Quite a bit	23
Not very much	59
None at all	11
Don't know	2
Total	100

At you can see, the results of poll No. 1 clearly demonstrate that Americans want to get tougher on criminals, particularly those who use firearms in the commission of a crime. The majority of those polled favor that the 5- to 10-year concept—this is directly in line what H.R. 27 seeks to achieve.

The results of poll No. 2 support the idea that Americans from our urban centers to our rural farmlands are fed up with the courts' leniency on lawbreakers, which indicates to me that the mandatory sentencing concept is an idea whose time has come. When 7 out of 10 of those polled have little or no confidence in the courts to sentence and convict criminals, it is apparent that a change is needed. They want to create an atmosphere, which H.R. 27 provides, whereby criminals know that if they use a gun in the commission of a Federal crime, they will go to jail.

As of today, over 120 of our colleagues have already cosponsored H.R. 27—just 11 weeks into the 97th Congress. It is evident that through the bipartisan support of H.R. 27 has attracted, this is a badly needed piece of legislation. I urge all those who have not cosponsored this significant measure to do so, so that we may begin to control the skyrocketing increase of violent crime now facing this Nation.●

MAYOR ED KOCH

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. COLLINS of Texas. Mr. Speaker, it is always encouraging to see people get smarter as the years go by. It is delightful to hear what Ed Koch has to say. Having served with Ed in Congress, it is hard to realize that this is the same man who used to stand in the well and blast out in behalf of all liberal programs. Now his commonsense remarks have the strength of practical experience.

The Wall Street Journal is a great voice for the free enterprise system. It is surprising, but so interesting, to read the plain-spoken words of New York's new conservative, Ed Koch.

[New York City Mayor Edward Koch was interviewed at length late last week at City Hall by James Ring Adams, a Journal editorial writer, and Thomas J. Bray, associate editor of the Journal's editorial page. Excerpts from that interview.]

WSJ: You got your start as a reform Democrat. You were a pretty liberal Congressman.

Mr. KOCH: "Mayor Culpa," they call me.

WSJ: Now you are a favorite of both the old and the new conservatives. Would you agree you have changed or have they changed?

Mr. KOCH: Both of us, I suspect. I perceive myself still as a liberal, but very pragmatic. There is no question that there is a decided difference in what I did as a Congressman and what I am doing as mayor when it comes to spending money. It isn't a difference in philosophy. It is that I didn't understand what I was doing when I was in Congress because in Congress you spend other people's money. In Congress you are not aware of the cost of the programs because either the federal government is spending it and they print the dollars or, worse, you impose the cost on the cities. You just tell them what to do but you don't give them the money to do it.

So now I'm an executive. I look at what has to be done and I say to myself, how could I have voted for those dumb programs?

WSJ: What federal mandates give you the most trouble?

Mr. KOCH: Special education, where we are spending $300 million and getting $12 million from the federal government to do things that we don't think we can do and responsibly operate our educational system. We are required to have classes for the handicapped that are as small as four students in a class, when the non-handicapped children are in classes of 29 or 30. We think that that should be left to us to decide.

The environmental mandates which require us to build a sludge factory instead of dumping the sludge in the ocean where it doesn't cause any more damage than it would cause if you dumped it on land and, in fact, may cause more damage on land because it is carcinogenic and God knows what it does to the water table. If they put off that mandate for five or six years until they find some other way to deal with sludge that makes more sense, we will save $35 million annually.

Mass transit. Over the next 30 years, we have to take out of whatever dollars they give us for capital funding something like $1.6 billion to make the subway system equally accessible by retrofitting it for the handicapped. It is the dumbest thing imaginable. Five hundred people in wheelchairs—I can bet anything that 500 may use it once and then maybe 10 thereafter, and we are spending this fortune, not extra dollars that the feds will give us to accomplish it, but out of the regular allocation. And that should be changed, and I think it will be.●

MAX FRIEDERSDORF AND COMPANY

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1981

● Mr. MICHEL. Mr. Speaker, history will have to be the judge as to the cause of Jimmy Carter's various errors, blunders, follies, and misjudgments. But I am certain that among the major reasons for the Carter administration's failures was its inability—or unwillingness—to establish good relationships with the Congress. By good relationships I do not mean a perpetual state of agreement and harmony between the executive branch and the Congress. That is impossible. But it is possible—and President Reagan is now demonstrating this—to let the Congress know a President is willing to listen and that he wants a fair hearing.

Much of the credit for the current good relations between the Reagan administration and the Congress must go to his talented staff of congressional liaison experts, headed by the talented and energetic Max Friedersdorf. I think Max and his staff deserve all the praise they get. It is, therefore, my privilege to insert a highly complimentary article from the Washington Post, "Reagan Hill Team Gets Rave Reviews", March 17, 1981, in the RECORD.

The article follows:

REAGAN HILL TEAM GETS RAVE REVIEWS

(By Helen Dewar and Lee Lescaze)

Just as a police dispatcher in his windowless office can tell when it starts to rain by the surge of traffic accident calls, Max Friedersdorf can measure each Monday's passing hours by the ringing of his White House office telephones.

Monday mornings, few of the 535 members of Congress over whom Friedersdorf watches as head of congressional relations for the White House are in Washington, but, as they hit the airport returning from their weekends at home, Friedersdorf's telephones blink more insistently, and he begins to place more calls.

After the Carter administration hiatus, Friedersdorf, who is white-haired, courteous bordering on courtly, and could easily be cast as a member of Congress, is back as chief of congressional relations for the White House, the same job he held under President Ford.

From the day after his election triumph, President Reagan spoke of wanting to hit the ground running in Washington. Perhaps his fastest start was in the wooing of Congress.

A week before Friedersdorf signed aboard, Reagan made his first visit to Capitol Hill as president-elect, and came away with rave reviews. Friedersdorf had about seven weeks' head start, and had his staff in place two weeks before Reagan was inaugurated.

It is difficult to find a member of Congress with anything negative to say about the White House's approach to Capitol Hill. Some may not like Reagan's programs, but they have been somewhat thrown off balance, if not disarmed, by the Reagan presentation.

Even many Democrats praise the Friedersdorf operation. "They're smooth, they're on the ball," said Sen. Ernest F. Hollings (D-S.C.), ranking minority member of the Senate Budget Committee, which will have first crack at Reagan's spending cut plan starting with hearings this week.

House Speaker Thomas P. (Tip) O'Neill Jr. (D-Mass.) is another example. President Carter, many of whose goals O'Neill shared, started their relationship off with a series of small slights.

O'Neill could not get extra tickets he wanted to the Carter inaugural. At his first White House breakfast, hearty-eater O'Neill got only a hard roll made even harder to

swallow because O'Neill, like other congressional guests, was billed for the fare.

The result was a headline-making Carter-O'Neill rift that was patched up only later.

Reagan began his relationship with an embrace. The speaker has been to the White House for a private dinner for four with Mrs. O'Neill and the Reagans. He was invited to the Oval office for the president's 70th birthday party, and he has been consulted many other times.

Reagan and his top aides long ago decided that the best strategy often is to hold potential enemies close, so close that they cannot move their arms, one official commented.

O'Neill met Carter's top aide, Hamilton Jordan, only three times in four years, an O'Neill assistant said, while he feels comfortable with Reagan's top advisers, and the only time he needed something from the White House, he got it.

Faced with the possibility of wide-spread Democratic defections on the vote to raise the federal debt limit, O'Neill asked Friedersdorf for a letter from the president to each Democratic member asking for support.

O'Neill was impressed that Friedersdorf promised the letters without checking with Reagan, and doubly impressed that they arrived the next day. "They produced," an O'Neill aide said.

Reagan and his top three White House aides, Edwin Meese III, James A. Baker III and Michael Deaver, are all sensitive to the need for good relations with Congress, which makes Friedersdorf's job easier.

"It is like they have worked in congressional relations before," Friedersdorf said of the three senior Reagan aides. Deaver had the idea of holding a 70th birthday party for Reagan in the Oval Office and inviting congressional leaders, he added.

It does not hurt Reagan or Freidersdorf that they succeed a president whose relations with Capitol Hill began wretchedly and improved only moderately.

Friedersdorf, 51, defines his strategy by two numbers: 51 votes in the Senate and 218 in the House.

If he gets those totals, even though he admits "We'd like a few more," he's a success.

"I don't think politics ever goes out of style," Friedersdorf said. "I don't have a bad connotation of that word. Politics means to facilitate."

To facilitate enactment of Reagan's programs, Friedersdorf and his 12 assistants aim to provide all the service they can to the members of Congress.

Ken Duberstein, Friedersdorf's top aide for the House, said members of his team have paid at least one visit to all 435 House offices. If the member of Congress has been out, they have talked to the staff.

Their emphasis, in their first meetings, Duberstein said, is on letting the legislators know the congressional relations office wants to help.

They are also following up on Reagan's promise that he will not take Congress by surprise and is looking for the reciprocal assurance that the White House won't be blindsided.

At least for now, almost nothing is too small if it helps build a solid foundation for good relations in the future.

"We try to be attentive to the little things, on the theory that if you take care of them, the big things can take care of themselves," said Friedersdorf's deputy for the Senate, Powell Moore, who makes it a point, when asked, to arrange birthday greetings from the president to constituents of senators.

Several members of Congress cited the preparation of Reagan's economic package and of Carter's first energy program as illustrations of the contrast between the Reagan and Carter approaches.

Meese and Baker worked closely with key members of Congress to explain the package and prepare its way before it was made public. The Carter program was handed down without such careful advance preparation.

"I've never been to so many meetings, but that's the way to do it," Hollings said.

Care and feeding of Congress is not limited to elected members. Steve Bell, staff director of the Senate Budget Committee, noted that the chief staffers of the Senate's four principal money committees—Appropriations, Finance, Budget and Banking—were invited to the White House a couple of weeks ago for a first-hand look at what was available to them from the liaison office.

When congressional staff members have had problems with executive agencies, Friedersdorf's people have stepped in to straighten them out, Bell said.

Friedersdorf said he intends to pursue good relations with every member of Congress: "I'm not writing off anybody at all." Even from Democrats who may not back Reagan with their votes, the White House hopes for a willingness to share information.

"A member of Congress needs information. Sharing it promptly often helps," Duberstein said.

The big tests lie ahead on whether the magic numbers 51 and 218 can be won for Reagan's program. The toughest part of the job so far, Friedersdorf said, has been helping the political clearances for White House personnel. For each happy job candidate and happy sponsor there are a lot of unhappy ones, he said.

Despite rough moments over personnel, Friedersdorf has no complaint about the way the president's program is being handled. "There seems to be a good attitude up there," he said.

Republican members of Congress are predictably more enthusiastic about their relations than Democrats. A few liberal Democrats said they had not seen any White House representatives, while most Republicans said they had been given quick and complete cooperation.

Sen. Jesse A. Helms (R-N.C.), who's probably more problems with the administration over nominations than any other Republican, gives "an A+" to the Friedersdorf operation.

"He can't do everything for you, but he gives it the old college try," Helms said. "Call it stroking or whatever, it's absolutely essential."●

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, March 19, 1981, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

MARCH 20

9:00 a.m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed reauthorization of food and agriculture programs administered by the Department of Agriculture.
324 Dirksen Building

9:30 a.m.
Finance
To hear and consider the nominations of Norman B. Ture, of Virginia, to be Under Secretary of the Treasury, and Beryl W. Sprinkel, of Illinois, to be Under Secretary of the Treasury for Monetary Affairs.
2221 Dirksen Building

Special on Aging
To hold oversight hearings on the impact of proposed budget reductions in programs affecting the elderly, focusing on income security programs.
1202 Dirksen Building

11:00 a.m.
Foreign Relations
To hold hearings on (Exec. S, 96th Congress, 2d session) the Protocol Amending the Interim Convention on Conservation of North Pacific Fur Seals, Between the United States, Canada, Japan, and the Soviet Union.
4221 Dirksen Building

MARCH 23

9:00 a.m.
Agriculture, Nutrition, and Forestry
To resume hearings on proposed reauthorization of food and agriculture programs administered by the Department of Agriculture.
324 Russell Building

9:30 a.m.
Finance
Health Subcommittee
To hold hearings to examine the current medicaid and medicare review requirements of the professional standards review organizations.
2221 Dirksen Building

10:00 a.m.
Appropriations
*Transportation and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Federal Railroad Administration, Department of Transportation, and the National Railroad Passenger Corporation (Amtrak).
1114 Dirksen Building

Commerce, Science, and Transportation
Communications Subcommittee
To hold hearings on S. 601, to reduce and simplify certain licensing requirements in the broadcast industry.
235 Russell Building

Energy and Natural Resources
Energy Research and Development Subcommittee
To hold hearings on proposed authorizations for fiscal year 1982 for the Department of Energy, focusing on fossil and environmental programs.
3110 Dirksen Building

Select on Indian Affairs
To hold hearings to review the administration's proposed budgetary recommendations for the Bureau of Indian Affairs, Department of the Interior, and the Indian Health Service, Department of Health and Human Services, and various Indian related programs of the Department of Education and the Department of Housing and Urban Development.
1202 Dirksen Building

2:00 p.m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed reauthorization of food and agriculture programs administered by the Department of Agriculture.
324 Russell Building

2:30 p.m.
Energy and Natural Resources
Energy Research and Development Subcommittee
To continue hearings on proposed authorizations for fiscal year 1982 for the Department of Energy, focusing on solar and conservation programs.
3110 Dirksen Building

MARCH 24

9:00 a.m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed reauthorization of food and agriculture programs administered by the Department of Agriculture.
324 Russell Building

9:30 a.m.
Appropriations
Agriculture and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Foreign Agricultural Service, Office of International Cooperation and Development, Federal Crop Insurance Corporation, Economics and Statistics Service, and the World Food and Agricultural Outlook and Situation Board.
1223 Dirksen Building

Commerce, Science, and Transportation
Surface Transportation Subcommittee
To hold oversight hearings to review supplemental assistance and restructuring policies for Consolidated Rail Corporation (Conrail), and on proposed authorizations for fiscal year 1982 for the U.S. Railway Association.
235 Russell Building

Labor and Human Resources
Aging, Family and Human Services Subcommittee
To hold hearings on proposed legislation authorizing funds for low-income energy assistance programs.
5302 Dirksen Building

Labor and Human Resources
*Labor Subcommittee
To hold hearings on S. 348, 430, and 658, bills to increase job opportunity by allowing employers to pay young people the minimum wage at a reduced rate.
4232 Dirksen Building

10:00 a.m.
Energy and Natural Resources
Energy and Mineral Resources Subcommittee
To hold hearings to examine current shortages and future supply trends of anthracite coal used for residential heating.
3110 Dirksen Building

Finance
To resume hearings on the administration's proposed spending reduction proposals for economic recovery.
2221 Dirksen Building

2:00 p.m.
Appropriations
State, Justice, Commerce, and the Judiciary Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Drug Enforcement Administration, and prison service programs, Department of Justice.
S-146, Capitol

Select on Ethics
Business meeting, to consider further the proposed revisions to the Senate Code of Official Conduct.
235 Russell Building

MARCH 25

9:00 a.m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed reauthorization of food and agriculture programs administered by the Department of Agriculture.
324 Russell Building

Appropriations
Interior and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for alternative fuel programs and the Economic Regulatory Administration, Department of Energy.
1114 Dirksen Building

Select on Intelligence
*Budget Subcommittee
To resume closed hearings on proposed authorizations for fiscal year 1982 for intelligence activities of the United States.
S-407, Capitol

9:30 a.m.
Appropriations
State, Justice, Commerce, and the Judiciary Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the office of the Secretary, general administration, Economic Development Administration, and the Regional Action Planning Commissions, Department of Commerce.
S-146, Capitol

Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To resume hearings on proposed legislation authorizing funds for fiscal year 1982 for the National Aeronautics and Space Administration.
235 Russell Building

Commerce, Science, and Transportation
Surface Transportation Subcommittee
To continue oversight hearings to review supplemental assistance and restructuring policies for Consolidated Rail Corporation (Conrail), and on proposed authorizations for fiscal year 1982 for the U.S. Railway Association.
5110 Dirksen Building

Labor and Human Resources
Alcoholism and Drug Abuse Subcommittee
To hold hearings on proposed legislation authorizing funds for the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act.
2228 Dirksen Building

Labor and Human Resources
Labor Subcommittee
To continue hearings on S. 348, to increase job opportunity by allowing employers to pay young people the minimum wage at a reduced rate.
4232 Dirksen Building

10:00 a.m.
Appropriations
*Transportation and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Federal Highway Administration, Department of Transportation.
1223 Dirksen Building

Environment and Public Works
Environmental Pollution Subcommittee
To hold hearings on S. 681, to provide a comprehensive system of liability and compensation for oil spill damage and removal costs (being held at the Senate desk).
4200 Dirksen Building

Finance
To continue hearings on the administration's spending reduction proposals for economic recovery.
2221 Dirksen Building

2:00 p.m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed reauthorization of food and agriculture programs administered by the Department of Agriculture.
324 Russell Building

Governmental Affairs
Intergovernmental Relations Subcommittee
To resume hearings on S. 45, simplifying the administration of national policy requirements applicable to Federal assistance programs to State and local governments.
3302 Dirksen Building

MARCH 26

9:00 a.m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed reauthorization of food and agriculture programs administered by the Department of Agriculture.
324 Russell Building

Appropriations
Interior and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Department of the Interior and certain related agencies.
1114 Dirksen Building

9:30 a.m.
Appropriations
Foreign Operations Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Department of State; and to review certain foreign assistance programs.
1224 Dirksen Building

Appropriations
State, Justice, Commerce, and the Judiciary Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the National Oceanic and Atmospheric Administration, and the Maritime Administration, Department of Commerce.
S-146, Capitol

Labor and Human Resources
To hold hearings on proposed legislation authorizing funds for certain public health professional education and nurse training programs of the Department of Health and Human Services.
4232 Dirksen Building

10:00 a.m.
Energy and Natural Resources
Water and Power Subcommittee
To hold hearings on proposed authorizations for fiscal year 1982 for the Power Marketing Administrations of the Department of Energy.
3110 Dirksen Building

Environment and Public Works
Environmental Pollution Subcommittee
To continue hearings on S. 681, to provide a comprehensive system of liability and compensation for oil spill damage and removal costs (being held at the Senate desk).
4200 Dirksen Building

Finance
To continue hearings on the administration's proposed spending reduction proposals for economic recovery.
2221 Dirksen Building

Select on Intelligence
Budget Subcommittee
To continue closed hearings on proposed authorizations for fiscal year 1982 for intelligence activities of the United States.
S-407, Capitol

2:00 p.m.
Select on Ethics
Business meeting, to consider further the proposed revisions to the Senate Code of Official Conduct.
235 Russell Building

MARCH 27

9:00 a.m.
Special on Aging
To resume oversight hearings on the impact of proposed budget reductions in programs affecting the elderly, focusing on health and human services programs.
6226 Dirksen Building

9:30 a.m.
Finance
Energy and Agricultural Taxation Subcommittee
To hold hearings on tax and tariff proposals to aid the domestic refining industry.
2221 Dirksen Building

*Labor and Human Resources
To resume hearings on proposed legislation authorizing funds for certain health professions block grants.
4232 Dirksen Building

10:00 a.m.
Appropriations
*Transportation and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the National Highway Traffic Safety Administration, Department of Transportation.
1224 Dirksen Building

Commerce, Science, and Transportation
*Merchant Marine Subcommittee
To hold hearings on proposed legislation authorizing funds for fiscal year 1982 for the Maritime Administration, Department of Commerce.
235 Russell Building

MARCH 30

9:00 a.m.
Agriculture, Nutrition, and Forestry
To resume hearings on proposed reauthorization of food and agriculture programs administered by the Department of Agriculture.
324 Russell Building

9:30 a.m.
Energy and Natural Resources
Energy and Mineral Resources Subcommittee
To hold oversight hearings on the implementation of the strategic petroleum reserve.
3110 Dirksen Building

Labor and Human Resources
Alcoholism and Drug Abuse Subcommittee
To hold hearings on proposed legislation authorizing funds for the Drug Abuse Prevention, Treatment and Rehabilitation Act.
4232 Dirksen Building

10:00 a.m.
Appropriations
Transportation and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Federal Aviation Administration, Department of Transportation.
1114 Dirksen Building

Commerce, Science, and Transportation
Communications Subcommittee
To resume hearings on S. 601, to reduce and simplify certain licensing requirements in the broadcast industry.
235 Russell Building

Finance
Taxation and Debt Management Subcommittee
To hold hearings on miscellaneous tax measures, S. 388, 446, 464, 476, 500, 501, and 499.
2221 Dirksen Building

2:30 p.m.
Energy and Natural Resources
Energy Research and Development Subcommittee
To resume hearings on proposed authorizations for fiscal year 1982 for the Department of Energy, focusing on magnetic fusion, inertial fusion, geothermal electric energy systems, and nuclear materials security and safeguards.
3110 Dirksen Building

MARCH 31

9:30 a.m.
Appropriations
Agriculture and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Soil Conservation Service, Agricultural Stabilization and Conservation Service, and the Animal and Plant Health Inspection Service, Department of Agriculture.
1223 Dirksen Building

Appropriations
State, Justice, Commerce, and the Judiciary Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the International Trade Administration, Scientific and Technical Research Service, and the Patent and Trademark Office, Department of Commerce.
S-126, Capitol

Banking, Housing, and Urban Affairs
Securities Subcommittee
To hold hearings on S. 289, to provide uniform margin requirements in transactions involving the acquisition of securities of certain U.S. corporations by non-U.S. persons where such acquisition is financed by non-U.S. lenders.
5302 Dirksen Building

Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To resume hearings, in closed session, on proposed legislation authorizing funds for fiscal year 1982 for the National Aeronautics and Space Administration.
235 Russell Building

Energy and Natural Resources
Energy and Mineral Resources Subcommittee
To hold oversight hearings to review the strategic minerals and materials research policy of the United States.
3110 Dirksen Building

Labor and Human Resources
To hold oversight hearings on the implementation of family planning programs.
4232 Dirksen Building

10:00 a.m.
Appropriations
Treasury, Postal Service and General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Office of Management and Budget.
S-146, Capitol

2:00 p.m.
Appropriations
Foreign Operations Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Agency for International Development; and to continue review of certain foreign assistance programs.
S-126, Capitol

Appropriations
Treasury, Postal Service and General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the White House Office, Office of Administration, official residence of the Vice President, executive residence, special assistance to the President, compensation of the President, and other unanticipated needs.
S-146, Capitol

Select on Ethics
Business meeting, to consider further the proposed revisions to the Senate Code of Official Conduct.
6226 Dirksen Building

APRIL 1

9:00 a.m.
Appropriations
Interior and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Bureau of Indian Affairs, Department of the Interior.
1114 Dirksen Building

9:30 a.m.
Appropriations
Agriculture and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Farmers Home Administration, Rural Electrification Administration, and the Farm Credit Administration.
1223 Dirksen Building

Appropriations
HUD-Independent Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Federal Emergency Management Agency and the Selective Service System.
S-126, Capitol

Appropriations
State, Justice, Commerce, and the Judiciary Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the economic and statistical analysis program, U.S. Census Bureau, National Telecommunications and Information Administration, and the Minority Business Development Agency, Department of Commerce.
S-146, Capitol

Labor and Human Resources
To hold hearings on proposed legislation authorizing funds for certain preventive health block grants.
4232 Dirksen Building

10:00 a.m.
Appropriations
Treasury, Postal Service and General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Secretary of the Treasury.
1224 Dirksen Building

Commerce, Science, and Transportation
Consumer Subcommittee
To hold hearings on proposed legislation authorizing funds for fiscal year 1982 for the Consumer Product Safety Commission.
5110 Dirksen Building

Rules and Administration
To hold hearings on Senate Resolution 20, providing for television and radio broadcasting of Senate Chamber proceedings.
301 Russell Building

2:00 p.m.
Appropriations
Treasury, Postal Service and General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Office of the Secretary, international affairs programs, Bureau of the Mint, Bureau of Engraving and Printing, and Bureau of Government Financial Operations of the Department of the Treasury.
1224 Dirksen Building

Energy and Natural Resources
Energy Research and Development Subcommittee
To resume hearings on proposed authorizations for fiscal year 1982 for the Department of Energy, focusing on nuclear programs.
3110 Dirksen Building

APRIL 2

9:00 a.m.
Appropriations
Interior and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Office of Surface Mining Reclamation and Enforcement, Department of the Interior, and the Smithsonian Institution.
1114 Dirksen Building

9:30 a.m.
*Veterans' Affairs
To hold hearings to receive legislative recommendations for fiscal year 1982 from officials of Paralyzed Veterans of America, Blinded Veterans Association, Military Order of the Purple Heart, Veterans of World War I, and Noncommissioned Officers Association.
457 Russell Building

10:00 a.m.
Appropriations
Treasury, Postal Service and General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the U.S. Postal Service.
S-146, Capitol

Commerce, Science, and Transportation
Consumer Subcommittee
To continue hearings on proposed legislation authorizing funds for fiscal year 1982 for the Consumer Product Safety Commission.
5110 Dirksen Building

11:00 a.m.
*Veterans' Affairs
To hold hearings to receive legislative recommendations for fiscal year 1982 from AMVETS
457 Russell Building

2:00 p.m.
Appropriations
Foreign Operations Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1982 for the Agency for International Development, and certain foreign assistance programs.
S-126, Capitol

Appropriations
Treasury, Postal Service and General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the U.S. Customs Service, U.S. Secret Service, Federal Law Enforcement Training Center, and the Bureau of Alcohol, Tobacco and Firearms.
S-146, Capitol

Select on Ethics
Business meeting, to consider further the proposed revisions to the Senate Code of Official Conduct.
5110 Dirksen Building

APRIL 3

10:00 a.m.
Appropriations
*Transportation and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Department of Transportation and related agencies.
1114 Dirksen Building

Commerce, Science, and Transportation
Consumer Subcommittee
To continue hearings on proposed legislation authorizing funds for fiscal year 1982 for the Consumer Product Safety Commission.
5110 Dirksen Building

Energy and Natural Resources
Energy and Mineral Resources Subcommittee
To resume oversight hearings on the implementation of the strategic petroleum reserve.
3110 Dirksen Building

Finance
International Trade Subcommittee
To hold hearings on proposed authorizations for fiscal year 1982 for the U.S. Customs Service, the International Trade Commission, and the Office of the U.S. Trade Representative.
2221 Dirksen Building

12:30 p.m.
Finance
Economic Growth, Employment, and Revenue Sharing Subcommittee
To hold hearings on the use of tax incentives to increase employment, focusing on ways to increase the level of employment by reducing the additional labor costs imposed by Federal taxes.
2221 Dirksen Building

2:00 p.m.
Energy and Natural Resources
Energy Research and Development Subcommittee
To resume hearings on proposed authorizations for fiscal year 1982 for the Department of Energy, focusing on the U.S. Synthetic Fuels Corporation, and alcohol fuel programs.
3110 Dirksen Building

APRIL 6

9:30 a.m.
Energy and Natural Resources
Energy Conservation and Supply Subcommittee
To hold hearings on proposed authorizations for fiscal year 1982 for certain programs of the Department of Energy which fall within the subcommittee's jurisdiction.
3110 Dirksen Building

Labor and Human Resources
Alcoholism and Drug Abuse Subcommittee
To hold hearings on proposed legislation authorizing funds for the Alcohol and Drug Abuse Education Act.
4232 Dirksen Building

10:00 a.m.
Appropriations
*Transportation and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the U.S. Railway Association and Consolidated Rail Corporation (Conrail).
1114 Dirksen Building

APRIL 7

9:30 a.m.
Appropriations
Agriculture and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the Food and Nutrition Service, and the Food Safety and Quality Service, Department of Agriculture.
1223 Dirksen Building

Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To resume hearings on proposed legislation authorizing funds for fiscal year 1982 for the National Aeronautics and Space Administration.
235 Russell Building

Energy and Natural Resources
Energy and Mineral Resources Subcommittee
To resume oversight hearings to review the strategic minerals and materials research policy of the United States.
3110 Dirksen Building

Labor and Human Resources
To hold hearings on proposed authorizations for fiscal year 1982 for the National Science Foundation.
4232 Dirksen Building

10:00 a.m.
Appropriations
Treasury, Postal Service and General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1982 for the General Services Administration.

SENATE—*Thursday, March 19, 1981*

(Legislative day of Monday, February 16, 1981)

The Senate met at 11 a.m., on the expiration of the recess, and was called to order by the President pro tempore (Mr. THURMOND).

PRAYER

The Chaplain, the Reverend Richard C. Halverson, LL.D., offered the following prayer:

Our Father in Heaven who are infinite in wisdom and justice, Thou hast said in Thy word,

If any of you lacks wisdom, let him ask God, who gives to all men generously and without reproaching, and it will be given him.—James 1: 5, RSV.

We pray for wisdom for the Senators as they work through the tensions between budget reduction and the needs and demands of the people and Government. Give them grace to ask for and receive Thy wisdom and guidance. May the Holy Spirit fill the Capitol and offices with divine presence. Infuse hearts and minds with judgment which transcends human reason.

Be gracious, O God, to the personal needs which we so easily conceal. Heal those who are hurting. Strengthen those who are weak. Encourage those who fear. Make resolute those who equivocate. Free those who feel cornered. Lord God, let Thy will be done in the Senate today. Rule and overrule in the affairs of this Nation.

We make these requests in the name of the Lord Jesus Christ. Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. Under the previous order, the majority leader is recognized.

THE JOURNAL

Mr. BAKER. Mr. President, I ask unanimous consent that the Journal of the proceedings of the Senate be approved to date.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF PROCEDURE—S. 509

Mr. BAKER. Mr. President, as I announced on Tuesday, it was the hope of the leadership that we could pick up the pending amendment to the pending measure and dispose of both on this day. But, after consulting and conferring with the distinguished minority leader, it appeared clear to both of us—I know it did to me—that a number of Senators were going to be necessarily absent today to attend an official function honoring one of our former colleagues. It seemed the better part of discretion, from a scheduling standpoint, would be to continue with the debate on the milk price support bill today and the pending amendment, but to provide that any votes that are ordered on this bill, or any amendments thereto, to be stacked and disposed of on Tuesday next.

If that arrangement is satisfactory to the minority leader, I am prepared now to make a unanimous-consent request in that respect.

Mr. ROBERT C. BYRD. Mr. President, the distinguished majority leader has discussed this matter with me. I wish to say that, on behalf of colleagues on my side of the aisle who have to be absent, I express appreciation to him for his courtesy in scheduling the votes for next Tuesday.

Mr. MELCHER is present in the Chamber. Being the author of the pending amendment, I feel it may be well to seek his reaction on the majority leader's suggestion. As for myself, I am very agreeable to the suggestion the majority leader has made with respect to stacking of votes on Tuesday and with respect to proceeding with debate, as I understand it, in the meantime.

Mr. BAKER. Mr. President, I am happy to yield to the distinguished author of the pending amendment.

Mr. MELCHER. Mr. President, I thank the distinguished majority leader for yielding, and I thank him for his gracious offer. It would indeed inconvenience some of the Senators, I suspect on both sides of the aisle, if critical votes were taken today or tomorrow.

I am delighted with the offer by the majority leader and I thank him for that. I had only one request, that the votes be stacked to occur after noontime on Tuesday.

Mr. BAKER. Mr. President, I thank both the distinguished minority leader and the distinguished author of the pending amendment.

Mr. President, I hope that all of the debate will be disposed of today, that all amendments that are to be offered to the bill can be offered today, and that we can reach third reading of the bill today because next week is going to be a busy week. While there is no time agreement on this bill or any amendment hereto, I would expect that the Senate would be in session as long as necessary to make a diligent effort to try to complete the debate on this bill and the amendments thereto during this calendar day.

UNANIMOUS-CONSENT AGREEMENT

With that expression of hope, I now ask unanimous consent that the vote on this bill on final passage, and any amendments to this bill, or other votes that may be ordered in respect to this bill on today, be deferred until Tuesday next; that such votes be stacked in the order in which they are ordered; that they occur back to back without further debate; that the first vote that may be ordered and stacked be 15 minutes in length and any subsequent votes may be 10 minutes in length, and that such votes not occur prior to the hour of—will the Chair indulge me for just a moment?

Mr. President, I withdraw that portion of my request which I was about to put dealing with the time for the votes to occur, and put my request to the Chair in respect to the stacking of votes to occur on Tuesday, with the full understanding that I will have another statement to make in respect to our preference on the time schedule later.

Might I inquire of the Chair, is the form of the request that I have now put that any votes that may be ordered on this bill, or any amendments thereto, be deferred from today and occur instead on Tuesday next, the first vote to be 15 minutes and the subsequent votes to be 10 minutes each? Is that the extent of the request so far?

The PRESIDING OFFICER (Mr. HAYAKAWA). That is correct.

Without objection, it is so ordered.

Mr. PROXMIRE. Was that request granted?

Mr. BAKER. It was.

Mr. PROXMIRE. I wanted to reserve the right to object. I will not object, but I want to find out whether the leader can inform the Senate whether or not there will be any votes today.

Mr. BAKER. Mr. President, I know of no votes that will occur today, but this request is in respect to votes on this bill or any amendments to this bill. I suppose it is theoretically possible that there will be votes today, but I do not know of any that are planned for today.

I do hope and expect that the full debate on this measure will be continued today and we can reach third reading on the bill before this calendar day is over. But I know of no votes that are to be ordered on other matters.

Mr. ROBERT C. BYRD. Mr. President, I was not listening when the Chair ruled on the request, but did the request include the matter with respect to third reading?

Mr. BAKER. It did not.

Mr. ROBERT C. BYRD. I thank the Senator.

ORDER FOR ROLLCALL VOTES ON TUESDAY, MARCH 24, 1981, AT 2:30 P.M.

(Later the following occurred:)

Mr. BAKER. Mr. President, I ask

unanimous consent that the votes which may be ordered on today in respect to the pending measure and any amendments thereto, which we have already postponed by previous order until Tuesday, occur beginning at 2:30 p.m. on Tuesday, back to back.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE PROGRAM

Mr. BAKER. Mr. President, might I say that notices I have issued previously to Members on this side, and the schedule I have apprised the minority leader of in respect to sessions of the Senate during these first organizational weeks on Tuesday, Thursday, and Friday, expire this week.

It will be my expectation that the Senate will be in session Monday, Tuesday, Wednesday, Thursday, and Friday of next week, with the possibility of a Saturday session if we have not completed certain matters that I hope we shall address next week, particularly the reconciliation resolution. The reason I say that now is to reiterate the notice that I have sent to Members on this side that that schedule which has obtained to this date no longer applies after the conclusion of the activities of the Senate this week.

Mr. President, one other matter: The notice that has been sent to Members on this side, the schedule of which I have apprised the minority leader of, provided that if there is to be a late-night session of the Senate, it will occur, if possible, on Thursdays. I might suggest that, in view of the fact that we have postponed final determination of this bill on this Thursday until next Tuesday, the possibility of a late night session, if it is necessary, might exist for Tuesday as well. I do not anticipate that. I certainly do not wish for that. But Senators should be on notice that the possibility of a late Thursday session attaches to next Tuesday, since we have postponed final disposition of the milk price support bill.

RESOLUTION OF RECONCILIATION

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. BAKER. I have yielded.

Mr. ROBERT C. BYRD. Could the Senator tell us what the schedule may be, with respect to the resolution of reconciliation, with instructions, as to when the Senate might begin consideration of that measure?

Mr. BAKER. Mr. President, I thank the minority leader. I consulted with the distinguished chairman of the Committee on the Budget today. It is his hope and expectation that the resolution of reconciliation, with instructions, can be ordered reported today. According to my calculations, that would mean that it is not possible to reach that resolution for floor action, given the requirements of the 3-day rule, until next Thursday. It would be my hope that the minority leader might be able to waive, say, 1 day of that 3-day rule and permit the Senate to address that resolution beginning on Wednesday instead of Thursday. I think that will diminish the chances that we might have to be in session on Saturday next week in order to dispose of it.

It is the intention of the leadership on this side to proceed to the consideration of the budget resolution as soon as it is available and as soon as we may do so under the rules and under the provision of the statute.

Mr. ROBERT C. BYRD. I thank the majority leader.

Mr. BAKER. Mr. President, may I also say that, in view of the fact that we are going to be in session all week next week, there will be no pro forma session of the Senate on tomorrow. We will, instead, convene at a time I shall suggest a little later in the day on Monday.

I expect that there will be requests for special orders on Monday, the subject of which may be wide ranging, but some of those special order speeches, I expect, will be on the subject of the budget.

It is my hope that Senators who wish to speak on the budget might take advantage of Monday, because once we get into this bill, and, debate on the bill is severely limited—50 hours, perhaps less, to debate this resolution.

So I invite Senators to consider the possibility that some of their statements with respect to the budget resolution might be made on Monday of next week.

In addition to honoring any requests for special orders, I expect we shall have a very generous period for the transaction of routine morning business on Monday.

I do not expect that other legislative matters will be submitted to the Senate on Monday, unless they are routine matters that can be treated by majority consent.

Mr. PROXMIRE. Mr. President, will the majority leader yield?

Mr. BAKER. Yes.

Mr. PROXMIRE. Will there be rollcall votes on Monday?

Mr. BAKER. I do not expect any.

Mr. PROXMIRE. But it is possible there will be rollcall votes.

Mr. BAKER. I do not anticipate any, but it is possible.

Mr. President, I see the Senator from Georgia is on the floor. I do not know whether I have any time left under the standing order or not. I had planned to yield to him part of my time under the standing order. Instead, since I rather suspect my time may have expired, I suggest that the Senator from Georgia might consider forgoing his statement for just a moment while I yield the floor and permit the minority leader to utilize his time. Then it will be my expectation that I shall ask the Senate for permission to go into a period for the transaction of routine morning business.

RECOGNITION OF THE MINORITY LEADER

The PRESIDING OFFICER. The Senator from West Virginia.

SOVIET INFLUENCE IN THE THIRD WORLD

Mr. ROBERT C. BYRD. Mr. President, in response to the Soviet Union's alarming buildup of strategic and conventional weaponry, the Reagan administration rightly has committed the United States to significant increases in defense spending over the coming years. I hasten to add, however, that I will reserve judgment on the administration's defense proposals until I have had the opportunity to ascertain whether or not they actually meet legitimate security needs.

In any event, I share the deep concern of this administration over the present Soviet strategic and conventional military capability. I support this Government's major policy decision to upgrade our own strategic and conventional military posture.

However, I am somewhat unsettled by other aspects of the administration's national security policy, particularly the dubious claim that the Soviet Union has successfully expanded its sphere of influence in the Third World. The facts just do not support this perception. I refer to two recent articles, one written by Joseph C. Harsch for the March 12, 1981, Christian Science Monitor and the other by John Kenneth Galbraith for the March 17, 1981, edition of the Washington Post.

Mr. Harsch, in his article, noted:

> Since World War II, 15 countries have for a time been part of the Soviet power system and then broken away from it. The high point for Soviet World influence was in 1958 when both China and Indonesia were part of that system. There was a second high point around 1970 when Egypt, India, and Iraq were in the Soviet orbit.
>
> Since Egypt pulled out in 1972, India in 1977, and Iraq in 1978, the world range of Soviet influence has been at a minimum. At present that influence is less than at any time since the end of World War II. Moscow has not enjoyed any real "winning streak" since it lost China in 1960.

Professor Galbraith further expands upon the Soviet decline by pointing out:

> One has only to recapture the past to see how great has been the fall—one made greater by statesmen who ascribed more unity than ever, in fact existed. Russia and China have split bitterly apart, one of the most formidable developments of our time. Romania has developed an independent line that, on occasion, has involved overtures to Peking. Hungary has designed its own relatively liberal economic system. The case of Poland calls for no current comment. Albania has returned from an association with China to total ambiguity. Various of the Western Communist parties, and most notably that of Italy, have proclaimed their independence. . . .

Today, out of an estimated 115 countries, those Third World nations which

could be classified as legitimate client states of the Soviet Union include Libya, Afghanistan, Cuba, and South Yemen. Vietnam is using the Soviet Union to balance its traditional emnity toward China and to promote its own expansionist policies in Laos and Kampuchea. Syria has entered into a friendship treaty with the Soviet Union more as a means of obtaining modern military equipment than for any reason of ideological compatibility. Ethiopia relies upon Soviet and Cuban advisers, and military equipment, to deal with rebellions in the Ogaden and Eritrean Provinces. Angola relies upon Cuban advisers, as well as Gulf Oil revenues, to maintain the MPLA in power. The Soviet Union has yet to convince the so-called Marxist government in Mozambique to accord it vital naval bases.

My concern is that this administration has articulated an "us against them" policy as it applies to the Third World. In other words, if the countries of the developing world do not march to our tune, then obviously they are against us and "for them." Obviously, this policy is not based upon any historical perspective. Historically, in the post-World War II era, the developing countries have, for the most part, marched to their own tune.

Within the context of the balance of military power between the world's two superpowers, I am concerned that the United States not be in a position of inferiority. By the same token, I think it is incumbent upon the administration to view the real world as it is and not through ideological blinders which could afford the Soviets opportunities presently denied them.

I ask unanimous consent that the two articles be printed in the RECORD.

There being no objective, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 17, 1981]

20 YEARS OF DECLINE IN THE SOVIET "EMPIRE"

(By John Kenneth Galbraith)

There could be comfort of a sort these days in finding one subject on which the United States and the Soviet Union, or more precisely their governments, agree. And there is; it is that imperialism is the greatest international ambition and consequent threat of our time. Each government routinely accuses the other of imperial design—of present effort and future intention to extend its influence, will and political and economic system beyond its borders and most notably to the poor countries of Asia, Africa and Latin America. Reference to the imperialist powers, meaning the United States, is routine in Soviet official expression. In an early Cabinet meeting, President Reagan is reported as proposing that reference to the Soviet Empire become the normal usage. During Secretary of State Alexander Haig's confirmation proceedings, the more common reference was to Soviet expansionism. This can be taken as a synonym reflecting the tendency to convert anything that is morally unacceptable into an ism.

But if, indeed, the Soviet Union and the United States are engaged in an imperial competition, it is surely the least successful in all history. In the last 20 years both have lost influence and suffered grave reverses beyond their borders. At most the effort has been to see who can lose what is called imperial power the least rapidly. By any calculation we have been losing less rapidly in this respect than the Soviets; and the largest part of our loss of influence has been the result of deliberate policy—of a well-considered effort to build up the economic and political independence of other lands. We are now, in some measure, surprised by the results of our own success.

I would like to turn first to the Soviet imperial achievement or nonachievement of these last two decades. Then in a second article I will come to our performance. And finally I will suggest the reasons, surprisingly similar in the main, why the external influence of both of the superpowers has been in decline, one obvious reason being that what is now called imperialism bears only the most pallid relationship to the forthright exercise of such authority in earlier times.

The year 1960 is a very good one on which to begin. World War II had been over for 15 years; its physical ravages had been repaired; the postwar pattern of international power and influence seemed fully established and totally stable; in that year, or more exactly a few months later, I became the servant of American imperialism as the ambassador to India. In 1960, any imperial strategist in Moscow, looking out on the world scene and ignoring some possible developing flaws, could only have reacted with the most intense satisfaction. The Soviet Union, incomparably the greatest power in Europe, was united geographically and in political and economic faith and system with China, the greatest power in Asia. Along the western marches, in turn, was a seemingly faithful band of Communist states—East Germany, Poland, Hungary, Czechoslovakia, Rumania, Bulgaria, as well as the independent but still stolidly Communist state of Yugoslavia and the *terra incognita* of Albania. Similarly to the east the writ ran on to North Korea and North Vietnam. One marvels now to think of it: an imperium, as it seemed, extending from the Brandenburg Gate to the port of Haiphong. There had been nothing like it since Genghis Khan or, as the Russians might prefer, Rome itself. Quite possibly this structure was more impressively solid when viewed from the outside than from within. In any case, all American references were to the Sino-Soviet bloc; in those years Secretary of State Dean Rusk characterized China as a "Soviet Manchukuo" devoid of any of the essential aspects of sovereignty. All sovereignty belonged to Moscow.

But there was yet more. In Indonesia Sukarno was backed by a large and powerful Communist Party. Egypt, the most influential country of the Arab world, was recipient of an increasing flow of Soviet arms and advisers. As was Ben Bella in Algeria. There was support to Kwame Nkrumah in Ghana. In Italy and France, huge Communist parties seemed in impeccable subordination to Soviet command. Similarly smaller ones elsewhere. More important, perhaps, was the feeling everywhere in the poor lands that socialism was on the wave of the future. How could it be otherwise? Capitalism had not served to break the terrible bonds of poverty. There must be an alternative; the only available one was socialism or communism. Moscow, not Washington (or New York), had custody of the future.

One has only to recapture this past to see how great has been the fall—one made greater by statesmen who ascribed more unity than ever, in fact, existed. Russia and China have split bitterly apart, one of the most formidable developments of our time. Rumania has developed an independent line that, on occasion, has involved overtures to Peking. Hungary has designed its own relatively liberal economic system. The case of Poland calls for no current comment. Albania has returned from an association with China to total ambiguity. Various of the Western Communist parties, and most notably that of Italy, have proclaimed their independence. In Indonesia the Communists were liquidated with a cruelty that no one anywhere could condone. The Soviet advisers have been expelled from Egypt. Tanks originally supplied by the Soviets ousted Ben Bella and returned him to the confinement that, by either the French or his own people, was his near-lifetime career. Nkrumah, unwisely absent from his country, was ousted. And in the poor countries of the world socialism has ceased to be the glowing alternative to poverty—given the terrible weight of the latter, one might only wish that it were. As Marx himself foresaw, socialism becomes an alternative only after the arrival of capitalism. It is a point to which I will return.

Against all this has been the Communist expansion—in Afghanistan to rescue a failing Marxist regime, a country as inhospitable to imperialism in the last two centuries as any in the world. And in Angola, where the MPLA regime is sustained by Cuban soldiers and, in a possibly much more practical way, by revenues from Gulf Oil. And in Ethiopia, where, as Evelyn Waugh once observed, the writ of governments has never run reliably very much beyond the airport, in his day the railway station. As a bastion of communism, Ethiopia is in exchange for Somalia, an earlier bastion of communism, now an outpost of the free world. Such is the 20-year record of the Soviet Empire. Expansionism indeed!

In contrast with that of the Soviet Union, the 20-year record of the United States looks almost heroic. We were expelled from Indochina, but Indochina is a long way from being China. As the Soviets suffered in Egypt, so did we in Iran. Elsewhere our influence has yielded to the discovery of the OPEC countries that they could charge what the market would bear, something that should not have been a great surprise to a capitalist country, an opportunity that could have been discovered from a reading of our better economic textbooks. And, as in the case of Brazil, Mexico and perhaps even India, our influence has suffered from the growing self-confidence that goes with industrial (or agricultural) development. Most of all, it has suffered from the highly successful development of our advanced industrial allies and friends. But all this, as noted, we have sought. With all these countries we remain on reasonably friendly terms. Our disasters have been only in countries, South Vietnam and Iran, where we attempted a much closer military and political embrace. To a further contemplation of the American imperial record over the last 20 years I return in a further article.

[From the Christian Science Monitor, Mar. 12, 1981]

MOSCOW'S "WINNING STREAK," CONTINUED

(By Joseph C. Harsch)

Since World War II 15 countries have for a time been part of the Soviet power system and then broken away from it. The high point for Soviet world influence was in 1958 when both China and Indonesia were part of that system. There was a second high point around 1970 when Egypt, India, and Iraq were in the Soviet orbit.

Since Egypt pulled out in 1972, India in 1977, and Iraq in 1978 the world range of Soviet influence has been at a minimum. At

present that influence is less than at any time since the end of World War II. Moscow has not enjoyed any real "winning streak" since it lost China in 1960.

One of the more interesting things about the rise and fall of Soviet influence in various parts of the world is that the United States played an effective role in only one of the important cases of a country getting itself out of the Soviet embrace. The others who escaped did it mostly on their own, often in spite of US policies which hobbled and delayed them.

Indonesia was the one important case where the escape had US support. The CIA was active in both planning and executing the events of September, 1965, when a communist coup was launched and converted into a communist disaster. The Communist Party of Indonesia was literally massacred. Estimates of the number killed range between 80,000 and 300,000. Indonesia has been in a state of semihostility with Moscow ever since.

China and India are the most populous countries on Earth. Indonesia comes just after the Soviet Union and the United States in population. If Moscow had been able to hang on to the loyalties of China, India, and Indonesia and if Moscow could count them today as members of its power system then Moscow today would be at an all-time peak of power and influence. But all three were lost. In the cases of China and India they were lost by Moscow, not pulled away by Washington.

The Chinese break was delayed by US hostility and was long concealed by the US involvement in Vietnam. The Chinese did not feel free to expose the extent of their differences with Moscow until President Nixon went to China in 1972. After that the Chinese were secure enough to become the leading advocates of a world coalition to "contain" the Soviets.

The United States "tilted" to Pakistan during its 1971 war with India. A US naval task force sailed into the Bay of Bengal, but withdrew when the Indian army inflicted a quick and decisive defeat on the Pakistani forces in eastern Pakistan which then became the new state of Bangladesh. India had prepared for that war by signing a 20-year "friendship and cooperation" treaty with Moscow in August and by placing orders for large quantities of arms. In effect, Moscow "covered" India while India broke up Pakistan. During the next five years India took $1.3 billion in arms from the Soviets.

Later, Soviet support for Vietnam expansion in India's backyard, and Soviet intrusion into Afghanistan helped India to return to a policy of neutrality between Moscow and Washington.

The first important Soviet loss was Yugoslavia in 1948. At the moment of the break the British rushed a shipload of motor fuel to keep that country's highway transport going. The US did nothing, on the assumption that the Soviets would quickly reassert their control.

Egypt became another, and a particularly humiliating, loss to Moscow. President Sadat broke away because he was fed up with the Soviet's arrogance. They had pushed him around too much. Mr. Sadat's switch over to the US side was a dazzling strategic windfall for Washington. Its effect was to push the Soviet fleet almost out of the Mediterranean by depriving it of the use of Alexandria. But it happened, without help from Washington.

In other words, Moscow is its own worst enemy. Its clumsy mishandling of one country after another has driven out of the Soviet orbit enough countries and peoples to dominate the world decisively. It lost China because it refused even to talk about territories taken from China by the Czars. Incidentally, it alienated Japan by refusing to surrender small islands just north of Japan which Stalin had grabbed at the end of World War II.

In all important cases except Indonesia Moscow's loss was due either to changes in the power pattern which made the Soviet relationship a disadvantage, or because the Soviet hand was too heavy. Usually, the United States was a surprised onlooker.

When we are talking about breaking up the Soviet empire Washington has a poor record. Moscow's own heavy and arrogant hand has done more for Washington than Washington's own often misguided efforts.

Let us hope that sending unrequested guns and advisers to El Salvador will not add one more item to the list of mistakes.

Mr. ROBERT C. BYRD. Mr. President, I yield to Senator PROXMIRE such time as he may desire.

Mr. PROXMIRE. I thank my good friend. I shall not take more than 2 or 3 minutes.

Mr. BAKER. I yield 3 minutes to the Senator.

DEALING WITH THE UNSPEAKABLE: RECALLING THE YEARS OF THE HOLOCAUST

Mr. PROXMIRE. Mr. President, to attempt to describe what happened during the holocaust is an attempt to describe something beyond the imagination of mankind. Yet, it is very important that each and every one of us remember just what took place. Mankind must never be allowed to forget that more than 6 million Jews, gypsies, and other so-called "undesirables" perished in the archipelago of Nazi death camps during the Second World War. Where Nazi virulence reached its ugly climax: The medical experiment, the gas chamber, and the crematorium.

It is difficult to believe how far this blatant attempt to commit genocide was allowed to go in the supposedly civilized 20th century. Yet the truth is that not only were the Nazis almost successful in carrying out the goals of the "final solution," but nothing was directly done to stop them. Is it possible that this attempt to commit outright genocide against all of European Jewry was successfully kept secret from the German citizenry, from soldiers, intelligence agents, and the foreign press? According to Walter Laqueur in his volume entitled, "The Terrible Secret," this was partially the case. According to Nazi propaganda, the Jews were not to be executed, just "resettled," "removed," given "special treatment." Still, too many cables were intercepted and codes broken for the world not to be aware of the Nazis' intention to achieve the goals of the "final solution." The holocaust became an open secret. The problem was an acute unwillingness among the knowledgeable to accept the truth of the situation.

A haunting rationale for this epidemic of moral numbness was provided by Willem Visser't Hooft, founding secretary of the World Council of Churches:

> People could find no place in their consciousness for such an unimaginable horror. . . . It is possible to live in a twilight between knowing and not knowing.

Several examples of this unwillingness to acknowledge the Nazis' genocidal intentions come to mind.

While the United States had the capacity, the Roosevelt administration preferred not to bomb Auschwitz or even the train tracks leading there. Instead, the White House ordered rescue by victory—though by the end of the war, only a remnant of Auschwitz' prisoners could be saved. Despite the fact that 70,000 Jews were murdered at Babi Yar, the Soviet Union refused to recognize specific crimes perpetrated against the Jews. And in Britain, Anthony Eden feared that statements about such Nazi slaughterhouses might cause the Germans to harden their hearts.

Mr. President, the most accurate explanation that describes why the Nazis were able to go as far as they actually did is Edmund Burke's dictum:

> The only thing necessary for the triumph of evil is for good men to do nothing.

Today, we have an opportunity to take an official stand on the international crime of genocide. There is no reason why the leading power of the Western World should refrain from officially condemning this most hideous crime. In ratifying the Genocide Convention, the United States of America will inform the world that it will not tolerate a recurrence of what happened during the holocaust. Let us procrastinate no longer and ratify this important convention.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President.

The PRESIDING OFFICER. The minority leader still has time.

Mr. BAKER. Mr. President, if the distinguished minority leader has no further need for his time or if there is any time remaining——

Mr. ROBERT. C. BYRD. Mr. President, I yield back the remainder of my time, if I have any remaining, to the distinguished majority leader.

Mr. BAKER. I thank the minority leader.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, as I mentioned earlier, the distinguished Senator from Georgia has a matter he wishes to take care of and I believe the Senator from Rhode Island has a matter. Therefore, I ask unanimous consent that there now be a period for the transaction of routine morning business not to exceed 30 minutes in length, in which Senators may be permitted to speak not more than 10 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Georgia is recognized.

SENATE CONCURRENT RESOLUTION 15—ENLARGEMENT OF GRAIN EMBARGO TO INCLUDE ALL COMMERCE WITH SOVIET UNION

Mr. MATTINGLY. Mr. President, I send a concurrent resolution to the desk and ask that it be appropriately referred.

The PRESIDING OFFICER. The resolution will be received and appropriately referred.

Mr. MATTINGLY. Mr. President, today is Agriculture Day 1981, and I should like to take a minute on this special day to remind my colleagues of a few facts:

Agriculture is our Nation's No. 1 industry, with assets of over $927 billion;

Agriculture is our Nation's No. 1 employer—with over 15 million people;

Agriculture is our Nation's No. 1 inflation fighter—with productivity growth five times greater than nonfarm industry over the past 5 years; and

Agriculture is our Nation's No. 1 exporter—exporting over $40 billion worth of produce last year.

In short, while industry loses ground to its scrambling foreign competition, the United States and its farmers are providing the one bright spot in our trade with other nations and a transfusion to the economy just when we need it.

But I remind my colleagues of one other fact: Not all of America's farmers are able to ship their product to the market that wants to buy it. The grain embargo, imposed 15 months ago, has penalized the farmers for the exact qualities we are trying to reward in the rest of the economy: They have a good product, produced in abundance, and aggressively marketed overseas.

I do not think it is fair. And I happen to know that a majority of my colleagues in this body do not think it is fair, either.

So, today I, along with Mr. JEPSEN, Mr. BOREN, and Mr. BUMPERS, am submitting a resolution cosponsored by a majority of other Senators, both Republican and Democrat, from all parts of this country, expressing the sense of the Senate that the U.S. embargo on grain sales to the Soviet Union be expanded to include all goods and services exported to that country—or that no embargo be in effect at all.

There is little doubt in my mind that the original purpose of the grain embargo was valid. It was designed to retaliate against the uncalled for and uncivilized invasion of Afghanistan. But in the last 15 months, it has become clear that the embargo must either be lifted, or expanded to cover all trade with the Soviets.

With this resolution, I am simply saying that if we are to have an embargo of the grain and food which this Nation so abundantly produces, then the embargo is going to be extended further than farm products. It will be extended across the board for all business and for all of our commerce with the Russians.

The American farmer has always been on the very frontline in support of preserving our national security and integrity. The American farmer does not mind shouldering the burden of this embargo for the good of the country if that burden is shared evenly by all. But our farmers are tired. They are tired of doing more than their share. They have been singled out to bear the burden for all of us. I now believe that if we are going to go into the embargo business, we should go in all the way—or not at all.

Mr. President, I agree with those who say that this is not the time to send the wrong kind of signal to the Soviet Union. However, I strongly believe that this embargo has done little more than show the Soviets that we are willing to hurt ourselves greatly in order to hurt them a little. For an embargo to be effective, our people must be willing to pay the price, and impose a penalty on the Soviet Union that might have an effect on their behavior.

This is the goal of all Americans.

All Americans are willing to do their part in reaching that goal.

(The text of the concurrent resolution (S. Con. Res. 15) is printed in the routine morning business proceedings.)

Mr. JEPSEN. Mr. President, I am pleased to join my colleague from Georgia in sponsoring this concurrent resolution. The resolution very simply states that as long as there is an embargo of grain to the Soviet Union, the embargo should pertain to all goods and services.

I cannot stand by any longer and allow the American farmer to bear the brunt of the embargo. This resolution does not debate whether or not the grain embargo is serving a foreign policy purpose—it only debates the fact that 4 percent of our population have been singled out to carry the burden.

Mr. President, over 14 months ago President Carter imposed a unilateral embargo of grain sales to the Soviet Union in response to a step-up in Soviet aggression, especially in Afghanistan. The problem was that the grain embargo was the only substantive action he took. Since the embargoed grain is only about 8 percent of the Soviet's projected needs, the impact on Russia was not great. On the other hand, the impact on the American farmer was catastrophic.

As I stated on January 4, 1980, President Carter shot the farmer in the foot and then said to Russia, "There, take that."

I have long stated that America should never use food as a weapon. Farmers are proud and patriotic people, but what this ineffective grain embargo has done is to make the farmer the whipping boy for Soviet aggression. My State of Iowa, with its high exports, bore the brunt of the grain embargo—but every U.S. farmer also became the victim. They could not understand why they had been singled out to "punish" the Soviets. And what an inadequate punishment it was. We have the facts to prove that.

On June 30, 1980, Lt. Gen. Eugene Tighe, Director of the Defense Intelligence Agency, testified, along with several top Soviet analysts, that the Soviet grain embargo had almost no effect on the Soviet Union. According to the testimony, the Soviets will have a grain shortfall during 1980 of only 3 percent. The testimony continued:

> It will not appreciably affect their economic growth rate . . . We observed that the Soviets very quickly replaced most of the grain that we embargoed from other Western sources, mainly Argentina, although Canada did export some wheat after our embargo.

Clearly, the Soviet Union has not suffered even minimal hardship because of the U.S. sales suspension of grain or other agricultural products. Prior to the sales suspension, per capita meat consumption in the Soviet Union averaged 120 pounds, a figure that no analyst believes will drop by more than 5 to 8 pounds. Senator TOWER has described the impact of the embargo as being tantamount to a "Big Mac" attack. It is difficult, in any case, to measure the precise impact of such a reduction in meat supplies because of the simple fact that food lines and deprivation have always been the norm for Soviet people.

It is true that the United States supplies a majority of the corn that is sold on the world market and that corn is the preferred feed grain. However, sorghum and manioc can be substituted for corn and both of these commodities are often available from Latin America, or Asian suppliers. Further, grain is a commodity that can be easily transshipped from the original destination. Unless we are able to monitor every boxcar, every barge, and every freighter in the world, the Soviets will likely be able to find some witting ally to be their agent.

While the embargo has not had the planned effect on the Soviets, it has had a very negative effect on the United States. The cost of the embargo was borne in several ways. First, of course was the $2.25 billion spent by the Government to purchase the more than 13 million metric tons of grain contracted for by the Soviets in order to "minimize the adverse impact of the embargo on the American farmer." Next, the United States suffered a loss in trade revenues equivalent to that portion of the embargoed U.S. grain that did not slip through to the Soviet Union through third parties or was not otherwise resold by the Government. The United States still has no effective method of preventing U.S. grain from being transshipped through third countries to the Soviet Union. And even if it did, it could not stop other countries from selling their grain to the Soviets and replacing it with U.S. grain.

As of mid June 1980, the Government had managed to sell less than half of the grain it purchased, and some of the sales were at as much as a dollar a bushel less than what the Government had paid for it. Whatever the Government did not sell either to foreign traders or to U.S. traders for export, of course, added to the overall deficit figure for the U.S. balance of trade. This further weakened

the dollar in international monetary circles.

Finally, contrary to the optimistic predictions of Bob Bergland, the commodity markets did not go back to normal in 3 months; it was more like 5 months.

The high interest rates resulting from Carter's inflation caused many farmers to sell their grain to elevators at a loss so they could finance spring planting.

To make matters even worse, Carter in mid-June 1980 informed several large grain trading companies that they could resume selling grain to the Soviet Union as long as it was foreign grain. To grain traders, this was an open admission that the grain embargo had failed and that Carter had no illusions about the 1980–81 trading year. Carter's decision allowed the major grain traders to buy wheat anywhere in the world to meet Soviet demand.

Mr. President, there has been a great deal of discussion about the grain embargo relative to the "signal" it sends to the Soviet Union. I think all Americans want to send a strong message to the Soviet Union. But I do not feel that message needs to be borne by the 4 percent of our population who are farmers. If we want to send a message, then an embargo on all goods and services is a much stronger message than that of a partial grain embargo.

While I still firmly believe the embargo should be rescinded, I will not debate that subject today. Rather, I urge my colleagues to join me in supporting this resolution to embargo all goods and services to the Soviet Union as long as there is a grain embargo. The American farmer is willing to help carry out our foreign policy, but they are not willing to stand alone.

Mr. President, I have talked about this embargo from January 4, 1980, beginning about 8:45 in the evening, 5 minutes after the President of the United States had announced he was placing the embargo in answer to the military aggression of Russia in Afghanistan.

When I was asked about this by the press in a telephone call, my first reaction was that it seemed to me that, in the interests of appearing tough—which we had not done for some considerable period of time—although well intentioned, I am sure, the President of the United States pulled out his six-gun, shot the American farmer in the foot, and said to Russia, "There, take that." The problem was military aggression in Afghanistan.

Mr. President, my remarks contain all of the facts that we all know well, the facts that I have said from one coast to the other and from the Canadian border to the Mexican border, north and south, east and west, over the past 14 months across this Nation.

The grain embargo when it was first imposed was grudgingly accepted by all major farm organizations which said, "Let us give them some time."

The farmers in my State who are very patriotic folks as all farmers are, said, "Well, if it is going to help and it makes a difference, we will reserve our judgment."

But as we all know, it was a failed procedure. It is riddled and punctured just literally, with page, after page, after page of documented misadministration, a lack of communication, and assumptions that were made, for example, that all of the other countries, as we were told, were going to go around and support the embargo with us of course, turned out not to be true. There is the fact that an announcement was made several months after the embargo was put on by the then President who said, "Grain companies, it is all right for you to trade and sell grain to Russia as long as it is not ours." There is the fact that for nearly 90 days after the embargo was imposed we sold fertilizer by the hundreds of thousands of tons to Russia in order that they could put more fertilizers on the land to improve their crops.

But where are we now? We are at a place where today in the United States of America people in the agriculture community, agriculture producers all over this country, among other things, are filing their income tax returns and there is no income to pay tax on. They are buying their chemicals, their seed, and their fertilizer to get ready for planting, and they are faced the second year in a row with a 25 to 35 percent increase in the cost of the materials they need for production. They are faced with nearly a doubling of the cost of the fuel that it cost and they are faced again for the second time in history—we did not believe it could happen—with the highest interest rates that we have seen since the Civil War days.

And I shall say this to this administration and those who are advising the President, who I know personally cares very much and is trying very hard to justify lifting the embargo but is being advised by a few that it would send the wrong signal: I suggest to my colleagues in the Senate and to those in the administration and to the advisers that are suggesting this that they look at and think about the big picture.

No. 1, we are about to embark and we are in fact taking the first step forward in a journey that is going to be tough, that is going to be a journey that will change the direction of this country for the first time in over a half-century, a change in direction that was mandated by the American people on the 4th of November, a chance to get our economy back on track, to get productivity built back into our economy and our basic operation in this country.

To bring that change about, Mr. President, we need the support and the consensus of all Americans and today up until this point the President has enjoyed this and it has been a bipartisan approach that we have been taking to get this job done to do, first, the first step that must be taken and that is to get control on the increase in Government spending.

But, Mr. President, the advisers are saying "Do not lift this embargo because it will send the wrong signal," and I say send the wrong signal to whom? They say because of Poland. I say so what is new? Poland yesterday, El Salvador today, Nicaragua last year, Zimbabwe before that, Angola, Ethiopia, Afghanistan. No; we are not sending the wrong signal when we lift the embargo because we are about to embark on a journey in this country that is going to be a tough one.

To change the economy, to turn around the direction of this whole Nation, we need the consensus of all of our people, and I might suggest to any of the generals who might think that this is a good thing to send the right signal, it is ineffective as it is, to our adversaries or enemies.

I suggest to them that they consider the fact that we are about to enter into a very important domestic battle of changing the direction of this country. We need the support of all their troops, and if you are a general and turn around and you find the troops you are leading are starting to turn and go the other way you have serious problems. And that, Mr. President, is coming close to happening in this country.

That is why we are introducing this concurrent resolution as a sense of the Senate to just simply come up and say:

I made a promise to the American people. This administration made a promise to the American people, and especially to the agricultural community, that the embargo was going to be lifted, and I simply today announce that it is lifted.

Lest one think it is a wrong signal, I do not believe it is, with the events that have taken place, with the posture we have taken, with the budget arrangements that are being made, and with the talk and the concern about attaining and maintaining the level of defense that will keep the peace. Whatever is necessary to do it, let us do it. I do not think anyone has the wrong signal.

I suggest that in the interest of bringing this whole program along we all join together, and it is a two-way street, in getting about this very serious and very tough business of getting the economic program and all of its four steps, namely, first, control of Government spending; second, tax cuts across the board and restructuring for the business community investment to get our productivity going to create jobs; third, to reform our regulatory agencies and bring realism into this; and fourth, have a tight monetary policy, so we can all support this and go down the same road together and give those of us and there are many of us here who represent an agriculture community in the constituency a chance to do so with gusto and enthusiasm, because that is what we have been doing and that is what we want to continue to do. But the embargo must be lifted.

Thank you, Mr. President.

Mr. ABDNOR. Mr. President, I rise briefly to commend our colleagues, the Senator from Georgia and the Senator from Iowa, for introducing this concurrent resolution. It is not only timely but it is really past time. We should not be experiencing the problems we are facing today with the embargo. It should have been lifted long ago. It is doing far, far more harm not only to the farmers of this Nation, but to the country as a whole and in many ways it completely

79-059 O - 1984 - 35 - (Vol. 127 Pt.4)

contradicts what we are trying to do in the domestic field by what we are doing in the foreign field.

The effect of the embargo as to the good it has done has been nominal at best, and in some respects the effect went even further each day, and the weight is becoming heavier and heavier on the President to lift the embargo. It is becoming increasingly difficult for many of my colleagues to support the administration's proposals on cuts in the agricultural programs when the embargo is doing so much damage to people in the farming business.

We all know we have a challenge to take this country forward and we need a strong economic program to get this country turned around and going in the right direction. But certainly a grain embargo is not the way to go about it.

I know the President has had great pressure put on him by those in the foreign policy field. They have said to him: "Mr. President, if you would lift the embargo now it is a sign of weakness toward Russia." I say that is a lot of hogwash.

The Russians followed the Presidential campaign that we had last fall just as closely as did the American people. They know what the President said in his campaign when he said he would build a stronger defense, he would stand up to our enemies, he was going to work toward a balanced budget, and he was going to take this country forward again and turn the economy around. One other thing he said was he was going to lift the embargo.

So in no way do I think that it would show as a weakness of America toward Russia.

The direct effect it is having on the farmers of this country is so great that above everything else that should be the first consideration, let alone the fact that one of the biggest problems we have is our balance of trade, and the greatest contributors in our balance of trade toward offsetting all the imports we are bringing in, are the farmers of this Nation.

They absolutely cannot be expected to carry the load for the rest of this country and its foreign policy, and to single out 6 million business people—and farmers are business people—who make 2.8 percent of the total population, and think they alone can carry the foreign policy of this country is ridiculous.

I just hope we bring forward this resolution as rapidly as possible.

Once again I want to commend Senator MATTINGLY and Senator JEPSEN for their efforts, on their resolution, and I hope we can expedite consideration of the concurrent resolution and pass it rapidly.

I thank the Chair.

The PRESIDING OFFICER. Is there further morning business?

Mr. PRESSLER. Mr. President, I rise in support of this concurrent resolution, and I should like to speak briefly on it.

I also have an amendment at the desk relating to the milk price support bill. Later today at a proper time I shall call up the amendment. I ask unanimous consent that the amendment I have at the desk be printed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PRESSLER. First of all, I am a cosponsor of the concurrent resolution about which my colleague just spoke.

We have had a funny situation with the Soviet Union. Indeed, we import casein from the Soviet Union which competes with our farm products, yet we cannot export grain to the Soviet Union.

We sell combines, tractors, and machinery to harvest wheat, yet we will not sell wheat to the Soviet Union.

We carry on industrial trade, tourism, and other activities, with the Soviet Union, even an exchange of scholars and diplomats, yet we have asked our farmers not to sell grain there.

I support, and I would support, a total embargo if that is our policy. But it is extremely difficult to support an embargo on one item which all analyses have indicated is not working, and where we are essentially shooting ourselves in the foot, so to speak.

The lost U.S. grain exports have also hurt our urban taxpayers because we have lost foreign currency. Other nations are selling the grain to the Soviet Union, and the Soviet Union is not being hurt. Rather our balance of payments, which causes inflation, is being hurt.

The Soviets are still in Afghanistan. Indeed, many of their troops and equipment are being hauled into Afghanistan in American-built trucks. So once again we have treated the agricultural sector of our economy differently from the way we treat our industrial sector. That has long been a theme of mine and a concern of mine. Therefore, I am a cosponsor of the resolution which has been offered.

I am also a sponsor of the amendment of my colleague from Nebraska regarding the grain embargo. At the proper time, I will be offering my amendment, which I have just asked be printed, which would provide that the changes in the dairy program could not occur unless the grain embargo were lifted.

Mr. President, last October I had an amendment in the Senate which passed 43 to 39 deleting funding from the appropriations bill and asking that the grain embargo be lifted immediately. That effort failed or was voted down on the House side, but it did pass the Senate.

Let me also say it was my clear understanding that President Reagan promised to lift the grain embargo. He said that during the campaign.

I believe it should be lifted, and that our foreign policy objectives would be served by so doing.

As a member of the Committee on Foreign Relations I have been concerned that we are told the grain embargo is serving a foreign policy purpose. It is no longer doing so.

For all those reasons, Mr. President, I join in these efforts. I think we must continue to keep the pressure on to lift the grain embargo. I have not been pleased with the explanations given by the White House, and I shall continue to join in every effort and continue to make the point repeatedly on this Senate floor that it is not a wise policy from a foreign policy formulation point of view or from a practical point of view.

Let me repeat, Mr. President, at the proper time later today I will bring in my amendment to section 201 of the Agricultural Act of 1949, as amended. This amendment will provide that:

> The provisions of this act will not become effective until the restrictions heretofore imposed on the export of U.S. agricultural products to the Union of Soviet Socialist Republics under the authority of the Export Administration Act of 1979 are terminated.

Mr. President, I yield the floor.

Mr. ANDREWS. Mr. President, I rise in support of this resolution, of which I am a cosponsor. For far too long the farmers of America have been asked to carry the entire burden of the action taken against the Soviet Union because of their invasion of Afghanistan. This resolution expresses the sense of Congress that the embargo on grain exports to the Soviet Union be extended to all products or, that such grain embargo be rescinded. Extending the embargo to all products is the least we should do. The American farmer is willing to sacrifice for the good of the country, but he cannot be expected to continue to suffer alone.

Ever since this embargo was put in place by the Carter administration, those of us from farm States have been asking, "Who's suffering more from this embargo, the Russians or the American farmers?" It is becoming more and more clear to my colleagues that what I predicted all along has actually happened. Instead of punishing the Soviets, the President's action has served only to add to the financial distress of an already depressed farm economy and seriously injured our national economy as well.

The Soviet Union has managed rather well without us. They have reduced their own exports of grain to their satellite countries. And, they have increased imports from other producer nations—including some of our best allies. The result has been a rise in international grain prices, yet a severe decline in the price U.S. farmers receive for their grain because they are fenced out of this key market.

Sure, it is important to tell the Soviets that the United States will not tolerate military aggression in the free world. But what has actually happened is that, because of this grain embargo, the Soviets are not paying for their military aggression—the U.S. farmer is.

Our grain exports are not only important to the agricultural sector of our economy, but for the national economic well-being of the entire Nation. Grain exports go a long way toward paying the cost of oil we must import. By exporting a renewable resource, food energy, we then gain the dollars we need to import a vital and nonrenewable resource, fuel energy. It is a good bargain, not just for farm families, but for our economy as a whole.

I think we now recognize that when we stopped the exports of grain last

year, our balance-of-payments problems were magnified, our inflation went up, and our interest rates continued to stay far higher than they should.

In the meantime we continued to ship Caterpillar tractors to Russia so they could farm their land better. We did not embargo fertilizer so they can increase production. The embargo has not worked. I think it is time to move toward other means of putting pressure on the Soviet Union. An across-the-board embargo is one thing, but an embargo confined to grain does not work.

Mr. President, this embargo has been replete with inequities. We gave the huge grain exporters the opportunity to ship grain that was in the pipeline at the time of the embargo to Russia, but we have not embargoed the other products that flow into the Soviet Union. It is time that we go on record saying we cannot tolerate these ineffective, unfair and partial embargoes. We have tried export embargoes on food under Republican administrations; we have tried an export embargo on food under the last Democratic administration. It has not worked. It does not work in the case of Russia.

Mr. President, I think it is about time the Congress points up the fact that we are no longer going to impose food embargoes. We have tried that too many times and it does not work. If we mean business, we must impose a total embargo.

I certainly hope that my colleagues will support this means of letting the President know that he must either lift the grain embargo or make it an across-the-board ban.

The PRESIDING OFFICER. Is there any further morning business?

Mr. DIXON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DURENBERGER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

IMPACT OF BUDGET CUTS

Mr. DURENBERGER. Mr. President, the March 16 Washington Star contained an interesting combination of articles that I want to bring to the attention of my colleagues.

Page A-3 of the news section had an article detailing the legitimate concern voluntary chartable organizations have over the administration's economic proposals. Brian O'Connell, executive director of Independent Sector, cited the potential loss of direct and indirect Federal assistance, coupled with inflation's impact on private contributions, as problems that budgetcutters and policymakers must deal with in fashioning new directions for public service delivery.

In addition, Mr. O'Connell was quoted as saying—

I caution that we in the (voluntary) sector—and those in the new Administration—not give a false impression that voluntary organizations can substitute for the necessary role of government in a vast array of services, such as public welfare and the enforcement of civil rights.

In the same newspaper—on the opinion pages—Kenneth N. Dayton, chairman of the executive committee of the Dayton-Hudson Corp., took a look at the same problem, but from a different perspective—corporate responsibility to assist in meeting society's social needs.

Mr. Dayton had this to say:

America's "new beginning" challenges all America—but business in particular—to back up its rhetoric with hard dollars where support for voluntary initiative is concerned.

No tax reform bill legislation is needed here. It has always been national policy to encourage corporate contributions by providing tax deductions for contributions of up to 5 percent of pretax income. Sadly, the national average of corporate giving is less than 1 percent.

Mr. Dayton, though, goes beyond urging corporations to merely contribute funds. He makes the point that—

A kept factor in effective corporate philanthropy is focus. Indeed, any contribution program without a carefully planned and clearly articulated funding focus comes dangerously close to "casting money to the winds."

Second, he tells his corporate colleagues that contributions—even targeted contributions—are not enough. The contribution of personnel is imperative:

We also know from experience that even modest resources that are leveraged with the time, talent and professional expertise of our people—and leveraged again with the contributions of like-minded corporate good neighbors—pay off handsomely in addressing local problems.

Brian O'Connell has laid out one of the problems that our society must deal with as we redirect the National Government. Kenneth Dayton has responded with one of the answers.

I hope both will continue to explore the problems and the solutions. As chairman of the Intergovernmental Relations Subcommittee of the Committee on Governmental Affairs, I have committed myself to work for those public policy changes that will foster a rebirth of voluntarism and volunteerism in public service delivery and an increase in private contributed funding of these services.

Mr. President, I ask unanimous consent that the two articles from the Washington Star be printed in today's RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WILL BUSINESS FILL THE GAP THAT BUDGET CUTS CREATE?

(By Kenneth N. Dayton)

As the new administration sets about the task of trimming government, bringing down inflation and stimulating the economy, its much-heralded ally—business—faces an unprecedented challenge of its own.

After all, business "won" the election, or so goes the popular argument. Now America is waiting to see what business will do with its born-again political clout—and just what responsibility business will claim for itself in revitalizing the country.

Indeed, every snip of Stockman's shears offers business an unparalleled opportunity to help America find non-government alternatives to meet the needs now serviced by the programs facing budget cuts.

To put it more bluntly, America's "new beginning" challenges all America—but businesses in particular—to back up its rhetoric with hard dollars where support for voluntary initiative is concerned. After all, government didn't invent those needs that we criticize it for trying—and failing—to meet. The needs are real, and they aren't going to disappear just because we now want less government.

LOGICAL SOLUTION

Because of its vast resources and its traditional association with the concept of limiting the public sector, business itself provides one very logical solution to help ensure that America's social health is not sacrificed at the expense of attempts to restore its economic health: increased corporate philanthropy.

Not that business can take the place of government; it cannot and it should not. But if we do, indeed, want to "get government off our backs," as the saying goes, business must help America get its hands out of government's pockets—by opening up its own pockets instead.

Moreover, failure to commit substantial private sector resources to help address this nation's needs will surely result in a swift return to dependence on the public sector, with all the regulatory and legislative punishment that such dependence entails.

Indeed, business has many powerful incentives to raise the national standard of corporate giving from below one percent, where it is today, to a more respectable and more effective level. To begin with, building a better environment for the free enterprise system is crucial to its survival, as is building greater public confidence and credibility in the private sector.

More importantly, to protect our business "bottom line," we must be concerned with the environment in which our businesses operate. Crime rates, housing conditions, the quality of education and cultural resources all influence our business success just as surely as productivity and management practices. So increasing corporate giving is also a smart business decision.

Beyond that, the IRS provides what is perhaps the most attractive incentive of all: a tax deduction of up to five per cent of taxable income. No matter what administration is in office, business must ask itself: Why send all that money to Washington and let them decide how to spend it? Why not keep some of it—almost 50 cents on the dollar, up to five per cent—and put it to work solving problems in our local communities?

After all, we've been saying for years that the local level is where problems can be most accurately identified and most effectively addressed. Surely America's business leaders have much to contribute, in expertise as well as corporate resources, to the search for solutions in their local communities.

In Minneapolis, where 45 businesses give at the five per cent level, we know from experience that the personal involvement of our business leaders is a key factor in making our philanthropy pay real dividends for our city. Were it not for the diverse cultural institutions and social service programs made possible by this partnership of contributions and leadership, a city the size of Minneapolis could not hope to attract the disproportionate number of company headquarters it does.

FOCUS

Another key factor in effective corporate philanthropy is focus. Indeed, any contribution program without a carefully planned and clearly articulated funding focus comes dangerously close to "casting money to the winds." For example, several years ago Dayton Hudson identified two areas in which our

company wants to have impact: the arts and social action programs, particularly those that reduce barriers to self-sufficiency for the disadvantaged.

This focus is all the more critical to the effectiveness of our giving, since our company's growth—combined with our formal commitment to give at the five per cent level—now generates an annual contributions budget of over $10 million. As the budget increases, we have learned there is a parallel need to professionalize.

We also know from experience that even modest resources that are leveraged with the time, talent and professional expertise of our people—and leveraged again with the contributions of like-minded corporate good neighbors—pay off handsomely in addressing local problems.

The Minneapolis standard, which is increasingly held up as a national standard, recognizes that the responsibility for solving problems does not rest in Washington alone. Nor does it rest solely in the state capitol or city hall. The responsibility rests with us as people, but most assuredly, with us as business leaders.

IT'S UP TO UNCLE

If business fails to meet the challenge of preserving voluntary effort in this country in the face of the proposed budget cuts, then we will have relinquished authority to government. We will have said, in effect, "Uncle, you do it, because we're too busy."

By contrast, if business launches a concerted effort nationwide to commit more corporate resources to solve local problems and if those resources are properly leveraged with focus and personal involvement—then we can truly launch a "new beginning" for this nation.

Surely our businesses will be more successful for it, our cities healthier, and our nation more secure.

CHARITIES CONCERNED ABOUT BUDGET IMPACT

(By Jim Castelli)

The Reagan administration's proposed cuts in federal social programs place religious and other voluntary charitable agencies in a position one church official describes as "double jeopardy"—they will be asked to serve more people with less money.

Voluntary agencies, particularly in the past several years, have been looking for a larger role, in cooperation with government, in providing social services, and many look forward to support from the Reagan administration.

But these agencies now fear they are being asked to do the government's job as well as their own.

Brian O'Connell, executive director of Independent Sector, an organization representing a broad range of private agencies. says, "I caution that we in the sector—and those in the new administration—not give a false impression that voluntary organizations can substitute for the necessary role of government in a vast array of services, such as public welfare and the enforcement of civil rights."

Patricia Barrett, director of government relations for United Way, says proposed budget cuts in social service programs far outstrip the money—about $1.5 billion—which United Way raised for its 37,000 affiliated agencies last year.

Leaders in the voluntary sector say it is too early to know the precise impact of the proposed cuts because it is not yet clear which local programs and services will be reduced or eliminated. But, these leaders say, the impact will come in a variety of forms.

The most direct will be the loss of federal revenue. Church and charitable agencies now receive hundreds of millions of dollars a year in federal funds for programs ranging from summer feeding to adoption services to Medicaid to public service jobs.

Leaders of charitable organizations say cuts in these programs will mean private agencies will have to choose between serving fewer people or replacing federal money from other sources, primarily voluntary contributions.

O'Connell also warns that private agencies could feel a disproportionate impact from the proposed cuts because government agencies find it easier to cut the money they pay in contracts and fees than to cut their own staff and operating expenses.

Col. Ernest Miller of the Salvation Army says the major impact of the budget cuts will be more "subtle" than direct loss of revenue.

He said the proposed cuts will force a large number of people off public assistance and "as the marginally eligible drop off public assistance, they will need more help from private charities, particularly local churches."

"Our resources are already stretched to the limit," said Matthew Ahmann, who handles government relations for the National Conference of Catholic Charities, the largest private social service system in the country.

The Rev. Ernest Gibson, executive director of the Council of Churches of Greater Washington, says church attendance usually increases during times of economic difficulty, but church revenue does not. He said he anticipates more people coming to their churches for help with the basic needs of food, clothing and housing.

Church groups are particularly concerned about proposed cuts in food stamps and other food programs, according to Nancy Amidei, executive director of the Food Research and Action Center, which is coordinating opposition to those cuts.

The churches believe the food stamp program works, she said, but beyond that, their own emergency food pantries are already strained. "They've gotten the feeling that the administration believes they will pick up the slack after cuts in these programs," Amidei said, "and they don't have the resources to do that."

A number of voluntary agencies are also highly critical of a proposed cut of $250 million to $290 million in postal subsidies to non-profit second and third-class mail users. After the Postal Service was reorganized in 1970, Congress approved a 16-year phase-in of higher rates for non-profit mail users. The administration wants to end that subsidy next Oct. 1, six years before it is scheduled to end.

The Third-Class Non-profit Mailers Alliance, which represents groups such as the Salvation Army, the March of Dimes the National Audubon Society and CARE, says postage costs for members of the National Catholic Development Conference would be increased by $18 million, postage for Billy Graham's organization by $2.6 million and postage for St. Jude's Children's Research Hospital by $1.2 million.

"Attempting to balance the federal budget by making it more difficult for (voluntary) organizations to raise privately donated funds to help the public welfare makes no sense," the coalition said. "It would require an equal or greater reduction in services at the same time all levels of government are reducing the delivery of services and looking to the voluntary sector to provide them."

Voluntary agencies are pursuing a variety of strategies in the wake of the proposed budget cuts. One is to mobilize opposition to specific program cuts. Another, according to Barrett of the United Way, is to reexamine their own priorities and look for alternatives to existing programs and ways to further reduce expenses.

O'Connell and others note that, during the campaign, Reagan supported a proposal to allow taxpayers using the standard deduction to deduct their contributions to charity, a move charities believe would increase charitable contributions by $1 billion or more.

That legislation is needed now more than ever, they argue. But, they add, even that will not be nearly enough to make up for the impact of Reagan's proposed budget cuts.

Mr. DURENBERGER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXTENSION OF MORNING BUSINESS

The PRESIDING OFFICER (Mr. GOLDWATER). Is there further morning business?

Mr. STENNIS. Mr. President, if the Senator yielded to me, I first want to thank him.

The PRESIDING OFFICER. The Chair recognizes the Senator.

Mr. BAKER. Will the Senator yield to me?

Mr. STENNIS. I am happy to yield to the distinguished majority leader, Mr. BAKER. I ask unanimous consent that the time for the transaction of routine morning business be extended for not more than 10 more minutes under the terms of the provision previously ordered.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Mississippi.

Mr. STENNIS. Mr. President, I thank the Senator again. I shall certainly not detain the Senate for more than 5 minutes.

THE TENNESSEE-TOMBIGBEE WATERWAY

Mr. STENNIS. Mr. President, one of the matters before Congress at this session will be the question of appropriations for the continued construction of the Tennessee-Tombigbee waterway project, which is already before the committees and some action has been had thereon. Those of us who are familiar with the project and have followed it have given attention to the idea of getting together what we believe are the actual cost figures for completing the project, and also, estimates that relate to other phases which have been mentioned by some Senators regarding the possible termination of the project.

I have in my hand, Mr. President, a "Dear Colleague" letter that has been prepared and signed by the Senator from Tennessee (Mr. BAKER) and the junior Senator from Tennessee (Mr. SASSER); the Senators from Kentucky (Mr. HUDDLESTON and Mr. FORD); the Senators from Alabama (Mr. HEFLIN and Mr. DENTON); the Senator from Mississippi (Mr. COCHRAN), and myself.

I ask unanimous consent that this letter be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C., MARCH 19, 1981.

DEAR SENATOR: This letter is an effort to bring you the facts in dollars and cents regarding the Tennessee-Tombigbee Waterway.

The financial facts concerning this waterway which we believe justify the continued support of the Congress are as follows:

(Data obtained from Army Corps of Engineers)

[In millions]

Total project cost	$1,780
Funds allocated through fiscal year 1981	1,099
President Reagan's revised fiscal year 1982 Budget	201
Balance after fiscal year 1982	480

A few of our colleagues have proposed that this project be terminated at the end of 1981. If the project were terminated, more than $1 billion, which has already been invested, plus over $300 million in contract termination and restoration costs, would be almost totally lost.

[In millions]

Cost estimate of terminating contracts	$122
Cost estimate of restoring land	161
Cost of completing work on navigable portion	45
Total	328

In addition, the economic return which is estimated to be $137 million in average annual benefits would be lost. However, only $17 million in average annual economic benefits would be realized if the project were stopped.

It really comes down to this—there can be a completed Tennessee-Tombigbee Waterway by spending $353 million more than it will cost to stop construction, terminate the contracts, and restore the area.

We believe that these facts clearly support continuation of the investment as proposed by President Reagan. We would like to personally discuss the Tennessee-Tombigbee Waterway with you and answer any questions you may have.

Sincerely,

JOHN C. STENNIS.
HOWARD BAKER.
WALTER HUDDLESTON.
HOWELL HEFLIN.
THAD COCHRAN.
JIM SASSER.
WENDELL FORD.
JEREMIAH DENTON.

Mr. STENNIS. Mr. President, my remarks now will be quite brief. I am not going to take the time of the Senate to read the entire letter. I just call attention to the fact that the word "estimates" is used in here. These are estimates that were made by the Corps of Engineers, at our request but from their actual records, based upon other, similar transactions that they have had in which they are experienced in this field. This undertakes to show the cost of what we have spent so far, the current appropriation request, and then some figures—as I say, estimates—with reference to different phases of what had been mentioned as a termination. We most respectfully call these to the attention of all our colleagues and to the public at large. I believe these figures are correct.

With all deference to everyone, we believe that, really, these figures are unanswerable in that: it shows that an investment has already been made and the funds to complete it are necessary to protect that investment, which is a capital investment for the Nation, and also necessary to make the project into a useful and serviceable project for the entire Nation.

Mr. HUDDLESTON. Will the Senator yield for a moment?

Mr. STENNIS. Yes, I am happy to yield.

Mr. HUDDLESTON. Mr. President, I think the distinguished Senator from Mississippi is to be commended for working up these statistics. All of us are interested in saving money, cutting the Federal expenditures, but I think these demonstrate that, sometimes, it becomes very, very expensive to save money. That can be penny-wise and pound-foolish in many instances, and I believe this is a perfect example.

I hope that as these figures are made known and the Members of this body become more familiar with the exact propositions that are being made, we will see that it is in the best interests of the country and that it is economically sound to continue this very important project.

Mr. STENNIS. I thank the Senator very much for his remarks, his interest, and his assistance.

I yield the floor.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If there be none, morning business is terminated.

ADJUSTMENT OF PRICE SUPPORT FOR MILK

The PRESIDING OFFICER. The Senate will now resume consideration of the pending business, S. 509, which will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 509) to amend section 201 of the Agricultural Act of 1949, as amended, to delete the requirement that the support price of milk be adjusted semiannually.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished Senator yield?

Mr. MELCHER. I yield to the minority leader.

Mr. ROBERT C. BYRD. Mr. President, I express the hope that Senators on my side of the aisle who have amendments will call them up today and proceed with the debate thereon, so that votes, if ordered, can be stacked up in accordance with the request made earlier and agreed to, as propounded by the majority leader.

I suggest that our cloakroom on this side of the aisle inquire of Senators if they have amendments and, if they do, encourage them to proceed at some point during the day to call them up, so that all amendments that will be voted on Tuesday will have been called up and debated.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. MELCHER. I am delighted to yield.

Mr. BAKER. I thank the manager of the amendment for yielding.

Mr. President, I join the minority leader and urge that Members on this side come to the floor as soon as possible and offer any amendments they may have to this measure.

While there is no certainty that we can complete debate on this bill today, we do have votes, as they may be ordered, stacked until Tuesday. It is my hope that we can complete all debate on this measure today, while we are not under any time pressure.

So I will ask our cloakroom to notify Senators that it is the wish of the joint leadership that Members who may have amendments should come to the floor and present them to the Senate for consideration today.

AMENDMENT NO. 8

(FORMERLY NUMBERED UP AMENDMENT NO. 14)

Mr. MELCHER. Mr. President, it is my intention to respond briefly to some of the comments that have been made about the amendment I offered on Tuesday and, having done that, to ask unanimous consent to lay aside temporarily the amendment, so that others may offer amendments if they are ready to do so.

The PRESIDING OFFICER. Does the Senator ask unanimous consent?

Mr. MELCHER. No, I have not asked that as yet. I will do so at the conclusion of my remarks.

Mr. President, the purpose of the amendment is to help the President in his program to decrease Federal outlays.

The bill itself, S. 509, by forgoing the increase in milk price supports on April 1—which would be automatic under the law—means that there will be a saving in Federal outlay of about $147 million. If we add to the bill the amendment now before the Senate, that will save approximately $200 million more in Federal outlay.

What could be wrong with that? That seems to be what we are after. So what are the objections?

First of all, the objection is raised that this would be a step toward protectionism, protecting the American market. The answer to that is, unequivocally, yes, it certainly is. It certainly is a step in that direction, and for very good reason.

Section 22 of the Agriculture Act provides for a mechanism to avoid importing agriculture products to the extent that it would drastically hamper the effectiveness of a domestic agricultural program. Section 22 of the Agriculture Act is for a specific purpose. The specific case we have right now is that we are importing between $330 million and $350 million worth of casein every year. That could be much worse. Casein is a natural protein of skim milk. It is convenient to ship it, and it could be that, instead of importing $330 million to $350 million worth of casein annually, we could be importing much more. Perhaps it would be a half-billion dollars' worth.

Is that bad? Yes, it is. It is time to limit how much we are going to import of this product, because it is in direct competition with the skim milk that is produced here in the United States.

What about the argument that we do not have any casein manufacturing in this country and that this amendment is meaningless in terms of reducing dairy

supplies, that it really has no effect on our domestic dairy producers?

That is not so at all.

First of all, the amendment would limit the casein imports to one-half of the average of the past 5 years. So, we are limiting most but not all of the casein that is going into food.

I think it is fair to give an example or two of what I am talking about as to what casein does go into the food.

Casein, I am told, is the very important, natural occurring protein in skimmed milk. It is easy to handle. It is easy to ship and it is available. When it gets over to this country, the imported casein, for instance, goes into making imitation cheeses, and other products.

How do they do that? They add some oil or some other type of solvent and they come up with imitation cheeses, coffee whiteners, and frozen dessert toppings. Just those three items I mentioned total 64.5 million pounds per year.

This casein goes into the food chain, the foods we eat, foods that are available to be purchased here in the United States.

Not all casein that we import goes into food. If we look at the other side of it, there are 28 million pounds we import every year that go to industrial uses Elmer's glue, I believe, is a casein glue. It goes into other industrial products. We also import casein that goes into medical, nutritional, and pharmaceutical supplies and that amounts to about 5 million pounds.

So if we add up those two areas, they amount to 33 million pounds out of 150 million pounds that we imported last year. This amount does not go into food. All the rest goes into food.

What the amendment seeks to do is reduce half of what we imported and, therefore, reduce most of what goes into actual food products in the United States.

We are told that if we do this this might cost consumers more money. I do not believe that argument is valid at all.

First of all, casein is convenient and cheap to import. It costs about $1.50 a pound. We get it from numerous countries, all of which in one way or another have a subsidized dairy program. So we are not talking about a product that is produced in a completely free market atmosphere. All of the countries that we import casein from have one way or another a subsidized dairy program.

The casein when we get it in here, as I mentioned earlier, is converted into a mixture with vegetable oils or solvents and goes into the food products that I mentioned.

What could have gone into these same food products if we did not import casein? The answer to that is that one of the food products here in the United States, produced by U.S. dairy farmers, is skimmed milk, which would replace the amount of the casein that is mixed with some solvent or vegetable oil to make the food products mentioned.

So it would be the same products, the cheese, the coffee whitener, the frozen dessert toppings, that would all be made by American-produced skimmed milk.

Why does that not happen? First of all, it does not happen because we are importing casein that is coming from countries that all subsidize their dairy industry. We are importing it and we get it at $1.50 a pound. The same amount of skimmed milk to replace that pound of casein would cost $2.75.

What happens, then, since obviously the skimmed milk that is domestically produced is not going to replace the imported casein under current conditions? The skimmed milk that is produced domestically is dried and is purchased by the Department of Agriculture as nonfat dried milk, and it is what goes into storage in the Credit Commodity Corporation stocks.

So there is where we are. Casein is cheaper to buy. So we put it into the food chain here. Because we have a domestic price support program for dairy farmers, the skimmed milk is not used; it is dried, and it goes into storage as dried milk.

What is paid for that? It is $2.75 per pound under the price support program of the United States.

Is it cheaper to have the casein that costs $1.50 to go into the imitation cheeses, et cetera, and at the same time paying our dairy producers $2.75 for the equivalent in dry milk? Of course, it is not. Add the two costs together. The consumers are paying $1.50 but the taxpayers are paying $2.75 for the equivalent that goes into storage.

So who is losing? The taxpayers are losing, and I think by and large they are consumers. It is certainly the U.S. Treasury that is losing on this whole proposition.

The argument is also made that somehow directing action under section 22 to prevent the damage to a domestic agricultural price support program, by limiting the importation of casein to 50 percent of the 5-year average, would interfere or violate our GATT treaty, the Geneva agreement on trade tariffs.

We have had some discussion here on the floor that seemed to say that it would.

I fail to see that. Those who have said that that would be the case have not given any citations and have not presented any convincing brief or indeed any brief at all of which I am aware that that proves their case.

I choose to accept the brief of the attorneys of the National Milk Producers Federation have prepared which has been available and has been presented to the Agriculture Committee in the discussion of this issue in the past weeks. I have a copy of it here. Mr. President, I ask unanimous consent that this brief be printed in the RECORD.

There being no objection, the brief was ordered to be printed in the RECORD, as follows:

BRIEF OF NATIONAL MILK PRODUCERS FEDERATION

During the March 11, 1981 hearings of the Senate Committee on Agriculture, Nutrition and Forestry on dairy programs and the 1981 general farm legislation, questions were raised regarding the proposal to direct Presidential action on milk protein imports under Section 22 of the Agricultural Adjustment Act (7 U.S.C. 624). Of particular concern was the question of whether or not such action would constitute a violation of the General Agreement on Tariffs and Trade.

The proposed directive regarding the use of Section 22 presents no greater nor less a violation of U.S. obligations under the General Agreement on Tariffs and Trade than use of normal Section 22 procedures, creates no additional opportunity for retaliation by other nations, and is supported by precedent.

(1) The Section 22 waiver approved by Contracting Parties to the General Agreement is confined to a waiver of U.S. obligations under Articles II and XI. It is not a waiver of the rights of affected parties to retaliate.

(2) Through a series of amendments and revisions, the Congress has made it clear that Section 22 stands in a superior position to any trade agreement or other international agreement to which the United States is a party. The Congress has expressed this principle in broad terms as it applies to the laws of the United States in general.

(3) The Congress has made it clear that its actions on international trade issues and passage of legislation dealing with these questions do not constitute approval of the General Agreement on Tariffs and Trade.

(4) Precedent for legislation directing Presidential action under Section 22 of the Agricultural Adjustment Act is found in the Trade Agreements Act of 1979 and in the Agricultural Act of 1956. The latter instance is identical to the present situation.

(5) The intent of Congress expressed in Section 22 has been frustrated by inaction and delay. The present amendment is necessary to overcome the failure of action.

(6) The threat of trade retaliation against the United States would be neither increased nor decreased as the result of this proposed action. The waiver afforded Section 22 under the General Agreement does not remove the retaliatory capability under any circumstance. Further, retaliation can be brought even in the absence of a violation of the General Agreement.

The following is a discussion of the points involved in such consideration leading to the conclusion that the proposed action is supported by precedent and is, in fact, necessary as the only available recourse in the face of obvious frustration of the intent of Congress in the enactment of Section 22 of the Agricultural Adjustment Act and the Dairy Price Support Program as part of the Agricultural Act of 1949 (7 U.S.C. 1446 (c) and (d)).

WAIVER OF UNITED STATES OBLIGATIONS UNDER THE PROVISIONS OF THE GENERAL AGREEMENT ON TARIFFS AND TRADE WITH RESPECT TO SECTION 22 OF THE AGRICULTURAL ADJUSTMENT ACT

In 1955, the contracting parties to the General Agreement on Tariffs and Trade considered a request from the Government of the United States for a waiver of U.S. obligations under Articles II and XI of the General Agreement with respect to Section 22. This waiver was granted. It is permanent in nature and its continuance requires no further action by the contracting parties.

Article II of the General Agreement details the conditions for tariff concessions and the general application of such concessions. Article XI calls for the general elimination of quantitative limitations and sets down certain conditions for and limits on the use of such restrictions where an individual nation finds their use necessary.

Waiver of both Articles with respect to Section 22 covers the two options available to provide the relief under the law. Under Section 22, action may be taken to impose fees, not in excess of 50 percent ad valorem on the product in question or quantitative limitations of up to 50 percent of the quantity of such articles entered into the United States or withdrawn from warehouse for consumption during the representative period.

It should be noted that the waiver does not preclude the right of affected contracting parties to have access to the appropriate provisions of Article XXIII of the Agreement. This article deals with the actions or responses available to contracting parties in the event of nullification or impairment of concessions previously granted. In this respect, any action under Section 22, whether taken under the initiative of the Secretary of Agriculture or directed by the Congress would provide grounds for response from other nations.

In granting the waiver for Section 22, the contracting parties to the General Agreement took particular note of conditions then existing in U.S. agriculture and the steps that were being taken to meet those problems. Among the notes contained in the decision published on the waiver is the following:

"(2) that, to help solve the problem of surpluses of products for which Section 22 import quotas now are in effect, the United States Government has taken positive steps aimed at reducing 1955 crop supplies by lowering support price levels or by imposing marketing quotas at minimum levels permitted by legislation; and that it is the intention of the United States Government to continue to seek a solution of the problem of surpluses of agricultural commodities;"

That statement speaks directly to the issue at hand today. The legislation, S. 509, to which Senator Melcher's amendment is proposed seeks to set aside the mandated increase in the level of dairy price supports on April 1, 1981. The reason for this move is the increase in the level of milk production and the rise in government purchases of surplus dairy products under the price support program. This was a primary element of the consideration in granting a waiver under the terms of the General Agreement in 1955.

SECTION 22 OF THE AGRICULTURAL ADJUSTMENT ACT HAS STANDING SUPERIOR TO TRADE AGREEMENTS OR OTHER INTERNATIONAL AGREEMENTS

Subsection (f) of Section 22 of the Agricultural Adjustment Act states: "No trade agreement or other international agreement heretofore or hereafter entered into by the United States shall be applied in a manner inconsistent with the requirements of this section."

By this action, the Congress has clearly stated the view that this law is to be viewed as primary and that its operation or authority shall not be set aside as the result of consideration of any international agreement.

Section 22 has a long history of review and revision by the Congress. First enacted in 1935, it was reenacted in 1937, amended in 1940 and revised and reenacted as Section 3 of the Agricultural Act of 1948. In the 1948 action, Subsection (f) made Section 22 subservient to international agreements of the United States. It stated, "No proclamation under this section shall be enforced in contravention of any treaty or other international agreement to which the United States is or hereafter becomes a party."

This clearly limited the scope of Section 22 and made it subject to what was allowed or might be allowed under the terms of international agreements.

In 1950, as part of Public Law 579, Congress again made extensive revisions in Section 22 and again directed specific attention to this provision. The basic language of subsection (f) was continued as in the 1948 reenactment. However, provisions were added to make it clear that no international agreement or amendment to an existing agreement would be entered into which did not permit the enforcement of Section 22 with respect to the articles and countries with which such agreement or amendment is applicable. The 1950 amendment further provided that any such international agreements or amendments to international agreements must allow the application of Section 22 to the full extent allowed under the General Agreement on Tariffs and Trade.

The most recent Congressional consideration of this question within the framework of Section 22 came with the enactment of the Trade Agreements Extension Act of 1951. Section 8(b) of that Act amended Subsection (f) of Section 22 and placed it in its present form.

Thus, there is a clear record of the intent of Congress in the development of this particular provision. With each consideration, the Congress moved farther from the specific requirement that Section 22 be subservient to international agreements to the present position that gives it primacy over such agreements. (See also *C. Tennant Sons & Co. of N.Y. vs. Dill*, 1957, 158 F.Supp. 63.)

While the question at hand relates specifically to Section 22, the Congress has addressed this principle in broader fashion more recently. Section 3(a) of the Trade Agreements Act of 1979 states: "No provision of any trade agerement approved by the Congress under section 2(a), nor the application of any such provision to any person or circumstance, which is in conflict with any statute of the United States shall be given effect under the laws of the United States." (19 U.S.C. 2504)

This broad statement of principle asserts the primacy of United States law as it relates to international trade agreements. While the Trade Agreements Act of 1979 did not deal with the organic elements of Section 22, the principle set forth in Section 3 (a) is identical to that of subsection (f) of Section 22.

THE GENERAL AGREEMENT ON TARIFFS AND TRADE HAS NEVER BEEN RATIFIED OR ADOPTED AS AN INTERNATIONAL AGREEMENT BY THE UNITED STATES

Since its development in 1947, the General Agreement on Tariffs and Trade has taken on an aura of overriding influence in the sphere of U.S. international trade policy. The fact of the matter is that it has never been adopted as an international agreement by the United States. Congress has, in fact, been very specific about the fact that its actions relating to international trade agreements and legislation dealing with international trade should not be regarded as an acceptance of the General Agreement.

Section 121(d) of the Trade Act of 1974 authorized the appropriation of funds to meet the United States share of expenses of the General Agreement on Tariffs and Trade. The second sentence of that subsection states: "This authorization does not imply approval or disapproval by the Congress of all articles of the General Agreement on Tariffs and Trade." (19 U.S.C. 2131(d)).

Similar provisions are to be found in the Trade Agreements Extension Act of 1951; the Act of July 1, 1954, Public Law 464; the Trade Agreements Extension Act of 1953, Public Law 215; and in Public Law 85–686, the Trade Agreements Extension Act of 1958.

Thus, the Congress has been consistent in its attitude toward the General Agreement on Tariffs and Trade. It provides a useful working structure for nations to gather together to address issues of international trade. There has been the development, however, of the position that domestic law must retain its primary position with regard to the provisions of this and other international agreements. In the specific case of the General Agreement, the repeated specificity of the Congress that its actions must not be viewed as acceptance of its terms and provisions is noteworthy when discussing the relationship of a prospective action by the Congress to an agreement that the United States has not adopted.

THERE IS PRECEDENT FOR THE PROPOSED AMENDMENT

The Trade Agreements Act of 1979 contained specific directives regarding the issuance of Presidential Proclamations to expand import Section 22 limitations on certain cheeses and chocolate crumb.

Section 703(a) of the legislation states: "The President shall by proclamation limit the amount of quota cheese which may enter the customs territory of the United States in any calendar year after 1979 to not more than 111,000 metric tons. Any such proclamation shall be considered a proclamation which is issued by the President under Section 22 of the Agricultural Adjustment Act (7 U.S.C. 624) and which meets the requirements of such section."

Similar instruction was given the President with regard to chocolate crumb in section 703 of the Trade Agreements Act of 1979.

It has been suggested that the present situation is different. In the case of the 1979 legislation, the Special Trade Representative had concluded agreements, as the agent of the President, in which this country had agreed to the proposed expansion of dairy product imports. The Trade Act of 1974, the authority for U.S. participation in the trade negotiations, required creation of and consultation with advisory committees so that any agreements reached would be reflective of the needs of various sectors. The completed agreements were subject to review and affirmation by the Congress.

In the current instance, it has been said that interested parties are being denied the opportunity to be heard and that established procedures are being bypassed.

An examination of the two situations brings them closer into alignment. It is true that in 1975 an Agricultural Technical Advisory Committee for Trade Negotiations on Dairy was formulated and convened for the purpose of providing advice on the conduct of negotiations relating to that sector. In its final report, the Committee stated that the actions regarding expansion of dairy product imports, revision of the countervailing duty statute and acceptance of the use of export subsidies by other nations to assist products in entering this market were counter to their recommendation. The advice of the advisory panel most directly involved was ignored.

There was opportunity for interested parties to appear before the involved Congressional Committees. The Ways and Means Committee and the Agriculture Committee in the House of Representatives and the Committees on Finance and Agriculture, Nutrition and Forestry in the Senate held hearings on the issues involved. These Committees, in fact the entire Congress, were, however, faced with an accomplished fact. The legislation submitted as the Trade Agreements Act of 1979 had to, under the rules set forth for its consideration, be approved or rejected without change.

In the current situation, there has been opportunity for public comment. The Senate Committee on Agriculture, Nutrition and Forestry heard testimony on this issue from interested parties as part of their March 11, 1981 hearing on general farm legislation. Similarly, in 1979, a Subcommittee of the Committee held extensive hearings on the issue. That same year the Dairy and Poultry Subcommittee of the Committee on Agriculture of the House of Representatives also held hearings on this matter. These hearings are at least as extensive as those involving the dairy issues relating to the Trade Agreements Act of 1979.

There is another specific precedent for the use of this procedure. Section 202(a) of the Agricultural Act of 1956 (7 U.S.C. 1852(a)) directed Presidential action under the au-

thority available in Section 22 with regard to limitations on cotton imports. According to Senate Report No. 1966, May 11, 1956, "Subsection (a) provides that the existing import quota on extra long staple cotton established pursuant to Section 22 of the Agricultural Adjustment Act of 1933 shall, hereafter, cover the same types of cotton included in the original quota. The effect is to remove the exemption of cotton having a staple length 1-11/16 inches and longer to bring such cotton back within the quota."

This is a specific Congressional directive on the use of Section 22 as contemplated in the present amendment. The directive was implemented through the issuance of Presidential Proclamation No. 3145 on July 6, 1956 by President Dwight Eisenhower.

THE PRESENT AMENDMENT SEEKS TO OVERCOME THE FRUSTRATION OF THE INTENT OF CONGRESS EXPRESSED IN SECTION 22

Since its initial enactment, Section 22 has had one central purpose—to assure the effective operation of domestic price support programs or similar operations of the Department of Agriculture by preventing interference with them from excessive and unneeded imports. In the case of casein imports, the intent of the Congress has been frustrated by inaction and delay. The U.S. dairy industry has made appeals to the past four Secretaries of Agriculture for action to restrain the imports of casein. The response has ranged from an acknowledgement of the request to a determination to delay action pending completion of studies.

In 1979, the United States International Trade Commission, at the request of the Committee on Ways and Means of the U.S. House of Representatives, conducted a study to determine the current usage of casein and mixtures of casein in this country. As part of that work, the conclusion was drawn that there is no significant replacement of nonfat dry milk by casein in food and animal feed uses. Since that time, the study has been cited as the basis for no action or denial of the dairy industry's request for Section 22 relief.

Unfortunately, the issue has been greatly clouded by repeated discussion of the displacement of nonfat dry milk by casein or the lack thereof. This is not the basic issue. The basic point in question is the displacement of skim milk as was pointed out during the hearings before the Committee on Agriculture, Nutrition and Forestry on March 11, 1981.

In a strong dissent from the opinion of the U.S.I.T.C., its Chairman, the Honorable Joseph Parker, concluded that the Commission lacked the information to draw the conclusions it made. This same attitude was reflected by Secretary of Agriculture Bergland when he directed his Department to conduct its own study on the issue.

This study is now underway; however the design of the study makes it doubtful that conclusions differing from those of the ITC will be forthcoming. The National Milk Producers Federation was asked to comment on the planned study and its design in late 1980. It was pointed out that the outline repeated the same basic error in direction that led the ITC to ignore the basic facts of the issue. Nonetheless, Howard W. Hjort, then Director of Economics, Budget and Policy Analysis for USDA, determined to proceed with the study as designed rather than to make the changes in approach necessary to address the basic question—the degree of displacement of domestic milk by use of these imported products.

Congress has developed Section 22 as a means of assuring the effective operation of domestic price support and similar programs. In developing the law, specific procedures have been provided for carrying out the intent of Congress. This intent has been repeatedly frustrated by inaction and avoidance of the issue at hand.

This is the reason for this issue being placed before the Congress at this time.

Section 22 has, in fact, been used as a means of expanding dairy product imports for the express purpose of depressing prices to farmers. This situation occurred seven times during a 15 month period in 1973 and early 1974. The effect of these actions was a 25 percent loss in the basic farm price for milk in mid-1974. These actions were taken under the emergency provisions of the law with no opportunity for comment by the industry until after the fact. In seeking legal redress of this policy, the dairy industry was denied in *National Milk Producers Federation, et al.* v. *Schultz*, 1973, U.S. District Court for the District of Columbia, Case No. 1465-73.

THE THREAT OF RETALIATION—DOES IT EXIST? IS IT COVERED BY THE WAIVER PROVIDED FOR SECTION 22 UNDER GATT?

Much has been said of the waiver the Contracting Parties to the General Agreement on Tariffs and Trade have provided in the case of Section 22 and the prospect of retaliation against the United States if the normal procedures of Section 22 are not employed.

The Section 22 waiver does not limit, in any manner, the rights of affected Contracting Parties. The waiver states, "Declare that this Decision shall not preclude the right of affected contracting parties to have recourse to the appropriate provisions of Article XXIII;".

Article XXIII of the General Agreement is the provision under which retaliation is authorized. That Article states three specific reasons as grounds for retaliation:

"(a) the failure of another contracting party to carry out its obligations under this Agreement, or

"(b) the application by another contracting party of any measure, whether or not it conflicts with the provisions of this Agreement, or

"(c) the existence of any other situation."

In short, the waiver does not preclude retaliation regardless of the approach used. Further, retaliation itself does not actually require a violation of the General Agreement. It may be taken due to an action ". . . whether or not it conflicts with the provisions of this Agreement" or due to ". . . the existence of any other situation."

The threat of retaliation is automatically raised as an excuse for inaction by the United States in seeking to enforce its specific rights in international trade and has been used as a reason not to enforce domestic law. Enforcement of the countervailing duty statute with respect to subsidized cheese imports from the European Community is a case in point. From 1968 to 1973, the U.S. Department of Treasury refused enforcement of a mandatory statute despite the acknowledged fact that imports of these products carried substantial export subsidies. Court action finally forced agreement that enforcement would take place, at which point the subsidies were removed.

With passage of the Trade Act of 1974, provisions were made for a waiver of countervailing duty collection under certain conditions. With passage of that law, the EC immediately restored its export subsidies and made the case that it thereby qualifies for the waiver. When the U.S. dairy industry objected, the EC raised the specter of a "cheese war" and talked of retaliation against a wide range of products.

This threat was raised, despite the fact that the United States was wholly within its rights in seeking such enforcement, both in terms of its domestic law and the terms of the General Agreement on Tariffs and Trade.

These issues apparently are not so sensitive with other nations. Again, in the case of the European Community, the extensive use of export subsidy programs as a central element of the Common Agricultural Policy is regarded as an internal issue not subject to international negotiation or the terms of any international control.

The variable duty, also a basic element of the Common Agricultural Policy, is used to effectively exclude imports of agricultural commodities such as dairy products or to maintain internal prices substantially above those of exporting nations. Again, this is regarded as an element of internal policy and is accepted as such by the United States.

Other nations employ devises which restrict entry into their markets. Listening and inspection schemes, product standards, and prohibitions on the use of certain agricultural chemicals on crops are subtle, yet effective means of closing borders to imports. These are counter to the terms of the General Agreement on Tariffs and Trade.

Section 22 is the only so-called trade barrier the United States employs in the case of dairy products and the only basis on which it can be employed is the demonstrated interference with the operation of a domestic policy. The history of its application has been such that dairy product imports into the United States have substantially increased since its first application in 1953. In 1953, dairy product imports into the United States totaled 525 million pounds milk equivalent, fat basis. In 1980, they stood at 2,106.8 million pounds, more than 400 percent of the 1953 level. Casein imports during 1979 totaled the equivalent of 5.3 billion pounds of skim milk. The proposed limitation would still allow the import of the equivalent of 2.5 billion pounds of skim milk annually as casein.

Mr. MELCHER. Mr. President, finally, I point out that in cutting all the programs that we intend to cut to try to reach a balanced Federal budget over the next 3 or 4 years we are cutting into some programs that have value and merit and many of us do so very reluctantly. But we do so in order to help the President reach this goal of a balanced Federal budget.

If we can ask Americans to agree, and I think Americans by and large are agreeing to have reduction in a whole host of programs that affect their daily lives, then I think it is also fair to ask in the case of an ongoing dairy price support program, that some foreign suppliers, whether they are New Zealand, Australia, Ireland, Russia, Poland, or any of the other 15 to 16 countries that send casein over here to this country, to also make some sacrifices. I think that is fair.

We, in effect, would be denying a market for those foreign dairy farmers for about $200 million worth of casein per year.

We are telling our own domestic dairy producers in the bill they are going to have less in price supports than what they would otherwise have if we did not repeal this section of the law. The new budget that has come up contemplates another reduction for dairy farmers in the United States in price supports to go into effect beginning October 1, a very real reduction.

We are asking people who receive food stamps to accept a reduction. We are asking people on school lunch programs to accept a reduction.

We are asking for a reduction in medicaid. We are asking for a reduction in the arts and the humanities. We are asking for a reduction in Federal aid to education, and a whole host of programs. We are asking students to take less in Federal programs.

I could go on for quite a while on what we are asking the various segments of American society to take less because we want to decrease Federal expenditures.

Well, I am also asking that we address the problem of telling some of these dairy farmers across the world that we are going to have a reduction in the casein we are buying from them. It is that simple. I think it makes all kinds of sense, all kinds of good, practical commonsense. I think it helps the President's program, and I hope it can be accepted by the Senate, and by the House also, and I feel the President should be delighted to have it.

I hope in the interim he will change his mind before we even come to a final vote on it Tuesday.

I want to point out that in the long run it is obvious that every dollar we spend on unnecessary imports—and this is surely an unnecessary import, since it can be offset by skim milk produced here—decreases the value of the dollar abroad, and results in higher prices for the products we must import, further adding to inflation.

The basic question is one of fairness to our domestic producers. The bill before us limits Government support for milk prices, lowering the return to these dairy producers. All my amendment does is to offset this action by limiting the importation of subsidized casein and other milk protein, thus increasing the size of the domestic market that is open to our American dairy producers. I think this is fair, the American dairy producers think this is fair, and the Senate, by a vote of 53 to 45 on Tuesday, said that this is fair.

This amendment does not undermine the President's efforts to trim the budget as part of his economic program—it helps it by saving the Government and the American taxpayer from $160 to $200 million a year that would otherwise be spent to purchase excess milk production. Those of us who support this amendment are not standing in the President's way—we are actually behind him and pushing. This amendment saves money, encourages greater activity through the private market, and boosts our economy—everything that President Reagan has called for.

What does this proposal do? It directs the President, through the authority provided him in section 22 of the Agricultural Adjustment Act, to proclaim that certain milk protein imports, including casein, caseinates, lactalbumin and whey protein are causing material damage to the domestic milk price support program, and to impose a quota limiting their importation to no more than 50 percent of the average for a representative period—in this case 1976 through 1980.

There can be little doubt that casein imports do materially affect the milk price support system. They have grown from 50 million pounds just a few years ago to 151 million pounds in 1980. I ask unanimous consent at this time to have a table printed in the RECORD showing the level of casein imports for the past 4 years.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

IMPORTS OF CASEIN, MIXTURES OF CASEIN—BY COUNTRY, 1977, 1978, 1979, 1980

[In thousands of pounds]

Country	1977	1978	1979	1980
New Zealand	96,327	84,263	92,095	76,764
Australia	23,127	23,167	21,715	17,923
Ireland	4,299	9,188	14,833	23,977
U.S.S.R.	4,315	4,496	4,794	1,268
United Kingdom	1,669	2,997	2,750	5,575
Poland	4,301	4,307	2,053	3,505
Argentina	6,976	3,008	1,462	2,183
Norway	890	2,016	1,703	1,969
Netherlands	621	1,517	2,547	2,526
Canada	247	1,468	2,609	789
West Germany	450	217	240	573
France	97	55	1,961	8,878
Other	926	436	2,064	5,296
Total	144,245	137,134	150,827	151,226

Mr. MELCHER. In 1979 these casein imports were equivalent to 2.2 billion pounds of skim milk. That volume of skim milk would have produced over 201 million pounds of nonfat dry milk which, when sold to the Commodity Credit Corporation at today's price, would result in increased Government outlays under the dairy price support program of $189 million. An additional 1 billion pounds of skim milk was displaced by casein in products where there was a high probability that skim milk would have or could have been used. The cost to the Government of this displacement was over $87 million more. This certainly can be considered to be "materially affecting" the domestic milk price support program, and to qualify for action under section 22 of the Agricultural Adjustment Act.

It has been argued that we are violating the procedures of section 22 by directing the President, through congressional action, to proclaim the quota. Section 22 does lay down procedures which the President is to follow in invoking his power to set quotas or increase tariffs. The statute nowhere says that Congress cannot direct the President to proclaim import restrictions when he deems such action necessary. In fact, there is precedent to taking action under section 22 without following the procedures outlined there.

For example, section 202(a) of the Agricultural Act of 1956 (7 U.S.C. 1852 (a)) directed Presidential action under the authority available in section 22 with regard to limitations on cotton imports. According to Senate Report No. 1966, May 11, 1956:

> Subsection (a) provides that the existing import quota on extra long staple cotton established pursuant to section 22 of the Agricultural Adjustment Act of 1933 shall, hereafter, cover the same types of cotton included in the original quota. The effect is to remove the exemption of cotton having a staple length of $1\frac{11}{16}$ inch and longer to bring such cotton back within the quota.

THIS WAS A SPECIFIC CONGRESSIONAL DIRECTIVE ON THE USE OF SECTION 22—THE SAME ACTION AS IS CONTEMPLATED IN MY AMENDMENT

There have been other specific cases where the procedures under section 22 have been circumvented. The Trade Agreements Act of 1979 directs the President to adjust import quotas on cheese and chocolate crumb. So that there was no question as to the legitimacy of this directive under section 22, the Act contains the following language:

> Any such proclamation shall be considered a proclamation which is issued by the President under section 22 of the Agricultural Adjustment Act (7 U.S.C. 624) and which meets the requirements of such section.

My amendment contains the exact same language as used in the Trade Agreements Act, and thus qualifies, for the same reasons, as legitimate action under section 22.

It is also argued that my amendment may violate the GATT agreement. To put it simply—that is impossible. First, GATT contains a waiver for section 22 actions. However, this waiver is not the authority for actions under section 22—it is only an acknowledgement of the inherent primacy of section 22 actions in our foreign trade dealings. That primacy is established in the section itself, which says in paragraph (f):

> No trade agreement or other international agreement heretofore or hereafter entered into by the United States shall be applied in a manner inconsistent with the requirements of this section.

That very simply says—and the GATT waiver acknowledges—that no international trade agreement can supersede our right to use section 22 actions to protect domestic agricultural programs.

The Trade Agreements Act of 1979 puts an even broader limitation on the authority of the GATT agreement. It says in section 3 that:

> No provision of any trade agreement approved by the Congress . . . nor the application of any such provision to any person or circumstance, which is in conflict with any statute of the United States shall be given effect under the laws of the United States.

Once again, this is clear evidence of our right to take actions under section 22 without violating the GATT agreement.

Another argument that has been raised is that if the nations exporting casein products "interpret" our actions in approving my amendment as a violation of GATT they can retaliate against us. The facts on the retaliation question are that any action by the United States to limit the importation of casein products is basis for retaliation by the affected nations under the GATT agreement. The GATT agreement permits aggrieved nations to retaliate in cases of "the failure of another contracting party to carry out its obligations under this agreement"; however, it also permits retaliation against "any measure, whether or not it conflicts with the provisions of this Agreement" that affects trade; it even gives nations the right to retaliate because the trade situation changes, whether or not this is due to the inter-

national action of any of the agreement's signatories.

In short, anything and everything can serve as the basis for trade retaliation if that is what other nations want to do.

The key to this question is whether or not the nations exporting casein to the United States want to retaliate against us for taking very limited actions to protect our domestic agricultural programs that are legal, both under our law and GATT, and by doing so risk upsetting our overall trade relations. This question does not hinge on the interpretation of any legal language in the GATT agreement, but on the political and economic realities of our relations with the casein exporting nations.

I have no doubt, personally, that our trade negotiators can explain this action to our trading partners for what it is—a limited, measured, necessary, and fair modification of imports—taken, I might add, as part of a program of limiting agricultural subsidies which is one of the major objectives of the GATT agreement.

Now, I do not blame the exporting countries for calling for the scare tactics of retaliation. It is in their best interest to continue to dump part of their excess dairy production in our markets. It is of great assistance, no doubt, to their own agricultural programs.

Also, the treat of trade retaliation has worked well for our trading partners in the past whenever they have wanted to gain concessions from us. We have a history of almost always giving in.

For example, during the years 1974–79 we did not collect the countervailing duties that were legally called for on subsidized Common Market dairy products. Why? Because the Common Market threatened to retaliate by not negotiating a new set of GATT agreements.

Again, through the 1970's, out antidumping laws and duties were not enforced against Japanese television imports. Why? Because the Japanese might retaliate.

I think that it is time we stopped worrying about what other nations might do because we take legal, limited, legitimate action to protect our own agricultural producers from being undercut by subsidized imports.

As I said earlier, I think our necessary actions to protect our domestic dairy industry can be explained to the casein exporting nations in a way that will make sense to them. One of the "big three" and by far the fastest growing of the casein suppliers is Ireland, a member of the Common Market. Who protects their farmers more in the world than the Common Market? Under the European Economic Community's common agriculture policy, the member nations set artificially high prices for their farmers' products, from wheat to dairy products and, when they produce a surplus, they unload these products by subsidizing exports. Without these subsidies, any European agricultural products would sell at twice the world price.

On the other hand, the Common Market uses a variable tariff on imports of American agricultural products that compete with their own, to set the cost of U.S. products at a level high enough to insure that they are not price competitive. The result is that almost no American wheat or dairy products are imported by the countries of the Common Market, except at their choice and when they decide they need it.

One of America's primary objectives in the last GATT treaty was to eliminate this system of export subsidies and import protection used by the Common Market. The Common Market refused to even discuss the issue, threatening to go so far as break off negotiations on the entire agreement unless this question was dropped. They told us there was no way they were willing to expose their farmers to uncontrolled competition from the United States and other nations.

They claimed the protection of their agriculture was a strictly internal issue, and that such protection must be continued in the name of national security and social order.

Certainly, any nation or group of nations that feels that strongly about the need to protect their farmers will understand the very small action we are proposing to take, in comparison to their protective programs, to assist our dairy producers. If they do not then maybe we had better rethink our trading relations with them.

Other casein exporting nations, outside the Common Market, also have programs through which they protect their agricultural industry, and thus, should understand the need for my amendment.

One of the main problems with casein imports is that the heavy subsidies they receive from the producing nations make it impossible for our dairy producers, who receive no subsidy or price support for casein, to compete. For example, in his dissent to the 1979 ITC Report on casein imports, Chairman Joseph Parker cited USDA data and wrote "under the milk program in effect in the European Community * * * the production of casein benefits from a subsidy which averages about $1.40 per pound."

A March 1981 USDA paper on casein imports found that Ireland's casein subsidy has ranged from $1.28 per pound to 80 cents per pound. Other nations that we import casein from have milk production subsidies as well. I ask unanimous consent that a table be printed in the RECORD at this time listing some of the milk subsidy information I have received from the Department of Agriculture.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Support prices for fluid milk

[Per hundred weight]

Common market	$12.37
Canada	13.09
Japan	19.55
New Zealand	3.66
Australia	3.77
Poland	11.15

Mr. MELCHER. One of the arguments that has been raised against my amendment is that there is no domestic casein industry and therefore imported casein does not compete with American production. This argument is absurd. The reason there is no casein production in the United States today is because anybody trying to compete with the subsidized imports of casein would simply go broke. Before World War II there were over 600 domestic plants producing 50 million pounds of casein annually. I have no doubt that if we limit the amount of subsidized casein imported into this country, the American dairy and American business will make up the slack—and Americans will reap the benefit.

The question of how much imported casein competes with domestic dairy products goes well beyond the direct uses of casein. Increasingly, casein and other milk protein imports are finding their way into the human and animal food chain, thus displacing American milk products. Some of the areas where imported casein is replacing domestic dairy products include: Imitation cheese, coffee whiteners, frozen dessert toppings, bakery products, breakfast foods, diet foods, calf milk replacers, and other animal feeds. I ask unanimous consent that a table showing the various uses of casein and the percentages of these uses be printed in the RECORD at this time.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

CASEIN, CASEINATE UTILIZATION, UNITED STATES, 1976, 1977, 1978, 1979, 1980 [1]

[In thousands of pounds]

	1976		1977		1978		1979		1980 [2]	
	Percent	Volume	Percent	Volume	Percent	Volume	Percent	Volume	Percent	Volume

50 percent of average										69,557.3

[1] Derived from data developed by U.S. International Trade Commission for U.S. ITC investigation No. 332-105.
[2] 1980 percentages are simply extensions of 1979 data.
[3] 1977 percentage used for 1976, 1978.
[4] May not add due to rounding.

Mr. MELCHER. One final point on the question of the competition of imported casein products with domestic dairy products. Much has been made of the 1979 report by the ITC on this subject. I want to make sure that the full picture on this report is brought before the Senate today and so I want to read the dissenting view, presented by no less than the chairman of the Commission, Joseph O. Parker:

In my judgment, an investigation of the impact of imports of casein will not be complete unless it includes an analysis of the domestic milk price-support program and the production and marketing of milk products in comparison with the conditions under which milk and milk products are produced and marketed by the countries exporting casein to the United States. The report of the Commission, in my opinion does not contain adequate information with respect to these matters to warrant the conclusion stated on page 4 of the report that there is ". . . virtually no relationship between imports of casein and mixtures of casein and purchase of nonfat dry milk under the price-support program in recent years. Likewise, no clear relationship is apparent between imports and domestic production or consumption of nonfat dry milk. Additionally, no clear relationship is apparent between imports of casein and mixtures of casein and other forms of domestic dairy production."

The price-support program of the Department of Agriculture for milk is designed to support the price of milk. Such price support is made effective primarily through acquisition of the products of milk at specified prices. Casein, even though it is not commercially produced in the United States, is a constituent of milk and is indirectly supported under the milk price-support program. Inasmuch as casein is not directly supported, producers obtain greater returns by not producing casein and converting fluid skim milk into nonfat dry milk.

According to information presented at the hearing by a number of domestic witnesses, including witnesses of the National Milk Producers' Federation, a price of about $2.40 per pound would be necessary to induce domestic plants to divert fluid skim milk from the production of nonfat dry milk to the production of casein. Inasmuch as imported casein is being marketed in the United States at about 90 cents per pound, domestic supplies of skim milk cannot be converted to casein and compete with imported casein at the current level of prices. Hence, casein is not currently produced in the United States regardless of the demand therefor.

Although the report does not contain specific information which will permit an analysis of the disparity between the prices of imported casein and the cost of domestic production of casein, this disparity may be the result of a number of factors including price-support programs, subsidies, differences in costs of production, and differences in marketing systems. For example, under the domestic milk price-support program, casein is not directly price-supported and is not protected under section 22 import programs as are other primary products of milk. The Foreign Agricultural Service of the United States Department of Agriculture reports that, under the milk program in effect in European Community, the price of milk is about $13 per hundred pounds and that the production of casein benefits from a subsidy which averages about $1.30 per pound. In New Zealand and Australia, the price of milk is about $4.50 per hundred pounds and the Foreign Agricultural Service reports that it is not aware of any specific subsidy being paid in casein by Australia or New Zealand. The price of milk in the United States is about $11 per hundred pounds. The Department of Agriculture reports that there are no generally accepted data available on the cost or pricing of milk and dairy products in the U.S.S.R.

Casein is delivered by the U.S.S.R., the European Community, and New Zealand and Australia to the United States at about one-third of the price that casein produced in the United States would have to receive under the current milk program. Thus, at present, the open U.S. market and domestic and foreign milk programs serve to induce imports of casein into the United States. In my judgment, more information is required to permit definitive economic conclusions to be made concerning comparative advantage, direct and indirect subsidization, or other causes resulting in the lack of production of casein in the United States and the impact of imports by casein.

Casein imports are trending upward and increasing quantities of imported casein are being used for the production of feed and food products, particularly imitation cheese. This imitation cheese is marketed in direct competition with other U.S. cheese products on the basis of lower prices. To the extent that these imports of casein may be displacing U.S. dairy products or preventing the production of domestic casein, such displacement would appear to have an adverse effect on domestic producers and the domestic milk program. The limited data available in the report on comparative costs, U.S. and foreign government support programs and the interrelationship of the extensive and complex domestic and foreign programs will not permit more detailed analytical judgment of the underlying factors affecting the production and imports of casein into the United States.

Mr. President, the evidence is clear. Imported casein does displace domestic dairy products, and thus adds to the surplus the Government purchase under the dairy price support program.

This brings us to another point. Opponents of my amendment argue that cutting back on casein imports will hamper our industrial users and possibly cause discomfort or even damage the health of some Americans. This is not true. My amendment would limit casein imports to about 69.5 million pounds using 1980 figures. This would be fully adequate to meet the needs for industrial uses (about 28 million pounds per year), food uses such as medical, nutritional and pharmaceutical uses where casein is considered essential (less than 5 million pounds per year), and still provide substantial quantities for other uses. When and if the needs for casein in these areas grow, it can be met by the American dairy industry and American business.

One point remains to be clarified. For years now I have been listening to the argument that any action that inhibits imports would be inflationary. This has been spread through the land as part of the gospel of free trade. It should be re-

membered, however, that this gospel is not a proven fact—it is only a theory. There are many, many factors that go into answering the question of whether or not actions to limit a specific import are, in fact, inflationary. A number of economists in recent years have begun to point out that there is a great difference in inflationary impact of essential and nonessential imports.

Essential imports such as petroleum and some metals and some other materials that we do not have in sufficient amounts in the United States must be paid for with hard currency. Every dollar the United States exports for nonessentials like blouses, televisions, automobiles, and I might add dairy products, cheapens our currency beyond the devaluation that takes place because of dollars we are compelled to export for essentials such as oil. This increases the cost of these essential imports and adds sharply to inflation. Thus, what might appear as a savings on an item in a department store invariably turns up as an extra bulge in the price at the gas pump, the cost of electricity or some other energy-related item.

Shoppers may be deceived into thinking they save money by buying an imported item, and not realize that the so-called savings turns up in the form of a higher price on another product or service.

The question of the inflationary impact of my amendment and similar proposals, whether on autos, textiles, TV's or some other nonessential import, has no simple answer. It cannot be handled by a naive assumption that such import limitations automatically add to inflation. That is just not the case.

Mr. President, the question here is one of fairness.

Fairness for the American taxpayer by cutting Government spending.

Fairness for the American dairy producer, who is making sacrifices to get Government spending under control and our economy back on its feet, only asks for an equal chance to sell his product in the private sector without having to fight subsidized foreign imports that undercut his prices.

Fairness to the American consumer who I know wants us to give American agriculture a fair shake so that, as consumers, they can continue to enjoy the most abundant and lowest cost food supply that mankind has ever known.

This amendment will save the taxpayer money and it will possibly mean the difference between make and break for thousands of American farmers by opening up a domestic market for their products equivalent to the production of upwards of 3,000 average dairy farms.

I hope that my colleagues who saw the fairness of this proposal last Tuesday will continue to support it.

Mr. LEAHY. Mr. President, I ask unanimous consent, if the Senator will yield to me. that he may do so without losing his right to the floor and without it counting as a second speech.

The PRESIDING OFFICER (Mr. SIMPSON). Without objection, it is so ordered.

Mr. LEAHY. Mr. President, I was pleased to hear the remarks of the distinguished Senator from Montana. I think they are well taken. Indeed, the amendment is one that is fiscally—prudent and fiscally frugal, and I would just add one other item that we should not lose sight of.

Basically what we are saying by this amendment is that the free enterprise system is alive and well among the family farmers—dairy farmers who are primarily family farmers—in this country.

What the dairy farmers, family farmers, are saying through this is they will compete with anybody in this country or abroad on fair terms and on equal terms, but that it does become very difficult to compete with somebody abroad who is heavily subsidized by his government at a time when whatever subsidies or price supports coming from our Government do not even begin to match them.

The dairy farmers in my State are willing to compete with anybody as long as it is equal and fair competition, but not when they are playing against a stacked deck.

I commend the Senator from Montana for his position, and I yield back to him.

Mr. MELCHER. Mr. President, as I announced at the outset, it is now my contention, and I do make the request, and I ask unanimous consent that my amendment be set aside temporarily so that other amendments may be considered and brought up.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HELMS. Mr. President, there is no more persuasive Member of this body, certainly to the Senator from North Carolina, than my friend from Montana, Mr. MELCHER, and I would reiterate to him that I agree with the substance of his amendment.

I would reiterate also that in committee I assured him that if he would approach this matter legislatively rather than by amendment that we would conduct prompt hearings.

Mr. President, I think it needs to be said again that there are so many reasons why this amendment should not be on this bill. First of all, there is a well-defined administrative procedure under section 22 of the Agricultural Adjustment Act for dealing with situations where imports threaten to interfere with price-support programs.

Adoption of this amendment would place the United States in clear violation of its international obligations, and almost certainly provoke retaliation by our trading partners against other agricultural products we produce, such as soybeans and nonfeed grains.

Mr. President, in the interest of time, I have a factsheet containing a list of reasons, and I ask unanimous consent that this be printed in the RECORD.

There being no objection, the fact sheet was ordered to be printed in the RECORD, as follows:

FACT SHEET

There is a well-defined administrative procedure under Section 22 of the Agricultural Adjustment Act for dealing with situations where imports threaten to interfere with price support programs. That procedure involves much less risk of repercussions for our $47 billion agricultural export trade than does a legislated limitation.

Adoption of the amendment would place the United States in clear violation of its international obligations and will almost certainly provoke retaliation by our trading partners against other agricultural products that we produce such as soybeans and nonfeed grains. The retaliation could exceed $60 million. In lieu of import retaliation, our trading partners may force the United States to grant concessions to compensate them for lost casein exports. These concessions may be granted on products such as beef and lamb.

In 1955 the U.S. obtained a waiver of our obligations under Article XI of GATT (relating to quotas) to cover the imposition of Section 22 quotas on agricultural imports. While this waiver is not a waiver of the right to retaliate, any U.S. action consistent with the waiver is placed in a position of being consistent with our international obligations, and therefore, less likely to be subject to retaliation.

Action to limit casein imports in this manner is premature. The ITC at the request of the House Ways and Means Committee completed a study in 1979 of the affect of casein imports on the domestic dairy support program. This study found that there was virtually no relationship between casein imports and purchases under the dairy price support program.

Current evidence does not indicate that casein imports displace a significant amount of U.S. milk production. It has not been shown that restrictions on such imports can be expected to reduce the large and expensive surpluses of non-fat dry milk currently held by the government.

Furthermore, USDA is presently conducting a study of the casein question which is expected in June and will delve into some matters not covered by the ITC. If there is a basis for restrictions on casein imports under section 22, this study should make the case and allow for initiation of the appropriate procedures for taking such action. Without more specific evidence than is now available, there is not an adequate basis to support action to limit casein imports.

The amendment establishes an unfortunate precedent in that the industry will expect Section 22 actions in the future which totally disregard ITC hearing and other procedures mandated by Congress and required by U.S. international obligations.

The casein import question is not directly related to the problem of S. 509 is designed to help and adoption of the amendment will complicate enactment of that bill since the House Ways and Means Committee will seek jurisdiction.

Mr. HELMS. Mr. President, in connection with that last point, the Senate should bear in mind that I have received a copy of two letters written by Congressman ROSTENKOWSKI, who is the chairman of the House Committee on Ways and Means, one letter to the chairman of the House Committee on Agriculture, and the other to the Speaker of the House of Representatives.

I ask unanimous consent to have those letters printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

COMMITTEE ON WAYS AND MEANS,
U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., March 17, 1981.

HON. E (KIKA) DE LA GARZA,
Chairman, Committee on Agriculture,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: I am enclosing a letter that I have today sent to the Speaker concerning possible amendments to the dairy price support bill currently under consideration by your Committee. Because of the jurisdictional questions involved as well

as the strong substantive interest that several members of the Committee on Ways and Means have expressed in a possible amendment to ban or limit the import of the milk protein, casein, I have requested that the Speaker sequentially refer this legislation to the Committee on Ways and Means if it is reported by the Committee on Agriculture with such an amendment.

In requesting such sequential referral, the Committee does not desire to slow or otherwise impede congressional consideration of the price support legislation. We feel quite strongly, however, that legislative efforts to ban or reduce the importation of any product into the United States should be considered by the appropriate legislative committee. I bring our request to your attention at this time so that you may be aware of our intentions prior to your actual deliberations on this matter.

Sincerely yours,

DAN ROSTENKOWSKI,
Chairman.

COMMITTEE ON WAYS AND MEANS,
U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., March 17, 1981.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, U.S. House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: It is my understanding that on Wednesday, March 18, 1981, the House Agriculture Committee will consider legislation to delay the April 1 increase in dairy price supports and that during the consideration of this bill, an amendment may be offered to ban the import of casein, a protein of milk used in foods, health formulas and other products.

Although the exact form of the amendment has not been made available to the Committee on Ways and Means, it is clear that this trade issue in whatever form it is presented is within the jurisdiction of the Committee on Ways and Means. If the amendment is designed to impose a simple quota, it is under the jurisdiction of the Committee on Ways and Means in much the same manner as the Meat Import Quota Act is currently. If the amendment is drafted to in some way invoke section 22 of the Agricultural Act of 1933, the Ways and Means Committee similarly has jurisdiction since the use of section 22 requires an International Trade Commission investigation of the merits of the case. As you know, the International Trade Commission is completely under the jurisdiction of the Ways and Means Committee. In fact, in 1979, it was the Committee on Ways and Means that requested the International Trade Commission study on casein on behalf of the Agriculture Committee.

In addition to the fundamental jurisdictional questions involved in this matter, imposition of any trade restraints on casein at this time would not only impede the passage of the price support bill but would create serious trade problems with certain of our trading partners. Countries where we frequently have trade surpluses would inevitably turn to compensation under the Trade Act of 1974 and the General Agreement on Trade and Tariffs.

Finally, any import limitation such as this would be a violation of the spirit of the International Dairy Agreement, negotiated in the Tokyo Round Multilateral Trade Negotiations under the guidance of this Committee.

Mr. Speaker, if the Agriculture Committee adopts an amendment in some way banning or limiting the import of casein as part of the price support bill, we would respectfully request that this legislation, when reported, be referred sequentially to the Committee on Ways and Means under clause 5 of Rule X of the Rules of the House of Representatives. That clause is interpreted, pursuant to your statement on January 5, 1981, to mean that sequential referral will be based upon the subject matter contained in any amendment recommended by a reporting Committee as well as upon the original text of the bill or resolution.

Respectfully,

DAN ROSTENKOWSKI,
Chairman.

Mr. HELMS. Mr. President, it will be noted that in the letter to the Speaker of the House of Representatives, Chairman ROSTENKOWSKI requested the Speaker to refer sequentially to the Ways and Means Committee any bill dealing with dairy price supports if it contains any amendment banning or limiting the importation of casein. Let me quote a paragraph from that letter just for purposes of emphasis:

In addition to the fundamental jurisdictional questions involved in this matter, imposition of any trade restraints on casein at this time would not only impede the passage of the price support bill but would create serious trade problems with certain of our trading partners. Countries where we fequently have trade surpluses would inevitably turn to compensation under the Trade Act of 1974 and the General Agreement on Trade and Tariffs.

Now, Mr. President, I say again I genuinely dislike having to oppose my friend from Montana on any matter. But the situation is so clear in the instance of his amendment that I am hopeful we can reach a resolution.

I simply do not feel that the majority of Senators want to kill this bill, but the fact is that the Melcher amendment is a killer amendment, and the fact is that this chairman and, I hope, a sufficient number of Senators, will bear in mind the unique circumstances that exist legislatively with respect to the Melcher amendment, and probably with most of the other amendments that I understand may be proposed.

The majority of Senators, including the distinguished Senator from Montana, Mr. MELCHER, want the economy of this country turned around and inflation brought under control. I am persuaded that this bill, S. 509, is an important first step in that direction.

That is why, Mr. President, I regretfully oppose the Melcher amendment, but I oppose it with the greatest of friendship of my colleague from Montana and I know he understands my position.

I thank the Chair and I yield the floor.

Mr. MELCHER. Will the Senator yield?

Mr. HELMS. Certainly.

The PRESIDING OFFICER. The Senator from Montana is recognized.

Mr. MELCHER. Mr. President, I want to ask the Senator to yield for a question.

Mr. HELMS. Mr. President, the Senator has the floor. I will be happy to answer the question if I know the answer to it.

Mr. MELCHER. Mr. President, the chairman has just stated that the amendment would hamper action in the House. In fact, the Senator used a very drastic term—"killer."

As the Senator probably is aware the Speaker of the House would determine whether or not there was a sequential referral of a bill. Is the Senator not aware of that?

Mr. HELMS. Mr. President, I think that is correct. I wish to pay my respects to the distinguished leader of the House, because he feels, as we do, that a clean bill should emerge.

Mr. MELCHER. Mr. President, is the Senator also aware that, if the Speaker should consider sequential referral of the bill, he often imposes a time limit on that referral and asks for the bill sequential referred to be reported back during that time limit? Is the Senator aware of that fact?

Mr. HELMS. Mr. President, the distinguished Senator having been a Member of the House, which the Senator from North Carolina has not been, is, of course, more familiar with the House rules than I am. But I am sure the Senator is correct.

Mr. MELCHER. Mr. President, is the chairman aware of the fact that in 1956, on the question of the restriction on the imports of cotton under section 22 of the act which we are using in this amendment, there was not any consideration at all of sequential referral. It was only considered by the Agriculture Committee?

Mr. HELMS. Mr. President, I will have to check on that.

Mr. MELCHER. Mr. President, I thank my chairman for responding.

Mr. HELMS. Mr. President, I cannot answer that.

Mr. MELCHER. Mr. President, I merely wish to establish the point that we are here this week discussing the amendment on March 19. We have had a vote and it was not tabled. It was not allowed to go to a final vote at that time. Opponents wanted more discussion on the amendment and, in order to be fair to Senators who could not be here today, looking at a rather friendly and sentimental journey to the great Northwest to be with a former colleague of ours, Senator Magnuson, we are deferring votes until Tuesday on it. Meanwhile, the House is considering their own version of the bill. So it is moving.

But regardless of what we do on Tuesday, there is still time for the House of Representatives to consider the amendment—our amendment may be attacked—and we will respond back one way or the other. If the House wants a sequential referral and the Speaker wants to hold it at the desk, that is the way it will be held. That is the way the Speaker operates. If he wants it to go to a committee or two, it will go to a committee or two. The Speaker is certainly within his prerogative and within all precedents to have the bill reported back by a certain time. And there is plenty of time, as I have seen the House operate, between next week on Tuesday and the 1st of April for the Speaker to let the House work its will and whatever has to happen to happen and the bill will be on the President's desk by April 1.

I wish to point that out, because I do not want the impression left that somehow we are under such a time constraint that if we allow the Senate to use its best judgment on this amendment, we are somehow hampering the President's

program. In fact, I think the merits of the argument are on our side. If we do adopt this amendment, we are going to really help the President in an additional way to avoid Federal outlays.

Mr. HELMS. Mr. President, my friend has stated his point of view. I would point out to him that next Tuesday will be March 24 and that would leave, as I count it, 5 days until April 1, which is the day that the Secretary of Agriculture must, under the law, announce his decision.

I know that the Senator would probably feel very comfortable about such a constrained time situation, but those of us who are interested in this legislation do not feel so comfortable.

Mr. HUDDLESTON. Will the Senator yield?

Mr. HELMS. Of course. I yield the floor, as a matter of fact.

Mr. HUDDLESTON. I thank the committee chairman.

The PRESIDING OFFICER. The Senator from Kentucky.

Mr. HUDDLESTON. Mr. President, I wish to comment briefly on two of the assertions that have been made regarding this particular amendment and the bill we are now considering.

It has been said that this amendment is not related to the content or the intent of Senate bill 509. Well, Mr. President, if the purpose of Senate bill 509 is to reduce expenditures, as I believe that is the major purpose, then the amendment by the distinguished Senator from Montana is related because it too is designed and will save Federal expenditures.

We have heard the figures projected in the neighborhood of $160 million. That is somewhat higher than is expected to be saved by the bill itself, S. 509, in denying the scheduled increase for dairy support prices on April 1.

So it is an amendment that does serve the purpose and actually increases considerably the result of cutting Federal expenditures.

Now, also S. 509, for those who seriously look at the dairy price-support program, makes certain changes that some of us believe would be helpful to the program itself, a program that has been successful. It has stabilized prices. It has continued to provide the American consumer with a dependable supply of quality dairy products, but one in which we have seen the cost to the Government increase dramatically over the past couple of years. Those of us who deal with commodity programs and price-support programs know that when a program gets out of balance to the extent that the cost of the Government becomes very large and that program was in jeopardy, some adjustments need to be made to bring it back into line so that its original purpose can be fulfilled without imposing an undue burden on the taxpayers of the country.

So S. 509 does that. It does make that adjustment. It keeps the program from becoming more expensive and more burdensome. It reduces the potential amount of surplus dairy products that would come into the hands of the Federal Government, thereby potentially causing a greater loss as they may or may not be able to dispose of those products at a profitable price.

So S. 509 does deal with adjusting the program.

The amendment by the Senator from Montana also deals with the overall program affecting the dairy farmers of this country. It seems to me that if you are going to take from them with one hand, and you have an opportunity to restore something with the other hand that costs the Government nothing but in fact saves the Government, that it is proper and prudent to attempt to do that. The whole package of dairy legislation and dairy policy should be considered.

So it is a related suggestion that while with one hand we reduce the income, or the potential income, to the dairy farmer, with the other hand we try to provide for them some assistance that would mitigate at least a circumstance under which they are dealing now at a tremendous disadvantage with foreign producers.

Senator MELCHER'S amendment is totally related. As a matter of fact, I do not in good conscience see how you can consider the first issue without considering the second. I would like to see even a more extensive review of the dairy program. We have asked from the administration what their intentions are toward the end of the year or later on as we begin to consider the total farm package and particularly the dairy package, just what their intentions are relating to dairy policy in the country. There are other things that could be considered and could be done that would cost the Treasury nothing but which would be of tremendous help to the dairy farmer. It would give him encouragement, it would increase his income, and it would help hold down the cost of the overall dairy price-support package.

So they are related and very closely related, and should be related and considered, in my judgment, in conjunction with each other.

The Senator from Montana has already responded to the contention that his amendment is a killer amendment, one designed, presumably, to kill the underlying piece of legislation, to prevent it from passing or allowing it to pass in such a manner or in such a condition that it would be unacceptable.

I do not see the logic at all in this supposition. I think the House would accept this amendment.

We certainly do have time, even on next Tuesday, the 24th day of March, to have the House continue its deliberations, complete its deliberations, and go to conference. We have seen how quickly this body and the House together can act when it is urgent to do so. We would have ample time to complete the deliberations on this measure and have it on the President's desk before the April 1 deadline.

I see no reason why this would be a killer amendment in any regard. That is usually a ploy that is used by those who oppose an amendment to a particular piece of legislation which is always suggested or many times suggested, that, "If you accept this amendment, you run the very strong risk of losing the entire bill because of the House" or because it would not be acceptable to somebody. That is stated much more often than it is actually put into effect.

I see no reason for us to be concerned that we are going to kill the overall objective that I think the vast majority of this body agrees with, which is reducing Federal expenditures with this particular amendment. Quite the opposite is true: We will give the administration a great boost in its budget-cutting efforts by adding this amendment which will save more dollars than the original bill itself will save.

I urge that the majority side permit an up-or-down vote on this amendment at the earliest opportunity. I do not know what the outcome will be. A majority of the Members were not willing to table it. They did want the opportunity to consider it. But I do not know what the final outcome will be.

It seems to me the way to expedite this process and the way to make sure we do not get into a time crunch at the end of the month is to go ahead and dispose of this matter with a vote in the Senate, to let the Senate work its will. Then we will be prepared to move on.

Mr. President, I yield to the Senator from Nebraska.

The PRESIDING OFFICER (Mr. PRESSLER). The Senator from Nebraska.

Mr. DOLE. Will the Senator from Nebraska vield me 2 minutes?

Mr. ZORINSKY. I am hapy to yield.

Mr. DOLE. I have listened to the debate and, as I indicated before, I am generally in sympathy with anything proposed by the distinguished Senator from Montana.

It would be my hope that between now and Tuesday we can work out some accommodation. I am not certain just what that might be. Then we could perhaps avoid voting on the merits.

It seems to me that the amendment will be defeated on the merits, but notwithstanding that I think there are things that can be done if the administration is willing to give the right signal. It might not fully satisfy the Senator from Montana, but it might satisfy others. It would be a positive signal to the dairy industry that we understand the importance of the importation of casein and other derivatives.

I just hope that between now and the time set for a vote we might find some compromise which the majority of us might agree upon.

I thank the Senator from Nebraska for yielding.

AMENDMENT NO. 9

(Purpose: To remove the Soviet grain embargo unless the President takes certain action)

Mr. ZORINSKY. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Nebraska (Mr. ZORINSKY), for himself, Mr. MELCHER, Mr. ANDREWS, Mr. BURDICK, Mr. BAUCUS, Mr. BOREN, Mr. EXON, and Mr. PRESSLER, proposes an amendment numbered 9.

The text of the amendment follows:

On page 1, immediately after line 5, insert the following:

SEC. 2. (a) Notwithstanding any other provision of law, effective April 30, 1981, the restrictions on the exportation of agricultural products to the Union of Soviet Socialist Republics imposed on January 7, 1980, shall expire unless, prior to such expiration date, the President certifies to Congress that—

(1) the continuation of such restrictions is necessary to further significantly the national security and foreign policy interests of the United States; and

(2) the continuation of such restrictions will not have an undue adverse effect nor unfairly impose a discriminatory burden on the agricultural economy and the farmers of the United States.

(b) If the President does not make the certifications provided for in subsection (a) of this section, the President may, nonetheless, delay for a reasonable time the date of expiration of the restrictions and resumption of normal grain trade with the Union of Soviet Socialist Republics by certifying to Congress, prior to April 30, 1981, that the President intends to negotiate a new bilateral grains agreement with the Union of Soviet Socialist Republics to replace the agreement that expires September 30, 1981.

Mr. ZORINSKY. Mr. President, the amendment I am offering with the cosponsorship of Senators MELCHER, BURDICK, ANDREWS, EXON, BAUCUS, BOREN, and PRESSLER would clarify for our country's farmers the outlook for grain exports during the next marketing year.

As spring approaches, farmers in some parts of the country are beginning to make difficult decisions about how much and which crops to plant. Seed and fertilizer must be purchased, credit obtained, and commitments made. In other parts of the country, the start of the winter wheat harvest is not far off. It is impossible, Mr. President, for a farmer to make a reasonable business decision in the current climate of uncertainty about grain markets.

The embargo on grain sales to the Soviet Union, imposed more than a year ago by former President Carter, has not—despite repeated campaign promises to the contrary—been lifted by President Reagan. Even if it were to be lifted, it is unclear whether any further sales of feed grains and wheat to the Soviet Union would be approved this marketing year. Moreover, the 5-year bilateral grain agreement with the Soviet Union will expire on September 30 of this year, leading to further uncertainty and confusion about the prospect of future sales to the Soviet Union.

The amendment I offer today would allow our country's farmers to assess the market situation, to make reasonable, informed determinations about the demand for their crops, and so to make sound planting and marketing decisions.

By the same token, Mr. President, the Agriculture Committees of both the Senate and House are in the process of developing a new comprehensive farm bill for the next few years. Such basic issues as the level of Commodity Credit Corporation loans, the operation of the farmer-held grain reserve, and whether or not to maintain target prices must be decided in the next few weeks.

Just as it would be impossible for the American farmer to make a sound decision about the demand for his crops, so it would be impossible for the Agriculture Committees and Congress to make reasonable decisions about the shape of farm policy during the next few years, without knowing if the Soviet market will be a factor. Rational policymakers cannot be expected to formulate long-term legislation except in the context of some market predictability.

The absence of a firm decision on the embargo of grain sales to the Soviet Union and the uncertain future of a new bilateral grain agreement may impair the ability of the Congress to develop appropriate and reasonable farm legislation.

The amendment I offer gives the President several options. First, as he has repeatedly promised, he could lift the embargo on grain sales to the Soviet Union by April 30, 1981; second, if the President determines that our country's foreign policy or national security compels the continuation of the embargo, he could continue the embargo by certifying that it is necessary and that it does not unfairly burden our Nation's farmers; and third, if the President intends to negotiate a new bilateral grain agreement with the Soviets, he may delay lifting the embargo for a reasonable period in order to facilitate the negotiations.

The purpose of the amendment is very simple and very straightforward. It will end once and for all the confusion about the availability of the Soviet market.

If the embargo is no longer considered vital, it will be lifted expeditiously and we can begin the long process of reestablishing our position in the Soviet market.

If, on the other hand, President Reagan believes it is in this country's best interests to continue to embargo, so be it. Our farmers will then know that the Soviet market is closed to them, that demand for their grain will be just that much less, and they will plant their crops accordingly.

Finally, if the embargo is a necessary bargaining chip in negotiations with the Soviets on a new, long-term grain agreement, the repeal can be delayed, but American farmers will be assured that the Soviets will again be a reliable customer of U.S. farm goods.

Clearly, Mr. President, some action on the embargo is necessary, and this amendment is designed to prompt it.

A few weeks ago, one of my distinguished colleagues offered a similar amendment to the debt ceiling bill. I endorsed that amendment, as did many of my colleagues. It is unfortunate that the Senate did not have an opportunity to vote on that amendment, but I understand why it was withdrawn. President Reagan indicated at that time that a decision on the embargo would be forthcoming; he promised to confer with Members of Congress on the issue, and indeed he did confer with them. Nevertheless, nearly a month has passed, and no decision has been made.

The American farmer deserves better.

There has been a great deal of talk in these first weeks of the Reagan administration about signals. It has been said that the voters sent a signal to Washington last November. It has been said that passing the bill we are considering today—S. 509—will send a signal to the country that this President and this Congress are serious about balancing the budget. Finally, it has been said that lifting the embargo now would send the wrong signal to the Soviets.

Mr. President, this amendment would send another signal—a signal to the White House to stop procrastinating and to make a decision.

I want to make it clear that this amendment would not in any way tie the President's hands. If the embargo is necessary for foreign policy or national security reasons, the amendment does not require its repeal. If the President believes he needs the embargo to negotiate a beneficial bilateral grain agreement, he may delay lifting it.

The amendment does not restrict the President's options. It simply, Mr. President, requires some definitive action. It asks the question American farmers have been asking for over a year.

And it requires a decision.

Mr. MELCHER. Mr. President, I am pleased to sponsor Senator ZORINSKY's amendment. There has been a great deal of speculation in recent years about the possible use of this country's food production as a diplomatic weapon in the conduct of foreign policy. This issue has been a hot topic of discussion among academicians and foreign policy theorists.

The theory goes like this: Our grain exports to the Soviet Union have increased dramatically in recent years. As a consequence of this development, so the theory runs, the United States can gain diplomatic leverage and punish the Soviets by refusing to sell them American grain.

It is an interesting theory, but nobody bothered to ask our agricultural community what they thought the effects of such a policy would be. If they had, our farmers and ranchers would have told them that an embargo is a double-edged sword; it cuts both ways.

The partial embargo or trade suspension initiated by former President Carter in January 1980 was, in effect, a testing of this foreign policy theory. The test has not been a success; the double-edged sword only cut American agriculture.

Had the theorists checked with our agricultural producers, they would have discovered that American agriculture is not at all enthusiastic about embargoes of any kind. They have been the victims of the earlier embargoes—the soybean embargo of 1973, the Soviet embargo of 1974, and the Soviet and Polish embargo of 1975. These embargoes, carried out under Presidents Nixon and Ford, were in response to concerns over possible shortages of supply.

Many producers feel that these embargoes were carried out to hold down the prices of their commodities. An embargo has a drastic psychological effect on producers because it creates havoc with the stability of the marketplace. Beyond that it causes buyers to look for substitutes or other suppliers—which means the buyer is looking to our international competitors. Another result

is that production is opened up or increased elsewhere, as was the case with the 1973 soybean embargo.

Embargoes do not work unless a country has effective control over a market, or a wartime situation provides the same kind of market control.

The United States is the world's major grain exporter, but there are other exporters. The United States gained most of the growth in agricultural exports in recent years, but that took lots of work and our position at the top of the ladder is not so secure that we cannot fall back a rung or two.

Has the embargo hurt the Soviet Union? The embargo did force the Soviet Union to look for additional suppliers. Because the embargo distorted the world market, it is estimated that the Soviet Union may have had to pay as much as $1 billion more because it had to pay a premium to obtain Argentine grain. The Soviet Union had to go to more buyers and use more ships, causing logistical problems at Soviet ports. And, it is clear that the Soviet Union had to lower its planned increases in livestock production and this ran contrary to the promises of the Communist Party leadership.

Nonetheless, the bottom line is that the Soviets have obtained nearly as much grain on the world market as they would have had there been no embargo. Despite tight world markets the Soviets are easily getting around the embargo by buying elsewhere.

USDA estimates that, last year, the Soviet Union obtained 31 million metric tons on the world market, with the United States being the largest supplier at 7.9 million metric tons under the U.S.-U.S.S.R. grains agreement. USDA expects that this year, the Soviet Union will be able to import around 35 million metric tons. Of this amount, the United States is supplying 8 million metric tons.

The harvest in the southern hemisphere looks quite promising, and, therefore, the Soviet Union may not need to continue paying a premium to obtain Argentine grain. In addition, the Canadians are no longer effectively bound by the embargo, and they will be shipping increased quantities to the Soviet Union.

The embargo has limited our access to the Soviet market, and the world grain market has been redirected and destabilized. In short, the embargo stands like a rock on a beach with the tide and the waves rushing around and over it.

While the expanded export markets in Mexico and China have softened the impact of the embargo on U.S. sales, we clearly are offering our competitors a great advantage in yielding the Soviet market to them. We need to recognize that our competitors are willing to trade with the Soviets in spite of ideological differences.

The discussion since the election and the hesitation of the Reagan administration to follow through on its campaign promises to end the embargo seems to hinge largely on the question of how to appear tough with the Soviet Union. I find it rather discouraging that many of our so-called foreign policy advisors want to be tough with the property of others—our farm producers.

Our farmers do not appreciate being singled out to serve as a pawn in a diplomatic chess game. They particularly do not relish playing a game that cannot be won.

I expect that the Soviets would welcome discussions to negotiate a new grains agreement. Such an agreement could be of benefit to both countries, and lifting the embargo could be used to negotiate a sound agreement. I also hope that the views of our agricultural community would be taken into account in negotiating such an agreement.

I suggest that President Reagan disregard the advice of self-appointed foreign policy theorists such as the American Heritage Foundation, and begin to consult with the Nation's agricultural and trade groups. Our experience of the past 15 months convinces me that an embargo will not work as a tool of foreign policy.

This amendment offers the President several basic options, and it is flexible. However, he needs to realize the urgency of addressing this important issue. I hope he will keep his promises.

We are at an important crossroads on this decision. Our producers and our people deserve some answers.

Mr. ZORINSKY. Mr. President, I yield to the Senator from Kentucky.

Mr. HUDDLESTON. Mr. President, I thank the Senator for submitting his amendment.

Mr. President, the amendment that Senator ZORINSKY is offering today would provide the President three options.

First, he could lift the Soviet grain embargo by April 30, 1981;

Second, he could continue the restrictions by certifying to Congress that the continuations of such restrictions is necessary to further significantly the national security and foreign policy interests of the United States, and will not have an undue adverse effect nor unfairly impose a discriminatory burden on the agricultural economy and the farmers of the United States; and

Third, the President could delay for a reasonable time the date of expiration of the embargo by certifying to Congress, prior to April 30, 1981, that he intends to negotiate a new bilateral grains agreement with the Soviet Union to replace the agreement that expires September 30, 1981.

The President has indicated on many occasions that he intends to lift the Soviet grain embargo. It was a repeated campaign pledge. This amendment is flexible, and it gives him a number of ways to carry out his promises.

The first option would mean lifting the embargo by April 30, 1981. Many argue that the embargo has not been very effective, and that it will have even less effect on the Soviets as time goes on. Other countries are supplying more grain to the Soviet Union, and this trend will continue. Argentina expects bumper crops this year, and they will be in a position to export even more grain than last year.

In addition, it should be noted that lifting the embargo would not automatically open up additional sales of wheat and corn to the Soviets. Russia has already purchased the 8 million tons authorized this year under the bilateral grains agreement. Any additional sales of wheat and corn above the 8 million tons would have to be negotiated.

The second option offers the President the opportunity to continue the embargo if he should feel that it is necessary for national security and foreign policy reasons. But, he would have to first consider the effect of the embargo on farmers. He would have to certify to Congress that continuation of the embargo would not impose a discriminatory burden on farmers and the agricultural economy of the United States.

The third option offers the President the opportunity to continue the embargo in order to negotiate a new bilateral grains agreement with the Soviet Union. No time limitation is set, and the amendment only asks that the President indicate that he intends to negotiate a new bilateral agreement to replace the one that expires September 30, 1981.

Mr. President, our producers need some words as to what the administration plans to do so that they will know what to expect with regard to the important Soviet market. They also feel that, under the embargo, they have been singled out to bear the brunt of the Nation's foreign policy. Acceptance of this amendment would provide very valuable assurance to our agricultural community that action to correct the current intolerable situation will be taken.

I hope the Senate sees fit to accept this amendment. It points the President in the direction of resolving this important issue.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. COCHRAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COCHRAN. Mr. President, this Senator has opposed the Soviet embargo as vigorously as anyone in this body. I opposed it when President Carter imposed it last spring and I oppose it today.

President Carter should never have put on just a partial embargo. If there were to be an embargo, it should have been a total trade suspension. Farmers are among the most patriotic people in this country, but no one likes to be singled out to bear the burden. They are upset and I do not blame them.

That is why, Mr. President, I joined several of my colleagues in a visit with President Reagan in an effort to encourage him to either lift the embargo or to expand it to a total trade suspension with the Soviet Union.

The President has stated that the embargo will be lifted or expanded, depending on the developing relations with the

Soviets. The ball is in their court. I believe the President will keep his word and act at the appropriate time.

Now is not the time for Congress to force an action on the administration. I am confident that the embargo will be lifted or expanded when the time is right.

Therefore, Mr. President, I urge my colleagues to oppose this amendment.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ZORINSKY. Mr. President, I ask for the yeas and nays on the amendment I have just submitted.

The PRESIDING OFFICER. Is there a sufficient second?

Mr. DOLE. Mr. President, will the Senator from Nebraska withhold that until the Senator from North Carolina comes to the floor?

Mr. ZORINSKY. Mr. President, I withhold the request, and I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BURDICK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BURDICK. Mr. President, I urge all my colleagues in the Senate to support this amendment pending before us today. The embargo has not worked. It was originally imposed as a response to the Soviet invasion of Afghanistan, in my mind, an empty gesture—as the embargo surely was—is worse than no response at all.

President Reagan promised the American people that, if elected, he would end the embargo. According to newspaper accounts, the President has not made the decision to end the embargo because he was impressed by Secretary Haig's policy of "no concessions to the Soviets." I am not asking that we make concessions in grain sales to the Soviets. In fact, let us not make concessions. Let us sell them the stuff. Let us not give the Soviets any preferential credit or trade conditions. Rather, let us make it cash and carry—no concessions.

Pre-embargo estimates were that the Soviets would need to import 34 million metric tons in 1980 of feed grains, wheat, oilseeds, and protein meals. Soviet intentions were to maintain livestock numbers and improve milk and egg supplies. The Carter administration estimated immediately following the embargo that the Soviets would be able to import only 23 million metric tons. However, the Soviets were able to accquire between 30½ million and 32½ million tons. Additionally, the U.S.S.R. increased its beef imports from Argentina from 2.000 to 5.000 tons per month, thus permitting it to maintain desired livestock numbers. Plus, the 1980 Soviet harvest was about 15 million tons higher than expected.

So, the grain embargo has not been an effective response to Soviet adventurism.

While I do not like embargoes for foreign policy reasons, this amendent contains a feature that would permit the President to continue to embargo if he certifies to Congress that it is needed for foreign policy reasons. I think this feature is important.

The Soviets were able to acquire adequate supplies of grain and meat. To do that, standard trading patterns of the past 10 years were altered somewhat. It could be that those trading patterns will remain, even if the embargo is lifted.

I, for one, wish to see a thorough analysis of what those trading patterns are now, what the alinements of those trading partners are, what the mutual interests and concerns of the new alinements are, and what the future food needs and the capabilities for purchasing adequate supplies are. If such an analysis would show that the new trading patterns serve the interests of the United States, and if continuation of the embargo was needed to foster these patterns, then the President would be well advised to continue the embargo. Otherwise, it should be ended.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. ZORINSKY. Mr. President, I ask uanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 9

Mr. ZORINSKY. Mr. President, I ask for the yeas and nays on my amendment to S. 509.

The PRESIDING OFFICER. Is there a sufficient second? There is not a sufficient second.

Mr. DOLE. Mr. President, is that with the understanding that the vote on Senator ZORINSKY's amendment will follow any final disposition of the so-called Melcher amendment?

Mr. ZORINSKY. That is correct.

Mr. DOLE. Of course, that will not prejudice the right to table the Senator's amendment.

Mr. ZORINSKY. That is correct.

Mr. DOLE. Mr. President, I ask unanimous consent that that be the agreement.

The PRESIDING OFFICER. Without objection, it is so ordered.

Is there a sufficient second? There is a suffcient second.

The yeas and nays were ordered.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that the Senator from Michigan (Mr. RIEGLE) be added as a cosponsor of my amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 15

(Purpose: To amend printed amendment No. 9 to change the effective date)

Mr. ZORINSKY. Mr. President, I send a perfecting amendment in the second degree to my own amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Nebraska (Mr. ZORINSKY) proposes an unprinted amendment numbered 15:

At the appropriate places in the text of amendment No. 9, strike out the phrase "April 30, 1981" both places at which it appears, and insert in lieu thereof "April 15, 1981".

Mr. ZORINSKY. Mr. President, I ask for the yeas and nays on my perfecting amendment in the second degree.

Mr. DOLE. Mr. President, I ask unanimous consent that that be based on the prior agreement.

Mr. ZORINSKY. It will be the same understanding.

Mr. DOLE. It will be the same understanding that we first dispose of the Melcher amendment.

Mr. ZORINSKY. Certainly.

Mr. DOLE. Is it?

Mr. ZORINSKY. Most certainly.

Mr. DOLE. It is. All right.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. ZORINSKY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HELMS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 2 P.M.

Mr. HELMS. Mr. President, I move that the Senate stand in recess until the hour of 2 p.m.

The motion was agreed to; and the Senate, at 1:43 p.m., recessed until 2 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. RUDMAN).

Mr. MELCHER. Mr. President, I ask for the yeas and nays on my amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. MELCHER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HELMS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. EXON. Mr. President, as a cosponsor of the amendment offered by my senior colleague from Nebraska I support proposing a termination date for the Soviet grain embargo.

Mr. President, we are all aware that the embargo has not been effective. We are also aware of the pledge made by Presi-

dent Reagan to the farmers of this Nation that if elected he would immediately cancel the grain embargo. I along with other Members of this body met with the President last month in an effort to persuade him to keep that promise made last year and lift the embargo. He has indicated that he will not cancel the grain embargo in the near future; a major shift in his original position on this matter.

Mr. President, this is the first administration in history which has a grain embargo in place and has also taken steps to completely emasculate even minimum agricultural programs. Last night, during the Senate Budget Committee markup of the budget for the Department of Agriculture, I offered a motion to restore funds for the storage facility loan program and the interest waiver on grain reserve loans. These programs have been employed by the Carter administration to try to offset the adverse impact on the farmers caused by the grain embargo especially the interest waiver on reserve loans. My motion failed Mr. President, and the administration's figures phasing out this loan program and the interest waiver on grain in the reserve were adopted.

Mr. President, I suggest that this action is a clear sign that the President and his administration are embarking on a course to dramatically reduce the Government's even minimal farm program during a time when American agriculture is suffering severely from extremely high interest rates, dramatically further increased fuel costs brought about primarily by the President's expedited deregulation of oil, and other escalating production costs of the food producers and other double-digit inflationary pressures. All of this Mr. President at a time when agriculture prices are plunging. It is not generally known but the cattle feeder, right now, is losing between $50 to $100 per head. The hog producer is in about the same proportionate position. The grain farmer is in a precarious position, and for the record I would like to insert in the RECORD at this point, a full and accurate report from the Nebraska wheat growers showing conclusively that our wheat producers are receiving 48 cents less per bushel since the November election and 18 cents less than when the embargo was announced.

Mr. President, I ask that the report from the Nebraska wheat growers, to which I have referred, be printed in the RECORD at this point.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HOW DOES THE EMBARGO FIT INTO A FREE MARKET PHILOSOPHY?

"To say the Soviet grain embargo has outlived its usefulness is a gross understatement. The embargo's failure is soundly proven and now acknowledged by the General Accounting Office of the Federal Government," reports John Sullivan, Nebraska Wheat Committee Chairman.

"Certainly, maintaining the embargo falls short of fitting the free market philosophy now being applied to industrial and technical exports to the Soviet Union," adds Sullivan. "Continuing the embargo also seems clearly inconsistent with the deregulation of other major industries for the good of the country."

"Wheat growers started sacrificing in January of 1980. The rest of the country is now asked to tighten its belt but it's already a year behind. Ironically, weakening the agricultural economy hurts the urban American along with the farmer, and grain embargoes serve to kill the country's economic golden goose . . . ag exports," concludes Sullivan.

Mr. EXON. Mr. President, I think it is now time for agriculture to take notice and the alarm must be sounded of what effect the Reagan administration's budget recommendations will do to the agriculture economy and all connected directly or indirectly therewith. I suggest that the administration has no present intentions of adjusting support levels to more acceptable figures. The only thing that can save our agriculture sector from the present intentions of the administration is unanticipated crop failures in other countries.

I believe that the agriculture funding levels recommended by the administration and rubber stamped by the majority of the Budget Committee will allow the Senate Agriculture Committee, charged with the responsibility of recommending a new farm program, virtually no flexibility in terms of the provisions in the farm program. There will be no room for needed higher support prices. There will be no room for meaningful setasides or diversions. There will be no room for conservation, research, or disease control programs. There will be no room, period.

Mr. President, I believe the message must go out to the farmers of this Nation that the President has embarked on a negative course for agriculture. I also believe it necessary for the administration to be put on notice that there is great concern for the survival of family sized agriculture as we know it today.

Mr. President, I speak on this matter with some expertise. I speak also as a Democrat who has established the credentials of nonpartisanship on farm policy. Regardless of party affiliation, there was no Senator who spoke out more forcefully on what I considered ill-advised agriculture policies, or lack thereof by the Carter administration. My point is that the current administration is currently leading us farther down the road to economic ruination for agriculture than was ever possible in the near-term past.

I believe we must adopt this amendment to end the embargo and send a message to the President of the United States that we in this body expect him to make good on his promise and cancel this grain embargo which has caused such harm in our agriculture community, and we will thereby be taking the first step for the legitimate protection of this Nation's most valuable economic asset, our great food-producing plant.

I have strongly supported the President's cutbacks, and the Senate Budget Committee, which has just completed its work, has exceeded the President's cuts by $2.3 billion. But I have serious objections to some of the tentative spending decisions, because in this headlong dash to cut, we have not carefully weighed our priorities. I object to rubber stamping without due consideration of important farm programs.

Mr. President, I yield the floor.

Mr. HELMS. Mr. President, I ask unanimous consent that the pending legislation be laid aside.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, not to extend past the

hour of 3 o'clock, in which Senators may speak for not to exceed 10 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

TESTIMONY OF SECRETARY OF STATE HAIG ON FOREIGN ASSISTANCE

Mr. PERCY. Mr. President, today, before the Committee on Foreign Relations, Secretary of State Alexander Haig testified for the first time since his confirmation hearing. He testified, appropriately, on the fiscal year 1982 State Department and all foreign assistance authorization requests to be made by the administration. I consider the testimony by Secretary Haig today and his response to Senators to be as creative, imaginative, bold, and incisive as the foreign policy of any administration to date. That foreign policy, as enunciated by the President and by Secretary Haig, has clearly delineated what American interests are and what the interests are of our allies and friends around the world.

Mr. President, a sense of firmness is needed today in a troubled world, where we have an adversary that does have some commonality of interest with the United States. We hope that the common ground between us can be found. We also must show our resolve, however, in areas where the Soviets choose to confront our interests and principles. We cannot let Soviet adventurism go unchallenged.

Mr. President, this brings me to the question of U.S. foreign assistance.

The programs included in the administration's foreign aid requests are designed to meet the Soviet challenge as well as to provide assistance to the needy of the world. Military and security assistance provide friendly nations with immediate assistance in obtaining military equipment for their defense and economic support for domestic stability. Development assistance, both bilateral and multilateral, help developing countries carry out longer term development programs aimed at improving the lives of their people and creating sustained economic growth. Our refugee and disaster assistance programs provide humanitarian support for those struck by circumstances beyond their control. And finally, the State Department authorization allows our diplomatic corps to perform increasingly important and sometimes physically dangerous tasks around the world. Realistically, these programs, which we will be reviewing in detail, must been seen as complementary to the defense budget in terms of their impact on U.S. national security and the nature of the world which our country will face in the future.

As important as these programs are, we also all know we are facing difficult economic circumstances, and it is imperative that we maintain as lean a Federal budget as possible in all areas. The budget proposed by the President for the international affairs function already represents a $1.7 billion reduction from the 1982 fiscal year budget presented a few weeks ago by President Carter. During our series of hearings we will look carefully to see if there are further economies which might be made.

Mr. President, I ask unanimous consent that Secretary Haig's testimony before the Foreign Relations Committee be placed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SECRETARY OF STATE BEFORE SENATE FOREIGN RELATIONS COMMITTEE

It is a great honor to appear before the Senate Foreign Relations Committee as Secretary of State.

As members of this Committee, you are aware that the conduct of foreign policy and exercise of influence requires many tools. It is the role and purpose of one of these tools—security and development assistance—that is the subject for discussion today.

Security and development assistance should be seen in the context of the international challenges that confront us and the foreign policy we have devised to overcome them. Today's world presents the United States with three prominent trends. First, power is diffused widely among many nations and some are prepared to use violence to advance their ends. Second, we and our allies are now more vulnerable to international unrest and violent change. Third and most dangerous, the growth of Soviet military power in now capable of supporting an imperial foreign policy.

The last trend is most alarming. Soviet adventurism in the Horn, in South Asia, in the Persian Gulf, and in Southwest Africa appears to conform to a basic and ominous objective: to strike at countries on or near the vital resource lines of the West.

The depressed world economic condition is equally familiar to you. The spiraling cost of oil has been a punishing blow to all nations. It has been particularly crippling to the developing nations. It is estimated that developing countries paid $50 to $60 billion in 1980 for their oil imports. Adding to this burden is another $50 to $60 billion in trade deficits. All of this comes at a time when world population will increase by half in just the next 20 years—from 4.4 billion in 1979 to over 6.3 billion by the end of the century, with 90 percent of this increase in the poorest countries. Economic dislocations of this magnitude create conditions for violent disruptions, with dangerous political consequences.

Our response to these challenges must incorporate several elements if we are to advance our international objectives. We require:

A strong, prosperous and productive American economy, because we can do little to help others if we are disabled ourselves;

An American defense posture that restores the confidence and determination of friends, and that deters adversaries from pursuing adventures; and

The resources to protect our international security interests and to promote peace and prosperity abroad.

The President has proposed a far-reaching and dynamic program to restore the health of the American economy. I fully support his proposals.

The revised defense budget which the Congress will review in a short time is designed to revitalize our Armed Forces and rebuild our capacity to defend our vital interests.

The third element, resources to promote our security and economic interests, is the reason for my appearance before this Committee today.

Before going into the details of the Administration's foreign assistance request, let me say a few words about the general directions of our economic policy and how we will shape assistance programs to complement these policies.

First, in the formulation of economic policy, in the allocation of our resources, in decisions on international economic issues, a major determinant will be the need to protect and advance our security.

Second, we shall continue to work with other countries to maintain an open and accessible international economic system. This will include efforts to engage the U.S. private sector more fully in the economic development process.

Third, the United States will not forsake its traditional assistance to the needy of this world: the undernourished, the sick, the desperate refugee.

Fourth, there will be neither abrupt nor radical redirection of our international economic policies. Where necessary, policy will be changed in an evolutionary fashion, with minimal disruption and uncertainty.

Fifth, the United States will not abandon institutions and agreements devoted to global economic and political stability. The United States will continue to bear a fair share of the cost to maintain and operate international organizations.

I have asked Jim Buckley to coordinate the allocations of all types of foreign assistance in which the Department is involved. Let me give you an example of what Jim undertook for me in recent days. We wanted to allocate additional assistance to El Salvador and Jim worked with the various offices to put together the package of Economic Support Funds, Development Assistance, PL 480, etc. I see this as entirely consistent with my responsibility, under the President, for overall supervision and direction of our foreign assistance effort.

SECURITY ASSISTANCE

I referred a moment ago to the President's proposals for reconstituting America's defense capabilities. Our security assistance program goes hand-in-hand with this effort, and must enjoy equal priority. This is because the friendly states we support can themselves help us assure our most vital national interests.

For example, many of our security assistance partners enjoy a geographic proximity to the resources our economy demands. Others possess timely knowledge of complex regional events, and are best suited to understand these events and assure that they do not slip beyond responsible control. Finally, many of our partners have military forces trained and experienced in operating in difficult areas.

As we strengthen these states, we strengthen ourselves and, for the reasons just mentioned, we do so more effectively and at less cost. Friendly states can help to deter threats before they escalate into world-shaking crises. The issue is not whether a local state can single-handedly resist a Soviet assault. Rather, it is whether it can make that assault more costly, more complicated, and therefore potentially less likely to occur.

In practical terms, this means that the air defense system we help a friendly state develop could one day serve as a prepositioned shield under which Western relief forces would move. We hope that day never comes, and all of our efforts are aimed at preventing it. However, in judging the economic value of these programs it is necessary to recognize the connection that frequently exists between today's assistance and tomorrow's needs.

In examining our overall security and defense needs, we have tried to balance the requirement for budgetary stringency with the need to revitalize our international position. From this review we concluded that our national interests demand a significant funding increase for our security assistance programs and at increased levels above FY–81.

The President is requesting that the Congress approve $4.27 billion in budget authority to finance a total $6.87 billion security assistance program for FY-82.

Almost 70 percent of the program for FY-82 is for the Middle East, with Israel and Egypt as the largest recipients.

Let me say something about the importance of these two countries.

The security of Israel remains a major U.S. concern and a binding U.S. commitment. We are determined that Israel retain the military capability to deter threats from hostile forces. Moreover we recognize the importance of Israel to our developing regional strategy. Israel constitutes an important deterrent in the region and indeed can play a major role in countering the more serious threats involving the Soviet Union.

Egypt occupies a unique position in the Arab world. Egypt's population, her strategic significance and cultural eminence give her that place. It was an event of extraordinary import for the United States when President Sadat decided to turn away from the Soviet Union and become our friend. President Sadat has had the vision not only to see and deal with the larger Soviet threat but also to join the peace process with Israel. There is no alternative to a strong, Western-oriented Egypt.

Adequate defense capability for Israel, Egypt and other responsible Arab states will not only help deal with outside pressures but will support our objective of a lasting Middle East peace. Individual and regional insecurity undermines every prospect for peace.

Our programs in the Middle East and Persian Gulf area, working with such states as Oman, are designed to deter threats to both regional security and Western energy interests.

Our FMS assistance to Europe will focus on four European nations: Greece, Portugal and Turkey in support of their NATO roles and Spain in connection with our defense agreement and our use of Spanish bases. A sizeable economic support funds program is planned for Turkey as we continue to respond to that country's economic needs in cooperation with other donors.

Turkey and Greece are two of our most important allies. Greece and Turkey are important to each other's defense and as allies and friends both are indispensable to us.

In East Asia, Korea will receive a large amount of FMS financing for force modernization, with significant programs also scheduled for Indonesia, the Philippines, and Thailand.

In Africa, our equipment, training, and/or economic support will help to enhance the security of a selected number of states friendly to the United States.

It is clearly in our interest, for example, to help Sudan and Tunisia withstand pressures from Libya. This is important in its own right and vital to our larger interest. For as the threat to these important states mounts, so too—indirectly—does the pressure on Egypt, with all that means for the prospects for peace and for our broader regional strategy. This suggests a central point: The interrelationship between threats and events in different theatres. If we are to act with coherence and consistency, these interrelationships must be reflected in our own policies.

For Central America, the Caribbean, and South America we are recommending a total program of $212.6 million. Especially noteworthy are our efforts to support the Duarte Government in El Salvador, which we believe offers the best chance for a resolution of that country's conflicts.

The benefits of our security assistance program will be limited unless we have the necessary flexibility to use these resources effectively and efficiently. This includes being responsive to unforeseen and rapidly changing events. It is impossible, in March 1981, to predict with certainty where crises may erupt in the coming months. We are therefore proposing special requirements funds for the Economic Support Fund and Military Assistance Program and a number of amendments to legislation that would facilitate the achievement of our policy objectives. If we have the capability to respond quickly and adequately in those cases where security assistance would make the difference, the need for United States direct involvement might be reduced or eliminated.

I want to stress that giving us the capability to deal with contingencies is not a vehicle for denying Congress its proper and necessary role regarding policy oversight of security assistance programs. Rather, both branches should address seriously the relationship of these programs to our policy objectives and, working together, ensure that relevant legislation and funding authorities facilitate rather than constrain achievement of these objectives.

DEVELOPMENT ASSISTANCE

While security assistance is specifically designed to shape events and address short-term problems in counties and regions of major political importance to the United States, development assistance provides the United States with other opportunities to influence economic, social and political change abroad.

We remain committed to a strong Development Assistance Program as an integral element of our overall policy toward our international economic and security objectives.

US foreign policy interests should guide our allocation of foreign aid. But the humanitarian aspects of the Development Assistance Program should not be overlooked. As a cooperative partner helping to meet the needs of the developing countries we will contribute to the achievement of a variety of key US foreign and economic policy goals.

In our budget submission to Congress, a $1.9 billion AID program is requested.

Over 50 percent of the proposed Development Assistance Program will be used to alleviate malnutrition and hunger.

MULTILATERAL DEVELOPMENT BANKS (MDB'S)

Over the past two decades, a growing percentage of U.S. official aid has gone to support multilateral development banks (MDB's). We intend to meet our existing obligations to these institutions as we move, in an evolutionary way, towards a greater emphasis on bilateral rather than multilateral assistance.

In this process, we shall keep in mind that multilateral institutions carry out two major functions:

First, they mobilize additional capital from other donors for economic progress in developing nations, nations that are important to U.S. security and economic interests.

Second, they foster increasing efficiency in the international economic system by encouraging developing countries to adopt Western, market-oriented development policies that improve productivity.

The President is therefore requesting appropriation of $1.48 billion for MDB subscriptions and contributions for FY 82. Because this request has been held to the minimum it is essential to have your support for the full amount specified.

INTERNATIONAL ORGANIZATIONS AND PROGRAMS

Voluntary U.S. contributions to International Organizations and Programs are another important element of our foreign development assistance strategy. Among the important efforts in this area are the United Nations Development Program (UNDP) and the UN Children's Fund (UNICEF). These activities provide basic technical, health and educational assistance to developing countries.

STATE DEPARTMENT BUDGET

Before concluding my statement today, I would call your attention to a crucial tool for the execution of our foreign policy; the budget of the Department of State. The Fiscal Year 1982 request for the Department reflects our commitment to economize. The entire $2.5 billion proposed budget is essential if we are to discharge our global foreign affairs responsibilities. The Under Secretary of State for Management, Richard T. Kennedy, will be coming before you to present and explain our authorization request, and he will be at your disposal to answer all of your questions regarding the State Department budget.

CONCLUSION

The program presented to you today represents our best judgment of the resources required to carry out our activities in these austere times. Cuts were made in the Development Assistance Programs totalling over a billion dollars, a 26 percent reduction from the previous budget—equalling if not exceeding reductions proposed for the domestic agencies.

For the past two years Congress has failed to enact a foreign aid appropriations bill. This has caused us substantial difficulties. We have been forced to neglect vital aspects of our assistance programs; U.S. foreign policy interests have been undermined. We should work together in the authorization and appropriation of these fiscal year 1982 foreign aid requests to assure a U.S. partnership with the nations that strengthen our common economic and security interests.

TESTIMONY OF UNDER SECRETARY OF STATE STOESSEL ON EL SALVADOR

Mr. PERCY. Mr. President, on Wednesday, March 18, the Committee on Foreign Relations held hearings on the present difficult situation in El Salvador. Under Secretary of State for Political Affairs Walter J. Stoessel, Jr., and other administration witnesses testified and responded to questions on administration policy.

Secretary Stoessel's clear and eloquent testimony during our hearing persuade me that present administration policy is both reasonable and responsible. Indeed, there are signs that this policy is experiencing some successes. Needless to say, of course, the situation in El Salvador remains difficult and will require our careful monitoring for some time.

Both Secretary Stoessel and Lt. Gen. Ernest Graves of the Defense Security Assistance Agency maintained that the administration believes that the present levels of military assistance to El Salvador (which total $35.4 million for 1981 and $26 million being sought for 1982) will be adequate to equip the Salvadoran military to deal with the guerrilla situation. Secretary Stoessel noted that the flow of arms from Nicaragua appears to have slowed substantially in recent days. We can only hope that this continues to be the case, allowing the moderate government in El Salvador to further consolidate and extend its program of reforms.

All witnesses agreed that the guerrillas' so-called final offensive in January was a failure and that popular sup-

port for the government of civilian President Jose Napoleon Duarte was increasing. Early indications are that phase 1 of the Government's land reform program has been successful and that crop harvests will at least remain at past levels, in spite of the guerrillas' efforts to disrupt the harvest. This is an important sign of the future potential of this program.

In short, Secretary Stoessel and General Graves both argued that they were confident that present limited programs were taking hold successfully; that our involvement in El Salvador would remain at its present low levels and that the Duarte government should be able to consolidate its influence over time.

With respect to the investigations of the murder of the four American religious persons, I was encouraged by the testimony of Frances Mullen of the FBI that the investigation has the full cooperation of the Duarte government. Evidence from the murder site is currently being analyzed in the FBI laboratories here in Washington. This includes several fingerprints from the Americans' van which the FBI is hopeful will permit the Salvadoran Government to identify the assassins.

Mr. President, I would like to share Secretary Stoessel's excellent statement on the present situation in El Salvador with my colleagues. I ask unanimous consent that his statement be placed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON EL SALVADOR BY THE HONORABLE WALTER J. STOESSEL, JR.

Mr. Chairman and members of this distinguished Committee, I welcome this opportunity to review and discuss with you the measures this Administration is taking with regard to El Salvador. I will summarize their main elements and the rationale for them. Afterwards, my colleagues and I will be happy to respond to your questions and comments.

Our actions with regard to El Salvador have as their goal the reduction of violence and instability in order to facilitate a peaceful transition to an elected government. This is the goal of the Salvadoran people and of their current government, headed by Christian Democratic President Jose Napoleon Duarte, which we strongly support. Having already promulgated a far-reaching agrarian reform and changes in the banking system and export trade, the government last week moved the country closer to elections when President Duarte appointed an Electoral Commission.

These important reforms will contribute to the reduction of violence and political instability in the longer term. In the short-term, however, some landowners availed themselves of traditional ties to local security forces, while Cuban-supported guerrillas attempted to exploit popular resentment of past authorities. Both these extremes sought to undermine the reforms through violence, but for different reasons. The landowners wished to restore the status quo ante; the guerrillas saw that reforms were winning away their popular support and recruitment base.

In recent months, our understanding of the situation in El Salvador has changed with the discovery that large quantities of arms and munitions were being supplied to the guerrillas. Last summer and fall, far away Vietnam, Ethiopia and some Eastern European countries joined Cuba to take the initiative to transform an essentially domestic conflict in Central America into an international confrontation. These outside efforts to impose an unpopular military solution proved unacceptable to the Salvadoran people, who rejected the guerrillas' appeals for support The Carter Administration acted once it acquired the evidence. We have done likewise.

The United States cannot stand idly by while a reformist government comes under attack by externally advised and armed guerrilla groups that lack popular support. If we fail to make clear that the external encouragement of violence and instability in El Salvador will have serious costs, we ensure that other countries seeking domestic solutions to domestic problems will find their efforts thwarted by guerrilla groups advised and armed from abroad. In turn, our failure to respond adequately to externally supported attempts to overthrow governments committed to reforms and to electoral solutions would cause other friendly countries to doubt our ability to help them resist assaults on their sovereignty.

While the guerrillas in El Salvador are externally supported, they also feed on domestic ills. These include years of repressive and unresponsive governments and inequitable distribution of resources and life opportunities. For this reason, the major emphasis of our assistance program for El Salvador is economic rather than military. The government of El Salvador welcomes this emphasis. Since October 1979, Salvadoran authorities have been committed to leading their country to democracy. To that end, the Duarte government is today working to carry out basic economic reforms.

We strongly support these efforts, financially as well as morally. On the economic front, we provided roughly $58.8 million in FY 80 for the government's reforms and its programs for the most needy. The Carter Administration had planned to provide about $63 million in FY 81 to create jobs through public works, to feed the hungry, and to improve health, education, and housing. An intensive interagency study has now concluded that additional economic aid to El Salvador will be necessary. We will be consulting further with the Congress on this. At this point, it appears likely that additional assistance in the range of $60 million will be needed this year. At that level, economic assistance would be more than three times larger than our military assistance. For FY 82, we will request the Congress to make available between $80–$100 million in economic assistance to ensure the continued viability of the reform process.

Our aid is designed to help the Duarte government eradicate the chronic social and economic ills that have fostered unrest. El Salvador's needs are enormous and pressing. We hope that our allies and other friendly countries—many of whom have themselves urged that socio-economic needs not be neglected—will go beyond exhortations and join us in providing economic assistance to El Salvador. The general climate of violence and the guerrillas' purposeful destruction of foodstuffs, electrical installations, communications lines, vehicles and roads have cut deeply into El Salvador's production and growth. The suffering of the Salvadoran people in this chaotic situation requires a compassionate response from us and from all civilized nations.

Now let me address our security assistance efforts. We are providing the necessary military assistance to the Duarte Government in its battle against the externally-supported guerrillas. Let me assure you that we are doing this with the greatest prudence and caution and with the lessons of the past very much in mind. El Salvador is not another Vietnam. Our objectives are limited: to help the government with its problems of training, equipment repair and maintenance, mobility, and resupply. Let me quickly review our assistance effort to date.

Prior to January 16 of this year, the Carter Administration had confined defense aid to El Salvador to nonlethal equipment like trucks and radios. It also had provided training for selected Salvadoran officers and had sent a number of training teams to Salvador. On January 16, after a week of hard fighting initiated by the guerrillas with the aid of externally-supplied arms and munitions, President Carter authorized the provision to El Salvador of some arms and munitions—the first such U.S. shipments since 1977—to replace some of the stocks depleted during the guerrilla offensive. President Carter also provided six helicopters and sent a dozen U.S. military technicians to train Salvadoran helicopter pilots and maintenance specialists.

Since taking office, the Reagan Administration has carefully reviewed and assessed the needs of the Salvadoran armed forces in consultation with President Duarte and his government. We have made a grant of articles and services valued at $20 million and have notified Congress of our intent to reprogram $5 million in additional FMS loan guarantees. This additional assistance includes sending a small number of personnel on temporary duty to help train the Salvadoran army and navy. One six-man team will help with repair of ships and ship-board equipment for coastal patrols; five men have been added to an operations planning assistance team in El Salvador since January; five will supplement the U.S. Military Group in its largely administrative duties; and three teams of five men each will help provide in-garrison training for the Salvadorans' new quick raction force. These additional training specialists will bring the total number of U.S. military personnel working with Salvadoran forces to 54. Although in a country torn by violence no place is totally safe, all U.S. trainers will work in some of the safest places in El Salvador: military garrisons and regional command centers. For FY 82, we are requesting $25 million in FMS financing for purchase of weapons and military equipment and $1 million for IMET training. Additional grant military assistance is not contemplated at this time.

We believe that the level of security assistance we are providing is commensurate with the need; it responds in every instance to the Duarte government's requests. While the January offensive was successfully repelled, the guerrillas continue to pose a serious military threat. Estimates of the number of guerrillas are around 4,000 with approximately 5,000 irregulars. The government's regular armed forces—the recipients of our security assistance—total about 9,000. Various police or constabulary forces have a similar combined strength.

It has been alleged that our support goes beyond minimum requirements, that the armed forces of President Duarte are successfully defeating the guerrillas, and hence that no further U.S. assistance is called for. Experience has shown, however, that for our support to be credible, it must respond not only to the present situation, but to the potential of the other side to create further violence. It takes time for new equipment to be absorbed and training to take effect. We must anticipate future needs rather than being merely reactive. There is, thus, an element of deterrence built into the level of our total support.

In giving military help to El Salvador, we are most mindful of our obligations to you under the terms of the War Powers Resolution. The activities assigned to our military personnel in El Salvador do not call for them to "command, coordinate, participate in the movement of, or accompany" Salvadoran forces at any time or place where involve-

ment in hostilities is imminent. The U.S. personnel are specifically instructed to avoid situations of potential hostilities, and our assessment of the risk at the locations where they will be assigned is that there is no imminent likelihood of hostilities involving these U.S. personnel. The assignment of our training personnel to El Salvador is not, in our view, "an introduction of U.S. armed forces into hostilities or a situation where imminent involvement in hostilities is clearly indicated by the circumstances"—the standard of the War Powers Resolution. We will seek to keep the Congress fully informed of the circumstances in El Salvador affecting the safety of U.S. personnel, and, I repeat, we will always consult with you on U.S. assistance to El Salvador.

Our economic and military assistance are both important for an eventual political resolution of the conflict in El Salvador. A peaceful outcome will require both greater social justice and greater stability under the law. To this end, we continue to impress upon the government the importance of finding and bringing to justice the murderers of the four American Church women and two AIFLD agrarian reform specialists.

We also support President Duarte's offers to discuss with opposition leaders and with business, labor and church groups within El Salvador what structures and guarantees will best ensure open elections next year. We cannot, of course, participate directly in any negotiation process that would compromise the sovereignty of El Salvador and the right of its government to negotiate on its own behalf. We are strongly committed, however, to a peaceful transition to an elected government and oppose any and all attempts to deprive the Salvadoran people of their right to elect a government of their own choosing. We firmly oppose any kind of coup against the centrist government.

In our view, the Duarte government provides the best opportunity for a transition to a political system that will offer the Salvadoran people some measure of control over the decisions that affect their lives. We support it for that reason. In El Salvador, as in any country, we have to deal with the political possibilities as they exist now. There are three alternatives in El Salvador today—the forces of the extreme right, the forces of the extreme left, and the present government. Of these, the Duarte government is the only one that promises to lead a transition to full constitutional order. Should it come to power, the extreme left would probably create a government modelled, like Cuba's, on the Soviet Union. Such governments can vary among themselves, but we do know from history that they have an unusual ability to establish a rigid grip. To passively accept a Cuban-coordinated attempt to impose their kind of political order by force of arms would be to close off all but one narrow path for the future development of the Salvadoran people. This is what we want to help prevent.

In summary, we believe the measured steps we have taken and have proposed are reasonable and responsible. They are carefully designed to contribute to a lessening of the violence and instability that threaten the social and political reforms the Duarte government has courageously undertaken. I hope that we will have the support of the Congress, and of this Committee, as we proceed to develop U.S. policy toward El Salvador and the region.

SALT NEGOTIATORS: TAKE NOTE

Mr. HELMS. Mr. President, on the front page of this past Saturday's Washington Post appeared an interesting article which gives an insight into the Soviet mentality on how to handle even the smallest confrontation.

The essence of the story is that the Soviets tried to import a couple of "ringers" or expert volleyball players in order to defeat the Brazilians in the local Embassy volleyball league. As the story unfolded, I was delighted to see that the Brazilians called attention to the stacking of the deck and the attendant publicity caused the Soviets to reverse tactics.

The volleyball crisis passed, but I hope that all those American diplomats who will sooner or later be negotiating SALT and verification practices and procedures will take note of this incident. For that purpose, Mr. President, I ask unanimous consent that the article from the Washington Post be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S SPORT TO SOVIETS—BRAZILIANS MIFFED AT RIVALS' VOLLEYBALL TACTIC

(By Donnel Nunes)

To hear the Brazilian Embassy volleyball team tell it, it was just about the sneakiest Russian maneuver since the invasion of Afghanistan. To hear the Soviet team captain tell it, it was nothing more than a joke.

Trouble is, no one else is laughing: Not the Brazilians, and certainly not Anna E. Honabach, a kindly and elderly Washington recreation department official who has suddenly found herself in the middle of a not-so-diplomatic squabble.

At stake is the championship of the Embassy Volleyball League, a title that is hotly contested by a half-dozen to dozen embassy teams each year and is routinely won by the Soviets. In fact, not only have they been embassy champions since the mid-1970s, but for four years they have not even lost a game.

That is, until this year when the Brazilians beat them in their first meeting. All the Brazilians have to do to be champs is hold off the Russians in their final confrontation this coming Tuesday.

A few days after the Brazilian victory, however, Honabach, who organizes the league each year and oversees the games that are played in Georgetown's Duke Ellington School, received a revised Soviet Embassy team roster. Two new names—Alexander Savin and Pavel Selivanov—were included.

They didn't mean anything to Honabach, but they sure did to the Brazilians.

Listen to what the September 1978 issue of Volleyball Magazine had to say about Savin:

"Alexander Savin is the most incredible volleyball body on a [Soviet national] team full of them. He is 5' 7", 21 years old, and has logged more air time [as a leaper] than most TWA pilots.

"In career kills he trails only Joseph Stalin in the Russian record books. In the World Championships, Savin unveiled his new hobby, blocking serves. When other teams try tough low serves, he takes a half-step approach, soars well above the net and stuffs the ball before it ever violates Soviet air space . . . so much for tough serves."

The same issue described Selinvanov as 6-foot-4 and one of the Soviet team's "two principal outside hitters."

Outraged, the Brazilians voted to protest formally the Soviet action to Honabach. Silvio Torres, a team member and official hairstylist to the Brazilian ambassador, was drafted to write the protest.

"The letter was written by me because the Brazilian Embassy did not want to get officially involved," Torres said. "But the embassy supported our idea."

Honabach promptly called Soviet team captain Gennadi Vasilenko, a Soviet Embassy press aide.

"I told Mr. Vasilenko that I didn't think it was right," said the motherly Honabach. "He said, well, he could say where there's some things about the Brazilian team that aren't right.

"But I told him I've ruled on it. It's not allowed."

Later, when she gave Vasilenko a copy of the Brazilian hairstylist's letter of protest, Vasilenko read it and laughed.

"He said it was just a joke." Honabach said. "It certainly seemed they were serious at the time."

Yesterday, Vasilenko, who nearly qualified for the 1964 Soviet Olympic team and is a recipient of the Soviet Master of Sport award, was still laughing.

"It was just a joke," he said. "I did it because [other teams had compained in the past] that anytime the Russians lose they get good players from home to help them."

Were by chance Savin and Selivanov going to be in the United States on other business around game time?

"Of course not—unfortunately," said Vasilenko. "If they were, we would have invited them to play. All of the Brazilian team, none of them are members of the embassy. Maybe, for the final, we ask them to bring diplomatic cards.

"I know where they are working and what they are doing."

The Russians do their homework, all right. In fact, only one Brazilian team member is a diplomat, the embassy confirms. The rest are Brazilian nationals who work locally.

The personable Vasilenko may simply be the victim of the longstanding image of Russians as dour and humorless figures on the diplomatic scene. As one Soviet specialist said yesterday, "The Russians don't have a very good sense of humor, so I doubt it was a joke."

"Well, if I'm going to do it next year," said Honabach, "I'm going to have to tighten the rules."

NATIONAL AGRICULTURE DAY

Mr. HELMS. Mr. President, it is most fitting that we set aside a special day to pay tribute to our farmers—who serve this Nation so well throughout the year. Today, March 19, 1981, is National Agriculture Day, and if there is one segment of the American endeavor that should be recognized, should be honored, it is agriculture, the very backbone of this great Nation.

It is my firm conviction that our farmers produce much more than food and fiber, as I have said before. Their efforts have nurtured a spirit of strong individualism that strengthens our country. This spirit was the cornerstone of the foundation upon which this country was built.

American agriculture is our No. 1 industry, No. 1 employer, and No. 1 exporter, accounting for $40 billion worth of trade in 1980. Our farmers and processors are the most efficient in the world, and have proven they can meet not only the food and fiber needs of the American people, but also that of a large portion of the world's hungry and ill clothed.

The Senate Committee on Agriculture, Nutrition, and Forestry, of which I have the honor of serving as chairman, is now engaged in hearings on the 1981 farm

bill. In this effort, we on the committee are dedicated and committed to producing a bill that will ennance the role of the private sector in dealing with the problems of American agriculture and restore profitability to farming.

Vast numbers of our farmers today are on the brink of disaster. We simply cannot let our great agriculture industry falter and stumble, for if that giant upon which we all depend falls to its knees, so do we as a nation.

Let us salute American agriculture, and let us work to preserve it, for as the theme of National Agriculture Day says, and says so well, "It's your heartbeat, America."

FINANCIAL STABILITY

Mr. HELMS. Mr. President, Lewis Lehrman is one of the most capable political economists I have had the pleasure of knowing. He combines an enthusiastic idealism with a practical perspective on our society and our economy.

I first met Mr. Lehrman when he testified last year before the Senate Banking Committee on a bill relating to the sale of gold by the U.S. Treasury. His testimony to the committee has received broad circulation and deserved favorable comment.

Recently, he wrote an article for the Wall Street Journal's February 18 edition entitled, "The Means to Establishing Financial Order." In this article he analyzes the evident incapacity of the Federal Reserve Board to control monetary aggregates. His prescription? A classical monetary policy embodied in a gold standard.

Mr. Lehrman is former president and currently chairman of the executive committee of the Rite Aid Corp. and president of the Lehrman Institute.

His work complements that of a Washington-based public policy research organization, the Institute on Money and Inflation. IMI has provided the necessary information and analysis for the Gold Commission legislation which was enacted last year. This law requires the study of the role of gold in the domestic and international monetary systems and could provide the intellectual basis for substantive monetary reform.

It is my view, Mr. President, that the new commission should listen closely to the words of Lewis Lehrman.

So that those words can reach a broader audience, Mr. President, I ask unanimous consent that his recent article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From The Wall Street Journal, Feb. 18, 1981]

THE MEANS TO ESTABLISHING FINANCIAL ORDER

(By Lewis E. Lehrman)

Recently on this page Milton Friedman wrote: "Despite vigorous efforts by the Fed to implement the [Oct. 6, 1979 Volcker] policy, monetary growth has varied over a wider range since Oct. 6, 1979, than in any period of comparable length for at least the last two decades. That fact is recognized by the Fed itself, by its defenders and by its critics." Prof. Friedman's remarks go to the heart of the problem of the Federal Reserve System.

The Fed's governors honestly believe they can attain a goal that is not within their reach—namely, to fix the specific quantity of money in circulation. They also believe they can fine-tune the world's most complex economy by changes in credit policy and monetary base manipulation. Monetary base manipulation leads to the Fed's daily interventions in the open market for government securities, creating uncertainty and disorder in the credit markets. In recent years Fed open-market operations have led to the systematic expansion of its portfolio of government securities. Not only has this process indirectly financed the government deficits; but, along with reduced reserve requirements, open-market operations have been the primary source of the perennial 8 percent to 9 percent increase in total adjusted Federal Reserve Bank credit—about three to four times the average growth of output. Through this mechanism of open-market operations, the Fed has become the engine of world inflation.

It is important to understand that in a free market order neither the amount of money in circulation, nor its growth rate, can be determined by the central bank. For, quite simply, the Fed does not possess all the necessary market information, the proven operating techniques or the foresight to bring about a predictable rate of growth of money now or in the future. It is true that the Fed does influence conditions governing the supply of money; but it is the users of money in the market who alone determine their demand for it.

AN ELUSIVE ABSTRACTION

Indeed, the money supply cannot be precisely defined or measured. How can the Fed control such an elusive abstraction? Moreover, no money-supply growth rate during a specific market period is necessarily correlated with a specified rate of inflation, deflation or with price stability. For example, during part of 1978 the quantity of money in Switzerland grew approximately 30 percent, while the price level rose about 1 percent. Conversely, in the U.S. in 1979, the money supply grew about 5 percent while the consumer price index rose 13 percent. In 1980, M1A grew at 5 percent, M1B grew 7.3 percent, while the CPI rose 13 percent. It is clear that the Fed cannot precisely control the relationship between the rate of growth of the money supply and the rate of inflation.

This should come as no surprise. Consider the institutional constraints on the Federal Reserve System. First and foremost, it is a bank. More precisely, it is a monopoly—the "bank of issue." The Fed has a monopoly over the issue of paper currency; that is, Federal Reserve notes.

But it also has a balance sheet, which limits even the actions of a government monopoly. The Fed buys assets (Fed credit) with the resources created by its liabilities (largely the monetary base). Total Federal Reserve credit is a precise magnitude which regulates the rise and fall of credit supplied by the Fed to the rest of the banking system. If the credit supplied is actually desired in the market, the price level will tend to be stable. If the new credit created by the Fed is forced on market participants, it will quickly be spent by them at home and abroad, thus tending to cause inflation and a depreciating dollar.

Therefore, in the future, the Fed should allocate credit by using the superior technique of the price mechanism—not the mechanism of open-market operations, a blunt and unwieldy quantity technique. If we must have the central bank, then remobilize the discount rate, which is the price of credit for loans from the Fed to the commercial banks. Recently the amount of this type of Fed credit has ranged from $1 billion to $3 billion—5% to 10% of bank reserves held at the Fed. At 13%–16% the present discount rate constitutes a subsidy rate to substantial commercial bank credit expansion—because it is below market rates. During periods of inflation, the discount rate should be above market rates, for example the rates on Treasury bills or Fed funds. Thus the subsidy would be eliminated. The discount rate, as a market-related technique of central banking, was repudiated long ago by the money-supply fine tuners; and not coincidentally, so was a stable value for the dollar.

The problem of equalizing the supply and demand for credit by means of the discount rate illustrates the fundamental issue of monetary policy and central banking. Instead of fixing a specific quantity of money, the goal of the central bank should be reasonable price stability, or even better, a stable value for the dollar. The means by which to achieve this goal is a remobilized discount rate joined to a true international gold standard.

When excess credit causes inflation, the Fed, by raising the discount rate above market rates, should promptly eliminate the subsidy to bank credit expansion, thus removing the stimulus to inflation. As a result, excess money and credit will be absorbed in order to hit the correct target: the volume of money in circulation should always be equal to the amount of money actually desired in the market. Inflation is caused by excess money. If there is none there can be no inflation. Such a monetary target can be hit so long as the government does not finance its inflationary deficit spending by continually demanding new money at the Fed and at the banks. That is why a balanced budget is crucial. It keeps the government from demanding new money at the Fed and the commercial banks.

To establish financial order, a sound Fed credit policy is a necessary condition of financial order; but it is not sufficient. History and classical economic analysis show that the policy best-suited to ensure stable money over the long run is to define the dollar as a weight of gold. But a domestic gold standard is not enough, because our national economy is fully integrated with the free world economy. It follows that only a world monetary system can provide an impartial, common currency, not subject to sovereign political manipulation. Such a world monetary system is the international gold standard. This is the classical monetary policy.

As a monetary standard, the value of gold compared to other goods in the world economy is determined by its relative costs of production, while the costs of production of one more unit of a paper currency is almost zero. Zero production costs explain why most government currency monopolies have overproduced paper money and thereby destroyed its value. On the other hand, gold is an ideal monetary standard because its real costs of production cause it to have a relatively inelastic supply curve. It cannot be overproduced. Its rate of growth of production over centuries has been about 1.5 percent to 2 percent—proportional, that is, to the rate of long-term economic growth and population growth in the industrial world. It is this unique and stable long-run relationship between the rates of increase of the supply of gold and of economic growth which, among other reasons, makes gold the optimum monetary standard.

GOLD IS LEAST IMPERFECT

Unlike paper and credit money, the supply conditions of gold cannot be fundamentally and swiftly altered by politicians. Supply

conditions for gold depend upon the real-world economics of gold production, which are, in general, not susceptible to scale-techniques of mining. When scale techniques of production are applied to other, more easily mass-produced commodity money standards, oversupply results and the monetary standard depreciates. In an imperfect world, the gold standard is, therefore, the least imperfect of the monetary standards. That is why over the centuries a gold currency was freely selected as money by the market.

Under conditions of modern central banking, a disciplined discount policy at the Fed is only useful for providing elasticity to the supply of credit in the short and intermediate term. But a gold currency is an independent long-run stabilizer of the supply of money and credit in the world economy—the gyroscope, if you will, of a free world-market-order. The true gold standard rules out excessive manipulation of money by politicians and bureaucrats. Therefore, in order to end inflation and to restore trust in the U.S. currency, the dollar must be defined in law as a weight unit of gold. A modernized gold standard would be a guarantee of the purchasing power of money and, therefore, of the future value of money savings. And we know that in the absence of increased savings there can be no long-term economic growth.

Thus, given President Reagan's unequivocal commitment to stable money and a policy of economic growth, it is time for the United States to offer the free world a real money, and to call for monetary reform based on the international gold standard.

"REAL" INTEREST RATES

Mr. HELMS. Mr. President, a recent article in the Wall Street Journal discussed some of the intricate mechanics of interest rates. The March 16 article by David Ranson, of H. C. Wainright Economics, shows that some of the assumptions about interest rates and inflation held by our Keynesian and monetarist friends are highly doubtful.

In fact, Mr. Ranson shows that the Federal Reserve System may be impotent in affecting the real interest rate, and is chiefly effective in causing inflation.

As Mr. Ranson points out, our progressive tax system turns inflation into a greater-than-expected brake on the economy.

What struck me is that the thesis Mr. Ranson puts forth has considerable relevance for monetary policy as well as for tax policy. If the central bank cannot change "real" interest rates, then perhaps its role as economic fine tuner and adjuster of the economy is not what the Keynesians and others think it is. If that is the case, then there is every reason to think that the monetary authority should stick to stabilizing the value of the money.

In other words, Mr. President, the monetary authority can do few things well. We know that it can do little to control real interest rates. What it can do, on the other hand, is keep tabs on the value of the dollar. It can do this by sticking to classical monetary disciplines.

As Mr. Ranson says concerning the phenomenon of the Feds inability to control "real" interest rates, "So the evidence tends to confirm the classical paradigm." so too, the evidence contributes to the argument for a classical monetary reform.

I have offered a bill, S. 6, the Gold Reserve Act of 1981, as a measure that would insure that the stability of the dollar would be the key goal of monetary policy—a classical monetary reform.

Mr. President, I ask unanimous consent that "Taxes and 'Real' Interest Rates" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAXES AND "REAL" INTEREST RATES

(By David Ranson)

Ecclesiastes says: "There is no new thing under the sun." In economics, according to some members of the Chicago School, "There is nothing new since Irving Fisher." In other words, no basic relationship in economics seems to exist that was not already discovered by Fisher, the premier economist in America during his most prolific period, 1890 to 1930. Just to clinch the point, a Chicago School economist recently announced that the Phillips Curve, the late-lamented tradeoff between inflation and unemployment, had actually been discovered by the American Fisher in 1926, rather than by the Australian A. W. Phillips in 1958 as has traditionally been supposed.

Fisher's work went out of style during the 1930s, when his concept of the business cycle as largely a "dance of the dollar" was discredited. But throughout the 20th Century to the present the famous "Irving Fisher formula" has continued to be accepted by economists of every stripe and enjoys a prominent position in investment thinking. This formula states that high interest rates correspond, on a one-for-one basis, to high expected rates of inflation. As the formula has it: Nominal rate of interest equals real rate of interest plus expected rate of inflation.

Fisher's insight lies behind the calculation, frequently made nowadays, that interest rates are not "really" so high, but largely reflect the fact that we live in a highly inflationary era. Now there must be a grain of truth to this claim, but it does raise an interesting problem. If it is "really" not high interest rates that have shattered the economy in the last couple of years, then what is it?

The widely accepted answer to this question recognizes the 25-year upward trend in interest rates as chiefly a result of advancing inflationary expectations. But around this trend there is also a "cycle" in the interest rate, reflecting variations in the real rate of interest around its equilibrium level. According to this view, for example, housing and auto sales are under pressure currently because the real rate of interest is well above equilibrium. The source of this cyclical movement? The Fed, whose pursuit of alternately "loose" and "tight" money policies is a prime method of fine-tuning the economy.

However authoritative, this view may be in trouble. The first assault on it occurred about five years ago. Eugene Fama, a member of the new Chicago School generation, published evidence that the real rate of interest is roughly constant. Unfortunately, Fama was hamstrung by the fact that he could not measure the real rate of interest directly. In place of the expected rate of inflation, he had only the rate that actually transpired, as calculated from consumer price index changes published after the fact. So his evidence was, to put it bluntly, circumstantial. Inevitably, Fama's pathbreaking paper has been searchingly criticized. But evidence has surfaced recently which strongly suggests that Fama was right.

In scientific work, the most solid advances occur when a theory based on one piece of evidence is corroborated by new evidence from an independent source. Sometimes, as happened in this case, two independent sets of observations, each of which in its own right is far from sufficient, tell identical stories which in combination provide a conclusive answer.

First, we have consumer opinion poll estimates of the expected rate of inflation itself. Ordinarily, opinion polls are not regarded as a reliable source of information by quantitative economists. Too much can slip between the pollster's interpretation of the question he asks and the interpretation implicit in the respondent's answer. But University of Michigan economists, who have administered such a poll an average of three times a year since 1948, have attempted to avoid these potential glitches as far as possible.

Consumers were asked, among other things: "How large a price increase do you expect [for the things you buy]? . . . [W]ould you say that a year from now prices will be about 1 percent or 2 percent higher, or 5 percent or closer to 10 percent higher than now or what?"

The chart compares the average response to such a question, as quantified by UM's Survey Research Center, with a second and independent set of estimates: the U.S. Treasury bill rate. Now interest rates too are an important measure of inflationary expectations, but for completely different reasons. Among other things, they are sensitive to credit market conditions and to tax rates.

As closely as available information allows, the dates at which the polls were taken have been matched with the dates at which the Treasury bill yield was quoted. Similarly, the horizon of the poll question (12 months) has been matched with the maturity date of the bill. To simplify the plot, the poll results and the T-bill quotes for each calendar year have been averaged.

While not perfect, the close correspondence between the two data series establishes Fama's proposition directly and beyond a reasonable doubt. Not only is the trend in the nominal rate of interest associated with shifts in the expected rate of inflation, but so is the cycle. Leaving plenty of room for misinterpretations in the poll data, and unrelated sources of variation in the T-bill rate, the two fit one another like a glove. The real rate of interest does indeed appear to be roughly constant, averaging about 1.75 percent through 1965 and 2.5 percent thereafter.

How can this be? How can the Fed, for all its huffing and puffing, have so little impact on the real rate of interest?

First, consider the way an economist in Irving Fisher's time might have approached the question. The real rate of interest is the price that clears the credit market. Not only the domestic credit market, but credit markets throughout the world.

Although nominal interest rates may vary from one country to another even for equivalent risk and maturity, this variation will reflect only differences in expected inflation for different currencies. Taxes aside, the real rate must be the same throughout the world, because international capital flows could arbitrate any differentials that might ephemerally exist. So to influence the real rate of interest, the Fed's actions would have to be large enough to control the price of credit throughout the world. Is the Fed as powerful as that?

Actually, the case for the Fed"s "real" impotence is even stronger. The real rate of interest is not only the price of credit. It is also the price that clears the market for saving and investment. At the margin, it equals the real return to saving (again, taxes aside) and also the real cost of capital. To control it means to influence substantially the volume of saving and the speed with which capital projects are pursued throughout the world. Surely no one would argue that the Fed is big enough for that.

So the evidence tends to confirm the classical paradigm. It contradicts Keynesian and

monetarist theories of the business cycle, according to both of which the real rate of interest is a cyclical phenomenon. This new logic is, indeed, consistent with the supply-side of incentivist view. It is tax-rate changes, or shifts in the disincentives rather than "real" price changes through which government policies influence the economy.

A major mystery remains. How can the economy be hurt by interest rate fluctuations that are not, in fact, "real"? Why does the stock market frequently get a boost when nominal interest rates decline, as happened last Thursday?

I think the answer to this question supplies a vital insight for a proper diagnosis of the economy's ills. The illuminating ingredient is tied to the characteristics of our tax system. Inflation implies tax bracket "creep." An upward shift in the expected rate of inflation implies an upward revision of the expected rate at which personal and business incomes will be pushed into higher tax brackets. Incentives can, and do, affect economic choices across time. The current level of production and expenditure is in part a function of the balance between current tax rates (at the margin) and the expected level of tax rates in future years

A rise in the expected rate of bracket "creep" shifts that balance. It makes it relatively more profitable to produce and spend today, and to cut back production and expenditure in future years. The empirical relationship between the economy and expected inflation conforms to this hypothesis.

AWARD OF THE NON COMMISSIONED OFFICERS ASSOCIATION OF THE USA (NCOA) L. MENDEL RIVERS AWARD FOR LEGISLATIVE ACTION TO SENATOR WILLIAM L. ARMSTRONG

Mr. THURMOND. Mr. President, once again I am privileged to announce the recipient of the Non Commissioned Officers Association of the USA (NCOA) L. Mendel Rivers Award for Legislative Action. This year's recognition goes to our colleague, Senator WILLIAM L. ARMSTRONG.

The NCOA has made a wise choice in honoring the junior Senator from Colorado. Senator ARMSTRONG deserves recognition for his dogged determination in support of many defense programs and especially his leadership in promoting increases in pay and allowances for our men and women in uniform.

He was the first of a growing number of Senators and defense officials to warn the Nation it was underpaying its military personnel. He alerted us to the circumstances we would confront if Congress did not act.

Of course, Senator ARMSTRONG was chosen for other attributes. He is a patriot and a most able legislator. He is loyal, hard working, and the epitome of all we Americans would like in our elected officials. Most of all, he is understanding and sympathetic.

Senator ARMSTRONG has also been effective in other areas such as promotion of equal per diem payments; exemption of parking fees on certain military installations; and support for a new GI bill for the use of our military recruiters to help upgrade the quality of today's military member.

Senator ARMSTRONG is a worthy recipient of this particular award established in memory of Representative L. Mendel Rivers, former chairman of the House Armed Services Committee. Chairman Rivers was most effective in promoting proper recognition and remuneration for our military enlisted personnel.

Senator ARMSTRONG will be the 10th recipient of this prestigious award. Senator JOHN TOWER, currently chairman of the Committee on Armed Services, received the honor in 1974 and Senator BOB DOLE, current chairman of the Committee on Finance, in 1979. I was privileged to have been the recipient in 1972.

On the House side, former Congressman F. Edward Hébert, now deceased, was the 1973 recipient. Retired Congressman Thomas N. Downing of Virginia was honored in 1975; retired Congressman Bob Wilson of California in 1976; Representative MEL PRICE, current chairman of the House Committee on Armed Services, in 1977; Representative CHARLES E. BENNETT, of Florida, in 1978; and former Congressman Mendel J. Davis of South Carolina in 1980.

The award will be presented to Senator ARMSTRONG on June 13 at the NCOA 20th international convention, to be held at the Hotel Raddison Muehlebach in Kansas City, Mo.

I know my colleagues will join me in saluting Senator ARMSTRONG for his exceptional performance as a U.S. Senator and congratulate him for being chosen the NCOA legislator of the year.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Saunders, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

BUDGET RESCISSIONS AND DEFERRALS—MESSAGE FROM THE PRESIDENT—PM 38

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with accompanying papers; which, pursuant to the order of January 30, 1975, was referred jointly to the Committee on Appropriations, the Committee on the Budget, the Committee on Commerce, Science, and Transportation, the Committee on Labor and Human Resources, the Committee on Energy and Natural Resources, the Committee on Banking, Housing, and Urban Affairs, the Committee on Environment and Public Works, the Committee on Governmental Affairs, and the Committee on Finance:

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report 33 proposals to rescind a total of $2.8 billion in budget authority previously provided by the Congress, and one new deferral of $3.0 million.

The details of the rescission proposals and the deferral are contained in the attached reports.

RONALD REAGAN.

THE WHITE HOUSE, *March 19, 1981.*

MESSAGES FROM THE PRESIDENT RECEIVED DURING THE RECESS

Under the authority of the order of the Senate of March 17, 1981, the Secretary of the Senate, on March 17, 1981, received messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(The nominations received on March 17, 1981, are printed at the end of the Senate proceedings.)

MESSAGE FROM THE HOUSE

At 11:18 a.m., a message from the House of Representatives, delivered by Mr. Berry, one of its reading clerks, announced that pursuant to the provisions of title 22, United States Code, section 276a–1, as amended by Public Law 95–45, the Speaker appoints as additional members of the delegation to attend the Conference of the Interparliamentary Union to be held in Manila, Philippines, April 20 to 25, 1981, the following Members on the part of the House: Mr. PICKLE, Mr. DE LA GARZA, Mr. HAMILTON, Mr. DANIELSON. Mr. BOWEN, Mr. LEVITAS, Mr. RHODES, Mr. BROOMFIELD, Mr. MCCLORY, and Mr. VANDER JAGT.

The message also announced that pursuant to the provisions of section 1 of Public Law 372, 84th Congress, as amended, the Speaker appoints as Members of the Franklin Delano Roosevelt Memorial Commission the following Members on the part of the House: Mr. HOWARD, Mr. ZEFERETTI, Mr. FISH, and Mr. GREEN.

REPORTS OF COMMITTEES RECEIVED DURING THE RECESS

Under the authority of the order of the Senate of March 17, 1981, the following reports of committees were submitted on March 18, 1981, during the recess of the Senate:

By Mr. HEINZ, from the Committee on Banking, Housing, and Urban Affairs, without amendment:

S. 734. An original bill to encourage exports by facilitating the formation and operation of export trading companies, export trade associations, and the expansion of export trade services generally (Rept. No. 97–27).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. GARN, from the Committee on Banking, Housing, and Urban Affairs;

Donald I. Hovde, of Wisconsin, to be Under Secretary of Housing and Urban Development.

(The above nomination reported from the Committee on Banking, Housing, and

Urban Affairs, with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. ROTH, from the Committee on Governmental Affairs:

Donald J. Devine, of Maryland, to be Director of the Office of Personnel Management.

(The above nomination, reported from the Committee on Governmental Affairs, with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

THE NOMINATION OF DR. DONALD J. DEVINE

The Committee on Governmental Affairs, to which was referred the nomination of Dr. Donald J. Devine, of Wheaton, Maryland, to be the Director of the Office of Personnel Management, having considered the same, reports favorably thereon and recommends that the nomination be confirmed subject to the nominee's commitment to respond favorably to requests to appear and testify before any duly constituted committee of the Congress.

SUBMISSION OF NOMINATION

The Senate formally received the nomination of Dr. Donald J. Devine, of Wheaton, Maryland, to be Director of the Office of Personnel Management on March 5, 1981. The nomination was subsequently referred to the Committee on Governmental Affairs.

TRAINING, EDUCATION AND EXPERIENCE OF DR. DEVINE

Dr. Devine was born in Bronxville, New York on April 14, 1937. He spent his high school years at the Bishop Loughlin School in Brooklyn, New York. He then developed a strong background in both business and Public Administration. Dr. Devine graduated from St. John's University in Brooklyn, New York in 1959 with a B.B.A. in Business Administration. He spent two years at the University of New York from 1963–1965, finishing with a M.A. in Political Science with a field concentration in Public Administration.

The nominee completed his education at Syracuse University in the Maxwell School of Public Administration. He obtained a Ph.D. in Political Science there in 1969, once again with a concentration in Public Administration.

Dr. Devine began working as soon as he graduated from high school. During his college years, he worked with the United States Life Insurance Company in New York City as a cashier. Upon graduation, he took a job in New York City with the Continental Casualty Company as a Senior Claims Adjustor. He was in that position from 1960 until 1964 at the same time that he was pursuing a Masters degree in Political Science. In 1965, Dr. Devine began lecturing at the Brooklyn College in Brooklyn, New York while continuing his studies in Political Science.

Since completing his Ph. D., Dr. Devine has been an Associate Professor at the University of Maryland. While at the University, he has also served as a Special Assistant to Representative Philip Crane in 1972 and to Representative John Ashbrook in 1973.

COMMITTEE ACTION

Under procedures established by the Committee for considering nominations, a detailed biographical and financial information questionnaire was submitted to Dr. Devine. The Committee also requested that the nominee respond to pre-hearing questions in writing. These questions concerned both substantive policy matters relating to the mission of the Office of Personnel Management and specific actions Dr. Devine intends to take as Director of that agency. Both the biographical information and the responses to the prehearing questions are appendices to this report. It is the policy of the committee that a nominee's financial disclosure statement is not reproduced or published as a part of the hearing record. However, this information is retained in the Committee offices for inspection by the public.

Committee procedures call for an independent review of a nominee's background. This includes a review of any investigative reports compiled concerning the nominee, including the Federal Bureau of Investigation's summary report on the background of the nominee and an interview with the nominee. All of these requirements were met during the committee's investigation, and a confidential staff report, which concluded that no further investigation is necessary, was filed with the Chairman and the Ranking Minority Member and made available to all other Members of the Committee.

On March 11, 1981, Dr. Devine appeared before the Committee on Governmental Affairs to testify on his appointment to be Director of the Office of Personnel Management. Dr. Devine was introduced to the Committee by the Senior Senator from Maryland, Senator Mathias.

COMMITTEE RECOMMENDATIONS

Based on its review of the nominee's responses to the biographical and financial questionnaire, the FBI investigative report, the responses to the prehearing questions, personal interview with the nominee, and the testimony and responses to questions at the hearing itself, the Committee believes that Dr. Devine is well qualified by reason of training, education, experience and integrity to be the Director of the Office of Personnel Management.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. HEINZ:

S. 734. An original bill to encourage exports by facilitating the formation and operation of export trading companies, export trade associations, and the expansion of export trade services generally; (from the Committee on Banking, Housing, and Urban Affairs on March 18, 1981 under the authority of the order of March 17, 1981.)

By Mr. PROXMIRE:

S. 735. A bill for the relief of Michael Treble Lysenko and Beverly Carol Dancho; to the Committee on the Judiciary.

By Mr. CHAFEE (for himself, Mr. BAKER, Mr. STAFFORD, Mr. RANDOLPH, Mr. DECONCINI, Mr. GORTON, Mr. MCCLURE, Mr. MOYNIHAN, Mr. TSONGAS, and Mr. WALLOP):

S. 736. A bill to provide for the control of illegally taken fish and wildlife; to the Committee on Environment and Public Works, by unanimous consent with instructions that once reported, the bill be referred to the Committee on the Judiciary for not to exceed thirty calendar days.

By Mr. DURENBERGER:

S. 737. A bill entitled the "Basic Industries Reindustrialization Act"; to the Committee on Finance.

S. 738. A bill to amend the Internal Revenue Code; to the Committee on Finance.

By Mr. DURENBERGER (for himself, Mr. PRESSLER, Mr. MELCHER, Mr. BAUCUS, and Mr. DIXON):

S. 739. A bill to amend the Internal Revenue Code of 1954 to make the investment credit for railroad property refundable; to the Committee on Finance.

By Mr. DURENBERGER (for himself, Mr. ANDREWS, Mr. PRESSLER, Mr. ABDNOR, Mr. MELCHER, Mr. BAUCUS, and Mr. BURDICK):

S. 740. A bill entitled the "Railroad Bonding Act"; to the Committee on Finance.

By Mr. DURENBERGER (for himself, Mr. ANDREWS, Mr. PRESSLER, Mr. ABDNOR, Mr. MELCHER, and Mr. BAUCUS):

S. 741. A bill to provide for an equitable resolution regarding leaseholds on abandoned rail line property; to the Committee on Commerce, Science, and Transportation.

By Mr. COHEN:

S. 742. A bill to amend title 38, United States Code, to provide expanded opportunities for individuals to earn educational assistance benefits based on honorable active service in the armed forces, and for other purposes; to the Committee on Veterans Affairs.

By Mr. LEAHY:

S. 743. A bill to relieve General Educational Fund, Inc., of Burlington, Vt., of liability for certain taxes assessed under section 4945 of the Internal Revenue Code of 1954; to the Committee on Finance.

By Mr. MATHIAS (by request):

S. 744. A bill to authorize the District of Columbia to issue and sell general obligation bonds for the purpose of paying certain liabilities of the District, and for other purposes; to the Committee on Governmental Affairs.

By Mr. FORD (for himself and Mr. COCHRAN):

S. 745. A bill to amend the Tennessee Valley Authority Act of 1933 in order to increase the number of members of the board of directors of such Authority to five and to set certain residence requirements; to the Committee on Environment and Public Works.

By Mr. PERCY:

S. 746. A bill for the relief of Lemuek G. Villaneuva, M.D. and Corazon S. Villaneuva, husband and wife; to the Committee on the Judiciary.

By Mr. HATCH:

S. 747. A bill for the relief of Seela Jeremiah Piula; to the Committee on the Judiciary.

S. 748. A bill for the relief of Barbara Crisp, Sean Anthony Crisp, and Andrea Leech; to the Committee on the Judiciary.

S. 749. A bill for the relief of Peter William Brunt and Leonie Elizabeth Dil Brunt; to the Committee on the Judiciary.

By Mr. WALLOP (for himself, Mr. BOREN, Mr. KENNEDY, Mr. PERCY, Mr. LONG, Mr. CHAFEE, Mr. BAUCUS, Mr. TOWER, Mr. PELL, Mr. D'AMATO, and Mr. COCHRAN):

S. 750. A bill to amend the Internal Revenue Code of 1954 to provide nonrefundable tax credits for investments in qualified industrial energy efficiency and fuel conversion projects, and for other purposes; to the Committee on Finance.

By Mr. HATCH (for himself and Mr. THURMOND):

S. 751. A bill to amend titles 18 and 28 of the United States Code to eliminate, and establish an alternative to, the exclusionary rule in Federal criminal proceedings; to the Committee on the Judiciary.

By Mr. BAUCUS (for himself, Mr. LONG, Mr. GOLDWATER, Mr. WILLIAMS, and Mr. LEAHY):

S. 752. A bill to amend the Internal Revenue Code of 1954 to provide for the awarding of reasonable court costs and certain fees to prevailing parties in civil tax actions, and for other purposes; to the Committee on Finance.

By Mr. CRANSTON (for himself and Mr. HAYAKAWA):

S. 753. A bill to clarify the intent of Congress with respect to the exemption of the

economic interests of State and local governments from the crude oil windfall profit tax; to the Committee on Finance.

By Mr. MOYNIHAN (for himself and Mr. SCHMITT):

S. 754. A bill to require that most-favored nation treatment be granted only to the products of countries which have not expropriated U.S. citizens' property without compensation therefor; to the Committee on Finance.

By Mr. HELMS:

S.J. Res. 49. Joint resolution authorizing and requesting the President to proclaim July 4 of each year as "Independence Day"; to the Committee on the Judiciary.

By Mr. DECONCINI (for himself and Mr. DOLE):

S.J. Res. 50. Joint resolution designating July 17, 1981, as "National P.O.W. M.I.A. Recognition Day"; to the Committee on the Judiciary.

By Mr. DOLE:

S.J. Res. 51. Joint resolution authorizing and requesting the President to issue a proclamation observing the 35th anniversary of CARE (the Cooperative for American Relief Everywhere, Inc.), and designating May 10 to 16, 1981, as "CARE Week"; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. CHAFEE (for himself, Mr. BAKER, Mr. STAFFORD, Mr. RANDOLPH, Mr. DECONCINI, Mr. GORTON, Mr. MCCLURE, Mr. MOYNIHAN, Mr. TSONGAS, and Mr. WALLOP):

S. 736. A bill to provide for the control of illegally taken fish and wildlife; to the Committee on Environment and Public Works, by unanimous consent with instructions that once reported, the bill be referred to the Committee on the Judiciary for not to exceed 30 calendar days.

LACEY ACT AMENDMENTS OF 1981

Mr. CHAFEE. Mr. President, as noted in this month's National Geographic magazine, wildlife is big business. Affluent nations such as ours have displayed a fascination with wildlife and a willingness to pay exorbitant prices for rare animals and animal products. Illegal traders are willing to circumvent wildlife-protection laws both in this country and abroad to satisfy the demand as well as their own pocketbooks. By perpetuating a market for rare species, illegal trade creates pressures that these fragile populations cannot endure.

Furthermore, grisly tales abound of the illegal wildlife trade's acts of cruelty and wanton disregard of the natural environment. For example, flocks of birds have been blasted from trees with buckshot so that the few who survive can be captured and sold. Entire nesting areas are destroyed by the common practice of cutting down trees and shooting adult birds to harvest the more profitable young birds. Adult chimpanzees, gibbons, and other species are also slaughtered in order to capture their young.

Equally as shocking is the way in which these animals are transported. It is estimated that as many as 90 percent of captured animals die lingering and painful deaths from freezing, overheating, thirst, starvation, overcrowding or suffocation during their transport.

To stem the rising tide of illegal trade in fish, wildlife, and plants, I am reintroducing the Lacey Act amendments which I sponsored in the 96th Congress. This legislation will provide the tools needed to combat and control the massive illegal trade that threatens the survival of numerous species, threatens the welfare of our agricultural and pet industries, and imposes untold costs on the American taxpayer. The bill does not increase the Federal role in managing wildlife nor does it create new areas of criminality or Federal responsibility. Rather, it improves existing Federal tools designed to aid States and foreign nations in enforcing their own wildlife laws.

The current Lacey and Black Bass Acts were enacted in 1900 and 1926, respectively. These statutes make it illegal to import or otherwise trade in fish or wildlife taken, transported or sold in violation of State or foreign laws. They seek to provide Federal assistance to the States and foreign nations in enforcing existing fish and wildlife conservation laws.

Illegal commerce in wildlife has grown into such an enormous and lucrative business that the penalties under the Lacey and Black Bass Acts no longer provide an effective deterrent. The Black Bass Act, for example, provides for a maximum fine of only $200 and no more than 3 months imprisonment. Such a penalty is not going to deter violators who can net many thousands of dollars by trafficking in illegally taken fish.

These laws are also limited in scope because they do not protect some species of wildlife such as coral nor do they protect plants. The State of Arizona annually harvests plants worth $1.8 million under a permit system. It is estimated, however, that an additional $600,000 to $900,000 worth are illegally taken each year. Once those plants leave the State, Arizona authorities are virtually powerless to apprehend and punish the violators. This legislation would enable the Federal Government to effectively assist in controlling such interstate traffic.

Wildlife is often imported with false documents, including false health certificates which make a mockery of our quarantine laws and end up costing the United States millions of dollars. Such fraudulent transactions have spread diseases that would have been detected in legal quarantine periods. An outbreak of Newcastle disease—carried by exotic birds and fatal to domestic poultry—in California in 1971 cost the Federal taxpayer $56 million. In 1979, 14,000 pet birds exposed to the disease had to be killed at a cost of $2 million to the Federal Government. In mid-September 1980, a particularly deadly strain of exotic Newcastle disease was diagnosed at a wholesale pet bird establishment in Miami, Fla. Shipments of approximately 20,000 birds from the Miami wholesaler have been traced by the Federal Government to 45 States, the District of Columbia, the U.S. Virgin Islands, Canada, and the Bahamas. The cost of that outbreak is expected to run into the millions of dollars.

Without the improved enforcement tools of the proposed Lacey Act Amendments of 1981, we can virtually guarantee yearly outbreaks of exotic Newcastle disease. Inevitably, one of these outbreaks of disease will have a catastrophic effect on the poultry industry. Industry representatives estimate that if the disease were to become established in the poultry industry, the yearly cost to the Federal Government would be $1 billion.

The legislation I am introducing today will respond to many of these problems. It proposes the following major changes in the Lacey and Black Bass Acts:

First. The legislation would eliminate inconsistencies now in the law by consolidating the Lacey and Black Bass Acts. The legislation will encompass all species of fish and wildlife which are the subject of Federal, State, or foreign conservation laws.

Second. The legislation extends protection to plants that are subject to State conservation laws. This provision would amend the Lacey Act to provide Federal enforcement assistance to States that have adopted laws regulating the taking and sale of rare and endangered plants.

Third. It would increase the maximum civil penalty to $10,000. The maximum penalty is currently $5,000 in the Lacey Act and $200 in the Black Bass Act.

Fourth. It would increase the maximum criminal penalty to $20,000 and 5 years imprisonment. The existing criminal penalties are $10,000 and 1 year in the Lacey Act and $200 and 3 months in the Black Bass Act.

Fifth. It would conform the criminal culpability standard to that which is found in most criminal laws by deleting a double specific intent standard. The Government will be required to prove that a defendant had knowledge of the underlying conservation statute, but will not be required to prove that the individual also had knowledge of the Lacey Act.

Sixth. The legislation would permit relaxation of the rigid labeling provisions currently in effect for containers in which fish or wildlife are shipped. Under the bill, the Secretaries of Interior and Commerce will promulgate joint regulations regarding labeling which are consonant with the practices of industry and which satisfy the needs of enforcement officers.

Seventh. The legislation will add the regulations of Indian tribes to the substantive provisions of the Lacey Act. This will insure that fish and wildlife conservation regulations that are applicable to Indian reservations will be subject to Federal enforcement.

Mr. President, I believe that this legislation is a welcome and needed addition to existing wildlife law. It provides sufficient safeguards against indiscriminate enforcement efforts while, at the same time, providing the tools needed to control the burgeoning international trade in illicitly taken fish, wildlife, and plants. For these reasons, I urge my colleagues to support this legislation.

I ask unanimous consent that the text of the legislation and the article from the March 1981 issue of National Geographic magazine describing the extent of the international wildlife smuggling problem be printed in the RECORD.

There being no objection, the material

was ordered to be printed in the RECORD, as follows:

S. 736

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Lacey Act Amendments of 1981."

DEFINITIONS

SEC. 2. For the purposes of this act—

(a) The term "fish or wildlife" means any wild animal, whether alive or dead, including without limitation any wild animal, bird, reptile, amphibian, fish, mollusk, crustacean, arthropod, coelenterate, or other invertebrate, whether or not bred, hatched, or born in captivity, and includes any part, product, egg, or offspring thereof.

(b) The term "foreign law" means laws or regulations of a foreign country which regulate the taking, possession, importation, exportation, transportation, or sale of fish or wildlife.

(c) The term "import" means to land on, bring into, or introduce into, any place subject to the jurisdiction of the United States, whether or not such landing, bringing, or introduction constitutes an importation within the meaning of the customs laws of the United States.

(d) The term "Indian tribal law" means any regulation of, or other rule of conduct enforceable by, any Indian tribe, band, or group but only to the extent that the regulation or rule applies within Indian country as defined in section 1151 of title 18, United States Code.

(e) The term "person" includes any individual, partnership, association, corporation, trust, or any officer, employee, agent, department, or instrumentality of the Federal Government or of any State or political subdivision thereof, or any other entity subject to the jurisdiction of the United States.

(f) The terms "plant" and "plants" mean any wild member of the plant kingdom, including roots, seeds, and other parts thereof, but excluding common food crops and cultivars, which is indigenous to any State and which is either (A) listed on an Appendix to the Convention on International Trade in Endangered Species of Wild Fauna and Flora, or (B) listed pursuant to any State law that provides for the conservation of species threatened with extinction.

(g) The term "Secretary" means, except as otherwise provided in the Act, the Secretary of the Interior or the Secretary of Commerce, as program responsibilities are vested pursuant to the provisions of Reorganization Plan Numbered 4 of 1970 (84 Stat. 2090); except that with respect to the provisions of this Act which pertain to the importation or exportation of plants the term means the Secretary of Agriculture.

(h) The term "State" means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, Northern Mariana Islands, American Samoa, and any other territory, commonwealth, or possession of the United States.

(i) The term "taken" means captured, killed, or collected.

(j) The term "transport" means to move, convey, carry, or ship by any means, or to deliver or receive for the purpose of movement, conveyance, carriage or shipment.

SEC. 3. PROHIBITED ACTS.

(a) OFFENSES OTHER THAN MARKING OFFENSES.—

It is unlawful for any person—

(1) to import, export, transport, sell, receive, acquire or purchase any fish or wildlife or plant taken or possessed in violation of any law, treaty, or regulation of the United States or in violation of any Indian tribal law;

(2) to import, export, transport, sell, receive, acquire or purchase in interstate or foreign commerce—

(A) any fish or wildlife taken, possessed, transported, or sold in violation of any law or regulation of any State or in violation of any foreign law, or

(B) any plant taken, possessed, transported, or sold in violation of any law or regulation of any State;

(3) within the special maritime and territorial jurisdiction of the United States (as defined in Section 7 of Title 18, United States Code)—

(A) to possess any fish, or wildlife taken, possessed, transported, or sold in violation of any law or regulation of any State or in violation of any foreign law or Indian tribal law, or

(B) to possess any plant taken, possessed, transported, or sold in violation of any law or regulation of any State;

(4) having imported, exported, sold, purchased or received any fish or wildlife or plant imported from any foreign country or shipped, transported or carried in interstate or foreign commerce, to make or submit any false record, account, label, or identification thereof; or

(5) to attempt to commit or solicit another to commit any act described in paragraphs (1) through (4).

(b) MARKING OFFENSES.—It is unlawful for any person to import, export, or transport in interstate or foreign commerce any container or package containing any fish or wildlife unless the container or package has previously been plainly marked, labeled, or tagged in accordance with the regulations issued pursuant to paragraph (2) of subsection 7(a) of this Act.

SEC. 4. PENALTIES AND SANCTIONS.

(a) CIVIL PENALTIES.—

(1) Any person who in the exercise of due care should know that he is violating any provision of this Act, other than subsection 3(b), may be assessed a civil penalty by the Secretary of not more than $10,000 for each such violation: *Provided*, That when the violation involves fish or wildlife or plants with a value of less than $350, and involves only the transportation, acquisition, or receipt of fish or wildlife or plants taken or possessed in violation of any law, treaty, or regulation of the United States, any Indian tribal law, any foreign law, or any law or regulation of any State, the penalty assessed shall not exceed the maximum provided for violation of said law, treaty, or regulation, or $10,000, whichever is less.

(2) Any person who violates subsection 3(b) may be assessed a civil penalty by the Secretary of not more than $250.

(3) For purposes of paragraphs (1) and (2), any reference to a provision of this Act or to a Section of this Act shall be treated as including any regulation issued to carry out any such provision or Section.

(4) No civil penalty may be assessed under this subsection unless the person accused of the violation is given notice and opportunity for a hearing with respect to the violation. Each violation shall be a separate offense.

(5) Any civil penalty assessed under this subsection may be remitted or mitigated by the Secretary.

(6) In determining the amount of any penalty assessed pursuant to paragraphs (1) and (2), the Secretary shall take into account the nature, circumstances, extent, and gravity of the prohibited act committed, and with respect to the violator, the degree of culpability, ability to pay, and such other matters as justice may require.

(b) HEARINGS.—Hearings held during proceedings for the assessment of civil penalties shall be conducted in accordance with Section 554 of Title 5, United States Code. The administrative law judge may issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books, or documents, and may administer oaths. Witnesses summoned shall be paid the same fees and mileage that are paid to witnesses in the courts of the United States. In case of contumacy or refusal to obey a subpoena issued pursuant to this paragraph and served upon any person, the district court of the United States for any district in which such person is found, resides, or transacts business, upon application by the United States and after notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the administrative law judge or to appear and produce documents before the administrative law judge, or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

(c) REVIEW.—Any person against whom a civil penalty is assessed under this section may obtain review thereof in the appropriate district court of the United States by filing a notice of appeal in such court within thirty days from the date of such order and by simultaneously sending a copy of such notice by certified mail to the Secretary. The Secretary shall promptly file in such court a certified copy of the record upon which such violation was found or such penalty imposed, as provided in Section 2112 of Title 28, United States Code. If any person fails to pay an assessment of a civil penalty after it has become a final and unappealable order or after the appropriate court has entered final judgment in favor of the Secretary, the Secretary may request the Attorney General of the United States to institute a civil action in an appropriate district court of the United States to collect the penalty, and such court shall have jurisdiction to hear and decide any such action. In hearing such action, the court shall have authority to review the violation and the assessment of the civil penalty de novo.

(d) CRIMINAL PENALTIES.—Any person who knowingly engages in conduct prohibited by any provision of this Act (other than section 3(b)) or any regulation issued to carry out such provisions shall, upon conviction, be fined not more than $20,000, or imprisoned for not more than five years, or both; Provided, that when the violation involves fish or wildlife or plants with a value of less than $350, and involves only the transportation, acquisition, receipt, purchase or sale of fish or wildlife or plants taken or possessed in violation of any law, treaty, or regulation of the United States, any Indian tribal law, any foreign law, or any law or regulation of any State, the person shall, upon conviction, be fined not more than $10,000, or imprisoned for not more than one year, or both. Each violation shall be a separate offense. Conviction under this Act shall require proof that the defendant knew that there was conduct in violation of, or unlawful under, any underlying law, treaty or regulation as proscribed in Section 3 of this Act.

(e) PERMIT SANCTIONS.—The Secretary may also suspend, modify, or cancel any Federal hunting or fishing license, permit, or stamp, or any license or permit authorizing a person to import or export fish or wildlife or plants (other than a permit or license issued pursuant to the Fishery Conservation and Management Act of 1976), or to operate a quarantine station or rescue center for imported wildlife or plants, issued to any person who is convicted of a criminal violation of any provision of this Act or any regulation issued hereunder. The Secretary shall not be liable for the payments of any compensation, reimbursement, or damages in connection with the modification, suspension, or revocation

of any licenses, permits, stamps, or other agreements pursuant to this section.

SEC. 5. FORFEITURE.—

(a) IN GENERAL.—

(1) All fish or wildlife or plants imported, exported, transported, sold, received, acquired or purchased contrary to the provisions of Section 3 of this Act (other than subsection 3(b)), or any regulation issued pursuant thereto, shall be subject to forfeiture to the United States notwithstanding any culpability requirements for civil penalty assessment or criminal prosecution included in Section 4 of this Act.

(2) All vessels, vehicles, aircraft, and other equipment used to aid in the importing, exporting, transporting, selling, receiving, acquiring, or purchasing of fish or wildlife or plants in a criminal violation of this Act for which a felony conviction is obtained shall be subject to forfeiture to the United States if (A) the owner or master of such vessel or the conductor, driver, or other person in charge of such vehicle, aircraft, or equipment was at the time of the alleged illegal act a consenting party or privy thereto, and (B) the violation involved the sale or purchase of, the offer of sale or purchase of, or the intent to sell or purchase, fish or wildlife or plants.

(b) APPLICATION OF CUSTOMS LAWS.—All provisions of law relating to the seizure, forfeiture, and condemnation of property for violation of the customs laws, the disposition of such property or the proceeds from the sale thereof, and the remission or mitigation of such forfeiture, shall apply to the seizures and forfeitures incurred, or alleged to have been incurred, under the provisions of this Act, insofar as such provisions of law are applicable and not inconsistent with the provisions of this Act; except that all powers, rights, and duties conferred or imposed by the customs laws upon any officer or employee of the Treasury Department may, for the purposes of this Act, also be exercised or performed by the Secretary or by such persons as he may designate. Provided, that any warrant for search or seizure shall be issued in accordance with Rule 41 of the Federal Rules of Criminal Procedure.

(c) STORAGE COST.—Any person convicted of an offense, or assessed a civil penalty, under Section 4 shall be liable for the costs incurred in the storage, care, and maintenance of any fish or wildlife or plant seized in connection with the violation concerned.

SEC. 6. ENFORCEMENT.

(a) IN GENERAL.—The provisions of this Act and any regulations issued pursuant thereto shall be enforced by the Secretary, the Secretary of Transportation, or the Secretary of the Treasury. Such Secretary may utilize by agreement, with or without reimbursement, the personnel, services, and facilities of any other Federal agency or any State agency or Indian tribe for purposes of enforcing this Act.

(b) POWERS.—Any person authorized under Subsection (a) to enforce this Act may carry firearms; may make an arrest without a warrant for any felony violation of this Act if he has reasonable grounds to believe that the person to be arrested has committed such violation; may make an arrest without a warrant for a misdemeanor violation of this Act if he has reasonable grounds to believe that the person to be arrested is committing a violation in his presence or view; and many execute and serve any subpoena, arrest warrant, search warrant issued in accordance with Rule 41 of the Federal Rules of Criminal Procedure, or other warrant of civil or criminal process issued by any officer or court of competent jurisdiction for enforcement of this Act. Any person so authorized, in coordination with the Secretary of the Treasury, may detain for inspection and inspect any vessel, vehicle, aircraft, or other conveyance or any package, crate, or other container, including its contents, upon the arrival of such conveyance or container in the United States or the customs waters of the United States from any point outside the United States or such customs waters, or, if such conveyance or container is being used for exportation purposes, prior to departure from the United States or the customs waters of the United States. Such person may also inspect and demand the production of any documents and permits required by the country of natal origin, birth, or reexport of the fish or wildlife. Any fish, wildlife, plant, property, or item seized shall be held by any person authorized by the Secretary pending disposition of civil or criminal proceedings, or the institution of an action in rem for forfeiture of such fish, wildlife, plants property, or item pursuant to Section 5 of this Act; except that the Secretary may, in lieu of holding such fish, wildlife, plant, property, or item, permit the owner or consignee to post a bond or other surety satisfactory to the Secretary.

(c) DISTRICT COURT JURISDICTION.—The several district courts of the United States, including the courts enumerated in Section 460 of Title 28, United States Code, shall have jurisdiction over any actions arising under this Act. The venue provisions of Title 18 and Title 28 of the United States Code shall apply to any actions arising under this Act. The judges of the district courts of the United States and the United States magistrates may, within their respective jurisdictions, upon proper oath or affirmation showing probable cause, issue such warrants or other process as may be required for enforcement of this Act and any regulations issued thereunder.

(d) REWARDS.—Beginning in Fiscal Year 1982, the Secretary or the Secretary of the Treasury shall pay a reward from sums received as a penalty, fine or forfeiture of property for any violation of this Act or any regulation issued hereunder to any person who furnishes information which leads to a criminal conviction, civil penalty assessment, or forfeiture of property for any violation of this Act or any regulation issued hereunder. The amount of the reward, if any, is to be designated by the Secretary or the Secretary of the Treasury, as appropriate, but shall not exceed the amount of the penalty, fine, or forfeiture collected in a case in which the person was an informant. Any officer or employee of the United States or any State or local government who furnishes information or renders service in the performance of his official duties is ineligible for payment under this subsection.

SEC. 7. ADMINISTRATION.

(a) REGULATIONS.—

(1) The Secretary, after consultation with the Secretary of the Treasury, is authorized to issue such regulations, except as provided in paragraph (2), as may be necessary to carry out the provisions of Section 5 of this Act.

(2) The Secretaries of the Interior and Commerce shall jointly promulgate specific regulations to implement the provisions of Subsection 3(b) of this Act for the marking and labeling of containers or packages containing fish or wildlife in interstate or foreign commerce. These regulations shall be in accordance with existing commercial practices.

(b) CONTRACT AUTHORITY.—To the extent and in the amounts provided in advance in appropriations Acts, the Secretary may enter into such contracts, leases, cooperative agreements, or other transactions with any Federal or State agency, Indian tribe, public or private institution, or other person, as may be necessary to carry out the purposes of this Act.

SEC. 8. EXCEPTIONS.

(a) The provisions of Subsection (a)(1) of Section 3 of this Act shall not apply to any activity regulated by a fishery management plan in effect under the Fishery Conservation and Management Act of 1976 (16 U.S.C. 1801, et seq.);

(b) The provisions of paragraphs (1), (2)(A), and (3)(A) of Subsection 3(a) of this Act shall not apply to—

(1) any activity regulated by the Tuna Conventions Act of 1950 (16 U.S.C. 951–961) or the Atlantic Tunas Convention Act of 1975 (16 U.S.C. 971–971(h)); or

(2) any activity involving the harvesting of highly migratory species (as defined in paragraph (14) of Section 3 of the Fishery Conservation and Management Act of 1976) taken on the high seas (as defined in paragraph (13) of such Section 3) if such species are taken in violation of the laws of a foreign nation and the United States does not recognize the jurisdiction of the foreign nation over such species;

(c) The provisions of Subsection (a)(2) of Section 3 of this Act shall not apply to the interstate shipment or transhipment through a State of any fish or wildlife or plant legally taken if the shipment is en route to a State in which the fish or wildlife or plant may be legally possessed.

SEC. 9. MISCELLANEOUS PROVISIONS.

(a) EFFECT ON POWERS OF STATES.—Nothing in this Act shall be construed to prevent the several States or Indian tribes from making or enforcing laws or regulations not inconsistent with the provisions of this Act.

(b) REPEALS.—The following provisions of law are repealed:

(1) The Act of May 20, 1926 (commonly known as the Black Bass Act; 16 U.S.C. 851–856).

(2) Section 5 of the Act of May 25, 1900 (16 U.S.C. 667e), and Sections 43 and 44 of Title 18, United States Code (commonly known as provisions of the Lacey Act).

(3) Sections 3054 and 3112 of Title 18, United States Code.

(c) DISCLAIMERS.—Nothing in this Act shall be construed as—

(1) repealing, superseding, or modifying any provision of Federal law other than those specified in Subsection (b);

(2) repealing, superseding, or modifying any right, privilege, or immunity granted, reserved, or established pursuant to treaty, statute, or executive order pertaining to any Indian tribe, band or community; or

(3) enlarging or diminishing the authority of any State or Indian tribe to regulate the activities of persons within Indian reservations.

(d) HUMANE SHIPMENT.—Subsection 42(c) of Title 18, United States Code, is amended by striking "Secretary of the Treasury" and inserting in lieu thereof "Secretary of the Interior within one hundred and eighty days of the enactment of the Lacey Act Amendment of 1981."

(e) REWARD.—Subsection 11(d) of the Endangered Species Act of 1973 (16 U.S.C. 1540) is amended to read as follows:

"(d) REWARD.—The Secretary or the Secretary of the Treasury shall pay a reward from sums received as a penalty, fine, or forfeiture of property for any violation of this Act or any regulation issued hereunder to any person who furnishes information which leads to a criminal conviction, civil penalty assessment, or forfeiture of property for any violation of this Act or any regulation issued hereunder. The amount of the reward, if any, is to be designated by the Secretary or the Secretary of the Treasury, as appropriate, but shall not exceed the amount of the penalty, fine or forfeiture collected

in a case in which the person was an informant. Any officer or employee of the United States or any State or local government who furnishes information or renders service in the performance of his official duties is ineligible for payment under this subsection.".

(f) The amendment specified in subsection (9)(e) of this Act shall take effect beginning in Fiscal Year 1982.

(g) The Secretary of the Interior is authorized to pay from agency appropriations the travel expense of newly appointed special agents of the United States Fish and Wildlife Service and the transportation expense of household goods and personal effects from place of residence at time of selection to first duty station to the extent authorized by Section 5724 of Title 5 for all such special agents appointed after January 1, 1977.

SEC. 10. The Secretary shall identify the funds utilized to enforce this Act and any regulations thereto as a specific appropriations item in the Department of the Interior appropriations budget proposal to the Congress.

WILD CARGO: THE BUSINESS OF SMUGGLING ANIMALS

(By Noel Grove)

The whole operation went off like clockwork, with Kannan serving as the mainspring.

P. Kannan, an agent of India's Directorate of Wildlife Preservation, wages a constant war against dealers in illegal reptile skins. A large, well-proportioned, benign-looking man, carrying a briefcase and tending toward open-necked sport shirts, he appears more an accountant than a detective. His shoes make an unstealthy scritch scritch sound, one that must haunt the dreams of more than 20 Bombay merchants he has subpoenaed since early 1979.

The careful planning of the Indian law officer was evident when I stood in a Bombay shop bargaining for a legal jacket of cowhide. A man with a turban as black as his neatly trimmed beard walked in the door and bought a lizard-skin wallet; after pocketing the receipt, he showed the identification of a wildlife inspector.

"You have sold goods that violate the Wildlife Protection Act," he told the startled clerk. "The agent in charge will arrive soon to begin proceedings."

From outside the shop came the scritch scritch of Kannan's shoes, an ominous sound like the creak of a slowly opening door in a horror movie, promising soon-to-be-disclosed details, probably unpleasant.

Unpleasantness for those trading illegally in wild animals and their products is escalating around the world. Within the past decade government after government has passed laws to restrict or prohibit the sale of wildlife seriously depleted by hunting and habitat destruction. With legal channels pinched, animal dealers have resorted to nefarious schemes to continue the flow.

Wildlife is big business. Exotic-bird collectors will pay $10,000 for a hyacinth macaw. At Saks Fifth Avenue in New York I tried on a pair of trendy western boots trimmed in lizard skin. The price? "Two hundred thirty-five," the clerk said, with an archness suggesting that most of his customers didn't bother to ask.

At Harrods department store in London I peered into a display case at wallets of crocodile hide selling for more than £250 apiece (about $600). In Paris, Christian Dior's director of fur design, Frédéric Castet, let me fondle a downy coat made from the belly fur of 17 lynx and priced at $100,000. "We make only two a year because of restrictions on lynx trade," he explained. "But we could sell many more."

These items are being sold legally. But somewhere in the dim beginnings of their trial through commerce, they may have been acquired illegally.

The hyacinth macaw, for example, is found principally in Brazil, which bans its export. Most shipments to the United States come from Paraguay and Bolivia, which have very few. Ornithologists familiar with the area say that most of these macaw shipments were smuggled across the border from Brazil. The lizard boots, the crocodile wallets, and a host of other wild animals or their products may have the same questionable legal history.

According to the latest figures from the U.S. Fish and Wildlife Service (FWS), some 422,000 live birds and more than 1.1 million reptiles and amphibians were imported into the United States in 1979. Raw wildlife hides and skins totaled 11.8 million. Of individual items made from wild animals, 129.6 million were imported that same year.

This fascination with wildlife within the affluent nations of the world adds to the disappearance of animals in the less developed countries. In between stand the illegal traders, willing to circumvent wildlife-protection laws to satisfy the demand and their own pocketbooks.

FWS estimates that for every ten shipments of wild animals or their products that enter the United States by proper channels, at least one and perhaps as many as four shipments enter illegally, at a large profit to the smuggler. The recent trial of a Philadelphia animal dealer revealed that Fiji Islands lizards, purchased illegally in the Far East for $20 a pair, were sold in this country for $550. The U.S. Department of Justice estimates the total value of such entries as anywhere from 50 to 100 million dollars a year.

Wildlife smuggling is costing the U.S. millions of dollars to control and is denying income to the treasury of any nation that would otherwise receive duty from legal imports. It has spread diseases that would have been detected in legal quarantine periods. An outbreak of Newcastle disease—carried by exotic birds and fatal to domestic poultry—in California in 1971 cost 56 million dollars to control. U.S. Department of Agriculture officials say an outbreak of major proportions could cost a quarter of a billion dollars to eradicate.

An irreversible effect of illegal trade could be the extinction of animal species that are finding fewer and fewer places to hide. Of an estimated 13,200 species of mammals and birds known in the 17th century, more than 130 are gone forever and another 240 are considered endangered, together with many reptiles, amphibians, fishes, and invertebraes. Most losses and near losses can be traced to man's activities, either from hunting or habitat destruction.

"No imaginable consumption can threaten animals if they have sufficient habitat into which they can retreat," I was told by William Conway, director of the New York Zoological Society. "But at the rate the world's rain forests are disappearing—50 acres every minute—excessive trade can contribute to the downfall of some.

"The worst thing about the wildlife trade is that it provides things for people who do not need them. No one really needs a leopard coat. And certainly not a toucan."

Wildlife trade is probably as old as currency, and illegal wildlife trade must date to the first conservation laws. In the U.S., the Lacey Act of 1935 prohibited importation into this country of any wildlife acquired illegally in another country. The U.S. Endangered Species Conservation Act of 1969 banned U.S. import of any animals on the Endangered Species List. Other governments passed laws too, but enforcement was rare.

"Until recently, few of us knew one species from another," a U.S. customs officer told me candidly. "You just sort of glanced at the shipping papers that came with them and waved them on through."

The first serious effort to control all wildlife sales and plug the smuggling leaks took place in Washington, D.C., in 1973, when 80 nations met to draft the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). The complex mechanism that evolved has been called the most remarkable trade pact ever devised. "It's like issuing passports for animals—dead or alive—that pass from one country to another," a Hong Kong customs official told me.

CITES divided wildlife into three categories, or appendixes:

Appendix I—dangerously threatened with extinction and therefore banned from any commercial trade, such as the rhinoceros and seven of the eight races of tigers.

Appendix II—potentially threatened, but commerce can take place if shipments are accompanied by authorizing documents from the country of export. The American alligator is listed on Appendix II, for example, and can be traded, while the U.S. crocodile is on Appendix I and cannot.

Appendix III—not considered endangered by the world at large, but listed by some countries where they originate, out of concern for their existence there. The scarlet macaw can be shipped from Panama, but Costa Rica bans its export because it is rare in that country.

Any nation that ratifies the treaty is expected to honor the three categories. "It puts the burden of detection on the importing countries," said a convention delegate. "If an item doesn't have the proper papers, don't let it in."

Drafted in 1973, put into effect in 1975, CITES underwent a sluggish start. In March 1979 the delegates met in San José, Costa Rica, and the embers of trade control were fanned into flame. Two years after San José, more than 60 nations have signed and ratified the treaty.

Enforcement worldwide has toughened, and smugglers and illegal traders are getting a taste of what its like to be hunted. An organization called TRAFFIC (Trade Records Analysis of Fauna and Flora in Commerce), supported mostly by the World Wildlife Fund, now monitors the movement of animal products around the world. The information is supplied upon request to government, CITES officials, and conservationists. TRAFFIC offices now operate in London, Washington, and Nairobi; others are planned for Frankfurt and Tokyo.

"Before TRAFFIC there was no single reliable source of data about the amounts of animals and animal products being moved around the world," said Nicole Duplaix, director of the Washington office and one of the founders of the organization. "If the enforcement agencies around the world have been the arm of the law to stop smuggling, we have been the arm of documentation."

With war declared on animal smugglers, photographer Steve Raymer and I made an assessment of the battlegrounds. We visited areas where wildlife is captured, cities where it is collected by animal merchants for dispersal abroad, and the affluent countries where it is purchased.

To those concerned about the wildlife trade, the good news is that stricter enforcement has curbed the activities of smugglers, perhaps cut them drastically. Some who once operated openly were driven underground by CITES, sometimes so deeply that we had to go there to assure ourselves that illegal trade existed.

The bad news: We were able to find it.

"Everybody pick a tree!" Park warden Phil Snyder's whispered warning seemed to chase a swarm of butterflies up my back. Five of us on an antipoaching patrol peered around a clump of foliage into a clearing in central

Kenya's Aberdare National Park. Less than 100 yards away a black rhinoceros stood broadside to us, stamping his three-toed feet angrily, swinging his head quickly in one direction, then another. He sensed the presence of intruders but, with his poor eyesight and upwind position, could not locate us.

I had always thought the two horns growing out of a rhino's nose to be blunt. This fellow's scimitarlike weaponry, typical of the wild black rhino, looked capable of skewering a man like a barbecue spit. That unique protection is also becoming the animal's downfall. Wealthy North Yemenis will pay $6,000 for a jambiyya, the traditional dagger, when the handle is made of rhino horn (page 301). Many Easterners believe powdered rhino horn holds medicinal powers.

Demand for it has reduced the black rhino—once widespread throughout most of equatorial Africa—to scattered remnant populations totaling perhaps 15,000 to 25,000. More than 15,000 existed in Kenya alone in 1969, according to a study by zoologist A. K. K. "Kes" Hillman. Ten years later Kenya's total stood around 1,500 and was still falling.

Elsewhere, the Sumatran, Javan, and great Indian rhinos together probably number fewer than 2,000, and the white rhino, found mostly in South Africa, survives under close supervision. The trend suggests that this nearsighted thick-skinned juggernaut may be the next large mammal to disappear from the earth.

In Kenya the American-born warden Phil Snyder and his patrol were hunting the poachers who hunt the rhinos. We found none that day, and the rhino, not finding us, lost interest and trotted away.

"Without these patrols there would be no rhinos here within three weeks," said Snyder's assistant, Kamaw Hugangin.

Months later and thousands of miles away I was offered rhino horn in a pharmacy on Macao, the tiny Portuguese colony on the South China coast. The young clerks, grinning broadly, produced a whittled chunk of bonelike gray, at a price of $450 an ounce. Many Eastern men consider rhino horn an aphrodisiac, although there exists no evidence to support the belief. It consists of a substance called keratin, which is found on the human body as well. Scientifically, men with waning sexual powers could obtain the same results by eating hair trimmings and chewing their fingernails.

I wandered through alleys in crowded Bangkok until I heard a cacophony of bird sounds behind a high wall. Five dogs rushed the iron gate as I knocked, but polite attendants quieted them and let me in. Inside I found an ark of animals from the shrinking Thai rain forest—tree shrews, pythons thick as my thigh, a tumult of birds, terrified civet cats that spat from dark corners of their cages, slow-moving lorises with round eyes like goblins.

I asked the owner, a well-dressed woman in her 30s, if it would be possible for someone to buy clouded leopards and gibbons from her for shipment to the United States. (Both animals are banned from international commerce under the CITES Appendix I rating.) She looked at me carefully, then looked away. "It would be difficult," she said. "It is prohibited by law."

"Is it possible?"

"It would be difficult."

He looked every inch the successful Singapore businessman—flashy finger rings, gold digital watch, clothes made by the best Oriental tailors.

"I've made a great deal of money in the animal trade," he said. "But I'm getting out of the business. It's getting too difficult, too many regulations."

But he knew exactly how the illegal trading was done, especially with exotic birds from Australia, which bans their export. In a Singapore hotel, he sketched maps tracing the feather trail through the Far East.

"A fishing boat is chartered and sailed to Bali, then to the east coast of Australia, outside the Great Barrier Reef," he said. "From there, twin-engine speedboats make a dash to shore and pick up perhaps 2,000 birds—roseate cockatoos, sulfur-crested cockatoos, and parakeets.

"The smugglers return to Indonesia and buy papers saying that that's where the birds are from. Then the birds are taken ashore under cover in Singapore and sold, mostly to European dealers. After expenses, such a trip can clear a million dollars."

So much for so few birds?

"Bird collectors in Europe and the United States will pay $12,000 for a pair of golden-shouldered parakeets," he said. "Brown parakeets and Naretha bluebonnet parakeets go for $8,000 to $10,000.

"Of course, there is the chance that the trip may make nothing. Each cage has a rope tied to it with a rock at the end. If a patrol boat chases them, the smugglers can dump the birds overboard."

Much of the illicit trade is carried on with the help of people assigned to protect the animals. I asked a young American biologist heading for the jungles of Colombia to contact me if he witnessed illegalities. His report weeks later included personal sighting of ocelot skins en route by canoe to a dealer in the nearest settlement, and Appendix I otter skins being sold to a government agent.

In Panama City a top officer in the department of natural resources admitted that illegal trade from neighboring nations passes through his country, but that he is powerless to stop it. "Some of the people doing it have political connections," he said.

The culprits are not always big operators. On Grand Cayman in the Caribbean, the saleswoman in a gift shop encouraged me to buy jewelry made from the shell of a green sea turtle. Even though this species is grown for market in a shore turtle farm here, all sea turtle products are banned from United States import. "It's very small, easy to hide in your suitcase," the saleswoman said, with a nonchalance that suggested long practice and past success.

Bird-loving Belgians flock each week to the Sunday market in Brussels' Grand' Place to ogle exotic species from the tropics. "Belgians are enthusiastic bird collectors," said a distinguished-looking gray-haired gentleman there, who added that he keeps a backyard aviary of some 50 birds. "Most of these birds are common waxbills and finches, but it is possible to buy others that are very rare, nearly extinct."

"How does one do that?"

"I know," he said with a smile and a wink, "but I cannot tell you."

Perhaps no single product is more synonymous with the illegal wildlife trade than elephant ivory. It touches all the major aspects of the problem—poaching, bribery, high profits, worldwide distribution, and an animal that finds it almost impossible to hide.

One of the world's precious commodities since biblical times, ivory sold for about $10 a kilogram (2.2 lbs.) during the first half of this century. The price shot to $100 a kilo in the mid-'70s before settling back to the present $74. With even a medium-size tusker carrying around some $1,300 on its upper jaw, elephants began dropping like flies all over Africa, usually outside the law.*

Although carved statuary, piano keys, and trinkets may be the ultimate use, much of today's new ivory is being held as a grisly investment, according to Au Ming Chi, chairman of the Hong Kong and Kowloon Ivory Manufacturers' Association. Many people around the world are buying raw tusks and hoarding them because they believe the elephant will become extinct and the price will soar.

Most African countries have limitations on their ivory exports, but official-looking documents can often be bought. After they are sold and resold in international markets, their origin becomes increasingly vague, until no one can say whether a carved figurine for sale in a Hong Kong ivory shop came from an elephant that was legally harvested, was poached with a poisoned arrow, or one that died of natural causes.

Joseph Kioko lives on the front lines of the poaching problem. The 35-year-old Kenyan is warden for the eastern portion of Kenya's Tsavo National Park. To protect the elephants and rhinos, he supervises 53 rangers, a thin force when spread over an area the size of Connecticut.

"We've found groups of as many as ten elephants, fallen close together," he told me one morning as he made the day's patrol assignments at park headquarters. "You could tell they were just mowed down by poachers with automatic weapons."

The body count is not always in animals. Two park rangers and 20 poachers—most of them drought-poor Somalis from Kenya's neighbors to the east—have been killed in shootouts. "It's like a war," said Joe, who has been fired at while flying surveillance of his park in a light plane.

The problems encountered by Joe Kioko are universal. In 1979 two game wardens were killed and five seriously wounded in Thailand, where diminishing rain forests have long been a reservoir of birds, reptiles, and primates for research. "We have 24 wildlife sanctuaries, but only 215 guards," I was told by Pramote Saiwichian of the Wildlife Conservation Division. "We hope to hire and train more, but it all depends on the national budget."

The actual killing or capturing of the animals is usually the work of villagers, who then sell them to dealers. "You have to remember that many locals have always made their living by selling wildlife," said Angel Paucar, head of Ecuador's wildlife section. "For them, it is an economic necessity."

His solution: "We have declared large areas of our Amazon Basin as national parks. The Indians there will undergo training and become salaried as park guards. Instead of killing the animals, they will be paid to protect them . . . if we can get money to finance the project."

"There is a reluctance on the part of governments to spend money on wildlife, because they do not see the immediate economic return," a wildlife official in India told me. "They prefer to spend money on development schemes that bring in big cash."

Kenya banned all hunting in 1974 in hopes of rebuilding the game stocks that draw tourists and trophy hunters. The World Bank has lent them 17 million dollars for the project.

But a hunting ban does not necessarily amount to a trade ban. Ivory, rhino horn, and catskins have continued to leak out of Kenya, sometimes with the help of public officials, Kenya's harshest critics concede, though, that corruption there is decreasing.

Proposed new U.S. legislation would tighten the restrictions on ivory coming into the country. A 1980 bill for elephant protection would allow imports only from those nations that can prove they are practicing strict measures of elephant management. The bill passed the House of Representatives, where it originated, but died in the Senate. It is almost certain to be reintroduced, and possibly broadened to cover all endangered species.

Strict though the measures may be for the African tusks, the United States has another problem to resolve with ivory produced with-

* See Orla Douglas-Hamilton's "Can They Survive?" in the November 1980 National Geographic.

in its own borders—the tusks of Alaskan walruses.

Most of the U.S. ivory-carving industry originated from scrimshaw—the etching of pictures on the teeth of sperm whales by early Yankee whalers. Carvers on the East and West Coasts and the Hawaiian Islands shifted to walrus tusks, then to elephant ivory when walrus kills were regulated. With interstate commerce in sperm whale teeth now banned in the U.S. and elephant-ivory imports reduced, traffic in walrus ivory has escalated. Although the walrus population has been creeping upward, so has the number of walrus kills—to more than 5,000 annually.

Under the U.S. Marine Mammal Protection Act, walrus hunting in Alaska is strictly limited. Walrus tusks may be sold only by native peoples who have worked them into "authentic handicrafts." In the seaside town of Lahaina on the Hawaiian island of Maui, I entered shop after shop displaying walrus ivory etched with seafaring scenes, for sale to tourists. Sailors in striped T-shirts hauled in a mainsail on one tusk. A clipper ship sailed across another piece, which sold for $775. The names of the artists did not sound native Alaskan.

I telephoned the artist who signed the clipper-ship tusk. Is the fresh ivory "worked as an authentic native handicraft" before he gets it from a local importer?

"Sometimes it just has the Eskimo's initials carved at one end," he admitted. "I've even gotten them with ball-point pen scribblings on them."

Wildlife laws are only as good as the officials who inspect shipments in and out of countries. In the United States, customs officers are attending seminars taught by animal experts, and visiting zoos and museums to see and identify exotic species. Tourists as well as big-time smugglers are feeling the new emphasis. I visited an "evidence room" in Honolulu, where hundreds of items seized from individual travelers were piled to the ceiling. They included leopardskin coats, carved whales' teeth, and some 800 hawksbill and green sea turtle shells—all illegal according to CITES and the U.S. Endangered Species Act. "Please, tell people to check regulations before they buy things abroad," pleaded agent James Bartee of the U.S. Fish and Wildlife Service. "We don't like to take these things from them."

Customs and FWS officers make the first contact with wildlife shipments; the National Marine Fisheries Service and the Department of Agriculture may be called in to provide positive identification of the animals being shipped. If any question arises, the agencies refer shipments to outside experts.

I watched customs inspectors Randy Karavanich and Maryanne Noonan at Los Angeles International one day as they checked crates of monkeys imported for research. Everything seemed in order—clean cages, healthy animals, shipping documents.

"The papers say they came from Guatemala," said Randy. "But I've never seen a Guatemala permit before, so I wouldn't know if this one is false. We'd better have Roy take a look at it."

Roy Simpson, the Fish and Wildlife inspector on duty, is a quiet, bookish man, with an eye for detail. He peered at the monkeys and pored over a manual explaining trade requirements. "One man's name, and no other, should be on any shipment from Guatemala," he said. "It's missing from these papers."

The monkeys were confiscated, to be cared for at a nearby holding station while the case was being investigated. If the final decision went against the importers, the animals might later be given to a zoo.

Randy slapped seizure stickers on the cages, at the same time telling the occupants in mock seriousness, "All right, you guys are being seized. You have the right to remain silent. Anything you chatter may be used against you."

Advising monkeys of their rights is a laughing matter, but convicted smugglers are finding little humor in penalties they now receive in the United States. The emphasis changed in August 1979 with a presidential directive calling for more attention to illegal animal trade. A special wildlife section committed to stricter enforcement was created within the Department of Justice. The new section's eight attorneys, headed by lawyer and wildlife expert Kenneth Berlin, aid U.S. attorneys in prosecuting cases at the designated ports where wildlife shipments may enter—New York, Miami, New Orleans, Chicago, Los Angeles, San Francisco, Seattle, Honolulu—and several other cities along the U.S. borders.

In addition, special task forces are being set up around the nation to combine the efforts of Justice, Fish and Wildlife, Customs, National Marine Fisheries, and the Department of Agriculture. "We're committing the expertise of all these agencies to individual wildlife cases, instead of having each one conduct its own investigations," Berlin told me in Los Angeles.

It's working. A case investigated and prosecuted by the task force in that city resulted in a $10,000 fine for the company importing the wildlife, an 18-month jail sentence for the principal defendant, and shorter terms for two associates.

The most celebrated wildlife case so far took place in Philadelphia in 1979, where animal dealer Henry Molt was convicted for illegally importing reptiles into the United States from Fiji and Papua New Guinea. He was sentenced to 14 months in prison and prohibited from importing any reptiles for a three-year probation period. Molt is appealing the verdict.

There is action on the international front as well. "The battle against illegal wildlife trade has encouraged countries to set up the institutions for conservation they didn't have before," said Dr. Gerard Bertrand, who has traveled worldwide for FWS, exporting American conservation techniques. "And there's no question about what started it all—CITES."

This "most remarkable trade pact" has its weaknesses, admits Peter Sand, the high-energy Bavarian lawyer who heads the CITES Secretariat. "The treaty allows members nations to 'take exception' to some trade restrictions," he told me at CITES headquarters in Gland, Switzerland.

"France, Italy, West Germany, Japan, and Switzerland all take exception to the ban on saltwater crocodiles, for example, because they process the skins into leather goods. And since they make most of the world's handbags, shoes, belts, and other crocodile-skin products, their exceptions undermine the CITES attempt to protect the species."

Regulation alone probably cannot stop wildlife trade.

"You can't cut off trade completely when demand exists for the product," a French tanner of crocodile hides told me angrily. "You only drive it underground. The only answer to saving endangered species is to farm them."

Managing wildlife to meet the demand for their products is inevitable, I heard from conservationists, animal dealers, tanners, bureaucrats, and illegal traders.

Management may include as large an operation as the great South African game reserves, where elephants, lions, and other trophy animals are carefully protected and regularly culled to prevent overcrowding. Such a controlled harvest can reap national income from hunting fees and tourism. In Papua New Guinea, crocodile ranching has become a national goal.

"The idea is to encourage villagers to capture the small wild crocs that suffer high mortality anyway and raise them to selling size," said Melvin Bolton, the United Nations' project manager. The U.N. has provided funds and technical assistance for the project. "It's not easy. These are people with traditions of hunting, not day-to-day ranching responsibilities."

Villagers at Mamber, a collection of stilt-legged huts along the broad Sepik River in the northwest, are accepting the new life. Amid clouds of mosquitoes I walked with them to four croc pens enclosed by vertical log walls. Several sets of periscopic eyes peered from muddy pools.

It takes two years for a captured yearling croc fed on netted fish to attain a belly width of 15 inches, proper selling size. Mamber hoped to sell the first crop of 14 for about $150 apiece within a year.

"Eventually we'll sell 20 a year," said villager Moses Gawi. "We'll use the money for improvements to the village, such as a pump to bring a better water supply."

Two large ranching operations, both owned by Papuans and managed by Australians, are under way at Lae and Port Moresby. Both fatten their charges on offal from their own chicken-processing plants, which operate simultaneously. Croc-skin sales for these large-scale operations could number in the thousands annually.

An exception to the CITES ban on saltwater croc sales has been granted Papua New Guinea. The project is seen as a possible pilot. If crocs can be ranched, why not leopards, tigers, or cheetahs?

The problem is one of identification. Who can tell whether a saltwater crocodile skin was raised or poached? Conservationists argue that farming an endangered species creates a market for it and encourages poaching of the animals still running wild. Dealers claim the demand will always be there and might as well be accommodated legally. The world's first green turtle sea farm brought the argument to the courts.

CITES lists the green sea turtle as Appendix I but allows trade if it is born and raised in capacity. Cayman Turtle Farm on Grand Cayman in the Caribbean meets those requirements, said its manager, William Johnson, as we walked past concrete tanks filled flipper to flipper with turtles. Fed high-protein pellets, they reach growth of about 80 pounds within three years before being butchered.

The farm markets the shells as jewelry and wall hangings, the oil for cosmetics, meat for steaks, fatty calipee for soup, and flipper skin for leather goods.

In the farm's early days, Mr. Johnson admitted, eggs were gathered in Suriname, from beaches said to be doomed to erosion. Now, he says, the entire stock comes from the breeding females.

Oval submarines with shells four feet across, they glide through the clear water of the large breeding pool with a smooth flipper motion that resembles flying. The largest weighs about 600 pounds. A sand beach lines one side of the pool, so the females can lumber ashore to lay their eggs, which are gathered and artificially incubated.

In 1978 the U.S. Departments of the Interior and Commerce banned import of all sea turtle products into the United States regardless of origin. The agencies argued that sale of the products created a market that encouraged the poaching of turtles in the wild. They added that success of the Cayman farm might encourage the establishment of similar companies, whose start-up operations might also require collection of eggs from the wild.

The farm filed suit against the U.S. agen-

cies to stop the embargo on their products, arguing that their operation met the requirements of the CITES treaty. As to depletion of wild turtles, they point out that hatching thousands of eggs annually adds to the sea turtle population.

The U.S. argument was upheld; the farm is appealing the decision.

Adequate space exists for both people and wildlife, in the opinion of most biologists, with the establishment of properly enforced game preserves. But no preserve is safe as long as there exists a demand for the creatures and their products, thus encouraging illicit traffic.

As human population pressures continue, many nondefenders of wildlife argue, "Who deserves the space more, people or animals?" Nalni D. Jayal, an Indian government conservationist, does not consider it a matter of choice. He sees wild animals as an important measuring stick for the state of the world. "The earth has developed a successful ecosystem, and the presence of all creatures in it is a sign that it is still healthy," he told me in New Delhi. "When we destroy any part of it, we destroy a bit of ourselves."

In his country, for example, the handbags made from glittering skins of the monitor lizard and the hooded cobra are popular tourist bargains. Why save these reptiles, once a throwback to the age of dinosaurs, both the stuff of nightmares? Because, Mr. Jayal said, they eat rodents, scourge of India's struggle to feed itself. Twenty percent of the annual food production is eaten by rats and mice, none of which are eaten by handbags.

Over months of searching for illegal trade, I found the prey progressively more elusive. Traders and dealers told me they were going out of business or shifting their emphasis to legitimate animals. Time after time I traveled to locations where, I had been told, the trade was particularly heavy and blatant. Time after time it was gone, or forced deep into hiding when I arrived.

At best, the funnel of illegal wildlife became a sieve, in which the holes are slowly being plugged. A drip can empty a vessel, but the slower flow at least buys time for earth's endangered animals.

Can they be saved before time runs out? Or will they be sacrificed to doomsday choices such as whether people or animals deserve to live on the earth?

After I had heard the "people or animals" question posed a third time on as many continents, I decided to submit the idea to cold logic. I imagined a cosmic jury considering the evidence.

On the one hand, the case is argued for the animals, whose ancestors preceded man's on earth, and who for the most part maintained a system of checks and balances on their numbers.

On the other hand, the case of man is brought forth. A relatively helpless creature save for a marvelous brain, this comparatively recent addition brought the ability to articulate an appreciation of the world and developed the potential to ease pain and hardship for all its inhabitants. But man also brought killing for fun and for decoration—killing that began to upset nature's delicate balance.

The evidence is in. Who more deserves the shrinking space on earth, animals or people? As a member of the latter species, I am worried about the verdict.

Mr. BAKER. Mr. President, in light of the action just taken by the distinguished Senator from Rhode Island, and in view of the fact that I am advised that the chairman and the ranking members of the Committee on Environment and Public Works and the Committee on the Judiciary have reviewed the proposed legislation, I ask unanimous consent that a letter in respect to this matter be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., March 17, 1981.

Hon. HOWARD H. BAKER, Jr.,
Majority Leader,
Hon. ROBERT C. BYRD,
Minority Leader, U.S. Senate, Washington, D.C.

DEAR LEADERS: We are proposing a unanimous consent agreement for the referral of the Lacey Act Amendments of 1981.

This bill, which would improve existing Federal tools designed to aid enforcement of Federal, State, and foreign wildlife conservation laws, is virtually identical to S. 1882, 96th Congress, which was referred to the Committee on Environment and Public Works. Unlike most laws within the jurisdiction of the Environment Committee, the Lacey Act is codified in Title 18 of the United States Code, at 18 U.S.C. 43. As such, the bill is of interest to the Committee on the Judiciary as well as the Committee on Environment and Public Works. In order to expedite the business of the Senate and without prejudice to future jurisdictional claims of either committee, we are proposing referral of this bill to the Committee on Environment and Public Works with a sequential referral to the Committee on the Judiciary for a period not to exceed 30 days.

Please let us know if this arrangement is satisfactory, as we hope to introduce the bill at an early opportunity.

Sincerely,

ROBERT T. STAFFORD,
Chairman, Committee on Environment, and Public Works.
JENNINGS RANDOLPH,
Ranking Minority Member, Committee on Environment and Public Works.
STROM THURMOND,
Chairman, Committee on the Judiciary.
JOSEPH R. BIDEN, Jr.,
Ranking Minority Member, Committee on the Judiciary.

Mr. BAKER. Mr. President, I ask unanimous consent that the Lacey Act Amendments of 1981 be referred to the Committee on Environment and Public Works and then be referred to the Committee on the Judiciary for a period not to exceed 30 calendar days.

Mr. DIXON. There is no objection on this side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAFEE. Mr. President, I thank the majority leader and the minority leader for their consideration with respect to the sequential referral.

By Mr. DURENBERGER:

S. 737. A bill entitled the "Basic Industries Reindustrialization Act"; to the Committee on Finance.

BASIC INDUSTRIES REINDUSTRIALIZATION ACT

Mr. DURENBERGER. Mr. President, in a tax system with adequate incentives for capital formation there would probably be no need for the investment tax credit. Unfortunately, over the past half century the incentives in the Tax Code have gradually swung away from savings and capital accumulation. The code has taxed away income from whatever new source American enterprise could develop without regard for the reinvestment consequences of the tax. In addition—and as distinct from other industrialized nations—our national tax policy has concentrated on raising revenue from the results of capital investment, rather than from the acquisition or consumption decisions of the society using the goods and services produced from the investments.

The President's tax proposal represents a departure from that trend. But it represents only the first step in a long process, and it seems evident that the investment tax credit will continue to be a vital part of America's tax policies throughout the foreseeable future.

The impact of the ITC has been statistically demonstrable in industry after industry. It is a constructive tax subsidy that serves its purpose directly and economically. Companies enjoy the prescribed tax relief—with the resulting positive impact on after-tax earnings and cash flow—only if they actually engage in productive investment. As in the case of accelerated depreciation, the "bang" for the forgone "tax buck" is maximized.

But like accelerated depreciation, the ITC has inherent limitations. Because it is a tax credit, it can only impact on industries that are already yielding profits.

Unfortunately, the industries facing the greatest need for retooling (because they have the oldest physical plant) are also among the economy's least profitable. Steel, automobiles, rail, airlines and mining are good examples. These basic industries have three troublesome factors in common:

First. Each is a true basic industry, employing large numbers of people, and producing a product essential to the Nation's economy.

Second. Each is facing immense capital investment needs as it seeks to modernize aging plants and equipment. It is also generally true that these industries have diverted millions of dollars in investment capital to socially rather than economically productive investments, such as pollution control equipment.

Third. In the face of these growing investment needs, each of these basic industries is facing inadequate earnings on an industrywide basis.

No one would deny that modernization of these basic industries is essential to any reindustrialization plan. But it is equally true that 10-5-3, ITC, and the various other tax reforms being considered by the Finance Committee will have little or no impact on these industries because they lack profitability.

The refundable investment tax credit (RITC) is the only tax reform proposal capable of affecting these basic industries. It is also completely consistent with the theory behind ITC—to render investment dollars a higher priority resource allocation by making every investment dollar worth $1.10. The 10-cent-per-dollar refund granted under refundability is no greater loss to the Treasury than the 10-cent-per-dollar credit being granted to industries that now qualify for the ITC. An industry receiving refunds under an RITC proposal receives no greater benefit than an industry which presently receives the credit. In each case, the benefit rendered

(or tax revenue lost) is identical. Only the form of the benefit/loss differs; that is, refund versus tax writeof.

Without refundability, there are substantial differences between the benefits rendered industries and companies within an industry which qualify and those which do not. The present, nonrefundable ITC creates an anomaly—focusing billions of dollars in Federal assistance on the industries that need it least, while denying any assistance to those industries which need it most. In a sense this overstates the point, since American industry has a general need for tax and investment incentives. But without refundability, the ITC will remain one of this Nation's most poorly targeted tax-planning mechanisms.

This morning I am introducing legislation that will resolve these defects in the ITC, and take a first meaningful step toward developing a tax policy that can meet the unique needs of America's basic industries. It is a bill designed to put the hundreds of thousands of workers who depend on these basic industries back to work. The bill is entitled the Basic Industries Reindustrialization Act. By making the investment tax credit refundable for certain classes of industry, it would extend the benefits of the ITC to those basic industries with the greatest capital investment needs, but the least ability to benefit from other tax measures due to inadequate earnings.

A number of basic industries are declared immediately eligible for the program, and mechanisms are created by which other industries can be declared eligible, or industries originally designated can be removed from eligibility as their profitability improves. The bill is a carefully targeted procedure for assisting an essential portion of America's economy through a time of unique capital crisis. Consistent with that philosophy, the program would sunset after 7 years unless Congress chose to renew it.

The bill would yield multiple advantages for American industry and the workers who depend on it. The last decade has illustrated that when industries begin experiencing financial difficulties, new investment is invariably the first item deferred. Over a period of years this has a cumulative effect. Decreased investment means higher unit costs, and loss of competitive advantage. These factors further weaken the industries' cash position, which magnifies the incentive to defer investment. It is a vicious cycle that has been repeated in most basic industries.

The refundable investment tax credit is the only tax reform proposal that attacks this cycle at the onset, by providing financially troubled industries with both the incentive and the liquidity to maintain adequate levels of capital investment. It is a form of preventive maintenance, which can go a long way toward preventing the kind of complete investment collapse experienced in a number of troubled American industries. It makes more sense to focus such assistance at the point where a company hits break-even level, that is, where the vicious cycle begins, than it does to pour billions of dollars into bailing out industries after they have suffered a complete financial collapse.

The refundable tax credit would have significant primary and secondary employment impact—primary in the industries qualifying, secondary in the industries producing the capital goods needed by these basic industries. By definition, refundable tax credits have a high correlation with new investment. No other form of financial assistance for basic industries gets this big a bang for the buck. In addition, the refundable tax credit gives the Federal Government the ability to have near absolute control over where the refunded dollars are spent. Under a refundable credit system, a company must spend money invested in qualifying property to qualify for the credit. Qualifying property can be defined in any way that Congress deems socially desirable. This makes the RITC a very precise tax-planning tool.

Making the ITC refundable would also counter the present law's inherent tendency to use Federal tax subsidies to widen disparities among members of the same basic industry. As Senators LONG and KENNEDY described the problem in a letter to former Treasury Secretary Blumenthal—

> Two firms in the same industry may purchase identical equipment. Yet, one firm may be placed at a competitive disadvantage, because it is not eligible for the ten percent investment tax credit. It is difficult to understand, for example, why a major Federal subsidy like the Investment Tax Credit should be designed in a way that enables General Motors to pay $90,000 for a $100,000 machine, while requiring American Motors to pay the full $100,000.

From both an economic and a philosophical standpoint, refundable investment tax credits are clearly preferable to the bailouts, subsidies, and import restrictions which have thus far been the only real alternative for assisting reindustrialization of the basic industries.

The Basic Industries Reindustrialization Act is not a mechanism for bailing out failing companies and otherwise healthy industries. It focuses only on basic industries which lack profitability on an industrywide basis. Nor is it accurate to suggest that the benefited industries have been singled out for special treatment. They have already been singled out by their inability to draw significant benefits from the broader tax package we will soon approve in Finance. The bill I offer this morning will simply enable those industries to share in the capital incentives we are about to grant—and in the case of ITC have already granted—other segments of American industry.

Refundability is a tool, and it is important to recognize that this bill is only one approach to using that tool. The coverage of the bill can be expanded to whatever degree the responsible committees deem advisable. Or, by controlling the percentage refundable in any given year, the concept can be fit within any budget parameters. The targeted approach embodied in this bill is designed to focus on the industries in greatest need, while keeping the cost of the bill within reasonable budget parameters. The possibilities for targeting the refundable tax credit are limited only by the ingenuity of those Senators and Representatives on the tax-writing committees.

In offering this legislation, I want to reaffirm the fact that I am solidly in support of President Reagan's tax reform proposals. I share his belief in the need to move the "first" tax package as quickly and as cleanly as possible through the legislative process. But with this goal achieved, we must address the need to resolve the chronic problems facing America's basic industries. The legislation I offer this morning is a workable, cost-efficient means to resolve those problems, and both a worthy and necessary supplement to the general tax package we are about to approve.

I ask unanimous consent that the bill be printed in full in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 737

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SUSPENSION OF LIMITATIONS ON INVESTMENT CREDITS FOR DESIGNATED INDUSTRIES.

(a) SUSPENSION.—Paragraph (8) of section 46(a) of the Internal Revenue Code of 1954 is amended to read as follows:

"(8) Suspension of limitation in the case of certain railroads, airlines, steel manufacturers, automobile manufacturers, and mining businesses—

"(A) IN GENERAL.—Paragraph (3) of this subsection shall not apply to so much of the credit allowed by section 38 as is attributable to application of the regular percentage to qualified investment (determined under subsections (c) and (d)) of a taxpayer in railroad property, airline property, steel manufacturing property, automobile manufacturing property, or mining property in such qualified investment is with respect to the 7-year period beginning with the taxpayer's taxable year ending after April 1, 1981.

"(B) RAILROAD PROPERTY DEFINED.—For purposes of this paragraph, the term 'railroad property' means section 38 property which (i) is used in connection with the trade or business of operating a railroad (including a railroad switching or terminal company) and (ii) is owned by a domestic common carrier by railroad or by a corporation the majority of the voting stock of which is owned directly or indirectly by one or more such common carriers or by persons who were such common carriers before entering proceedings under the Bankruptcy Act.

"(C) AIRLINE PROPERTY DEFINED.—For purposes of this paragraph, the term 'airline property' means section 38 property which (i) is used in connection with the trade or business of the furnishing or sale of transportation of persons or property as a common carrier by air and (ii) is owned by a domestic common carrier by air or by a corporation the majority of the voting stock of which is owned directly or indirectly by one or more such common carriers or by persons who were such common carriers before entering proceedings under the Bankruptcy Act.

"(D) STEEL MANUFACTURING PROPERTY DEFINED.—For purposes of this paragraph, the term 'steel manufacturing property' means section 38 property used by the taxpayer directly in connection with the trade or busi-

ness of the taxpayer in the manufacture or production of steel.

"(E) AUTOMOBILE MANUFACTURING PROPERTY DEFINED.—For purposes of this paragraph, the term 'automobile manufacturing property' means section 38 property used by manufacturers or producers of motor vehicles in connection with the trade or business of the manufacture, production, assembly, sale, or delivery of vehicles intended to be used as motor vehicles (as defined in section 6323(h)(3)) or parts, accessories, or components thereof.

"(F) MINING PROPERTY DEFINED.—For purposes of this paragraph, the term 'mining property' means section 38 property used by the taxpayer directly in connection with the trade or business of the taxpayer of extracting ores or minerals from the ground (or from the waste or residue of prior mining) and treating or processing such ores or minerals to the form in which they are most commonly marketed by the domestic industry.

"(G) CREDITS GENERATED BEFORE APRIL 1, 1981.—The portion of any investment credit carryover attributable to application of the regular percentage to qualified investment in railroad property, airline property, steel manufacturing property, automobile manufacturing property or mining property with respect to taxable years prior to the period described in subparagraph (A) which has not expired prior to the beginning of such period shall be deemed for purposes of subparagraph (A) to be an amount of qualified investment to the extent of the percentages specified below:

Taxable year ends in:	*Percentages:*
1981	14
1982	28
1983	42
1984	56
1985	70
1986	85
1987	100

"(H) ORDER OF APPLICATION.—For purposes of this paragraph, the amount of credit allowed in any taxable year shall be determined by reference first to property to which this paragraph does not apply.

(I) REPORT BY PRESIDENT.—The President shall submit to Congress a report on or before December 1, 1982, and on or before the corresponding date for each year thereafter through 1988, recommending whether—

(i) the 7-year period described in subparagraph (A) of this paragraph should be extended with respect to any or all of the industries described in such subparagraph, and

"(ii) the provisions of subparagraph (A) of this paragraph should be extended to any other industries.

In making such recommendations the President shall take into account to the extent possible in each case the projected level of investment credits to be generated by a particular industry in years subsequent to the report, the investment needs of industry, and the projected ability of such industry to utilize the benefits of the investment credits so generated on a current basis without the benefits of this paragraph."

(b) EXCESSS CREDIT TREATED AS OVERPAYMENT OF TAX.—Subsection (b) of section 6401 of the Internal Revenue Code of 1954 (relating to excessive credits) is amended—

(1) by inserting "38 (relating to investment in depreciable property)," before "39" the first place it appears, and

(2) by striking out "39 and 43" and inserting in lieu thereof "38, 39, and 43".

(c) CONFORMING CHANGES.—

(1) Section 6513 of such Code (relating to time return deemed filed and tax considered paid) is amended by adding at the end thereof the following new subsection:

"(f) TIME INVESTMENT CREDITS CONSIDERED PAID.—For purposes of sections 6511 and 6512, the taxpayer shall be considered as paying an amount of tax on the last day prescribed by law for payment of the tax (determined without regard to any extension of time and without regard to any election to pay the tax in installments) equal to so much of the credit allowed by section 38 (relating to investment credit) as it is treated under section 6401(b) as an overpayment of tax.".

(2) The heading for section 6611(d) of such Code is amended to read as follows:

"(d) Advance Payment of Tax, Payment of Estimated Tax, Credit for Income Tax Withholding, and Time Investment Credits Considered Paid.—".

SEC. 2. TENTATIVE REFUND OF INVESTMENT TAX CREDIT.—

(a) Section 6411(d) of such Code (relating to tentative carryback and refund adjustments) is amended as follows:

(1) By inserting after the words "tentative refund" the words "of so much of the credit allowed by section 38 (relating to investment credit) as is treated under section 6401(b) as an overpayment of tax for the taxable year, or";

(2) By deleting the word "and" at the end of subsection (1)(B);

(3) By inserting immediately after "(C)" in subsection (1) the words "in the case of an application for a refund of an amount treated as an overpayment of tax under section 1341(b)(1),";

(4) By deleting the period at the end of subsection (1)(C)(v), and substituting therefor a comma followed by the word "and"; and

(5) By adding at the end of subsection (1)(C) the following new subsection:

"(D) In the case of an application for a refund of the amount of a credit allowed by section 38 (relating to investment credit) and treated as an overpayment of tax under section 6401(b), set forth such information in such detail and with such supporting data as the Secretary may prescribe by regulation."

(b) Section 6213(b)(3) of such Code (relating to assessments arising out of tentative carryback or refund adjustments) is amended by adding a comma after "carryback" and by inserting immediately before the words "he may assess" the words "or the amount creditable under section 38 and treated as a refund under section 6401(b),".

SEC. 3. AUTHORIZATION OF APPROPRIATIONS.

There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

By Mr. DURENBERGER:

S. 738. A bill to amend the Internal Revenue Code; to the Committee on Finance.

ST. PAUL PORT AUTHORITY REVENUE BONDS

Mr. DURENBERGER. Mr. President, this morning I am introducing a refunding amendment to section 103(b) of the Internal Revenue Code, which relates to industrial development bonds. This measure is designed to allow the Port Authority of the City of St. Paul to advance refund prior issues of revenue bonds. Such refundings will relieve the port authority of restrictive covenants, improve its cash flow and thus strengthen the port authority's ability to finance future projects.

Port authority revenue bonds are unique because, unlike typical industrial revenue bonds, port authority revenue bonds are secured by a pledge of almost all of the port authority's revenues derived from facilities owned by the port authority but leased to private companies. This "pooled security" has allowed the port authority to finance many projects which would not attract private financing standing alone. To market the bonds, however, the port authority had to enter into many restrictive covenants which have impacted on the entire operation of the port authority and its ability to issue bonds in the future.

The most serious restriction is a requirement that an additional reserve fund be maintained as additional security for the port authority's "pooled security" bonds. Although the additional reserve fund was needed over 5 years ago when the port authority initially made such bonds available, this requirement is no longer necessary for the marketing of the bonds because of the success of the program. The upshot is that major revenues of the port authority are being trapped in the additional reserve fund rather than used to help fund the port authority's economic development program.

The problem is that refunding the prior issues is the only practical remedy the port authority has of relieving itself of restrictive covenants no longer required by existing market conditions. This remedy, however, is not available to the port authority because of the fact that the interest on such refunding bonds would not be exempt from Federal income taxation under the existing provisions of section 103(b) of the Internal Revenue Code. The proposed bill solves that problem.

The proposed refunding amendment to section 103(b) also allows the port authority to improve its cash flow by requiring that any debt service savings gained by refunding accrue for the benefit of the port authority rather than be passed on to the private companies using the facilities financed by the bonds being refunded. This requirement further enhances the ability of the port authority to finance future bond issues backed by a pledge of revenues derived from port authority facilities.

In short, the proposed refunding amendment solves a problem which is essentially unique to the port authority and, because of the narrow scope of the amendment, would not impact throughout the rest of the country. For this reason, we submit that the Internal Revenue Service should have no objections to the amendment.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 738

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part II of Subchapter B of Chapter 1 of the International Revenue Code of 1954 (relating to items specifically excluded from gross income) is amended by redesignating section 103(b)(8) as section 103(b)(9) and by in-

serting after Section 103(b)(7) the following new section:

"(8) ADVANCE REFUND OF QUALIFIED ISSUES.—

"(A) IN GENERAL.—Paragraph (1) shall not apply to a refunding issue if—

"(i) the refunding issue is secured by a pledge of substantial revenues of the issuer derived from 20 or more facilities operated or leased by the issuer,

"(ii) the issuer of such refunding issue is a political subdivision engaged primarily in promoting economic development,

"(iii) the issuer of such refunding issue was created under State law at least 20 years prior to the issuance of such refunding bonds for the express purpose of promoting economic development, and

"(iv) any debt service savings derived from the refunding may be used only for the proper corporate purposes of the issuer and shall not be used to reduce any existing obligations of any person who is not an exempt person (within the meaning of paragraph (3))."

By Mr. DURENBERGER (for himself, Mr. PRESSLER, Mr. MELCHER, Mr. BAUCUS, and Mr. DIXON):

S. 739. A bill to amend the Internal Revenue Code of 1954 to make the investment credit for railroad property refundable; to the Committee on Finance.

RAIL INVESTMENT INCENTIVES ACT OF 1981

Mr. DURENBERGER. Mr. President, this morning I am introducing legislation that will play an essential role in halting the deterioration of this Nation's rail system, and insuring continuing private ownership of the carriers that operate the system. The bill is entitled the "Rail Investment Incentives Act of 1981," and it would provide a system of refundable investment tax credits for the rail industry.

America enters the 1980's with a rail system weakened by nearly $4 billion in deferred maintenance. Power shortages and railbed deterioration touch every region of the country," even on their main lines, few railroads can maintain the operating speed they were accustomed to just three decades ago. Because the bulk of maintenance deferrals occur on the Nation's branch lines, rural communities—which depend so heavily on rail transportation—are paying the greatest price.

The difficulties experienced by Midwestern Farmers in their efforts to ship last year's record harvest provided a dramatic illustration of the interdependence between our regional economies and their transportation systems. We need to recognize that the Nation's railbeds are an indispensable national asset. Yet under present regulatory and tax structures, it is difficult to see how the industry can raise the billions of dollars necessary to preserve that asset over the last two decades of the 20th century.

The refundable investment tax credit is a mechanism to extend the benefits of the investment tax credit to marginal railroads, whose investment needs uniformly exceed those of their more profitable competitors. In doing so, it will fill an important gap in our present rail assistance program.

Although the Federal Government invests hundreds of millions of dollars each year in emergency rail assistance, most of this money is targeted toward subsidizing or rebuilding railroads that are already insolvent.

Unfortunately, most of the damage done to the physical plant of a weak railroad occurs during the "wind down" stage prior to bankruptcy. When a railroad's cash flow declines, the easiest obligation to defer is track maintenance. But as maintenance is deferred, service declines, which forfeits business and further weakens the railroad itself. This is more than a theoretical argument; the cycle has been evident in dozens of railroad bankruptcies across the Nation throughout the past few decades.

The need for investment capital is not a problem unique to the railroad industry. It was the precise problem Congress sought to address by enacting the investment tax credit, and that bill has achieved some dramatic results.

But because it is a tax credit, its impact is confined to the most profitable industries, and the most profitable members within each industry.

By common admission, rail is among the most labor and capital intensive of American industries. But its net return on investment has hovered around 1 percent in recent years, so the ITC has had little effect on the industry as a whole.

Within the industry, ITC has had a particularly skewed impact because of the unique economics of the rail industry. Invariably, when weak railroads cut back on expenditures, they begin by deferring railbed maintenance. As a consequence, the great bulk of the Nation's $4.1 billion in deferred maintenance is concentrated in the Nation's weakest railroads—the ones that draw little or no benefit from the ITC. And deferred maintenance, by weakening service, weakens the rail companies themselves. The Rock Island is the best example of this secondary impact. ITC has strengthened the stronger railroads, but had little impact on the weaker, investment-starved lines. In effect, it has widened disparities within the industry, intensifying the trend toward merger and acquisition.

Rail companies come and go, but the railbeds are an essential national asset. And the RITC is a mechanism to induce failing railroads to maintain their railroad property investment during times of economic difficulty. Under present law, a railroad with, say, $8 million in income and $1 million in obligations will place railbed maintenance at the bottom of its priority expenditure list. But with RITC in place, a dollar invested in railbed rehabilitation yields a 10-percent turn—making this a more desirable source of resource allocation than of the railroads' other debts. The RITC is a crucial incentive for losing railroads to maintain their investment in the railbeds even during times of economic difficulty.

This effort to spread the effects of the ITC to weaker railroads is no corporate bailout. It has a direct impact on the future of the Nation's rural transportation system. Railbeds are a national asset. When railroads begin deferring maintenance, they starve the branch lines first because those lines produce a weaker cash flow. This process focuses the impact of a failing railroad on rural—agricultural areas, creating the type of difficulties experienced throughout the Nation's agricultural areas over the past 24 months.

Railroads are the lifelines that link these agricultural regions with national and international markets. Farmers, consumers, and exporters alike have a stake in preserving those lifelines. By lowering the cost of branch line rehabilitation, the bill would improve the cash flow of every branch line in the Nation. This would do more to preserve branch line service than any program now in existence.

Even from a purely social standpoint, insuring the viability of the Nation's rail system is an essential step in preserving the vitality of rural America. Railroads determined the settlement patterns in much of the country. As elevators were built along branch lines, and settlements sprung up at key junctions. A century later, the economies of these rural towns still depend on their access to rail transportation. Preserving the rural rail system is an indispensable part of the effort to maintain rural vitality.

And at a time when the American public is spending hundreds of billions of dollars in the search for alternative energy sources, railroads remain the most energy efficient form of freight transportation.

By any public criteria, this special investment in the rail industry is a sound investment.

The rail industry needs help, and this amendment is an efficient means to provide an infusion of desperately needed investment capital. During the last decade, we have repeatedly witnessed the immense human and financial costs that follow a major rail bankruptcy. It makes far more sense to provide the industry with some preventive medicine than to face these costs again in the decade ahead.

This is a bill that every farmer, every shipper, and every resident of rural America has a stake in. I hope that every Senator will join in supporting it.

I ask unanimous consent that following this statement the full text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 739

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a)(1) subparagraph (A) of section 46(a)(9) of the Internal Revenue Code of 1954 (relating to special rules in the case of energy property) is amended—

(A) by inserting "or the application of the regular percentage to railroad property" after "energy percentage" in clause (i),

(B) by striking out the period at the end of clause (ii) and inserting a comma and "and", and

(C) by adding at the end thereof the following new clause:

"(iii) then with respect to so much of the credit allowed by section 38 as is attributable to the application of the regular percentage to railroad property.".

(2) Section 46(a)(9) of such Code is amended by adding at the end thereof the following new subparagraphs:

"(C) REFUNDABLE CREDIT FOR RAILROAD

PROPERTY.—In the case of so much of the credit allowed by section 38 as is described in subparagraph (A)(iii)—

"(i) paragraph (3) shall not apply, and

"(ii) for purposes of this title (other than section 38, this subpart, and chapter 63), such credit shall be treated as if it were allowed by section 39 and not by section 38.

"(D) RAILROAD PROPERTY DEFINED.—For purposes of this paragraph, the term 'Railroad Property' means section 38 property, which is (i) used directly in connection with the trade or business of operating a railroad company (including a railroad switching or terminal company), and (ii) is owned by a domestic common carrier by railroad or by a corporation at least 80 percent of the voting stock of which is owned directly or indirectly by one or more such common carriers or by persons who were such carriers before entering proceedings under the Bankruptcy Act.

(2) The headings for section 46(a)(9) of such Code is amended by inserting "OR RAILROAD" before "PROPERTY".

(3) Section 56(c) of such Code is amended by inserting before the period at the end thereof ", and without regard to the provisions of section 46(a)(9)".

(b)(1) Each person who, by reason of section 46(a)(9)(C) of the Internal Revenue Code of 1954 or subsection (c)(2), receives a refund of the credit allowed by section 38 of such Code which is attributable to the application of the regular investment percentage to railroad property (within the meaning of section 46(a)(9)(D) of such Code) shall establish and maintain a separate account for amounts so received.

(2)(A) All refunds described in paragraph (1) and subsection (c)(2) shall be credited to the account established under paragraph (1).

(B) No amount may be withdrawn from an account established under paragraph (1) unless the funds are to be used for—

(i) normal maintenance, rehabilitation, or capital improvements made in connection with railroad property,

(ii) acquisition of railroad property, or

(iii) payment of the tax imposed by section 3221 of such Code.

(C) If funds are withdrawn from such an account and are not used for a purpose described in subparagraph (B), then there is hereby imposed on such person for the taxable year in which such amount is withdrawn a tax in an amount equal to such amount.

(c)(1) Except as provided in paragraph (2), the amendments made by subsection (a) shall apply with respect to—

(A) property to which section 46(d) of the Internal Revenue Code of 1954 does not apply, the construction, reconstruction, or erection of which is begun or completed by the taxpayer after December 31, 1979, but only to the extent of the basis thereof attributable to construction, reconstruction, or erection after such date,

(B) property to which section 46(d) of such Code does not apply, acquired by the taxpayer after such date, and

(C) property to which section 46(d) of such Code applies, but only to the extent of the qualified investment (as determined under subsections (c) and (d) of section 46 of such Code) attributable to qualified progress expenditures made after such date.

(2)(A) In the case of an unused credit for an unused credit year ending before January 1, 1980, which—

(i) is attributable to the application of the regular percentage to railroad property which is property not described in paragraph (1), and

(ii) is an investment credit carryover to a taxable year beginning after December 31, 1979,

that portion of the unused credit which would expire after the 7th taxable year following the unused credit year by reason of section 46(b) of such Code shall be treated as if it were a credit allowed by section 39 (and not section 38) of such Code for the 8th taxable year following the unused credit year.

(B) For purposes of this paragraph, the terms "unused credit", "unused credit year", "regular percentage", and "railroad property" have the same meaning as when used in section 46 of such Code.

(d) The Secretary of the Treasury shall reserve such receipt of the tax imposed by section 4986 of the Internal Revenue Code of 1954 as he determines are equal to the decrease in revenues attributable to the amendments made by this section.

(e) There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

By Mr. DURENBERGER (for himself, Mr. ANDREWS, Mr. PRESSLER, Mr. ABDNOR, Mr. MELCHER, Mr. BAUCUS and Mr. BURDICK):

S. 740. A bill entitled the "Railroad Bonding Act"; to the Committee on Finance.

RAILROAD BONDING ACT

Mr. DURENBERGER. Mr. President, State governments now have the authority to issue tax-free industrial revenue bonds for a variety of transportation purposes, including construction of airports, docks, and mass transit facilities. This morning, on behalf of myself and my colleague from Montana, Senator BAUCUS, I am introducing legislation expanding that authority to include rail line rehabilitation.

It is impossible to overstate the degree to which the economics of rural America depend on continued access to rail line service. Railroads determined the settlement patterns throughout much of the West and Midwest as towns sprung up along key branch lines and junctions. Even today, thousands of rural communities and the businesses that support them owe their existence to railroad access. For these communities, the capital shortage afflicting the Nation's rail system is both a social and economic crisis.

The ramifications of that crisis on agricultural production are every bit as severe. Railroads are the lifelines that link America's agricultural regions with national and international markets. If we cannot maintain their carrying capacity, the export potential we have labored so hard to develop will remain nothing more than potential. The same is true for coal-fired utilities, heavy equipment manufacturers, and a host of other industries whose futures depend on the long-haul efficiencies of rail.

The rural rail crisis has a special impact on State governments. For just as railroads are struggling to preserve their route systems, State, and local government's are struggling against growing financial pressure to preserve the integrity of the Nation's highway system. Deferred maintenance on the Nation's highways actually exceeds the cost of maintenance deferrals on the railroads. And with each rail line abandonment thousands of traffic tons are shifted to rural highways. In analyzing the impact of the Milwaukee Road bankruptcy, Minnesota discovered that loss of rail service to a single coal-fired utility would be at least 500 trucks a day on Interstate 94. The consequences of that transfer would be catastrophic. Rail line rehabilitation is far less expensive than highway reconstruction, and few have a stronger stake in rail rehabilitation than the users of the Nation's highways.

Against this background of public necessity the needs of the Nation's rail system are immense. The U.S. Department of Transportation projects that the industry will suffer a $16 billion capital shortfall between now and 1985. Passage of the Rail Deregulation Act will enable the industry to meet some of that shortfall. But sizable needs remain, and we know from sad experience that when facing a capital shortage, railroads invariably starve lower density branch lines first.

It would be naive to suggest that all or even most of the 6,200 miles of branch line now slated for potential abandonment can be preserved. But it would be equally naive to deny that a timely investment could salvage many of these lines. My own State of Minnesota provides an excellent example of how that process works.

Eighteen months ago, the two Milwaukee branch lines in southern Minnesota were slated for abandonment. Neither carried a volume of more than 300 cars per month. But through the efforts of shippers along those lines, a compact was formed between the State, shippers, and the Milwaukee Railroad to rehabilitate both lines. With the help of State guarantees, shippers invested more than a quarter million dollars of their own funds. Rehabilitation is now essentially complete, and the results are remarkable. Volume on the lines has increased more than 400 percent. They are generating a cash flow profit, and the shippers' investment will soon be paid back in full. This process can be repeated on other lines, and in other parts of the country. The key factor is the availability of capital.

Only limited portions of that capital can come from the rail industry, which has rarely achieved better than a 1-percent rate of return in recent years. Federal involvement will continue, but certainly at a reduced rate so long as current budgetary and economic conditions prevail. The future of the rural rail system depends largely on the ingenuity of the States in developing alternative capital funding sources to replace the declining pool of Federal dollars. The bill we introduce this morning offers a workable mechanism to bridge that gap.

States are presently permitted to issue industrial revenue bonds under section 103 of the U.S. Internal Revenue Code. Normally, interest earned on those bonds is subject to the Federal income tax. However, IDB's issued for construction of facilities that have a public purpose—facilities such as airports, docks, and mass transit—have been granted a tax-exempt status under section 103 of the code. But paradoxically, current Federal law does not extend this exemption to bonds for railroad rehabilitation. This has limited their usefulness as a mech-

anism for raising the funds necessary to promote rail rehabilitation at the State level.

The legislation we introduce today will alter that situation. Specifically, it amends title 26, section 103(a)(4) of the United States Code by adding obligations issued to finance certain railroad improvement projects, including the construction, repair, and upgrading of rail beds, trackage, depots, and switching and signaling equipment to the list of tax-exempt facilities.

The reasons for making this change are compelling. The bill will provide State governments with an effective mechanism to meet the capital crisis created by steadily deteriorating lines and decreasing Federal assistance.

Moreover, the approach suggested by the bill is consistent with the progressive shift in responsibility from the Federal to the State level. It encourages States to prioritize their own rail needs. and better utilize State resources to address them.

It is impossible to overlook the absurdity of a system which allows localities to use their bonding power for airports, docks, and industrial plants, but precludes its use for rail rehabilitation on which the communities' commercial existence may depend. It is not our intention to suggest when and if the use of this authority is appropriate. But it is our intention to grant States and localities the power to make that judgment.

This legislation provides one more effective tool for the States to use in combating the capital shortage that afflicts the Nation's' rural transportation system. I urge all Senators to consider the proposal, and give it their full support.

I ask unanimous consent that the bill be printed in full in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD as follows:

S. 740

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsection (b) of section 103 of the Internal Revenue Code of 1954 (relating to industrial development bonds) is amended by redesignating paragraph (9) as paragraph (10) and by inserting after paragraph (8) the following new paragraph:

"(9) RAILROAD REHABILITATION.—Paragraph (1) shall not apply to any obligation which is part of an issue substantially all of the proceeds of which are used to provide financing for—

"(A) railroad rehabilitation, including the acquisition, construction, reconstruction, or erection of any roadbed, track, trestle, depot, switching and signaling equipment, or any related equipment, but not including rolling stock, or

"(B) acquisition of land or rights-of-way in connection with railroad rehabilitation."

(b) Paragraph (10) of section 103(b) of such Code (relating to exceptions), as redesignated by subsection (a), is amended by striking out "and (7)" and inserting in lieu thereof "(7), and (9)".

SEC. 2. The amendments made by the first section of this Act shall apply to obligations issued after September 30, 1981.

By Mr. DURENBERGER (for himself, Mr. ANDREWS, Mr. PRESSLER, Mr. ABDNOR, Mr. MELCHER, and Mr. BAUCUS):

S. 741. A bill to provide for an equitable resolution regarding leaseholds on abandoned rail line property; to the Committee on Commerce, Science, and Transportation.

RAIL SHIPPERS PROTECTION ACT OF 1981

Mr. DURENBERGER. Mr. President, I introduce legislation today which will protect the rights of grain elevators and other small businesses located on abandoned rail lines.

Elevator operators are often "double losers" when rail line abandonments occur.

First, they lose access to their primary mode of transportation. Worse still, the many elevators constructed on land leased from the railroads run the risk of having that land sold out from under them.

Fortunately, this latter problem can be effectively resolved by a simple change in current abandonment statutes.

Present law does not require the railroad to protect the rights of its lessees when liquidating properties along abandoned rights-of-way. Lessees, particularly grain elevators, make sizable capital investments on those properties.

Railroads encourage those investments and draw substantial benefit from them. But because they lease rather than own the property, elevator operators and other small businessmen have no way to protect the existence of their business should the railroad decide to liquidate the leased land.

The problem arises because railroads often prefer to sell the abandoned rights-of-way as a single unit. Elevators and other small businesses leasing portions of the right-of-way are not given the opportunity to purchase their leaseholds, even when they have the desire and ability to do so. This is more than a hypothetical problem. In Minnesota, we have experienced several cases where a railroad either sold or threatened to sell leased property out from under an operating elevator. In at least one case this resulted in liquidation of the business and substantial loss to its operators.

There is no doubt that railroads have generally made a sincere effort to protect lessees when liquidating these rights-of-way. But there are exceptions, and with 6,200 miles of branch line now scheduled for possible abandonment the problem is likely to increase in the years ahead.

I propose to resolve that problem by simply granting lessees a "right-of-first-refusal" in the event the property they lease is offered for sale. Although the principal beneficiaries would be grain elevators, the rights granted by this legislation would benefit any commercial enterprise leasing property along abandoned rights-of-way.

This legislation costs the Federal Government nothing. It establishes no new bureaucracy. But it protects the investments of thousands of small business, agricultural co-ops, and the farmers who depend on them. I urge you to join me in supporting this legislation so the problems experienced in Minnesota will not be repeated in your State and other parts of the Nation.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 741

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 1306 of title 49, United States Code, is amended by—

(1) inserting "(a)" immediately before the first sentence thereof,

(2) inserting at the end thereof the following new subsection:

"(b)(1) When the Interstate Commerce Commission finds under section 10903 of this title that the present or future public convenience and necessity require or permit abandonment or discontinuance, the Commission shall determine the economic impact of such abandonment upon leaseholders, employing 10 or more persons on the site of such leasehold, and the communities in which such lease is held. Where the Commission finds that the termination of such lease will have an adverse effect upon such leaseholder and community the Commission shall provide in the order of abandonment the conditions described in paragraphs (2) and (3).

"(2) Where the Commission makes an affirmative finding under paragraph (1) the order of abandonment shall provide that—

"(A) the carrier shall be prohibited from disposing of such leased property for a period of 180 days after the effective date of the order, unless the properties have first been offered to the leaseholder on terms no less favorable than any other offer made to the carrier on or after the date of the order;

"(B) the carrier shall provide written notice of any proposed sale of leasehold property to the lessee not less than 60 days prior to the anticipated sale of such property;

"'(C) the carrier shall provide not less than 10 days for the lessee to advise the carrier in writing of an intention to make an offer to purchase the leased property; and

"(D) the carrier and the lessee (who has notified the carrier in accordance with subparagraph (C)) agree to terms of sale within 20 days after notice is given to the carrier under subparagraph (C).

"(3)(A) Where a lessee makes an offer which meets or exceeds any other offer the carrier has received for the subject property the carrier shall sell such property to the lessee.

"(B) Where a lessee and a carrier cannot agree to the price for the sale of the subject property the parties shall submit such disagreement to binding arbitration. Such arbitration shall be conducted by a panel of 3 persons, one selected by each party and the third selected by the persons chosen by each party.".

By Mr. COHEN:

S. 742. A bill to amend title 38, United States Code. to provide expanded opportunities for individuals to earn educational assistance benefits based on honorable active service in the Armed Forces. and for other purposes; to the Committee on Veterans' Affairs.

LEGISLATION RELATING TO GI EDUCATION BENEFITS

Mr. COHEN. Mr. President, I am introducing today a new proposal for providing GI education benefits to veterans and members of the Armed Forces. It is called the veterans education and training (VET) program.

The bill is an improvement of one I introduced during the 96th Congress (S. 2020) and reintroduced earlier this year (S. 48). My first proposal was limited in scope. It provided a basic program of education for individuals who served in the Armed Forces for more than 2 years. Longer periods of service, under

the proposal, would increase the individual's benefits.

One shortcoming in the design of my earlier legislation is that it required those in less needed military occupations to serve longer to earn the same benefits as others. While I continue to believe that there is merit in targeting, I believe there should be a basic program of benefits which all military personnel would earn at the same level. If the services want to provide their own "kickers" for those in critical skill or combat positions, that could be done under a separate, Defense Department-administered program.

My new bill will allow persons enlisting or reenlisting in the Armed Forces to earn up to 36 months of education benefits by completing 4 years of honorable service. Those who do not complete 4 years will receive less benefits. However, no benefits will be paid to persons completing less than 2 years of service.

Individuals may begin to use their benefits after they have completed 2 years of service. They will receive the same educational assistance payment as veterans who are training under the Vietnam-era GI bill program. It is important to point out that this payment schedule is smaller than would be provided by other GI education proposals. However, I have chosen to keep it for a number of reasons.

First, we must seek to create a fair GI education program, not an overly generous one. Second, the payment structure and amount of the current GI bill must be considered adequate for our goals. If not, we must admit that Congress and the executive branch have been remiss in our duty to Vietnam-era veterans. Finally, any new program must be kept within the realm of affordability. We can easily adjust upward the payment amounts to suit our needs.

The second major provision of my new bill provides the veteran an opportunity to save for his or her spouse or children's education. I have included this approach because of the strong calls by service representatives for a transferability provision.

Direct transferability of benefits could, I am told, ultimately cost as much as $4 billion per year in addition to whatever benefits are paid to the veteran. That projection is based on payments of only $342 per month to full-time students.

My transferability program deals with the long-term cost problem and it also significantly improves administrative procedures by establishing an official account for all who choose to participate. The program is modeled after the current veterans education assistance program (VEAP). It will allow service members who have more than 6 years in the Armed Forces to contribute $25 to $100 per month. This money would be placed in a fund.

When the member has completed 10 years of service, the Defense Department would add $2 for every dollar in the fund. Contributions made after the service member's 10th anniversary of service would receive the 2-for-1 match on deposit. The individual's contribution would be limited to $6,000, making the maximum Government contribution $12,000.

A student training under this program would receive a benefit of $500 per month for 36 months. Yet, it would cost the service member less than $500 per month if contributions are begun between the member's 6th and 8th year of service. Overall, I expect this portion of my program will cost about $45 million per year group, with a high-year cost of $475 million.

The final major provision of the legislation will allow individuals to take a leave of absence from the Armed Forces to use their education benefits and complete a degree. In return, they would be required to serve 2 months for every month of leave taken. This will greatly enhance retention of service personnel who are seriously interested in education.

I have made one other significant improvement over my original proposal. The measure I am introducing today includes a provision for those serving in the Nation's Reserve Forces to receive GI bill benefits. Reserve personnel would earn 9 months of educational assistance upon completion of 2 years of service. For each 3 months of additional service, they would earn 1 month of educational benefits.

There is little doubt about the need for a new veterans education program. Indeed, the old GI bill should never have been terminated. A plethora of studies demonstrate its value to the armed services, the veteran, and the Nation.

One study shows that as many as 36 percent of the people who joined the Armed Forces before termination of the GI bill enlisted to receive those benefits. Another shows that veterans are generally better educated than their civilian counterparts and usually earn a better wage. Finally, there has been testimony that veterans who train under the GI bill return more to the Treasury in taxes than the United States pays for their education.

One of the recurring themes I have heard as a member of the Armed Services Committee is that a program of educational assistance for those who serve is badly needed. The military services have listed the return of the GI bill as a top priority.

As the first Senator to introduce a GI bill proposal in the 96th Congress and as one of those responsible for the test program of educational benefits included in the fiscal year 1981 defense authorization bill, I do not share the official Defense Department view that we can afford to wait an additional year before approving a new GI bill program. The services have testified that they think an educational benefits program is essential. A 1-year delay in implementing a program to replace the unsuccessful VEAP program could seriously set back efforts to recruit adequate numbers of quality personnel.

Educational assistance could do more than dollars applied to across-the-board pay increases in the effort to attract the individuals the services need to fill critical skill positions. I do not see that anything is gained by waiting a year for the test program to be evaluated. We have a solid program with a proven record in the Vietnam-era GI bill. That program is the basis for my legislation. With the improvements I have made—establishing a minimum service period for benefit eligibility, requiring 4 years of service for full benefits, extending benefits to those in the Reserves, providing a contributory transferability program, and allowing educational leaves of absence—that program should only be strengthened.

I would like to thank the Noncommissioned Officers Association of the USA (NCOA) for their assistance in developing this legislation. I believe the program is a good one. It represents the kind of direction we should be moving in as we seek to strengthen our military forces, and it reflects my firm belief that the Nation should give proper recognition to those who have served in our Armed Forces.

This approach, I believe, merits the fullest consideration by the Congress. I look forward to working with Senator ALAN SIMPSON, chairman of the Veterans' Affairs Committee, and with all of those in the Senate interested in providing a program of educational assistance for those who serve.

By Mr. MATHIAS (by request):

S. 744. A bill to authorize the District of Columbia to issue and sell general obligation bonds for the purpose of paying certain liabilities of the District, and for other purposes; to the Committee on Governmental Affairs.

DISTRICT OF COLUMBIA BOND AUTHORIZATION ACT OF 1981

● Mr. MATHIAS. Mr. President, at the request of the District of Columbia Mayor Marion Barry, I am today introducing legislation which would grant authority to the District to issue general obligation bonds for the purpose of paying eligible operating liabilities. Identical legislation to this bill has been introduced in the House of Representatives by Congressman WALTER FAUNTROY. My purpose in introducing this bill is to allow the Senate ample time to review the proposal in conjunction with the House.

As my colleagues may know, the District was granted the authority to enter the bond market for the purpose of funding capital improvements projects by the District of Columbia Self-Government and Governmental Reorganization Act of 1973, commonly known as the Home Rule Act. The city does not, however, have the power to sell bonds for any other purpose. This legislation would grant them that power with respect to funding operating deficits.

Mr. President, the first full audit of the District of Columbia books has just been successfully completed. The audit rendered an unqualified opinion, thereby removing one of the last major roadblocks in the way of the city's entry into the municipal bond market. At the same time, the audit for fiscal year 1980 did reveal that the city is operating with an accumulated $388 million deficit, a portion of which was discovered when the city switched from its congressionally

permitted cash method of accounting to the accrual method required to inept generally accepted accounting practices.

It is clear that the city cannot continue to operate in the red. Many steps have been taken by the Mayor to slow spending and to bring the city into a fiscally sound state. Prospects for achieving a balanced budget in fiscal years 1982 and 1983 are promising. But additional moneys are necessary to fund fully the accumulated deficit while maintaining services and adequately compensating District employees.

When Congress enacted the Home Rule Act, it set in motion the mechanism by which the District of Columbia was able to achieve a measure of self-government. The city and its leaders have worked diligently ever since to meet its responsibilities under the Home Rule Charter. This legislative proposal is one more example of the District's determination to address its problems in a responsible and timely manner.

While legislation allowing the city to go to the bond market to fund operating liabilities may not be the best answer to the fiscal crunch being experienced in the District of Columbia, this bill represents a starting point from which we in the Congress, the District's leaders, and the citizens of the Nation's Capital can address the city's accumulated fiscal problems. My Subcommittee on Governmental Efficiency and the District of Columbia will review the proposal carefully within the overall picture of sound financial management and a fiscally healthy municipality.

Many questions remain unanswered, including the prospects for an investment grade rating for District bonds. We hope to answer such questions fully during our deliberations on this proposal and to do what we can, in these fiscally tight times for all, to assist the city in eliminating its accumulated operating liabilities.

Mr. President, I ask unanimous consent that the text of the bill and a section-by-section analysis be included in the RECORD at this point in my remarks.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

S. 744

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "District of Columbia Bond Authorization Act of 1981".

DEFINITIONS

SEC. 2. For purposes of this Act:

(a) The term "bonds", except when reference is made to bonds authorized pursuant to the Home Rule Act, means the general obligation bonds of the District authorized to be issued pursuant to section 3 of this Act.

(b) The term "Council" means the Council of the District of Columbia provided for by section 401 of the Home Rule Act (D.C. Code, sec. 1–141).

(c) The term "District" means the District of Columbia.

(d) The term "District revenues" means District revenues as defined in section 103 (10) of the Home Rule Act (D.C. Code, sec. 1–122(10)).

(e) The term "eligible liabilities" means all current liabilities of the District in the general fund, excluding liabilities relating to advance collection of taxes, annual leave due to employees and interest on loans from the United States Treasury, which current liabilities shall be determined as of September 30, 1980, as reported in the Annual Financial Report of the District as audited by an independent auditor in accordance with generally accepted accounting principles.

(f) The term "Home Rule Act" means the District of Columbia Self-Government and Governmental Reorganization Act, as amended (Public Law 93–198).

(g) The term "Mayor" means the Mayor of the District as provided for by section 421 of the Home Rule Act (D.C. Code, sec. 1–161).

(h) The term "net eligible liabilities" means the aggregate amount of eligible liabilities minus the aggregate amount of current assets of the general fund of the District determined as of September 30, 1980, as reported in the Annual Financial Report of the District as audited by an independent auditor in accordance with generally accepted accounting principles. Net eligible liabilities equal $184,000,000.

DISTRICT'S AUTHORITY TO ISSUE GENERAL OBLIGATION BONDS TO PAY ELIGIBLE LIABILITIES

SEC. 3. (a) The District is authorized to incur indebtedness by issuing general obligation bonds for the purpose of—

(1) paying eligible liabilities;

(2) reimbursing the general fund of the District for funds expended after September 30, 1980, to pay eligible liabilities;

(3) paying costs incidental to the issuance of the bonds; and

(4) providing the amounts to be paid from the bond proceeds into a reasonably required debt service reserve fund to the extent provided by the act of the Council authorizing the bonds adopted pursuant to section 4 of this Act.

(b) The aggregate principal amount of bonds issued shall not exceed net eligible liabilities of $184,000,000, plus costs incidental to the issuance of the bonds and the amount needed to provide the debt service reserve fund referred to in subsection (a) of this section.

AUTHORITY TO ISSUE BONDS; REDEMPTION PROVISIONS; APPLICABILITY OF HOME RULE ACT PROVISIONS

SEC. 4. (a) The Council, by one or more acts adopted in the manner provided in the Home Rule Act, may authorize the issuance of all or any part of the aggregate principal amount of bonds, not exceeding the amount of the bonds authorized to be issued pursuant to section 3 of this Act. Any such act shall take effect immediately and the provisions of section 602(c) of the Home Rule Act (D.C. Code sec. 1–147(c)) shall not apply thereto.

(b) Any such act shall set forth a plan for the financing of the amount required annually for the payment of the maturing principal of and interest on the bonds thereby authorized, which plan shall identify—

(1) by type all new or increased taxes or charges proposed;

(2) by source, all new or increased revenues anticipated to be applied; and

(3) proposed expenditure reductions or other reasons justifying the availability of any existing District revenues.

(c) The District may reserve the right to redeem any issue of bonds in whole or in part, before maturity in such manner and at such price as may be fixed by the Mayor prior to the issuance of such bonds.

(d) Except as expressly provided for in this Act, the provisions of the Home Rule Act pertaining to the authorization, issuance, and payment of general obligation bonds, including, without limiting the generality of the foregoing, the provisions of section 603 (b) of the Home Rule Act (D.C. Code, sec. 47–228(b)), and Charter Amendment Numbered 1 (D.C. Code, secs. 1–181 to 1–187), shall not apply to the authorization, issuance, or payment of the bonds.

PUBLICATION OF BORROWING LEGISLATION

SEC. 5. (a)The Mayor shall publish once in at least one newspaper of general circulation within the District any act of the Council authorizing the issuance of bonds, together with a notice of the enactment thereof in substantially the following form:

"NOTICE

"The following act (published herewith), authorizing the issuance of general obligation bonds for the purpose of paying certain liabilities of the District of Columbia incurred on or prior to September 30, 1980, or to reimburse the District for funds expended after such date to pay such liabilities, has become effective. The time within which a suit, action, or proceeding questioning the validity of such bonds can be commenced, will expire twenty days from the date of the first publication of this notice, as provided in the District of Columbia Bond Authorization Act of 1981.

_____

Mayor."

(b) Neither the failure to publish the notice provided for in subsection (a) of this section nor any error in any publication thereof shall impair the effectiveness of any act of the Council authorizing the issuance of bonds nor the validity of any bonds issued pursuant thereto.

SHORT PERIOD OF LIMITATION

SEC. 6. At the end of the twenty-day period beginning on the date of the first publication pursuant to section 5 of this Act or the notice of the enactment of an act authorizing the issuance of bonds:

(a) any recitals or statements of fact contained in such act or in the preambles of the titles thereof shall be deemed to be true for the purpose of determining the validity of the bonds thereby authorized, and the District and all others interested shall thereafter be estopped from denying the same;

(b) such act and all proceedings in connection with the authorization of the issuance of such bonds shall be conclusively presumed to have been duly and regularly taken, passed, and done by the District in full compliance with the provisions of this Act and of all laws applicable thereto; and

(c) the validity of such act and proceedings shall not thereafter be questioned by either a party plaintiff or a party defendant, and no court shall have jurisdiction in any suit, action, or proceeding questioning their validity, except in a suit, action, or proceeding commenced prior to the expiration of such twenty-day period.

ISSUANCE OF BONDS; MATURITY; EXECUTION OF BONDS; DETERMINATION OF TERMS, FORM AND CONTENTS OF BONDS

SEC. 7 (a) At the end of the twenty-day period specified in section 6 of this Act, the Mayor may issue the bonds authorized by the act published pursuant to section 5 of this Act. An issue of bonds is hereby defined to be all or any part of the aggregate principal amount of bond so authorized. The Mayor may sell any issue of bonds at either public or private sale in such manner as he shall determine to be in the public interest.

(b) The bonds of each issue shall be payable in annual installments beginning not more than three years after the date of such bonds and ending not more than thirty years from such date.

(c) Bonds shall be executed by the facsimile signature of the officers designated by the act of the Council authorizing such bonds, to sign the bonds, with the exception that at least one signature shall be manual. Coupons attached to bonds shall be au-

thenticated by the facsimile signature of the Mayor unless the Council shall provide otherwise. All other matters relating to the terms, form, and contents of bonds shall be prescribed by the Mayor.

SEGREGATION OF PROCEEDS; REPORTS

SEC. 8. (a) The proceeds from the sale of bonds shall be deposited in a special account in a federally insured financial institution in the District, shall be segregated from other funds of the District and shall be expended only for the purpose for which such bonds were authorized to be issued. In the event that any portion of such proceeds is not expended for such purpose, such portion shall be applied only to the payment of annual debt service on the bonds.

(b) Any moneys realized on any investment of the proceeds of bonds shall be credited to such special account and shall be used only—

(1) for the purpose for which such bonds were authorized to be issued;

(2) to pay annual debt service on the bonds; or

(3) to pay the expenses of maintaining such special account.

(c) No moneys shall be withdrawn from such special account without prior certification by the Mayor, or his designee, that such amount will be expended in compliance with the foregoing provisions of this section.

(d) The District shall keep an account of all transactions involving the bond proceeds which shall be subject to audit by the General Accounting Office, the District of Columbia auditor, and by independent auditors appointed by the Mayor.

(e) The District shall report annually to Congress on its use of the proceeds of the bonds and as to its payment of the principal of and interest on the bonds.

BONDS SECURED BY THE FULL FAITH AND CREDIT OF THE DISTRICT

SEC. 9. The full faith and credit of the District shall be and is hereby pledged for the payment of the principal of and the interest on all bonds whether or not such pledge be stated in the bonds or in the act authorizing the issuance thereof.

GENERAL AUTHORITY TO PLEDGE DISTRICT REVENUES TO SECURE BONDS

SEC. 10. (a) An act of the Council authorizing the issuance of general obligation bonds of the District, whether adopted pursuant to this Act or pursuant to the Home Rule Act, may pledge any District revenues as additional security for the payment of the bonds authorized thereby. In such event, such act may contain provisions which may be a part of the contract with the holders of the bonds thereby authorized—

(1) describing the particular District revenues pledged as additional security for the bonds;

(2) creating a debt service reserve fund or other special funds:

(3) authorizing the Mayor to execute a trust indenture securing the bonds;

(4) vesting in the trustee under such trust indenture such properties, rights, powers, and duties in trust as may be determined necessary, convenient, or desirable;

(5) authorizing the Mayor to enter into and amend such agreements as may be deemed necessary, convenient, or desirable concerning the custody, collection, use, disposition, security, investment and payment of the bond proceeds and pledged District revenues, and the doing of any act (including refraining from doing any act) which the District would have the right to do in the absence of such agreement;

(6) the remedies of the holders of the bonds in the event of a default; and

(7) authorizing and empowering the Mayor to do any and all other things necessary, proper, or expedient in connection with the issuance, sale, delivery, securing, and payment of the bonds.

(b) Any provision of article 8 of title 28 of the District of Columbia Code to the contrary nowithstanding, any such pledge of District revenues shall be valid, binding, and perfected from the time when such pledge is made without any physical delivery of the collateral or further act, and the lien of any such pledge shall be valid, binding, and perfected against all parties having claims of any kind in tort, contract, or otherwise against the District irrespective of whether or not such parties have notice thereof. No instrument by which such a pledge is created nor any financing statement need be recorded or filed.

(c) Notwithstanding section 466 of the Home Rule Act (D.C. Code, sec. 47–216), any issue of bonds authorized pursuant to the Home Rule Act which shall be additionally secured by a pledge of District revenues pursuant to this section may be sold by the Mayor prior to the expiration of two years from the last day of the fiscal year of the District during which this Act shall take effect, at either public or private sale in such manner as he shall determine to be in the public interest.

DEBT LIMITATION COMPUTATIONS

SEC. 11. Principal and interest payments due on issued bonds shall not be included in the computation under section 603(b) of the Home Rule Act (D.C. Code, sec. 47–228 (b)), for the purpose of determining whether other general obligation bonds or Treasury capital project loans may be issued within the limitation prescribed thereby.

EXEMPTIONS FROM THE APPROPRIATIONS PROCESS

SEC. 12. The fourth sentence of section 446 of the Home Rule Act (D.C. Code, sec. 47–224) shall not apply to—

(a) amounts obligated or expended from the proceeds (inclusive of accrued interest and premiums) derived from the sale of any bonds;

(b) amounts approved, obligated, or expended for the payment (as to either principal or interest, or both, inclusive of any redemption premium) of any bonds; or

(c) the pledge, transfer, or assignment of any District revenues to secure or otherwise to provide for the payment of any bonds.

TAX EXEMPTION; LEGAL INVESTMENT

SEC. 13. The provisions of sections 485 and 486 of the Home Rule Act (D.C. Code, secs. 47–252 and 47–253) shall apply to all bonds.

EFFECTIVE DATE

SEC. 14. This Act shall take effect on the date of the enactment thereof.

SECTION BY SECTION ANALYSIS

Sec. 1. Provides that the Act may be cited as the "District of Columbia Bond Authorization Act of 1981."

Sec. 2. Defines the terms "bonds", "Council", "District", "District Revenues", "eligible liabilities", "Home Rule Act", "Mayor", and net eligible liabilities," as used in the Act.

Sec. 3. Authorizes the District to issue general obligation bonds for the purposes of paying eligible liabilities, reimbursing the General Fund of the District of Columbia for any payments already made in settlement of eligible liability obligations, paying costs incidental to the issuance of the bonds, and provides for the establishment of a debt service reserve fund.

(b) Establishes that the aggregate principal amount of bonds issued shall not exceed $184 million, plus costs.

Sec. 4. Authorizes the Council to act to issue the bonds authorized by this Act, and eliminates the Congressional lay-over provisions in the Home Rule Act.

(b) Requires that the act authorizing the issuance of the bonds by the Council set forth a plan for the financing of the amount required annually for the payment of the principal and interest on the bonds. The plan shall include:

(1) by type, all new or increased taxes or charges proposed;

(2) by source, all new or increased revenues anticipated to be applied; and

(3) proposed expenditure reductions or other reasons justifying the availability of any existing District revenues.

(c) Provides for the early redemption of the bonds at a price and under terms set by the Mayor.

(d) Provides that except as expressly provided for in this Act, the limitations in the Home Rule Act pertaining to the authorization, issuance, and payment of general obligation bonds shall not apply to the authorization, issuance and/or payment of the bonds authorized by this Act.

Sec. 5. (a) Provides for publication of notice of intent of the District of Columbia to issue bonds and the actual Council Act authorizing the issuance.

(b) Provides that failure to publish notice as described in subsection 5(a) shall not impair the effectiveness of any Act of the Council authorizing the issuance of bonds nor the validity of any bonds issued.

Sec. 6. Limits the period of challenges against enactment or authorization of the bonds to a period of twenty (20) days.

(a) Prevents the District and all others from denying any recitals or statements of fact contained in the bond issuance act and its preambles or titles, unless such are made within the period of twenty (20) days.

(b) Provides conclusive presumption that all proceedings in connection with the authorization and issuance of bonds were done by the District in full compliance with the provisions of this Act unless such proceedings are challenged within twenty (20) days.

(c) Provides that the validity of the bond issuance act and its proceedings shall not be questioned by any party to a lawsuit, and that no court shall have jurisdiction in any action relating to the act, unless such challenges are made within the twenty (20) day period.

Sec. 7. (a) Bonds may be sold at the end of the twenty (20) day period, and may be sold in the whole aggregate or any portion. The Mayor may sell at public auction or through a privately negotiated sale.

(b) Bonds shall be payable in annual installments beginning not more than three years after the date of issuance; the bonds shall be paid in full at the end of not more than thirty (30) years.

(c) Provides for the use of a facsimile signature after one manual signature in executing the bonds.

Sec. 8. (a) Provides that proceeds from the sale of such bonds shall be deposited in a special segregated acount at a federally insured financial institution in the District of Columbia. Further prohibits the use of any excess proceeds for any purpose other than the payment of the annual debt service.

(b) Prohibits the use of any income earned on the investment of proceeds from the sale of the bonds for any purpose other than:

(1) purpose for which said bonds were authorized;

(2) payment of annual debt service

(3) payment of expenses incurred as a result of maintenance of special account

(c) Requires certification by the Mayor that any funds withdrawn are used in compliance with the foregoing provisions.

(d) Requires that an account of all transactions be subject to audit by the GAO, the District of Columbia Auditor, and other independent auditors.

(e) Requires an annual report to the Congress.

Sec. 9. Pledges the full faith and credit of the District to the bonds.

Sec. 10. (a) Provides that the Council may pledge particular District revenues as additional security for payment of the bonds.

(b) Provides that the bonds and anything pledged thereto shall be valid and binding without the formal requirements normally associated with investment securities.

(c) Allows a two (2) year period for issuance of the bonds.

Sec. 11. Provides that the bonds are outside of the District's debt limitation contained in the Home Rule Act. This provision applys only to the bonds authorized by this Act.

Sec. 12. (a) Exempts from the Appropriation Process: Amounts obligated from the proceeds due to the sale of the bonds.

(b) Amounts approved, obligated or expended for the payment of any bond.

(c) The pledge, transfer or assignment of any District revenues to secure or otherwise provide for the payment of any bonds.

Sec. 13. Provides for the tax-exempt status of the bonds, and pursuant to the Home Rule Act makes the bonds a legal investment.

Sec. 14. Makes the Act effective on the date of enactment.●

By Mr. FORD (for himself and Mr. COCHRAN):

S. 745. A bill to amend the Tennessee Valley Authority Act of 1933 in order to increase the number of members of the Board of Directors of such Authority to five and to set certain residence requirements; to the Committee on Environment and Public Works.

LEGISLATION TO EXPAND THE TENNESSEE VALLEY AUTHORITY BOARD FROM THREE TO FIVE MEMBERS

Mr. FORD. Mr. President, when the Tennessee Valley Authority was created in 1933 as a multipurpose regional development agency, little did anyone realize what a critical role the future held from not only a regional, but a national perspective. TVA has grown to become the largest producer of electricity in the Nation, serving an estimated 7 million people. The Corporation's bonded debt and authorized indebtedness have been increased. Rates have been raised, a massive construction program is planned—matters by law left to the full discretion of the Board. This will have a profound effect on the users in the TVA service area.

If the TVA is to be in a posture to fulfill its mandate to the people of the region, it has become apparent to many of us from the Valley that the times demand more policy responsiveness by the Board of Directors. I have serious doubts that a three-member Board can give the proper and balanced representation in the years ahead, particularly in light of the fact that so many of the Board's actions are nonappealable.

To remedy this, I am today introducing legislation to expand the TVA Board from three to five members and, in addition, stipulate that three members at all times be residents of States which consume TVA power. This requirement would serve as a safeguard for the people most affected by the TVA's action.

Oversight hearings before the Senate Environment and Public Works Committee earlier this week brought into clear focus the many complicated decisions with far-reaching implications that the TVA Board will have to wrestle with in the years ahead.

Even though a three-member Board has, as some have said, withstood the test of time over the past 47 years, the fact is that times are changing and more challenging than ever before in the agency's proud history. In my opinion, the structure of the Board must change to guarantee that the TVA States have greater input and greater influence in helping shape those decisions which will directly impact their future.

The next few decades could well turn out to be the most important and challenging in the TVA's history. The changes I am recommending are positive ones and will enable the Board to better fulfill the high expectations we have for it, while at the same time assuring that the Board's primary responsibilities to the people of the valley are not shortchanged.

By Mr. WALLOP (for himself, Mr. BOREN, Mr. KENNEDY, Mr. PERCY, Mr. LONG, Mr. CHAFEE, Mr. BAUCUS, Mr. TOWER, Mr. PELL, Mr. D'AMATO, and Mr. COCHRAN):

S. 750. A bill to amend the Internal Revenue Code of 1954 to provide nonrefundable tax credits for investments in qualified industrial energy efficiency and fuel conversion projects, and for other purposes; to the Committe on Finance.

INDUSTRIAL ENERGY SECURITY TAX INCENTIVE ACT OF 1981

● Mr. WALLOP. Mr. President, today I join with Senators BOREN, KENNEDY, PERCY, LONG, CHAFEE, BAUCUS, TOWER, PELL, D'AMATO, and COCHRAN, in introducing the Industrial Energy Security Tax Incentive Act of 1981. This legislation provides a tax credit incentive to accelerate private investments in industrial energy efficiency. The bill will revise, extend, and make more effective the existing investment tax credits designed to encourage energy conservation and conversion of equipment from the use of oil or gas to the use of alternate fuels. This legislation builds upon the 1978 energy tax credit in an effort to encourage a broad and accelerated effort to use our domestic energy resources more efficiently and reduce our dependence on foreign oil.

Mr. President, this legislation will help promote industrial energy efficiency as an integral part of a symmetrical energy policy in the 1980's. A symmetrical energy policy must not only recognize the need to increase the production of domestic energy resources, but it must also reflect the role that can be played by an aggressive program to achieve optimal energy efficiency levels in U.S. industry.

The Industrial Energy Security Tax Incentive Act is based on the premise that investments in energy efficiency can result in a dramatic near term reduction in U.S. energy requirements, help insulate industry from future energy price shocks, and accelerate the use of abundant domestic fuels. Improvements in energy efficiency are among the most economic, low risk, and most environmentally sound methods of reducing our dependence on foreign oil.

This legislation focuses on energy savings potential in the industrial sector because industry represents nearly 40 percent of U.S. energy requirements, and industry is the fastest growing energy-consuming sector in the U.S. economy. Within the industrial sector, the major process industries such as steel, chemicals, cement, aluminum, refining, and paper account for 70 percent of industrial energy use. The intensity of energy use in the industrial sector, particularly in the major process industries, makes it possible to reap tremendous energy savings per dollar of investment capital. Energy efficiency investments in the industrial sector can provide the biggest bang for the buck of any conservation effort in the U.S. economy.

Mr. President, I should clarify what kind of energy savings we are seeking through this legislation. Industrial energy conservation should not be viewed in the context of reduced production, slowed economic growth, or a lower standard of living for the average American. This legislation calls for energy conservation that centers on increasing energy efficiency so rapidly as to permit a reduction in our oil imports and an increase in industrial productivity. I must emphasize that decreasing energy use in industry does not require plant closings or less production.

Just the opposite is the case. Industrial energy conservation entails costly investments in new equipment and modifications in existing plants to allow more efficient, productive use of our energy resources.

Mr. President, the legislation we introduce today is not a radical departure from tax or energy policy since it builds upon existing law. It will revise, extend, and make more effective the business investment tax credits designed to encourage conservation of energy and conversion of equipment from the use of oil or gas to the use of alternate substances. Such credits, first enacted as part of the Energy Tax Act of 1978, will otherwise expire on December 31, 1982. Only $310 million in credits have been claimed in the 2 years since these special energy investment tax credits were enacted.

Congress originally expected more than $600 million in energy investment tax credits to be claimed over this 2-year period, anticipating that the program would interest many industries. The poor performance of the 1978 energy investment tax credits in stimulating conservation and conversion investments can be traced to the restrictive definitions in the legislative language.

The 12 items of conservation equipment listed under the category of specially defined energy property simply do not apply to the vast majority of major energy efficiency investments that industry is likely to consider. The 1978 act failed to provide a tax incentive for the dynamic response that could come from industry if a broad definition of conservation equipment were provided. Efforts to stimulate conversion to coal and other alternate fuels had limited success since the credit covered only a limited portion of the entire investment required to switch to the use of an alternative fuel.

The Industrial Energy Security Act makes amendments to existing law so that these tax credits can be more effective in stimulating investments in energy efficiency. In the case of specially defined energy property, the legislation provides more complete definitions for many of the items on the current list and adds a variety of new types of qualifying equipment. This provision will open the energy investment tax credit to a wider array of industrial porcesses that have proven their energy saving potential.

The legislation also amends existing law to broaden the definition of recycling equipment. The legislation builds upon the definition of solid waste by including liquid and semisolid materials. By encouraging the recycling of waste in industry we can address both an energy problem and an aspect of waste disposal. Converting waste to energy must be recognized as one of the most significant contributions to meeting the Nation's synfuel energy goals.

By encouraging the conversion of waste to energy we can provide significant amounts of energy to our Nation's urban centers where the feedstock is generated and the demand is greatest for alternative energy. Hopefully this legislation will help stimulate further equity investments in waste-to-energy projects, allowing more of these facilities to be built across the country.

Third, the legislation amends existing law by providing a credit for cogeneration equipment so that mechanical shaft power can qualify for the 20 percent cogeneration credit. It is important to note that that credit is also made available for equipment which utilizes oil or gas as an energy source. This remedies a significant defect in existing law whereby the cogeneration credit is severely restricted with respect to cogeneration facilities using fuels other than coal.

Mr. President, these changes in existing law are not by themselves adequate to capture some of the most dramatic energy savings that can be achieved. It is impossible to list all of the energy saving technologies that have been perfected or might one day be invented. Narrow definitions can exclude many of the investment projects that possess tremendous energy saving potential. To cure this defect in present law the bill creates a new category termed qualified industrial energy property, eligible for the 20-percent investment tax credit. Qualified industrial energy property is defined as property which modifies an existing process or processes at an existing facility, the installation of which results in an annual energy savings of at least 1,000 barrels of energy equivalent (BOE).

To be eligible for the credit the investment must also result in an overall decrease in energy consumed per unit of output by the process. Mr. President, it should be made clear that the availability of the full tax credit in this category is limited to arrange investments. Investments which are highly economic to the taxpayer would receive a limited tax credit. This limits the tax credit to the extent that it is needed to accelerate the installation of energy saving equipment.

On the other end of the scale, the credit is limited so that the Government will not encourage conservation or conversion investments that are so costly that they are not cost effective for the Nation. Thus, the full credit is available only to those investments that would not go forward as quickly without the incentive, and those investments that are cost effective energy conservation purchases for the Nation. The most important aspect of this provision is that no credit will be granted unless the project actually saves energy.

Finally, the legislation also extends the 20-percent investment credit to investments in conversion from oil and natural gas to alternative substances such as coal. The legislation would provide an important incentive to move away from the burning of gas and oil to the wider use of alternative resources such as coal, biomass, and alternative substances. This provision will assist industries in their efforts to shift to safe and dependable domestic supplies of energy. These conversion investments will help diminish our dependence on foreign sources of energy, and help to provide jobs for the production and transport of coal and other alternative energy sources.

The objective of the legislation that I am introducing today is to encourage energy-saving investments in all types of businesses in our diverse economy. It would be very helpful to me and the other members of the Senate Finance Committee if businesses could review the legislation and give us their suggestions as to how we can best achieve this objective. Perhaps modest changes in the precise drafting of this legislation to account for factors that the Senate Finance Committee is not yet aware of will enable us to formulate the most constructive approach possible.

Mr. President, increasing industrial energy efficiency is a goal that transcends party lines or regional energy conflicts. The Senators from both parties who have joined me in sponsoring this legislation represent States with widely disparate energy interests. It is readily apparent why Senators from energy consuming industrial States would support this legislation. In many cases, the workers and factories of the energy dependent States have been idled by international energy price increases that choke their ability to compete. By restoring energy efficiency in these plants and shifting our energy dependence to domestic resources these plants and workers can be productive once again.

Perhaps it is more puzzling to see the number of energy exporting States that are represented by the cosponsors of this bill. Senators from energy producing States understand that the prosperity that comes from energy production may last only as long as these depletable resources are available. The unnecessary consumption of our energy resources only hastens the day when energy-based prosperity will end, for our States and for the Nation.

It is also important to remember that many people do not welcome the side effects that come from the rapid development of energy resources. The people of Wyoming and the Rocky Mountain West are willing to make their contribution to solving the energy problem by producing the oil, coal, uranium and synfuels that this Nation needs. But energy development goes forward hand in hand with competition for precious water resources, threats to environmental quality, and inevitable changes in the character and way of life in the West. We are willing to produce the energy necessary for a secure and prosperous national economy, but why should Wyoming farmers lose water or land to produce energy that is wasted in inefficient industrial plants? We will do our part by producing energy, but the rest of the Nation must work to use those valuable energy resources more efficiently.

WHY TAX INCENTIVES ARE NEEDED

Mr. President, some critics of this proposal may argue that no tax credit incentive for industrial energy efficiency is needed, because energy price increases will force conservation investments to go forward. I anticipate that some will argue that there is no room for Federal incentives of any sort for investments in conservation, efficiency or conversion to domestic fuels. This theoretical approach ignores the ominous energy realities we face as a nation, and it belies the logic of investment decisionmaking in private industry.

The debate on this issue should begin by acknowledging that Federal policies have contributed to the energy problems faced by U.S. industry today. Energy leasing, production, price, and tax policies have discouraged the costly process of exploring for and producing domestic energy. These policies have set the stage for our current predicament of dependence on unreliable and high-priced foreign energy supplies.

Moreover, most of our industrial plants were built when energy cost the equivalent of $5 per barrel. During the decade of the 1970's we saw energy prices driven to previously unimaginable levels. While Japan, West Germany, and other industrialized countries passed on energy price increases to industrial and individual consumers, it was the policy of this Nation to insulate the economy from the true cost of energy. These pricing policies not only discouraged energy production, but they also made it uneconomic to proceed with the industrial energy efficiency investments that were taking place around the world.

Fortunately, the decontrol of oil and eventual decontrol of natural gas will allow us to develop an economy related to the market price of energy. But this leaves industries with processes based on $5 per barrel energy costs in an environment where oil costs $40 per barrel. Higher energy prices certainly create a new impetus to invest in energy efficiency, but high energy prices also rob industry of the capital required to make efficiency or conversion investments. Simply speaking, Mr. President, energy price increases have contributed to the capital shortage in American industry.

The major impediment to investments in industrial energy efficiency is not technology or know-how, but capital. Most of the low-cost industrial energy conservation measures have already been adopted. The significant energy savings of the future will come largely from heavy capital expenditures in energy-efficient plant and equipment. Much of America's investment capital is already directed by Government mandate into investments that insure environmental quality and worker safety. In many cases, the little discretionary capital that is left over is allocated to projects that offer a quick payback or an improved market position. Hence, energy conservation or conversion investments must compete with a long list of investment options, and in many cases energy-efficiency improvements are deferred.

By providing additional financial incentives for industrial energy conservation and efficiency investments, this legislation will allow more of these projects to be initiated in the early 1930's.

There should be no misunderstanding about how this legislation interacts with the President's accelerated capital cost recovery program. Energy tax credits are a supplement to, but in no way a substitute for, broad-based capital formation legislation, such as the President's accelerated capital cost recovery program. The President's depreciation proposal will stimulate productivity-enhancing investments throughout the economy. Broad-based capital formation legislation, combined with the tax credit contained in this bill, will accelerate the timetable under which industrial energy-efficiency investments are made.

It is appropriate to question why it is in the Nation's interest to accelerate investments in industrial energy efficiency. Price changes will eventually force many of these same investments to be made, so what is the rush? My perspective is that any delays in investing in more energy-efficient equipment or converting to the use of abundant domestic fuels means that the United States is wasting energy and needlessly importing oil.

This energy wasted in inefficient plants is as tragic as flaring our natural gas or pumping our domestic oil and dumping it into the ocean. By failing to invest in more efficient plant and equipment we waste energy that could be used to grow food more cheaply or enjoy reasonably priced comforts of heating or air-conditioning. Energy waste means that we import more and more foreign oil that drives up the cost of commuting to work or taking a summer vacation. Mr. President, it is no small matter to this Senator that energy waste is driving the price of oil so high that people cannot afford the price of gasoline to visit the spectacular State of Wyoming.

Certainly waste and inefficiency has certain costs for an energy consuming industry, but it has far greater costs for the Nation as a whole. The continued importation of oil bears a number of side effects that are more costly to the Nation as a whole than to the individual consumer. These costs include the impact of the marginal U.S. oil imports on the world market. If the United States had kept imports at a level of 6 million barrels per day as it was in 1975, instead of 8.5 million barrels per day as it was in 1979, we might not have seen prices reach $40 per barrel.

Prof. Robert Stobaugh and Daniel Yergin of the Harvard Business School calculate that the marginal cost of those several million barrels of oil imports was on the order of $60 to $100 per barrel. Clearly each individual or company pays only the average cost of $35 per barrel, but the Nation as a whole bears the burden of $65 to $100 marginal barrel. Only the Federal Government can provide a tax incentive to help bring down energy demand and prevent future price increases of this magnitude.

Mr. President, the lessons of our recent economic past should not be lost on a nation heading into a strong economic recovery. We have recently seen a tremendous decrease in our energy appetite, but this energy diet occurred when the Nation was in the throes of an economic recession. No wonder energy is saved when factories are shut down and workers need not worry about their daily commute. This situation will quickly change. The major econometric forecasting firms predict that the President's economic package of spending cuts and tax reduction will help send the Nation into an economic recovery beginning toward the end of the year. Our economic recovery will not only bring this Nation out of recession, but it should also invigorate the economies of Western Europe, Japan, and the developing nations with whom our financial and trade links are so strong.

The economic recovery can bring a mixed blessing of increased industrial energy demand and another round of strangling OPEC price increases. Our prosperity and our struggle against inflation can be robbed through another round of predatory oil price increases. There is no need to tolerate this treatment from rapacious oil exporting countries, nor do we need to accept another roller coaster economic recovery.

This Nation can recover from recession, increase industrial production, and decrease industrial energy demand if industry accelerates the process of converting to domestic fuels and achieves greater energy efficiencies. We may not be able to prevent OPEC price increases, but we can reduce the energy demand which makes energy price increases inevitable.

Industrial energy efficiency must also be examined from the standpoint of vulnerability to supply disruptions. Our vulnerability to oil supply disruptions is reduced if our plant and equipment is retrofitted to use energy carefully, and to rely on domestic fuels. In the event of a supply disruption, energy efficient industries will be able to produce vital goods and services for a longer period than our present, less efficient production facilities. I submit, Mr. President, that these national security considerations cannot be calculated by an individual corporation, nor do price levels reflect the national security consequences of delaying investments in industrial energy efficiency. These are just a few of the reasons why it is necessary for the Government to provide a tax incentive to stimulate industrial energy conservation at the earliest possible date. This legislation will complement broad-based capital formation efforts by increasing productivity in conjunction with a decrease in industrial energy demand. The Industrial Energy Security Tax Incentive Act can help structure a new era of prosperity and energy security.

Mr. President, I urge my colleagues to support the passage of this timely legislation.

I request unanimous consent that the text of the bill be reprinted following my statement in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 750

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; AMENDMENT OF 1954 CODE.

(a) SHORT TITLE.—This Act may be cited as the "Industrial Energy Security Tax Incentives Act of 1981".

(b) AMENDMENT OF 1954 CODE.—Except as otherwise expressly provided, whenever in this Act an amendment is expressed in terms of an amendment to a section or other provision, such reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1954.

SEC. 2. INCREASE IN ENERGY PERCENTAGE FOR CERTAIN ENERGY PROPERTY AND SPECIFICATION OF ENERGY PERCENTAGE FOR QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY.

(a) IN GENERAL.—The table contained in clause (1) of section 46(a)(2)(C) is amended by adding at the end thereof the following new subclauses:

"VII. Certain alternative energy property, specially defined energy property, recycling equipment, and cogeneration equipment.—Property described in section 48(l)(3) (other than clause (viii) or (ix) of subparagraph (A) thereof), section 48(l)(5), section 48(l)(6) or section 48(l)(14).	20%	Jan. 1, 1981	Dec. 31, 1985
"VIII. Qualified industrial energy efficiency property.—Property described in section 48(q).	20%	Jan. 1, 1981	Dec 31, 1985

(b) AFFIRMATIVE COMMITMENTS.—Section 46(a)(2)(C) is amended by adding at the end thereof the following new subclause:

"(v) LONGER PERIOD FOR CERTAIN ENERGY PROPERTY.—Clause (iii) shall apply to energy property described in subclauses VII or VIII of clause (i). However, in applying clause (iii) to such property, 'December 31, 1986' shall be substituted for 'December 31, 1982', 'December 31, 1994' shall be substituted for 'December 31, 1990', 'January 1, 1987' shall be substituted for 'January 1, 1983', and 'January 1, 1990' shall be substituted for 'January 1, 1986'.

SEC. 3. QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY TREATED AS ENERGY PROPERTY.

(a) QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY DEFINED.—Section 48 (relating to definitions; special rules) is amended by redesignating subsection (q) as subsection (r) and by inserting after subsection (p) the following new subsection:

"(q) QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY.—

"(1) IN GENERAL.—For purposes of this subpart the term 'qualified industrial energy

efficiency property' means property used as a part of a modification to an existing industrial or commercial facility (including the modification or replacement of one or more processes carried on at such facility on January 1, 1981), but only if such modification—

"(A) results in the utilization by such facility, process or processes of less energy per unit of output,

"(B) results in an aggregate annual decrease in energy consumed by such facility, process or processes, based upon levels of output in effect before such modification, of not less than 1,000 barrels of oil equivalent, and

"(C) does not increase the total amount of oil and natural gas (or products thereof other than petroleum coke, petroleum pitch and waste gases) consumed by such facility, process or processes per unit of output.

"(2) LIMITATION.—Property shall be considered as qualified industrial energy efficiency property only if it is property—

"(A)(i) the construction, reconstruction or erection of which is completed by the taxpayer after January 1, 1981, or (ii) which is acquired after January 1, 1981 if the original use of such property commences with the taxpayer and commences after such date,

"(B) with respect to which depreciation (or amortization in lieu of depreciation) is allowable, and which has a useful life (determined as of the time such property is placed in service) of 3 years, or more and

"(C)(i) which results in the utilization described in paragraph (1)(A), or (ii) the installation and operation of which is reasonably necessary to the achievement of such utilization.

"(3) APPLICATION TO PROPERTY WHICH IS ENERGY PROPERTY WITHOUT REGARD TO BEING QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY.—No property shall be treated as qualified industrial energy efficiency property if the taxpayer claims the energy percentage provided by section 46(a)(2)(C)(i) (other than by subclause VIII thereof) with respect to that property.

"(4) COMPUTATIONS PER UNIT OF OUTPUT.—The determinations required by paragraph (1) shall be made by comparing the BTU content of the energy (or of the oil and natural gas in the case of the determination required by subparagraph (1)(C)) used by the facility, process or processes per unit of output prior to the modification with the BTU content of the energy (or of the oil and natural gas in the case of the determination required by subparagraph (1)(C)) used by such facility, process or processes per unit of output upon completion of the modification. Computations under this subparagraph shall be made in accordance with subparagraph (6).

"(5) REDUCTION OF CREDIT WHERE COST OF ENERGY SAVINGS EXCESSIVE OR WHERE ENERGY SAVINGS WARRANT INVESTMENT WITHOUT REGARD TO CREDIT.—Notwithstanding subclause (VIII) of section 46(a)(2)(C)(i), the energy investment credit allowable by section 38 for qualified industrial energy property shall be determined in accordance with the following table:

"If the adjusted BOE cost of the property is—	The energy investment credit is—
Less than $10	The reduced credit amount.
At least $10 but not more than $60.	The section 46(a)(2)(C) amount.
Over $60	The alternative credit amount.

"(6) DEFINITIONS.—For purposes of paragraph (5)—

"(A) ADJUSTED BOE COST.—The term 'Adjusted BOE cost' means, with respect to any qualified industrial energy efficiency property—

"(i) the section 46(a)(2)(C) amount with respect to such property, divided by

"(ii) the annual number of BOE's saved by the modification of which such property is a part.

"(B) ANNUAL BOE'S SAVED BY PROPERTY.—The term 'annual number of BOE's saved' means, with respect to any property, an amount equal to—

"(i) the excess of the average number of BOE's utilized by the facility, process or processes per unit of output during a representative 1-year period before the use of the property commences over the number of BOE's utilized by such facility, process or processes per unit of output during any representative 12 month period occurring within the recomputation period, multiplied by

"(ii) the units of output during such 1-year period prior to the modification.

"(C) REDUCED CREDIT AMOUNT.—The term 'reduced credit amount' means the energy investment credit determined as if the energy percentage equaled the percentage which bears the same ratio to 20 percent as the BOE cost of the property bears to $10.

"(D) SECTION 46(a)(2)(C) AMOUNT.—The term 'section 46(a)(2)(C) amount' means the energy investment credit determined without regard to paragraph (5).

"(E) ALTERNATIVE CREDIT AMOUNT.—The term 'alternative credit amount' means, with respect to any qualified industrial energy efficiency property, an amount equal to—

"(i) $60, multiplied by

"(ii) the annual number of BOE's saved by the modification of which such property is a part.

"(F) BOE—

"(i) IN GENERAL.—One BOE shall be equal to 5.8 million BTU's.

"(ii) BOE FOR ELECTRICAL ENERGY.—In the case of electrical energy, BOE's shall be calculated by using a heat rate of 10,000 BTU's per kilowatt hour.

"(7) SPECIAL RULES.—

"(A) SPECIAL RULE FOR PROPERTY PLACED IN SERVICE WITHIN 2 YEARS AFTER DATE OF ENACTMENT.—In the case of qualified industrial energy efficiency property which is placed in service during the 2-year period beginning on the date of the enactment of this subsection, the table contained in paragraph (5) shall be applied by substituting '$5' for '$10' each place it appears.

"(B) CERTAIN ENERGY SAVINGS DISREGARDED.—For purposes of this subsection, energy savings shall be disregarded which result from—

"(i) the installation of property other than qualified industrial energy efficiency property, or

"(ii) substantial changes in the character of either the output or input of the facility.

"(8) REDUCTION OF CREDIT WHERE CAPACITY INCREASES.—

"(A) IN GENERAL.—In the case of qualified industrial energy efficiency property which directly results in more than a 10 percent increase in the capacity of the facility, process or processes, the energy investment credit attributable to such property shall be an amount which bears the same ratio to such credit (determined without regard to this paragraph) as the capacity of the facility, process or processes prior to the modification bears to the capacity of the facility, process or processes upon completion of the modification.

"(B) CERTAIN CAPACITY INCREASES DISREGARDED.—For purposes of subparagraph (A), reductions in intermediate or finished product waste or reprocessing shall not be considered an increase in capacity.

"(9) TIME OF APPLICATION OF LIMITATIONS ON AMOUNT OF CREDIT.—

"(A) IN GENERAL.—The provisions of paragraphs (5) and (8) shall be applied as of the close of the recomputation period.

"(B) RECOMPUTATION PERIOD DEFINED.—For purposes of this paragraph, the term 'recomputation period' means, with respect to any modification, the period beginning on the date on which the qualified industrial energy efficiency property which is a part of such modification is placed in service and ending on the last day of the first taxable year beginning more than 180 days after such date.

"(C) RECAPTURE OF EXCESS CREDIT.—If the amount of the credit allowed under this subsection (determined without regard to paragraphs (5) and (8)) with respect to qualified industrial energy efficiency property exceeds the credit allowable under paragraphs (5) and (8), the tax imposed by this chapter for the recomputation year shall be increased under section 47 by the amount of such excess.

"(10) EXISTING DEFINED.—For purposes of this subsection, a facility shall be considered an 'existing facility' if industrial or commercial operations were conducted at that geographic location as of January 1, 1981.

"(11) PROCESS CARRIED ON IN A FACILITY ON JANUARY 1, 1981.—A process which was carried on in an existing facility on January 1, 1981, shall not thereafter cease to be treated as such solely because capitalizable expenditures are paid or incurred with respect to such process after January 1, 1981, or the chemical, physical or mechanical action by which the desired result is accomplished is modified.

"(12) REPLACEMENT OF PROCESS.—In the case of a replacement of a process or processes carried on in an existing facility on January 1, 1981, no property shall be treated as qualified industrial energy efficiency property if—

"(A) the replaced property is not retired from service, except for property maintained as standby or temporary replacement property for the qualified industrial energy efficiency property during periods for which such qualified property is inoperable due to an emergency or on account of repairs or maintenance, or

"(B) the replacement property is placed in service on a site other than the site of the replaced property or reasonably adjacent to that site.

"(13) QUALIFIED INVESTMENT.—In determining the amount of the taxpayer's qualified investment in qualified industrial energy efficiency property, for purposes of section 46(c)(1), the applicable percentage shall be 100 percent for items of such property without regard to the useful life of any particular item of such property.

(b) CONFORMING AMENDMENTS.—

"(1) TREATMENT AS ENERGY PROPERTY.—Subparagraph (a) of section 48(1)(2) (defining energy property) is amended by striking out 'or' at the end of clause (viii), by inserting 'or' at the end of clause (ix), and by inserting after clause (ix) the following new clause:

"(x) qualified industrial energy efficiency property.

"(2) QUALIFIED INDUSTRIAL ENERGY EFFICIENCY PROPERTY DOES NOT INCLUDE PUBLIC UTILITY PROPERTY.—Paragraph (17) of section 48(1) is amended by striking out "and 'cogeneration property'" and inserting in lieu thereof "'congeneration property', and 'qualified industrial energy efficiency property'".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years ending after December 31, 1980.

SEC. 4. AMENDMENTS RELATING TO ENERGY PROPERTY.

(a) AMENDMENTS RELATING TO ALTERNATIVE ENERGY PROPERTY.—

"(1) EQUIPMENT FOR CONVERTING ALTERNATE SUBSTANCES INTO ELECTRICITY ELIGIBLE FOR CREDIT.—Clause (iii) of section 48(1)(3)(A) (defining alternative energy property) is amended by inserting before the comma 'or into electricity, but only, in the case of elec-

tricity, up to (but not including) the electrical transmission stage.

"(2) DEFINITION OF BOILER.—Paragraph (3) of section 48(1) (defining alternative energy property) is amended by adding at the end thereof the following new subparagraph:

"(D) BOILER.—For purposes of subparagraph (A), the term 'boiler' means a system for producing a vapor or high pressure liquid stream from water or some other working fluid. Heat is produced by combustion or otherwise, and is transferred through metal or ceramic tube walls to generate a vapor or higher pressure liquid stream at a positive pressure within the boiler vessel.

"(3) HEAT TREATING FURNACES, MELT FURNACES AND MODIFICATIONS.—

"(A) IN GENERAL.—Subparagraph (A) of section 48(1)(3) (defining alternative energy property) is amended by striking out 'and' and the end of clause (viii) (by striking out the period at the end of clause (ix) and inserting in lieu thereof a comma, and by inserting after clause (ix) the following new clauses:

"(x) heat treating furnaces, the primary fuel for which will be an alternate substance,

"(xi) melt furnaces, if such furnaces use no fuel, or if the primary fuel for which will be an alternate substance, and

"(xii) equipment designed to modify existing equipment in a facility which was using an alternate substance as a primary fuel on October 1, 1978, provided such modification reduces the use of fuels other than alternate substances at the existing facility.

"(B) CONFORMING AMENDMENTS.—

"(i) Paragraph (3) of section 48(1), as amended by paragraph (2), is amended by adding at the end thereof the following new subparagraphs:

"(E) MELT FURNACE.—The term 'melt furnace' includes any device, apparatus, or configuration which directly or indirectly converts solids into liquids or gases through the use of heat.

"(F) HEAT TREATING FURNACE.—For purposes of subparagraph (A), the term 'heat treating furnace' means any device, apparatus, or configuration which heats materials (such as metals) for the purpose of obtaining improved properties (such as through normalizing or annealing).

(ii) Subparagraph (A) of section 48(1)(3) is amended—

(I) by striking out 'or (v)' in clause (vi) and inserting in lieu thereof '(v), (x) or (xi)', and

(II) by striking out 'or (vi)' in clause (vi), (x) or (xi)'.

"(4) CERTAIN SUBSTANCES TREATED AS ALTERNATE SUBSTANCES.—Subparagraph (B) of section 48(1)(3) (defining alternative energy property) is amended by adding at the end thereof the following new sentence: "The term 'alternate substance' includes petroleum coke; petroleum pitch; synthetic fuels; and any other product produced from any alternate substance, whether or not such product has undergone a chemical change in the process of its production."

"(5) PRIMARY FUEL DEFINED.—Paragraph (3) of section 48(1), as amended by paragraphs (2) and (3)(B)(i), is amended by adding at the end thereof the following new subparagraph:

"(G) PRIMARY FUEL.—For purposes of this paragraph—

"(i) IN GENERAL.—An alternate substance shall be considered the 'primary fuel' if any alternate substance or combination of alternate substances accounts for more than 50 percent of the BTU's used by any item of alternative energy property.

"(ii) 50 PERCENT RULE NOT REQUIRED IN CERTAIN CASES.—Notwithstanding clauses (i), (ii), (x), (xi) and (xii) of subparagraph (A), the taxpayer shall not be required to comply with a primary fuel requirement for any taxable year—

"(I) if the taxpayer is unable to obtain the alternate substance for reasons (other than cost thereof) beyond his control, or

"(II) in the case of the 12-month period beginning on the date the boiler, burner, or furnace is placed in service, to the extent a fuel other than an alternate substance is used by reason of start-up conditions. requirements or timing.

"(iii) ELECTRICITY TO SATISFY PRIMARY FUEL REQUIREMENT IN CERTAIN CASES.—Electricity shall be treated as an alternate substance for purposes of the primary fuel requirement in clauses (i), (ii), (x), (xi) and (xii) of subparagraph (A) if—

"(I) the electricity is generated by the taxpayer primarily from an alternate substance, or

"(II) the electricity is purchased by the taxpayer and the taxpayer establishes to the satisfaction of the Secretary that the electricity reduces the need for on-site use of oil or gas and that more than 50 percent of the electricity purchased by the taxpayer for that use is generated from an alternate substance.

(b) AMENDMENTS RELATING TO SPECIALLY DEFINED ENERGY PROPERTY.—

Paragraph (5) of section 48(1) (defining specially defined energy property) is amended to read as follows:

"(5) SPECIALLY DEFINED ENERGY PROPERTY.—

"(A) IN GENERAL.—The term 'specially defined energy property' means—

"(i) a heat wheel,

"(ii) a heat exchanger,

"(iii) a waste heat boiler,

"(iv) a heat pipe,

"(v) an automatic energy control system,

"(vi) a turbulator,

"(vii) a combustible gas recovery system,

"(viii) an economizer,

"(ix) modifications to alumina electrolytic cells,

"(x) industrial insulation,

"(xi) an industrial heat pump,

"(xii) modifications to burners, combustion systems, or process furnaces,

"(xiii) batch operations conversion equipment,

"(xiv) product separation and dewatering equipment,

"(xv) fluid bed dryers and calciners, or

"(xvi) any other property of a kind specified by the Secretary by regulations, the installation of which is for the principal purpose of reducing the amount of energy consumed in any existing industrial or commercial process, processes or activities and which is installed in connection with an existing industrial or commercial facility. The Secretary shall not specify any property under clause (xvi) unless he determines that such specifications meet the requirements of subparagraph (C) of this section. Any property specified by the Secretary under clause (xvi) shall be deemed qualified specially defined energy property as of October 1, 1978.

"(B) DEFINITIONS RELATED TO SUBPARAGRAPH (A).—

"(i) HEAT EXCHANGER.—The term 'heat exchanger'—

"(I) means a configuration of equipment used to transfer energy to incoming combustion air, or lower temperature fluids, gases, or solids with or without the interposition of heat transfer surfaces, and

"(II) includes but is not limited to devices commonly referred to as recuperators, regenerators, and preheaters.

"(ii) WASTE HEAT BOILERS.—The term 'waste heat boiler' means any boiler (within the meaning of paragraph (3)(D)) which uses waste heat from whatever source derived.

"(iii) AUTOMATIC ENERGY CONTROL SYSTEM.—The term 'automatic energy control system'—

"(I) means equipment comprising a system which by automatic controls reduces the energy consumed in environmental space conditioning or in other industrial or commercial processes or activities, and

"(II) includes, but is not limited to, systems which automatically control fuel or electric power inputs to a combustion system or process or the utilization or transfer of energy within a process, or which automatically control process variables (other than energy) in order to minimize energy consumption.

"(iv) COMBUSTIBLE GAS RECOVERY SYSTEM.—The term 'combustible gas recovery system' means equipment comprising a system to recover, and condition for use, unburned fuel or other combustible material from combustion exhaust gases or process streams.

"(v) INDUSTRIAL INSULATION.—The term 'industrial insulation' means any material which—

"(I) is designed to possess a material resistance to the flow of heat, and

"(II) is to be used primarily to retard loss or gain of such heat with respect to pipes, tanks, vessels, equipment, or processes, but not with respect to buildings or structural components thereof.

"(vi) INDUSTRIAL HEAT PUMP.—The term 'industrial heat pump' means equipment which—

"(I) uses the compression and expansion of a contained fluid to extract heat from a gas or liquid and transfer it to another gas or liquid at another temperature, or

"(II) uses nonmechanical means to achieve an equivalent result.

"(vii) BATCH OPERATIONS CONVERSION EQUIPMENT.—

"(I) IN GENERAL.—The term 'batch operations conversion equipment' means equipment to permit conversions from batch operations to one or more continuous processes.

"(II) BATCH OPERATIONS.—The term 'batch operations' means operations where temporary storage of materials in process results in heat transfer to the surrounding environment, or where such handling or temporary storage is accompanied by the waste or reprocessing of more than 5 percent of the material in process.

"(III) CONTINUOUS PROCESS.—The term 'continuous process' means a process which minimizes the handling or temporary storage of the material in process so as to reduce either the amount of heat transfer to the surrounding environment or the amount of waste or reprocessed material.

"(viii) PRODUCT SEPARATION AND DEWATERING EQUIPMENT.—The term 'product separation and dewatering equipment' means equipment designed to separate water or other liquids or volatiles from process materials.

"(ix) FLUID BED DRYERS AND CALCINERS.—The term 'fluid bed dryers and calciners' means equipment in which solid particles are chemically processed by direct heat exchange with a gas or liquid. The gas or liquid passes through a bed of solid particles at sufficient velocity to physically suspend the particles in the gas or liquid stream.

"(C) SPECIFICATION OF ADDITIONAL ITEMS BY SECRETARY.—The Secretary shall specify property under subparagraph (A)(xvi) at this discretion or if—

"(i) such property is recommended for specification to the Secretary by the Secretary of Energy, and

"(ii) there are no generally available and substantial Federal subsidies for such property. The Secretary shall act on a recommendation of the Secretary of Energy within 6 months of its receipt.

(c) AMENDMENTS RELATED TO RECYCLING EQUIPMENT.—

"(1) IN GENERAL.—Subparagraph (A) of

section 48(1)(6), (defining recycling equipment) is amended to read as follows:

"(A) IN GENERAL.—The term 'recycling equipment' means any property which is used exclusively—

"(i) for the unloading, transfer, storage, reclaiming from such storage, sorting, and preparation (including, but not limited to, washing, crushing, drying and weighing) of solid waste, or

"(ii) in the recycling of solid waste.

"(2) INCLUSION OF CERTAIN EQUIPMENT.—

"(A) IN GENERAL.—Subparagraph (D) of section 48(1)(6) relating to inclusion of certain equipment) is amended to read as follows:

"(D) CERTAIN EQUIPMENT INCLUDED.—The term 'recycling equipment' includes any new or replacement property which is used in the conversion or processing of solid waste into a fuel or into useful energy such as steam, electricity, or hot water and any property which is used in the processing of solid waste to recover and store other reusable resources and materials, including but not limited to paper, ferrous metals, non-ferrous metals, and glass.

"(B) APPLICATION WITH SUBPARAGRAPH (B)(i).—Subparagraph (B)(i) of section 48(1)(6) (relating to equipment not included) is amended by striking out 'any' and inserting in lieu thereof 'except as provided in subparagraph (D), and'.

"(3) SOLID WASTE DEFINED.—Section 48(1)(6) is amended by adding at the end thereof the following new subparagraph:

"(E) 'SOLID WASTE' DEFINED.—For purposes of this section, the term 'solid waste' means garbage, refuse, and other discarded solid, semisolid and liquid materials, including materials resulting from industrial, commercial, agricultural and community activities.

(d) AMENDMENTS RELATED TO COGENERATION EQUIPMENT.—Paragraph (14) of section 48(1) (defining cogeneration equipment) is amended to read as follows:

"(14) COGENERATION EQUIPMENT.—

"(A) IN GENERAL.—The term 'cogeneration equipment' means property comprising a system for using the same fuel for the sequential generation of electric power and/or mechanical shaft power in combination with qualified energy at a facility at which, as of January 1, 1980, electricity, mechanical shaft power, or qualified energy was produced.

"(B) QUALIFIED ENERGY.—The term 'qualified energy' means steam, heat, or other forms of useful energy (other than electric power and/or mechanical shaft power) to be used for industrial, commercial, or space-heating purposes (other than in the production of electric power and/or mechanical shaft power).

(e) BIOMASS PROPERTY.—Paragraph (15) of section 48(1) (relating to biomass property) is amended by striking out the word 'and' in subparagraph (i) after the word 'substance' and inserting in lieu thereof a comma, and by inserting after the phrase 'such coal' the following: 'and does not include source separated, separately collected, recyclable waste paper, and'

(f) PUBLIC UTILITY PROPERTY.—Paragraph (17) of section 48(1) (relating to public utility property) is amended by inserting after the phrase 'alternative energy property' the following: 'specially defined energy property, qualified industrial energy efficiency property,' and by inserting before the period at the end thereof the following: ', unless such property is installed in connection with a qualifying small power production facility or a qualifying cogeneration facility (within the meaning of paragraphs (17)(C) and (18)(B) of section 3 of the Federal Power Act).

(g) AMENDMENTS TO DEFINITION OF EXISTING.—Paragraph (10) to Section 48(1) (defining existing) as amended to read as follows:

"(10) EXISTING DEFINED.—For purposes of this subsection,

"(A) EXISTING FACILITY.—When used in connection with a facility, a facility shall be considered an 'existing facility' if industrial or commercial operations were conducted at that geographic location as of October 1, 1978.

"(B) EXISTING PROCESS.—When used in connection with a process, a process shall be considered an 'existing process' if such process was carried on at that facility on October 1, 1978.

"(C) EXISTING EQUIPMENT.—When used in connection with an item of equipment, an item of equipment shall be considered 'existing equipment' if it was placed in service prior to October 1, 1978.

"(D) PROCESS CARRIED ON IN A FACILITY ON OCTOBER 1, 1978.—A process which was carried on in an existing facility on October 1, 1978 shall not cease to be treated as such solely because capitalizable expenditures are paid or incurred with respect to such process after October 1, 1978, or the chemical, physical or mechanical action by which the desired result is accomplished is modified.

(h) REPLACEMENT OF EQUIPMENT OR PROCESS.—Section 48(1) (relating to energy property) is amended by adding the following new section at the end thereof:

"(18) REPLACEMENT OF EQUIPMENT OR PROCESS.—In the case of a replacement of an item of equipment or one or more processes in service or carried on in an existing facility on October 1, 1978, no property shall be treated as energy property if—

"(A) the replaced property is not retired from service, except for property maintained as standby or temporary replacement property for the energy property during periods for which such property is inoperable due to an emergency or on account of repairs or maintenance, or

"(B) the replacement property is placed in service on a site other than the site of the replaced property or reasonably adjacent to that site.

(i) INCREMENTAL COST RULE.—Section 48(1) (relating to energy property) is amended by adding the following new section at the end thereof:

"(19) INCREMENTAL COST RULE.—Property, other than alternative energy property, recycling equipment, qualified hydroelectric generating property, or cogeneration equipment, which otherwise qualifies as energy property under this section but which also substantially increases the operating capacity of the existing process, processes or facility, shall only qualify to the extent of the 'energy component' of the property.

"(A) For purposes of this subparagraph, a substantial increase in capacity is defined as an increase as a result of the installation of the otherwise qualified energy property of more than 10 percent over the capacity of the process, processes or facility prior to the installation of the otherwise qualified property.

"(B) For purposes of subparagraph (A), reductions in intermediate or finished product waste or reprocessing shall not be considered an increase in capacity.

"(C) The term 'energy component' means a prorata allocation of the total cost of the installation of the otherwise qualified industrial energy property, determined by multiplying the total cost by a fraction, the numerator of which is the energy related cost of the equipment and the denominator of which is the total cost.

"(D) In the case of property which qualifies under section 48(1)(3) (alternative energy property) 48(1)(6) (recycling equipment) 48(1)(13) (qualified hydroelectric generating property), and 48(1)(14) (cogeneration equipment), no reductions in the credit otherwise allowable under this section shall be required.

(j) EFFECTIVE DATE.—The amendments made by this section shall apply to periods after the date of enactment of this act, under rules similar to the rules of section 48(m) of the Internal Revenue Code of 1954.

SEC. 5. ASSOCIATED PROPERTY.—

(a) IN GENERAL.—Subsection (1) of section 48 (defining energy property) is amended by adding at the end thereof the following new subparagraph:

"(20) ASSOCIATED PROPERTY.—

"(A) GENERAL RULE.—Any property associated with alternative energy property, specially defined energy property, recycling equipment, or cogeneration equipment shall be treated as qualified industrial energy efficiency property.

"(B) WHEN PROPERTY ASSOCIATED.—For the purposes of subparagraph (A), property shall be considered associated if:

"(i) in the case of property associated with alternative energy property, the installation and operation of such property is reasonably necessary to enable the utilization of an alternate substance, or

"(ii) in the case of property associated with specially defined energy property, the installation and operation of such property is reasonably necessary for realization of the reduction of the amount of energy consumed or heat wasted by the process, processes or activity, or

"(iii) in the case of property associated with recycling equipment, the installation and operation of such property is reasonably necessary to achieve the sorting, preparation or recycling, or

"(iv) in the case of property associated with cogeneration equipment, the installation and operation of such property is reasonably necessary to achieve the energy savings intended by the installation of the cogeneration equipment, or

"(v) in the case of property associated with qualified industrial energy efficiency property, the installation and operation of such property is reasonably necessary for the utilization of less energy per unit of output.

(b) CONFORMING AMENDMENTS.—

"(1) ENERGY PERCENTAGE.—Subparagraph (C) of section 46(a)(2) (defining energy percentage) is amended by adding at the end thereof the following new clause:

"(vi) ASSOCIATED PROPERTY.—In the case of property described in section 48(1)(20), the energy percentage shall be the same as the energy percentage determined under clause (i) for the energy property it was installed in connection with.

"(2) ENERGY PROPERTY.—Subparagraph (A) of section 48(1)(2) (defining energy property), as amended by Section 3(b)(1), is amended by striking out 'or' at the end of clause (lx), by inserting 'or' at the end of clause (x), and by inserting after clause (x) the following new clause:

"(xi) associated property,"

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years ending after December 31, 1980.●

● Mr. CHAFEE. Mr. President, I am honored to be an original cosponsor of the Industrial Energy Security Tax Act of 1981.

This legislation expands and extends the existing energy tax credits that are available to businesses which conserve energy or convert from the use of oil and gas to alternate fuels. Currently, businesses are allowed an additional 10 percent nonrefundable investment tax credit for expenditures on certain types of energy property. The bill we are introducing today increases this tax credit from 10 percent to 20 percent and extends the credit from 1982 to 1986. In addition, new categories of equipment, such as industrial insulation, industrial heat pumps, modifications to burners

and combustion equipment are added to the list of eligible expenditures.

The bill also contains an innovative, new approach to energy conservation tax credits for businesses which can demonstrate significant energy savings. Major industrial energy users, such as the steel and aluminum industries, would be required to repay all or part of the value of the tax credit, if their energy conservation measures prove to save energy and be economically beneficial to the company. Thus, tax incentives will be used to help offset the high "front-end" cost of conservation equipment, but will not be used to benefit projects which, once in place, are economically viable.

In my view, energy conservation remains our best opportunity for improving our energy supply situation. The industrial sector consumes 37.4 percent of all energy in our Nation. Indeed, industry is the largest and fastest growing sector of our economy. Industrial cogeneration efforts that are immediately cost-effective have already been taken. Now, it is time to press for capital investment in industrial energy conservation equipment.

I am especially supportive of the provisions in this bill which will help small and medium size businesses reduce energy usage. For example, the textile industry in the New England area has been especially hard hit by rising electricity prices. This bill will help these companies invest in cogeneration equipment and heat pumps. With capital investment in energy conservation equipment, employers and their thousands of employees will be better able to compete.

Mr. President, energy conservation is especially important in New England because this region is heavily dependent upon imported oil. While we consider innovative solutions for the future—such as conversion of utilities to coal and greater use of hydroelectric power—we must do all we can to promote conservation. The bill we introduce today will help the industrial sector of our economy reduce energy consumption and retain important jobs.●

By Mr. HATCH (for himself and Mr. THURMOND):

S. 751. A bill to amend titles 18 and 28 of the United States Code to eliminate, and establish an alternative to, the exclusionary rule in Federal criminal proceedings; to the Committee on the Judiciary.

ELIMINATION OF AND ALTERNATIVE EXCLUSIONARY RULE IN FEDERAL CRIMINAL PROCEEDINGS

● Mr. HATCH. Mr. President, today I am introducing a bill to eliminate and establish an alternative to the exclusionary rule in Federal criminal proceedings. The exclusionary rule is a judicial policy mandating the inadmissibility of evidence obtained in violation of certain fourth amendment rights. For example, a technical defect in a search warrant would prohibit the use of credible and otherwise legally obtained evidence in a judicial proceeding.

The fourth amendment provides:

> The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath and affirmation, and particularly describing the place to be searched, and the persons or things to be seized. (U.S. Constitution, Amendment IV).

It does not expressly offer redress for violations of unreasonable searches and seizures.

Ninety-five years ago, in *Boyd* v. *United States*, 116 U.S. 616 (1886), the Supreme Court aware of the illegal activities of law enforcement agencies, including invasions of the home and privacy of citizens, suggested possible judicial action in the future. The Court, in lieu of any constitutional sanction, instituted the so-called exclusionary rule in *Weeks* v. *United States*, 232 U.S. 383 (1914), as a deterrent to abusive Federal law enforcement practices. The rule, also referred to as the "Weeks Doctrine" or the "Suppression Doctrine," was subsequently extended to encompass the States in *Mapp* v. *Ohio*, 367 U.S. 643 (1961).

Whereas a law enforcement officer acting in violation of the fourth amendment should be held responsible for his actions, the exclusionary rule instead is custom made to deter the prosecutor, not those law enforcement officers guilty of committing the illegal acts. The exclusionary rule is succinctly explained by the distinguished legal authority Dean Wigmore:

> The Doctrine of *Weeks* v. *United States* also exemplifies a trait of our Anglo-American judiciary peculiar to the mechanical and unnatural type of justice. The natural way to do justice here would be to enforce the healthy principle of the fourth amendment directly, i.e., by sending for the high-handed, over-zealous marshal who had searched without a warrant, imposing a thirty-day imprisonment for his contempt of the constitution, and then proceeding to affirm the sentence of the convicted criminal. But the proposed indirect and unnatural method is as follows:
>
> "Titus, you have been found guilty of conducting a lottery: Flavius, you have confessedly violated the constitution. Titus ought to suffer imprisonment for crime, and Flavius for contempt. But no! We shall let you both go free. We shall not punish Flavius directly, but shall do so by reversing Titus' conviction. 8 Evidence § 2184 (3d ed. 1940).

In England, as well as throughout the Commonwealth generally, the illegality of a seizure does not prevent evidence from being admissible in criminal proceedings. Also, police violators of the law are held personally accountable for their transgressions.

In America, however, violations of fourth amendment rights by law enforcement officials always elicit one response from the courts—evidence inadmissible under the exclusionary rule. The rule excludes the convicted criminal as well as the offending law enforcement official from answering for his misconduct. Both malefactors are freed to again break the law.

A number of Supreme Court justices have questioned the usefulness of the exclusionary rule. Mr. Justice Black, in a concurring opinion in *Wolf* v. *Colorado*, 388 U.S. 25 (1949), stated:

> The Federal Exclusionary Rule is not a command of the fourth amendment but is a judicially created rule of evidence which Congress might negate.

Again, in *Linkletter* v. *Walker*, 381 U.S. 618, 648 (1965), Mr. Justice Black said:

> The inference I gather from these repeated statements is that the rule is not a right or privilege accorded to defendants charged with crime but is a sort of punishment against officers in order to keep them from depriving people of their Constitutional rights. In passing I would say that if that is the sole purpose, reason, object and effect of the rule, the court's action in adopting it sounds more like law-making than construing the Constitution.

More recently, Chief Justice Burger stated:

> It creates a damage remedy not provided for by the Constitution and not enacted by Congress,

clearly indicating his view regarding the deleterious effect the exclusionary rule has on justice. In *Bivens* v. *Six Unknown Federal Narcotic Agents*, 403 U.S. 388 (1971), Chief Justice Burger recommended this course of action:

> Reasonable and effective substitutes can be formulated if Congress would take the lead, as it did for example in 1946 in the Federal Tort Claims Act. I see no insurmountable obstacle to the elimination of the Suppression Doctrine if Congress would provide some meaningful and effective remedy against unlawful conduct by government officials.

It seems then that the Supreme Court has thrown down the gauntlet. Now Congress must answer the challenge.

The rule's adamant demand for a perfect trial is without constitutional foundation. In criminal prosecutions, the sixth amendment maintains that the accused be given a speedy and public trial, not necessarily a perfect trial. In addition, the Supreme Court has repeatedly interpreted the due process clause of the 5th and 14th amendments to require that a "fair trial" be provided, not the aforementioned perfect trial. The concept of a fair trial is an important one. Mr. Justice Rehnquist, in *Michigan* v. *Tucker*, 417 U.S. 433 (1974), stated:

> Just as the law does not require that a defendant receive a perfect trial, only a fair one, it cannot realistically require that policemen investigating serious crimes make no errors whatsoever.

The protection of the citizenry is the foremost responsibility of the law enforcement officer; his first priority is to remove nefarious persons such as rapists, murderers, and kidnappers from the streets. In the performance of his duties, the policeman may sometimes err. The exclusionary rule does not distinguish between flagrant violations and accidental errors.

For example, it does not distinguish between clearly unreasonable searches of one's home and simple misstatements of information on a search warrant. Regardless of the magnitude of the error of the policeman, the rule mandates the suppression of evidence obtained in violation of the fourth amendment. The release of a convicted murderer due to an error in a search warrant is necessitated by the exclusionary rule.

Under the rule, evidence considered to have been obtained illegally is not permitted into trial, and if causal connection is determined, even the most credible kinds of evidence may be deemed "tainted" and also excluded from the trial. Causal connection refers to the judicial decision that where additional evidence is believed to have been gathered as a result of illegally seized evidence, it shall be subject to the exclusionary rule. For example, the body of a victim is inadmissible evidence at trial if the body was found as a result of a confession of a pickpocket being held illegally by law enforcement officers.

In our society, differing types of criminal elements are present. There are criminals such as gamblers and pickpockets who seek monetary gain by committing crimes against property. There are also criminals such as rapists and child molesters who commit violent crimes against the person. The exclusionary rule, however, does not differentiate between heinous crimes against the person such as rape, child abuse, or homicide and simple monetary crimes. Its use allows the same reversal for a convicted child molester, on the grounds of the illegality of the search and seizure, as it does a convicted gambler.

Our courts also make a distinction insofar the penalties meted out to the convicted criminal. The Court demarcates misdemeanors and more serious felony crimes. The penalties established are based on the magnitude of the crime committed. Conviction of a misdemeanor elicits a penalty ranging from a fine or probation to 1 year imprisonment in prison. Conviction of a serious felony crime elicits a penalty ranging from 1 year incarceration in a State or Federal penitentiary to the death penalty. Whereas the courts take into consideration the gravity of the crime, the exclusionary rule does not distinguish the misdemeanor from the more serious felony crime. The rule releases a convicted gambler the same as a convicted killer, totally ignoring the gravity of the crime.

The primary reason for the institution of the exclusionary rule was to deter abusive law enforcement practices. However, there is little substantive proof that the exclusionary rule is an effective deterrent. Mr. Justice White, in his dissenting opinion in Stone against Powell, stated:

> As time went on after coming to the bench I became convinced that *Weeks* v. *United States*, (Citations omitted), and *Mapp* v. *Ohio* had overshot their mark insofar as they aimed to deter lawless action by law enforcement personnel and that in many of its applications the exclusionary rule was not advancing that aim in the slightest and that in this respect it was a senseless obstacle to aiming at the truth in many criminal trials. 428 U.S. 465, 537 (1967).

Mr. Justice White also contends that the rule cannot deter unlawful conduct:

> When law enforcement personnel have acted mistakenly, but in good faith and on reasonable grounds, and yet the evidence they have seized is excluded, the exclusion can have no deterrent effect. The officers, if they do their duty, will act in similar fashion in similar circumstances in the future; and the only consequence of the rule as presently administered is that unimpeachable and probative evidence is kept from the trier of fact and the truth-finding function of proceedings is substantially impaired or a trial totally aborted. 428 U.S. 465, at 539.

It has even been suggested that the exclusionary rule promotes illicit conduct by law enforcement officers. Since the rule is conviction oriented it is only brought to play at the trial stage of criminal proceedings when law enforcement officials are seeking a conviction, it permits harassment or seizure of contraband by officers who have no intention of a conviction while providing no direct punishment to the officer who may have violated fourth amendment rights. In some instances, the rule diminishes abidance of the law and compels officers to turn to illegal means of law enforcement; that is, false testimony. Where then lies the protection for the innocent victim of illegal searches and seizures required by the fourth amendment? Assuming an illegal search and seizure is committed upon a law-abiding citizen, the rule offers him little help, remedy, or protection—certainly no compensation.

Prof. Virgil Peterson's thoughts as to the ineffectiveness of the rule in its protection of the innocent are expressed well:

> Rejection of the evidence does nothing to punish the wrongdoing official while it may and likely will, release the wrongdoing defendant. It deprives society of its remedy against one lawbreaker because he has been pursued by another. It protects one against whom incriminating evidence is discovered, but does nothing to protect innocent persons who are the victims of illegal but fruitless searches. (In restrictions of the law of search and seizure, 52 Northwestern Univ. L. Rev. 46 at 55 (1958).

Further proof is found in a report from the American Bar Association's Division of Judicial Administration. A relevant section reads:

> Not only has the rule failed to achieve its stated purpose, but it has imposed substantial costs on society in the process. First, the exclusionary rule affords no protection or remedy to innocent persons whose fourth amendment rights have been infringed. Justice Frankfurter noted that the exclusion of evidence is a remedy which directly serves only to protect those upon whose person or persons something incriminating has been found . . . next it is clear that the exclusionary rule imposes a single, inflexible, and drastic sanction without regard to the nature, circumstances or degree of police misconduct.

To ascertain the validity of the many criticisms of the exclusionary rule, an empirical study was conducted in Chicago in 1971–72. The study was administered by the U.S. Department of Justice and the University of Chicago Law School. The results indicated the ineffectiveness of the rule as a deterrent to abusive law enforcement practices and illustrated the lopsided protections the rule gives for violations of the fourth amendment rights. Instead of protecting the innocent law-abiding citizen, the rule releases the criminal as well as the offending law enforcement official from answering for his misconduct. In a brief (amicus curiae) submitted by the district attorney of Alameda County in the case of People against Cahan, the district attorney stated:

> (The) net result of the exclusionary rule is that the persons who will benefit the most, in fact almost exclusively, are the blackmailer, the kidnapper, the big-time narcotic peddler, the racketeer, the dishonest gambler who preys in devious ways upon a gullible public, the panderer and procurer, the entrepreneur of syndicated prostitution, who like the pimp, lives off the earnings of prostitutes, and other types of organized syndicated crimes. 44 Cal. 2d 434 (1955).

In recent Supreme Court decisions concerning the exclusionary rule, Justices have continued to echo the fact, which was first introduced in *Wolf* v. *Colorado*, 388 U.S. 25 (1949), that the rule is "judicially created and one which Congress might negate." The bill I propose today is in response both to the cries of these Justices of the Supreme Court and to our fellow Americans, who are increasingly becoming victims of violent criminal acts.

My bill, comprised of two major provisions, would eliminate the exclusionary rule, thus permitting evidence not be held inadmissible, when obtained in violation of fourth amendment rights by Federal law enforcement officials, in a Federal criminal trial. Also, my bill would allow for redress for innocent persons of fourth amendment violations. Federal law enforcement officials who violate fourth amendment rights will not be afforded protection by this bill; but they will instead be required to answer for their actions. Both provisions are needed.

The first provision would require the addition of a new section, § 3505 (elimination of the exclusionary rule) in chapter 223 of title 18 of the United States Code. It would eliminate the exclusionary rule as it pertains to Federal criminal proceedings. The proof of innocence or guilt must be based on the truth. In my opinion, truth is denied when courts are not given the opportunity to judge evidence solely on the basis of its reliability. By eliminating the exclusionary rule, all evidence would be available to the trial judge for his determination as to its relevance to the case.

The second provision would add a new chapter, 172 (illegal search and seizure) to title 28 of the United States Code. It would provide a civil tort remedy for individuals whose fourth amendment rights have been violated by Federal law enforcement officials. It would define Federal officials who would be subject to appropriate discipline for violating fourth amendment rights, and it would stipulate that the U.S. Government would be held liable for the actions of its officials who violate fourth amendment rights.

It would also set forth the standards for recovery of actual damages and such punitive damages, up to but not to exceed $25,000, as the court may award. Finally, it would provide the court the opportunity to award any claimant who prevails in such action reasonable attorney fees, and other litigation costs reasonably incurred as the court may deem appropriate. Thus, this second provision would offer the protection guaranteed by the fourth amendment of the U.S. Con-

stitution as well as act as a deterrent to potential violations of searches and seizures by Federal law enforcement officals.

Other bills have been introduced which would redefine and limit the exclusionary rule. These bills attempt to restructure the rule in order that more evidence may be deemed admissible by the courts in a Federal trial. They place great faith in the ability of the courts to readily decide whether the law enforcement official's violation of the fourth amendment was either intentional or substantial, or was flagrant or accidental. In fact, this determination has perplexed the courts for over 67 years. One judge may deem actions by law enforcement officers to be in violation of the fourth amendment when the crime is gambling and yet that same judge may deem the same actions not to be in violation of the fourth amendment when the crime is prostitution.

Another problem these other bills fail to address is a remedy for a law-abiding citizen against unreasonable searches and seizures. The exclusionary rule only comes into play at the trial stage of a criminal proceeding, and does not offer protection for the law-abiding citizen whose fourth amendment rights have been violated.

Congress enacted legislation to allow civil tort actions to be taken against State authorities who abuse their powers, 42 U.S.C. § 1983 (1970):

> Every person who, under color of any statute, ordinance, regulation, custom, or usage, of any State or territory, subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress.

Congress should offer redress when Federal law enforcement officials violate fourth amendment rights. The bill I propose offers just such a remedy.

The exclusionary rule forces the courts to accept suppression motions on all evidence claimed to have been obtained in violation of fourth amendment rights. This has admittedly doubled the court calendar. The other bills continue to request that courts decide whether the evidence should be admissible in court at a suppression hearing. Thus, the exclusionary rule would remain a time consuming, added burden on the court system.

Even innocent persons subjected to illegal searches and seizures, who are arrested as a result of the illegal searches and seizures, must wait for a date on the court calendar just for a suppression hearing, and then, whether or not the evidence is found to be admissible, they must wait yet another date of the court calendar for their trial. If the innocent person cannot afford bail, he probably will have to wait for his trial date confined in a local jail. On the other hand, if an alleged child molester can afford bail, he will await his trial date back in society among children.

My proposed bill would not allow this injustice to occur. It would free up the courts' calendar by eliminating the need for an extra proceeding prior to trial, thereby allowing the courts to handle cases in a more timely and expeditious manner. The speed with which the courts could handle cases would insure the release of innocent persons faster as well as speed up the removal of criminals from the streets.

The exclusionary rule has not lived up to its expectations. The creators of this misguided rule have themselves asked Congress to rectify its shortcomings. My bill, eliminating the exclusionary rule, would permit Federal courts to pursue the truth by allowing the admission of evidence obtained in violation of the fourth amendment by Federal law enforcement officials at trial.

My bill would also create a much needed working deterrent to fourth amendment violators. Not only would the bill deter potential violators, but it would also provide, by means of a civil tort action, a remedy whereby an innocent person would be protected by the fourth amendment from unreasonable searches and seizures as intended by the framers of the Constitution.

My bill is a workable alternative to the exclusionary rule. Accordingly, I urge the support of my colleagues on this important legislation. I ask unanimous consent that the text of my amendment appear at this point in the RECORD, as well as an excellent analysis of the subject by Prof. Ernest Van Den Haag appearing in National Review magazine.

There being no objection, the bill and article were ordered to be printed in the RECORD, as follows:

S. 751

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 223 of title 18, United States Code, is amended by adding at the end thereof the following new section:

"§ 3505. Elimination of exclusionary rule

"Evidence, otherwise admissible in a Federal criminal proceeding, shall not be excluded on the grounds that such evidence was obtained in violation of the United States Constitution.".

(b) The table of sections for chapter 223 of title 18, United States Code, is amended by adding at the end thereof the following new item:

"3505. Elimination of exclusionary rule.".

SEC. 2. (a) Title 28, United States Code, is amended by adding immediately after chapter 171 a new chapter 172 as follows:

"Chapter 172.—ILLEGAL SEARCH AND SEIZURE

"Sec.
"2691. Definitions.
"2692. Tort claims; illegal search and seizure.
"2693. Sanctions against investigative or law enforcement officers; illegal search and seizure.
"2694. Judgment as a bar.
"2695. Attorney fees and costs.
"2696. Applicability of other tort claims procedures.

"§ 2691. Definitions

"As used in this chapter, and section 1346 (g) of this title, the term—

"(1) 'Federal agency' includes the executive departments, military departments, independent establishments of the United States, and corporations primarily acting as instrumentalities or agencies of the United States, but does not include any contractor with the United States; and

"(2) 'Investigative or law enforcement officer' means any officer of the United States who is empowered by law to execute searches, to seize evidence, or to make arrests for any violation of Federal law, or any person acting under or at the request of such officer.

"§ 2692. Tort claims; illegal search and seizure

"(a) The United States shall be liable for any damages resulting from a search or seizure conducted by an investigative or law enforcement officer, acting within the scope of his office or employment, in violation of the United States Constitution.

"(b) Any person aggrieved by such a violation may recover actual damages and such punitive damages as the court may award under subsection (c).

"(c) Punitive damages may be awarded by the court, upon consideration of all of the circumstances of the case, including—

"(1) The extent of the investigative or law enforcement officer's deviation from permissible conduct;

"(2) The extent to which the violation was willful, reckless, or grossly negligent;

"(3) The extent to which the aggrieved person's privacy was invaded;

"(4) The extent of the aggrieved person's personal injury, both physical and mental;

"(5) The extent of any property damage; and

"(6) The effect of such an award would have in preventing future violations of the United States Constitution.

"(d) Notwithstanding subsections (b) and (c), the recovery of any person who is convicted of any offense for which evidence of such offense was seized in violation of the United States Constitution is limited to actual physical personal injury and to actual property damage sustained as a result of the unconstitutional search and seizure.

"(e) No judgment, award, compromise, or settlement of any action brought under this section shall exceed the amount of $25,000, including actual and punitive damages. The United States shall not be liable for interest prior to judgment.

"(f) Any action under this section shall be brought within the period of limitations provided in section 2401(b) of this title.

"§ 2693. Sanctions against investigative or law enforcement officers; illegal search and seizure

"An investigative or law enforcement officer who conducts a search or seizure in violation of the United States Constitution shall be subject to appropriate discipline in the discretion of the Federal agency employing such officer, if that agency determines, after notice and hearing, that the officer conducted such search or seizure lacking a good faith belief that such search or seizure was constitutional.

"§ 2694. Judgment as a bar

"The remedy against the United States provided under this chapter shall be the exclusive civil remedy for a violation of the United States Constitution by any investigative or law enforcement officer acting within the scope of his office or employment whose act or omission gave rise to the claim.

"§ 2695. Attorney fees and costs

"In any action brought under this chapter, the court may award any claimant who prevails in such action reasonable attorney fees, and other litigation costs reasonably incurred.

"§ 2696. Applicability of other tort claims procedures

"The procedures provided in sections 2672, 2675, 2677, 2678, 2679, and 2680 of this title apply to any action brought under this chapter. For the purposes of such sections, any investigative or law enforcement officer

who conducts a search and seizure in violation of the Constitution shall be treated as if he were an 'employee of the government'.".

(b) The table of chapters for title 28, United States Code, and for part VI of title 28, United States Code, are each amended by inserting immediately after the item relating to chapter 171 the following:

"172. Illegal Search and Seizure------ 2691".

SEC. 3. Section 1346 of title 28, United States Code, is amended by adding immediately after subsection (f) the following new subsection:

"(g) The district courts, together with the United States District Court for the District of the Canal Zone, the United States District for the Territory of Guam, the District Court for the Northern Mariana Islands, and the District Court of the Virgin Islands, shall have exclusive original jurisdiction of any civil action on a claim against the United States, for money damages, brought under chapter 172 of this title.'.

SEC. 4. (a) Section 1402(b) of title 28, United States Code, is amended by inserting after "subsection (b)" the following: "or subsection (g)".

(b) Section 1504 of title 28, United States Code, is amended by striking "section 1346 (b)" and inserting in lieu thereof "under subsection (b) or subsection (g) of section 1346".

SEC. 5. The civil action against the United States provided by the amendments to title 28, United States Code, made by this Act shall only apply to claims arising on or after the date of enactment of this Act.

CRIME OR PUNISHMENT?

(By Ernest Van Den Haag)

Our courts do not do well in enforcing a legal order in which law-abiding citizens can be secure in their lives, their liberties, and their pursuit of happiness. Yet it is "to secure these rights" that "governments are instituted among men." Our courts, rather than concentrating on whether those arrested for a crime are guilty of it, are preoccupied with deciding whether there was "probable cause" for the arrest. They are less concerned with the defendant's guilt or innocence than with whether the evidence for his guilt is admissible. If it isn't—if a policeman made an error in seizing the evidence—the defendant gets off, however many murders he has committed.

The exclusionary rule on which this procedure rests is a late invention of our courts (in no way mandated by the Constitution). A letter to the New York Times illustrates its perverse effects:

". . . I was mugged at the front door of my house in Hollis Hills, Queens. The mugger was caught within three hours of my report to the police. I pressed charges, and six hearings over a span of six months ensued. . . . All the evidence which helped catch the mugger was offered: 1) description of car—year, type, color; 2) license plate number—one number off, M instead of W; 3) $40 in the mugger's pocket in the exact bills I reported missing; 4) an autoharp pick—he did not even know what an autoharp is; 5) an almost exact approximation of his height and weight; 6) accurate description of his clothing, etc. . . . The mugger was freed after the sixth hearing because of *an illegal search of vehicle by the policeman.* [My italics.]

Last night on Channel 5 news, there was an item about the $1 rapist, who was finally caught after raping about 25 women in Queens. His name [was] Leroy Hamlin; [he] was the same man who had mugged me. . . . Mr. Hamlin had several previous arrests prior to mugging me."

Six adjournments! Six months! for a man the police caught in three hours. Unfortunately this is not unusual. Only the persistence of the complainant was. Usually complainants and witnesses are discouraged from testifying by repeated adjournments, if they are not sufficiently intimidated by the threats that offenders—out on bail—can and do make with practical immunity.

Could this be an isolated instance in which the exclusionary rule was misused by a lower court? Consider *U.S.* v. *Montgomery.* Police made a routine traffic stop after suspicion had been aroused by a car's repeatedly circling in the same area. The driver had an arrest warrant outstanding against him; the police searched the car. They found bullets, an unregistered revolver (loaded), an unregistered sawed-off shotgun, and shells. The driver was found guilty in trial court. The court of appeals freed him, saying the policemen's suspicions, however justified they turned out to have been, did not suffice for searching the car. According to the court of appeals, the "probable cause" which authorizes arrest or search requires, in practice, that a crime has already been committed and witnessed. Police are not allowed to prevent it. A man cannot be convicted for having unregistered arms in his car unless he uses or, at least, displays them. And, in this matter, state courts are certainly no better—they can't be, because defendants can appeal to the federal bench.

Joseph W. Bishop Jr., Ely Professor of Law at Yale University, in his review (Commentary) of Justice Macklin Fleming's thorough book *The Price of Perfect Justice,* affords the layman a glance at what happens:

". . . the incarceration of even the most obviously guilty criminal is a task comparable to landing a barracuda with a trout-rod and dry-fly. . . . Justice Fleming itemizes 26 separate state and federal proceedings in which a defendant can challenge the lawfulness of a single search or seizure. Moreover, he can petition for *habeas corpus ad libitum,* hoping finally to find a federal judge who agrees with him and disagrees with all the other judges, for the doctrine or *res judicata*—that an issue finally determined by a court cannot be reopened—does not apply to *habeas corpus.* . . ."

Few criminals are ever caught. And our courts seem to feel that equal protection of the laws requires that they be let go—after all, why single out for punishment the small proportion of the criminal population which gets caught? Even when a reluctant judiciary manages to find a defendant guilty, he is treated—well, the New York Times recently carried the following story. (It often carries analogous stories.)

Davereaux Wiggins, who was accused of hurling a 28-year-old airline stewardess in front of an onrushing subway train last July after he put a knife to her throat and grabbed her handbag, was sentenced to four to twelve years in prison yesterday after pleading guilty to a robbery charge. A charge of attempted murder was dropped, and the sentence was half the maximum that could have been imposed.

Mr. Wiggins reportedly told detectives that the airline stewardess, Anne Picyk, was the fourth subway passenger he had pushed in front of a train that month. . . .

The twenty-year-old defendant had been indicted for an attempted murder and robbery, each of which is a felony carrying a maximum sentence of 25 years in jail. Justice Roberts accepted Mr. Wiggins' guilty plea to the robbery charge, described the defendant's act as "an horrendous crime," and then imposed sentence. Mr. Wiggins will be eligible for parole after four years. . . .

Both of Miss Picyk's legs were fractured in the fall, but she managed to scramble to her feet and hoist herself up the side of the platform. The station was already vibrating with the approach of a train in the distance.

The moment she got her hands over the platform edge, she told police, her assailant kicked her in the face and sent her sprawling back onto the tracks. The train, by then, had almost reached the beginning of the platform. . . .

After Mr. Wiggins pushed her in front of the train, he took the keys to her Columbus Avenue apartment from her purse and was apprehended at the apartment by the police while stealing her clothes and jewelry.

Mr. Wiggins had previously been arrested for pushing a ninety-year-old man onto the tracks of the IRT station at West 181st Street. That charge was dropped when the victim was unable to identify him. . . .

Note: (1) the most serious charge, although accurate, was dropped (trial is quite a risk for the prosecution these days); (2) no charge for the burglary; (3) the judge, aware that the more serious charge had been dropped, and aware that he could have sentenced the defendant to a richly deserved 25-year term on the remaining charge, sentenced him to one-third of the time he could have been given for his "horrendous crime," making parole possible after four years. I guess His Honor doesn't ride the subway.

PRISONER OF IDEOLOGY

By now even official bodies realize the need to reform our criminal justice non-system. According to the New York Times, "A special committee of prosecutors and lawyers [found] current sentencing practices 'erratic and unpredictable,'" so as to "'resemble a lottery'" in which "'mere chance, rather than the rule of law, often governs the way we sentence criminals.'" Wherefore the committee proposed to abolish judicial discretion and parole. (I have urged abolition of both for years.) But however rotten it be, there are always defenders of the status quo. Charles E. Silberman now has come to their aid with Criminal Violence, Criminal Justice (Random House, 1978).

As the author gratefully acknowledges, nearly every Establishment figure in the criminal justice system worked with him on this book. (Some praise their own product on the dust-jacket without letting on; which doesn't seem quite cricket.) Nonetheless, the book is written in a clear journalistic style—although I could do with fewer solecisms such as "not all the minutiae is necessary": these minutiae are. There is no doubt about Silberman's sincerity and good will toward men. Nor about his diligence: the book is crammed with facts and quotations.

The chapters on prison and on juvenile justice do accurately and extensively describe what's going on. This helps—although Silberman does not propose any feasible and effective remedies. He has learned, at least, that rehabilitation does not work and that the juvenile court system doesn't work either. Other liberals learned this earlier (non-liberals have known it all along), but at the Ford Foundation, which funded Silberman's work, it may be news. McGeorge Bundy, its president, "is proud" of Criminal Violence, Criminal Justice. He may well be. For in Charles E. Silberman, McGeorge Bundy has found someone who would run the war against crime as the Administrations he served in the Sixties ran the war in Vietnam. Keep restricting the authority of the troops to fight (or arrest, or consider evidence), while insisting they are not hamstrung and that the rise in crime (or enemy power) has nothing to do with these restrictions. Have optimistic reports written: things are better (at least no worse) than in 1920. Ask for more money, more troops, to be thrown into the fight. There is light at the end of the tunnel . . .

Criminal Violence, Criminal Justice is misleading on a much larger scale than it needs to be for its defense of the status quo. So totally a prisoner of his ideology is Silberman that he does not suspect he has one. The lack of self-awarness keeps him honest, but has the disadvantage of preventing him from understanding his subject.

Vague yet pervasive, Silberman's ideology

may be described as nostalgic reformist-liberal guilt (1960 vintage) with (severely localized) attacks of rationality. Thus, Silberman's overall remedies for our high crime rates are income redistribution and an end to racism and inequality. This charitable sentiment responds to guilt feelings, but ignores facts. Sir Leon Radzinowicz—hardly a conservative—writes in The Growth of Crime that, as affluence spreads, crime follows: "In Sweden, the model of equable prosperity and enlightened law, the [crime] rate went up 44 per cent . . . In the solid and industrious Netherlands, 55 percent." (Sweden and the Netherlands are not well known for racism and inequality.) However, with the help of our courts we do much better: in Manhattan there are more murders every year than in the whole of England and Wales—and Manhattan's murder rate is not high compared to that of other American cities. As elsewhere, in the U.S. a more equal distribution of income and less racism actually have been associated with higher crime rates.

About black criminality, Silberman's naive theories once more suggest displaced guilt feelings but tell us nothing about their object. They appear to justify what they seek to explain. (However, to his credit, Silberman does admit the remarkably high black crime rate—which he blames on past oppression.)

According to Silberman, "it is plain wrong" of me (in my Punishing Criminals) to "rail against 'the fact that so small a proportion of all crimes committed—about 1 per cent—ever lead to imprisonment.'" The actual punishment rate "turns out to be 65 per cent." Silberman neglects to mention that my figure was credited to Ramsey Clark, not generally known as an enemy of judicial leniency or of the exclusionary rule.

Silberman's 65 percent is absurd—only Japan has so high a rate of punishment (and a correspondingly low crime rate). Even in England the punishment rate is only about 4 per cent—four times higher than ours (the crime rate is correspondingly lower), but nowhere near Silberman's 65 per cent. How does he get his figure? He a) confuses my "all crimes" with the seven crimes indexed by the FBI, and b) my "crimes committed" with crimes reported to and by the police (probably about one-third of those committed); then c) he suddenly switches to the porportion punished out of all arrested offenders rather than out of the perpetrators of all "crimes committed" (about 25 per cent of all crimes lead to an arrest); then d) he decides to exclude all crimes committed by juveniles—etc., etc. His 65 per cent is the arithmetically correct end-product of these manipulations, but has nothing to do with "the proportion of all crimes committed [that] lead to imprisonment," which Ramsey Clark and I referred to. The 65 per cent punishment rate is correct—for a highly selected group of convicted felons; Silberman could have been even more selective and reached 90 percent, or 100 per cent. (Indeed, for the group selected, 65 per cent is scandalously low.)

In any case, Silberman's confusion, ignorantly or deliberately, misdescribes the effectiveness of the criminal justice system. The imprisonment rate for all crimes committed unfortunately is "about 1 percent." There is plenty of evidence for this. E.g., of 10,000 persons arrested for robbery (a major crime) in one year in California, only 1,300 were incarcerated (i.e., 13 percent of those arrested for robbery). Only about one-third of all robberies are reported, and about one-quarter of the reports result in arrest. California is not exceptional, and things have not improved.

ESCAPING PUNISHMENT

On a first reading I did not see wherein Silberman's manipulations could do anything but mislead the unwary, including, perhaps, him. But there is method in this madness. Silberman tries to show that judicial foolishness, or leniency, is not to blame, that our courts do well, that "it is not true that significant numbers of guilty offenders escape punishment"; that actually "only a handful of criminals escape arrest, conviction, or punishment because of exclusionary rules, search-and-seizure laws, and other technicalities designed to protect defendants' rights."* Utinam haberetis!

Is it really "not true that significant numbers of guilty offenders escape punishment"? (Why the pleonastic "guilty offenders"? Where are innocent offenders found?) Consider these data. The crime rate rose 144 percent from 1930 to 1970. (Crime rose 176 percent—the difference is accounted for by the rise in population.) In 1930, 118 persons out of 100,000 were in prison. In 1970, 96 were—a drop of 19 percent. Hence the proportion of offenders imprisoned—low to begin with—must have declined sharply. Other data confirm as much. Thus, while crime rates rose 144 percent, the number of convictions decreased from 117 to 95 per 100,000. Silberman will find it hard to persuade anyone familiar with the data that "it is not true that significant numbers of guilty offenders [escaped] punishment." They certainly did. They still do.

According to the New York Times (not a paper known to "rail" against the judiciary—indeed, a paper Mr. Silberman quotes at length when convenient): ". . . the defendant [tends to have] the upper hand in bargaining about sentences in Criminal Court. The repeaters know this from experience. The novice learns it from friends or his lawyer."

Some illustrations? "Hosie S. Turner was convicted of murder after a month-long trial." His prior record included "16 convictions for robbery, burglary, larceny, parole violation, drug possession and sale. . . . He invariably was allowed to plead guilty to a lesser charge."

"Willie Poinsette had a record of 21 previous arrests when, on April 8, 1973, he was charged with robbery and possession of a gun, both felonies. If convicted on these charges he would have faced up to 32 years in prison. Two days later in Criminal Court, Mr. Poinsette pleaded guilty to petit larceny, and was sentenced to two months in city jail."

"Melvin Lewis was 19 and had a record of previous arrests [juvenile arrests are not recorded, of course] when he was charged with possession of a knife and attempted robbery, both felonies. If convicted of these charges, he would have faced up to 14 years in prison. Mr. Lewis pleaded guilty to attempted grand larceny, a misdemeanor, and was sentenced to ten months in city jail. He was conditionally released on parole to a rehabilitation center three months later. Shortly after disappearing from the rehabilitation center on January 21, he was arrested for assaulting two civilians and a police officer. A week later he was charged with wounding a police officer and killing Mr. Walker." Which is why the New York Times reported Mr. Lewis' doings. For these are not isolated instances. They are so typical, so much a matter of routine, that they are not usually reported.

How come Mr. Silberman overlooks what everyone knows? Not surprisingly, the names of Professor Bishop and of Justice Fleming, whom I quoted earlier, do not appear in his index. Both are well known and highly respected—but inconvenient to ideologues. Silberman blithely tells us that the exclusionary rule—which makes evidence obtained by improper methods inadmissible in court—prevents few convictions. He reached this conclusion by looking at trial records and at research reports, the methodology of which he does not describe and has not checked. I can't take these reports or Silberman's interpretation seriously. They contradict what the naked eye can see; and they come from the researchers who for years tried to convince us that deterrence cannot work, and that we should rehabilitate and not punish. They got us where we are.

Evidence, however convincing, comes to court only if the prosecution has some hope that it will be admitted. Offenders will not be prosecuted and trials do not occur if the prosecution knows that the court will exclude the evidence needed for conviction. Thus the main effects of the exclusionary rule are: (a) offenders are not arrested when the police cannot get the evidence or know that it won't be admitted; (b) if arrested, offenders are released by prosecutors when they learn that the evidence won't be admitted; (c) if not released by the prosecutor, they are released on arraignment; (d) in plea bargaining—which, as Silberman notes, decides 90 percent of all cases—prosecutors, when they know that much of their evidence may not be admitted, are compelled to accept guilty pleas for offenses carrying a penalty below that threatened for the crimes actually committed. That is how many of the offenders who are actually prosecuted—a small proportion of all offenders—escape most punishment, even when courts are willing to impose it.

Silberman feels that it is unfair to accuse the courts. Is the exclusionary rule their fault? Indeed it is; the judiciary invented the exclusionary rule in 1914 and imposed it on the states in 1961. The Constitution prohibits unreasonable searches and seizures. Hence, those guilty of such searches and seizures should be punished and held responsible for damages. But not to admit the evidence available in the court—however procured—and then to release guilty defendants for lack of evidence, harms society and does not punish the policemen who committed procedural errors or unlawful acts.

This judicial invention—admittedly not required by the Constitution[1]—does not protect the innocent: it protects only the guilty. Only a guilty defendant can profit from nonadmission of the evidence showing his guilt; an innocent defendant obviously cannot. (And in practice he won't be compensated for an unlawful search; but such compensation would be independent of the exclusionary rule anyway.) The exclusionary rule, the incredible delays in our judicial process, and the infinite complications that Professor Bishop and Justice Fleming only partially list, all were invented by the judiciary, who do not deserve Silberman's encomia—but who in turn gratefully praise his work. He deserves their gratitude; but not that of law-abiding citizens.

Silberman defends plea bargaining as if the issue were to abolish it. It is not. There is nothing wrong with the prosecution and defense anticipating the likely outcome and sparing us the actual trial. (Less sordid, more public, better supervised procedures would help, but let that go.) What is wrong is that the judiciary has so weakened the position of prosecutors that they must habitually agree to inappropriate punishment because they cannot hope to do better by trial. Silberman's views deserve to be quoted here:

"Most important of all, it is *not* true that the guilty escape punishment; when charges

*I have taken the last few quotations from Silberman's own summary of his book in the New York Times, November 14, 1978.

[1] In *Calandra* (1974) the Supreme Court declared the exclusionary rule not "a constitutional right." In 1976 the Court admitted that the rule was irrational, a point made forcefully many years ago by Benjamin Cardoza. (See Steven R. Schlesinger's thorough *Exclusionary Injustice*. New York, 1977.)

are dropped, it usually is because the victim refuses to press charges, or because the prosecutor lacks the evidence needed to sustain [*sic*: you've got to obtain a conviction before it can be sustained—I guess Silberman means "obtain"] a conviction."

Whatever leads Silberman to believe "it is not true that the guilty escape punishment" escapes me. If a victim "refuses to press charges" or a prosecutor "lacks the evidence," does that make the guilty innocent? Or does it cause them to "escape punishment"—whether they are guilty or not? Silberman prudently does not hazard a guess as to why victims "refuse to press charges" (do they fall in love with their robbers, assailants, or burglars?), or why prosecutors "lack the evidence." It might have something to do with the futility of pressing charges and the difficulty of collecting admissible evidence—both obstacles created by the judiciary. Perish the thought.

THE VICTIMS OF PROBATION

About probation, Silberman comments: "The fact that so many probationers ended up behind bars suggests that being sentenced to probation constitutes punishment, too." Really? Probation suspends punishment and permits the probationer to avoid it if he behaves. Since probation supervision is a bad joke, in practice probationers go to prison only when they are caught committing new crimes. That so many of them continue their criminal careers while on probation, and that some are caught and (mirabile dictu) prosecuted, shows not that "probation constitutes punishment, too," as Silberman says, but that the court was wrong in not punishing the offenders when they were convicted in the first place. Instead, the court gave them the opportunity, sedulously used by many, to commit additional crimes. Probation, in these cases, "constitutes punishment, too"—for society and for innocent victims, not for the criminals the courts exist to punish. They are imprisoned only as punishment for additional crimes, which probation gave them the opportunity to commit.

Even if one subtracts demographic factors, our crime rates remain remarkably and quite unnecessarily high. Our punishment rates are remarkably and unnecessarily low—which is one reason why our crime rates are as high as they are. Silberman has misinterpreted the data and concluded that it is not so. "There's none so blind as they that won't see," Swift said. He was right. Crime rates will remain unnecessarily high as long as readers can be persuaded to believe what Criminal Violence, Criminal Justice tells them.●

By Mr. BAUCUS (for himself, Mr. LONG, Mr. GOLDWATER, Mr. WILLIAMS, and Mr. LEAHY):

S. 752. A bill to amend the Internal Revenue Code of 1954 to provide for the awarding of reasonable court costs and certain fees to prevailing parties in civil tax actions, and for other purposes; to the Committee on Finance.

TAXPAYER PROTECTION AND REIMBURSEMENT ACT

● Mr. BAUCUS. Mr. President, the bill I am introducing today, the "Taxpayer Protection and Reimbursement Act," would permit Federal courts and the Tax Court to reimburse private parties who prevail in litigation against unreasonable Government positions in tax cases. This bill is a slightly modified version of S. 1444 that I introduced on June 27, 1979. Several improvements have been made as a result of hearings held last year by the Finance Subcommittee on Oversight of the Internal Revenue Service.

I am especially pleased to note that the distinguished Senators LONG, GOLDWATER, LEAHY, and WILLIAMS have joined me as cosponsors.

Mr. President, we are quite aware of, and certainly are concerned about, the deepening mood of dissatisfaction among the American people with our Government. Nowhere is this mood more apparent than in the way Americans view the tax system. We hear that taxes are too high, that the tax laws are too complicated, and that tax forms and reporting requirements are excessively burdensome.

We also hear IRS is too big, powerful and awesome for a taxpayer to stand up against and successfully vindicate his legal rights—even in those instances where a taxpayer is confronted with an unreasonable IRS position.

The Civil Rights Attorneys' Fees Awards Act of 1979 was to allow the attorneys' fees to be awarded to citizens who prevailed in tax cases. However, this act has had little success in tax litigation because the courts have interpreted the provision very narrowly.

The courts have agreed that fees can be awarded only when the taxpayer is the defendant. However, in most cases, the taxpayer is the plaintiff.

The courts have also agreed that the defendant taxpayer can only recover fees if he shows that the Government acted in bad faith—for purposes of harassment or vexatiously or frivolously. This is a burden few taxpayers can meet.

The Equal Access to Justice Act, which I supported and was passed last session, was the latest piece of legislation to deal with the reimbursement of attorneys' fees. The act allows an individual or small business that prevails to be awarded attorneys' fees in a civil action brought by or against the United States. The provision does not, however, address the particular problems related to Tax Court cases.

The reality facing the taxpayer today is—if they go to court with IRS they will, in most cases, have to pay the court costs and attorneys' fees. Often these expenses equal or exceed the actual amount of money in controversy. Faced with this harsh fact, many taxpayers swallow their legal rights and settle with IRS.

A 1974 Law Review article on awards of attorneys' fees confirms this problem:

> Current practice tends to alter prosecution of even clearly meritorious claims by litigants who could at best recover less than the often high expense of counsel . . . And what is true for plaintiffs also holds true for defendants: the cost of defending against an unjust small claim may easily exceed simply paying what is demanded. The result is distasteful, for it ranks legal rights by dollar value . . . (Court Awarded Attorneys' Fees and Equal Access to the Courts, 122 University of Pennsylvania Law Review, 636, 650).

It is not my desire to penalize IRS or impair the performance of its duties when it is acting reasonably and fairly. However, when it is clear that IRS is maintaining an unreasonable position, the availability of a judicial resolution of the problem should not depend on the size of a taxpayer's wallet. As Donald C. Lubick, former Treasury Assistant Secretary for Tax Policy, said during Senate testimony nearly 3 years ago:

> The voluntary assessment plan system must be viewed as fair and even-handed. Taxpayers without significant resources must not feel incapable of obtaining redress of their grievances against the Internal Revenue Service where the Service has acted unreasonably. (March 13, 1978 statement before the Senate Judiciary Subcommittee on Improvement in Judiciary Machinery).

Mr. President my bill is tailored to alleviate the financial burden for taxpayers who win in court against an unreasonable IRS position. It contains the following basic elements:

First. Federal courts and the Tax Court are given the discretion to reimburse prevailing parties, other than the United States, for reasonable litigation costs, including fees and expenses of attorneys, accountants and other experts, incurred in civil tax actions or proceedings in which the United States is a party.

Second. Reimbursement can be granted in a civil action or proceeding in which the United States is a party, which is brought for the determination, collection, or refund of any tax, interest or penalty, brought by or against the United States under the Internal Revenue Code, except those relating to certain declaratory judgments.

Third. Reimbursement of litigation costs, including fees and expenses of attorneys, accountants and other experts, is available to plaintiffs/petitioners and defendants who prevail against the United States.

Reimbursement could be applied to civil tax cases involving refund actions, deficiency proceedings, collection and enforcement suits, summons proceedings, and wrongful levy actions.

Moreover, permitting prevailing plaintiffs and defendants alike to receive such awards encourages meritorious suits to vindicate private harm and foster the public interest, and discourages the Government from instituting unreasonable suits.

Fourth. Federal courts and the Tax Court can reimburse taxpayers up to $20,000 for incurred court cost.

This ceiling would provide sufficient relief to taxpayers but prevent against overwhelming the courts with an excessive amount of additional litigation.

Fifth. A party can be reimbursed for their litigation expenses, if they satisfy two requirements—they must win the court case either with respect to the amount in controversy, or with respect to the issue or issues presented, and they must prove that the Government's position was unreasonable.

This "prevailing party" standard is both reasonable and equitable since, determining whether its two requirements are met, the court must focus not merely on the formal record before it, but also on the totality of the relevant circumstances surrounding the case.

Such circumstances would include the necessity for bringing the action, whether the party succeeds as to the central matter in dispute, and the con-

duct of the Government with regard to the particular taxpayer.

For example, a court should consider whether, even though IRS' desire to litigate a tax issue may very well be for the public benefit and its legal position may be reasonable, the position of IRS has nonetheless become unreasonable due to its application of the law to a particular taxpayer which wrongfully and unnecessarily forces that taxpayer into court.

Furthermore, the rule that a party can be sustained either by judicial determination or settlement of the parties encourage the parties to settle thereby lessening court congestion, yet prevents the Government from escaping liability for litigation expenses merely by conceding the case before final judgment.

Sixth. Defined, "litigation expenses" would include the fees and expenses of attorneys, accountants, and other experts.

Seventh. An order granting or denying the reimbursement would be incorporated in the court's decision in the case and would be subject to appeal.

Eighth. The reimbursement would be paid out of the losing agency's general funds. I am hopeful this would encourage Government agencies, such as IRS and the Justice Department, to be more cautious and reasonable in their dealings with taxpayers.

Ninth. The bill would apply to Tax Court cases begun after December 31, 1979, and before January 1, 1990. This sunset provision would give Congress and IRS the opportunity to evaluate the effect and success of the reimbursements.

To conclude, Mr. President, this legislation provides much needed improvements to the present law granting awards of reasonable litigation costs in Federal civil tax cases. It provides needed protection and assistance to those who become embroiled in court cases with IRS through no fault of their own, but does not penalize IRS for responsible performance of its duties.

Our tax system must be fair and reasonable—and must be perceived as such by all taxpayers. The Taxpayer Protection and Reimbursement Act would help restore taxpayers' confidence in the fairness of our tax system by placing them on a more equal footing with IRS. I urge speedy consideration by the Senate of this legislation.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 752

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Taxpayer Protection and Reimbursement Act".

SEC. 2. AWARDING OF COSTS AND CERTAIN FEES.

(a) IN GENERAL.—Subchapter B of chapter 76 of the Internal Revenue Code of 1954 (relating to proceedings by taxpayers and third parties) is amended by redesignating section 7430 as section 7431 and by inserting after section 7429 the following new section:

"SEC. 7430. AWARDING OF COURT COSTS AND CERTAIN FEES.

"(a) IN GENERAL.—In the case of any civil action or proceeding which is—

"(1) brought by or against the United States for the determination, collection, or refund of any tax, interest, or penalty under this title, and

"(2) brought in a court of the United States (including the Tax Court), the prevailing party may be awarded a judgment for reasonable court costs incurred in such action or proceeding.

"(b) LIMITATIONS.—

"(1) MAXIMUM DOLLAR AMOUNT.—The amount of reasonable court costs which may be awarded under subsection (a) with respect to any prevailing party in any civil action or proceeding shall not exceed $20,000.

"(2) ONLY COSTS ALLOCABLE TO THE UNITED STATES.—An award under subsection (a) shall be made only for reasonable court costs which are allocable to the United States and not to any other party to the action or proceeding.

"(c) DEFINITIONS.—For purposes of this section—

"(1) REASONABLE COURT COSTS.—

"(A) IN GENERAL.—The term 'reasonable court costs' includes the reasonable expenses of expert witnesses, the reasonable cost of any study, analysis, engineering report, test, or project which is found by the court to be necessary for the preparation of the party's case, and reasonable fees paid or incurred for the services of attorneys.

"(B) ATTORNEY'S FEES.—In the case of any proceeding in the Tax Court, fees for the services of an individual (whether or not an attorney) who is authorized to practice before the Tax Court shall be treated as fees for the services of an attorney.

"(2) PREVAILING PARTY.—

"(A) IN GENERAL.—The term 'prevailing party' means any party to an action or proceeding described in subsection (a) (other than the United States or any creditor of the taxpayer involved) which—

"(i) establishes that the position of the United States in the civil action or proceeding was unreasonable, and

"(ii) (I) has substantially prevailed with respect to the amount in controversy, or

"(II) has substantially prevailed with respect to the most significant issue or set of issues presented.

"(B) DETERMINATION AS TO PREVAILING PARTY.—Any determination under subparagraph (A) as to whether a party is a prevailing party shall be made—

"(i) by the court, or

"(ii) by agreement of the parties.

"(d) EXCLUSION OF CERTAIN CIVIL ACTIONS OR PROCEEDINGS.—No award for reasonable court costs may be made under subsection (a) with respect to any civil action or proceeding brought under—

"(1) section 7428 (relating to the declaratory judgments with respect to status and classification of organizations under section 501(c)(3), etc.), unless such action or proceeding involves the revocation of the tax-exempt status of an organization described in section 501(c)(3),

"(2) section 7476 (relating to declaratory judgments with respect to qualification of certain retirement plans),

"(3) section 7477 (relating to declaratory judgments with respect to transfers of property from the United States), or

"(4) section 7478 (relating to declaratory judgments with respect to status of certain governmental obligations).

"(e) MULTIPLE ACTIONS.—For purposes of this section, in the case of—

"(1) multiple actions which could have been joined or consolidated, or

"(2) a case or cases involving a return or returns of the same taxpayer (including joint returns of married individuals) which could have been joined in a single proceeding in the same court,

such actions or cases shall be treated as one civil action or proceeding regardless of whether such joinder or consolidation actually occurs, unless the court in which such action or proceeding is brought determines, in its discretion, that it would be inappropriate to treat such actions or cases as joined or consolidated for purposes of this section.

"(f) RIGHT OF APPPEAL.—An order granting or denying an award for reasonable court costs under subsection (a), in whole or in part, shall be incorporated as a part of the decision or judgment in the case and shall be subject to appeal in the same manner and to the same extent as the decision or judgment.

"(g) SOURCE OF PAYMENT.—Payment of any award for reasonable court costs under subsection (a) shall be made by the agency over which the party prevails from any funds made available to the agency, by appropriation or otherwise, for such purpose.".

(b) APPLICATION WITH TITLE 28.—Section 2412 of title 28, United States Code, is amended by adding at the end thereof the following new subsection:

"(e) The provisions of this section shall not apply to any costs, fees, and other expenses in connection with any action or proceeding to which section 7430 of the Internal Revenue Code of 1954 applies.".

(c) CONFORMING AMENDMENTS.—

(1) The table of sections for subchapter B of chapter 76 of such Code is amended by striking out the item relating to section 7430 and inserting the following new items:

"SEC. 7430. Awarding of court costs and certain fees.

"SEC. 7431. Cross references.".

(2) Section 722 of the Revised Statutes (42 U.S.C. 1988) is amended by striking out immediately after "Public Law 92-318" the clause "or in any civil action or proceeding, by or on behalf of the United States of America, to enforce, or charging a violation of, the United States Internal Revenue Code.".

SEC. 3. EFFECTIVE DATE.

The amendments made by this title shall apply to civil actions or proceedings filed after December 31, 1980, and before January 1, 1991.●

By Mr. CRANSTON (for himself and Mr. HAYAKAWA):

S. 753. A bill to clarify the intent of Congress with respect to the exemption of the economic interests of State and local governments from the crude oil windfall profits tax; to the Committee on Finance.

EXEMPTION OF ECONOMIC INTERESTS OF STATE AND LOCAL GOVERNMENTS FROM CRUDE OIL WINDFALL PROFITS ACT

● Mr. CRANSTON. Mr. President, last Thursday the distinguished Senator from Wyoming (Mr. WALLOP) introduced, on behalf of himself, myself, my colleague from California (Mr. HAYAKAWA), and the two Senators from New Mexico (Mr. DOMINICI and Mr. SCHMITT) S. 700 to redress unfair or inadvertent financial burdens imposed on State, local, and Indian tribal governments by the windfall profits tax.

I am delighted to be a coauthor of that legislation, and I support with enthusiasm the early adoption of each of the three sections of that bill.

These, respectively, exempt from the windfall profits tax the full State share of the royalty from Federal leases within States; permit deductibility of local ad valorem taxes from the WPT to the same extent as State severance taxes are now deductible and provide equal treatment for severance taxes imposed by Indian tribal governments with severance taxes imposed by State governments, eliminating the discrimination against tribal governments currently in the law; and correct an ambiguity created by the unfortunate use of the term "economic interest" to describe the exempt governmental interest under the WPT, which, when applied to net profit agreements between certain State or local governments and windfall tax-paying oil companies, denied these governments much of the benefits of their intended exemption from the WPT.

Adoption of each of these provisions will substantially improve the WPT, and benefit governmental entities currently subject to unfair or unintended fiscal losses under the windfall tax as originally enacted.

Two of the provisions will additionally benefit tax-paying oil companies by relieving them of the undue burden of double taxation, which the current WPT imposes unevenly.

The Senator from Wyoming, in introducing S. 700, correctly pointed out that State, local, and tribal governments do not reap windfall profits. Rather, they use the resources they have to provide necessary public services to the populations they serve.

At a time when the Federal administration seeks to eliminate Federal financial support for many services provided at State, local, and tribal levels, it is particularly important that the ability of the State, local, and tribal governments to meet the needs of their citizens not be impaired by misuse of the Federal taxing power against these entities.

While I therefore support each of the provisions of S. 700, I want to focus the balance of my remarks on the third section, which is an attempt to rectify a problem particularly important in California.

There a particular construction of the language of the WPT has resulted in a substantial loss of revenues for both the State of California and the city of Long Beach, despite the fact that Congress in enacting the WPT clearly intended that both the State and local governmental interests in oil be exempt from the Federal windfall tax.

I want to express my deep appreciation to my good friend from Wyoming (Mr. WALLOP) for his willingness to include this provision in the bill.

Section 3 of S. 700 is a reworking of legislation I introduced toward the end of the last session of Congress but was unable to get considered in the parliamentary situation that existed at the end of the 96th Congress.

The apparent ambiguity which section 3 would correct arises from the use of the term "economic interest" in crude oil to describe the governmental interest qualifying for exemption from the WPT.

The phrase "economic interest," used for depletion purposes by tax-paying oil companies under well-established Federal income tax law, has acquired a meaning far broader than the company's ownership interest or its interest under a net profits agreement. For example, the long-term contract currently in force at Long Beach between several oil companies and the nontaxable city and State government entities which own the oilfield provides that the government entities retain 95 percent of the net profits from its production.

However, oil companies with a mere 5 percent net profits interest or less are deemed to have an income tax-depletable "economic interest" of 30 percent or more, and, reciprocally, the "economic interest" of the Government agencies, despite 100 percent ownership and 95 percent or more share of both net profits and expenses, may for income tax purposes be 70 percent or less. If the oil company calculated its tax obligation under the windfall tax using the same meaning for "economic interest" as it would for income tax purposes, it will pay a higher windfall profits tax to the Federal Government—based on a 30-percent-plus economic interest, rather than a 5-percent economic interest. The company then deducts the amount paid in windfall tax from the gross profits before distributing to the governmental entities net profits in accordance with the formula in its agreement with the State and local entities.

The effect of this calculation is to pass along to the State and local government 95 percent or more of the additional increment of windfall tax—resulting from using the broader meaning of "economic interest"—thereby depriving these entities—intended to be exempt from the windfall tax—of much of the benefits of this exemption. Section 3 of S. 700 defines "economic interest" for the purposes of the windfall tax in a way different from the definition of this term under income tax law, but consistent with net profits share, so that public tax-exempt entities operating oilfields under net profits agreements will receive their full share of net profits, despite application of the windfall profits tax. In the form included in S. 700, section 3 will apply only to a net profits agreement between a tax-exempt entity and a windfall tax-paying entity.

But, Mr. President, the Treasury Department is concerned that the ambiguity surrounding the term "economic interest" has created a situation under net profits arrangements in which the windfall tax is not imposed uniformly on oil companies benefiting from crude oil price decontrol. This unequal imposition of the tax permits certain private net profits operations to escape the payment of their full share of windfall taxes.

This ambiguity has also created a new loophole through which a few oil companies may evade WPT liability.

This eventuality arises only in the few cases where there is a net profits agreement between two or more taxpaying oil companies, taxable at varying rates under the windfall profits tax: For example, a major oil company and an independent producer.

By increasing the economic interest of the lower rate taxpayer, and decreasing the economic interest of the higher rate taxpayer, the companies can reduce their total windfall tax obligation.

To guard against this eventuality the Treasury Department has suggested language slightly different from the language of section 3 of S. 700.

So that this language will be before the Energy Subcommittee of the Senate Finance Committee, to which S. 700 has been referred, when it considers S. 700, I, along with my distinguished colleague from California (Mr. HAYAKAWA) am now introducing the Treasury Department-approved version of a solution to this problem of ambiguity as a separate bill.

While the Treasury Department has not, to my knowledge, yet indicated support for the first two sections of S. 700, the Department has indicated its recognition of the problem created by this ambiguous use of the term "economic interest" in the original WPT, acknowledged that this ambiguity denies both the State and the city of Long Beach a substantial portion of the exemption intended by Congress in adopting the tax, adoption of the clarifying amendment we are today introducing over any possible administrative solution to this problem.

While the first two sections of S. 700 represent substantive changes improving the WPT, the third section is merely a technical correction clarifying language to prevent congressional intent from being frustrated.

While I fully support adoption of all sections of S. 700, I believe that section 3, in one of its alternative versions, is vital to carrying out the already expressed will of Congress to exempt fully State and local government and should be adopted promptly with or without accompaniment.

Mr. President, I ask uananimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 753

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 1. ASSIGNMENT OF COST RECOVERY OIL IN ACCORDANCE WITH RESPECTIVE NET PROFITS INTERESTS FOR PURPOSES OF WINDFALL PROFIT TAX.

(a) GENERAL RULE.—

(1) DEFINITION OF PRODUCER.—Paragraph (1) of section 4996(a) of the Internal Revenue Code of 1954 (defining producer) is amended by redesignating subparagraph (B) as subparagraph (C) and by inserting after subparagraph (A) the following new subparagraph:

"(B) NET PROFITS INTERESTS.—Except to the extent otherwise provided by regulations, in the case of any property, all cost recovery oil covered by a net profits agreement (within the meaning of subsection (a)) shall be treated as produced by the parties to such agreement in proportion to their respective shares (determined after reduction for such cost recovery oil) of the production of the crude oil covered by such agreement."

(2) CLERICAL AMENDMENT.—Subparagraph (A) of such paragraph (1) is amended by striking out "subparagraph (B)" and inserting in lieu thereof "subparagraphs (B) and (C)".

(b) NET PROFITS AGREEMENTS; COST RECOVERY OIL.—Section 4996 of such Code (relating to other definitions and special rules) is amended by redesignating subsection (h) as subsection (i) and by inserting after subsection (g) the following new subsection:

"(h) TERMS USED IN SUBSECTION (a)(1)(B).—For purposes of subsection (a)(1)(B) and this subsection—

"(1) NET PROFITS AGREEMENT.—The term 'net profits agreement' means an agreement providing for sharing part or all of the production of crude oil from a property where—

"(A) 1 or more persons are to be reimbursed for qualified costs by the allocation of cost recovery oil, and

"(B) 1 or more persons are to receive a share of any production of crude oil from the property remaining after reduction for the cost recovery oil referred to in paragraph (A).

"(2) COST RECOVERY OIL DEFINED.—The term 'cost recovery oil' means crude oil produced from the property which is allocated to a person as reimbursement for qualified costs paid or incurred with respect to the property.

"(3) QUALIFIED COSTS.—The term 'qualified costs' means any amount paid or incurred for exploring for, or developing or producing, 1 or more oil or gas wells on the property.

"(4) SCOPE OF AGREEMENT.—A net profits agreement shall be treated as covering only shares of production of crude oil held by persons who hold economic interests in the property (determined without regard to subsection (a)(1)(B))."

(c) NET INCOME LIMITATION.—Subsection (b) of section 4988 of such Code (relating to net income limitation on windfall profit) is amended by adding at the end thereof the following new paragraph:

"(6) COST RECOVERY OIL COVERED BY NET PROFITS AGREEMENT.—For purposes of paragraph (2), if any person is treated under section 4996(a)(1)(B) as the producer of any portion of the cost recovery oil covered by a net profits agreement (within the meaning of section 4996(h))—

"(A) such person (and only such person) shall include in his gross income from the property the gross income from such portion, and

"(B) the qualified costs allocable to such portion shall be treated as paid or incurred by such person (and ony by such person)."

(d) EFFECTIVE DATE.—

(1) IN GENERAL.—The amendments made by this section shall apply to oil removed after February 29, 1980.

(2) NO INTEREST FOR PAST PERIODS.—No interest shall be paid or credited with respect to the credit or refund of any overpayment of a tax imposed by this title, and no interest shall be assessed or collected with respect to any underpayment of the tax imposed by this title, for any period before the date which is 60 days after the date of the enactment of this Act, to the extent that such overpayment or underpayment is attributable to the amendments made by this section.●

By Mr. HELMS:

S.J. Res. 49. Joint resolution authorizing and requesting the President to proclaim July 4 of each year as "Independence Day"; to the Committee on the Judiciary.

INDEPENDENCE DAY

● Mr. HELMS. Mr. President, I find it both interesting and ironic that July 4, perhaps the most significant anniversary date in our Nation's history, has never been proclaimed on a continuing basis as Independence Day.

Numerous other anniversary dates, many of which are of far less significance, have been appropriately designated by proclamation by the President at the request of Congress.

In light of this, I am today introducing, for appropriate reference, a joint resolution authorizing and requesting the President of the United States to issue a proclamation designating July 4 of each year as Independence Day, and calling upon the people of the United States to hold appropriate ceremonies observing the day.

Mr. President, I have done a good bit of research on this matter just as a matter of personal interest, and this research has disclosed that a somewhat similar proclamation was issued in 1950 by President Harry S. Truman, again in 1952 by President Truman, and in 1953 by President Dwight D. Eisenhower. However, each of those proclamations was limited to the particular year in question. The joint resolution that I am today introducing calls upon the President to issue a proclamation of a continuing nature which refers to July 4 of each succeeding year.

This resolution was suggested by the North Carolina District Exchange Clubs, and I am very happy to be associated with its introduction. The National Exchange Club, together with its many affiliates across the Nation, have done an outstanding job preserving and stimulating appreciation of our national heritage.

As many Senators will recall, on September 17, 1947, acting upon the direction of the Congress, President Truman dispatched the Freedom Train containing the historic documents which form much of the foundation of our American heritage to cities and towns all across the country. Reacting to the continuing interest shown by the millions of citizens who visited the train, the National Exchange Club established the Freedom Shrine, comprised of 28 American documents. Among others, it includes a copy of the Declaration of Independence. These shrines are to be found throughout the Nation, in schools, courthouses, and many other public places. In all, more than 5,000 shrines have been presented.

The Freedom Shrine is an exclusive project of the exchange clubs and a very important American citizenship program. It was conceived to be, and it is, a living symbol of the rich heritage of Americans.

To the Tar Heels of North Carolina, the history of our State during the Revolutionary period is very important. North Carolina, for example, was the first colony to adopt a resolution to break its ties with Great Britain—the Halifax Resolves of April 12, 1776. Upon the adoption of that resolution to declare independence from Great Britain, messengers were dispatched to Philadelphia, and the Declaration of Independence of the Thirteen Colonies was proclaimed, of course, on July 4 of that year. Of course, the Mecklenburg Declaration of May 20, 1775, is also well known. The dedicated patriots of what is now the city of Charlotte, N.C., were pressing fervently for freedom. Both of these historic dates appear on the flag of the State of North Carolina as a perpetual reminder of the strong sentiment for freedom and independence in North Carolina.

Indeed, the events in North Carolina leading up to April 12 and July 4, 1776, are demonstrable of the spirit of freedom that our citizens hold so dear. The First Provincial Congress in America was held in New Bern, N.C., on August 25 through 27, 1774. It was called in open defiance of the British Parliament and the Royal Governor, Josiah Martin. Historians rank it as an example "of intercolonial cooperation, of enormous significance"—Lefler and Powell, "Colonial North Carolina—A History," page 262.

At the Edenton Tea Party on October 25, 1774, 51 ladies from Edenton, N.C., and surrounding counties signed an agreement to do all in their power to carry out the wishes of the First Provincial Congress and to support the American cause for independence. It represented the "earliest known instance of political activity on the part of women in the American Colonies"—Lefler and Powell, "Colonial North Carolina—A History," page 259.

The Battle of Moore's Creek Bridge, near Wilmington, N.C., on February 27, 1776, was the earliest victory won by the Americans in the South—

Unquestionably, the victory at Moore's Creek Bridge saved North Carolina from conquest, and it probably postponed the defeat of South Carolina and Georgia for three years. (Lefler and Powell, *Colonial North Carolina—A History*, pages 278, 280).

And July 4 itself has been a very special day in North Carolina. Indeed, the first official observance of July 4 as Independence Day was in the town of Salem, now Winston-Salem, N.C. It was pursuant to a resolution of the general assembly of the State and a resulting proclamation of the Governor. The text of that resolution, which was adopted on May 16, 1783, is as follows:

Resolved, that the fourth Day of July be and is hereby appointed a day of General Thanksgiving and praise to Almighty God for the gracious Interposition of Divine Providence in behalf of this nation; that it hath pleased Him to deliver us from the calamities of War; and crown our wishes with the blessings of Peace; and that his Excellency the Governor notify the same by Proclamation. (The State Records of North Carolina, Collected and Edited by the Honorable Walter Clark, Chief Justice of North Carolina, Vol. XIX, page 358 (1901)).

The resulting proclamation of the Governor of North Carolina read as follows:

[State of North Carolina]

A PROCLAMATION

(By his Excellency Alexander Martin, Esquire, Captain General and Commander in Chief of the State aforesaid)

Whereas the honorable the General Assembly have by a Resolution of both Houses recommended to me to appoint Friday the Fourth of July next being the anniversary of the declaration of the American Independence, as a Day of Solemn Thanksgiving to Almighty God, for the many most gracious interpositions of his providence manifested

in a great and signal manner in behalf of these United States, during their conflict with one of the first powers of Europe:

For rescuing them in the Day of Distress from Tyranny and oppression, and supporting them with the aid of great and powerful allies;

For conducting them gloriously and triumphantly through a just and necessary War, and putting an end to the calamities thereof by the restoration of Peace, after humbling the pride of our enemies and compelling them to acnowledge the Sovereignty and Independence of the American Empire, and relinquish all right and claim to the same.

For raising up a distressed and Injured People to rank among independent Nations and the soverign powers of the world. And for all other Divine favors bestowed on the Inhabitants of the United States and this in particular.

In conformity to the pious intentions of the Legislature I have thought proper to issue this my Proclamation directing that the said 4th Day of July next be observed as above, hereby strictly commanding and enjoining all Good Citizens of this State to set apart the said Day from bodily labour, and employ the same in devout and religious exercises. And I do require all Ministers of the Gospel of every Denomination to convene their congregations at the same time, and deliver them Discourses suitable to the important Occasion, recommending in general the Practice of Virtue and true Religion, as the great foundation of private Blessings as well as National happiness and prosperity.

Given under my Hand and the great Seal of the State at Danbury the 18th Day of June in the Year 1783 and seventh Year of the Independence of the said State.

ALEX: MARTIN.

By his Excellencys Commande: God save the State.

P. HENDERSON, *Pro. Sec.*

"Records of the Moravians in North Carolina." Edited by Adelaid L. Fries, M.A., Archivist of The Moravian Church in America, Southern Province, Vol. IV, page 1919 (1930).)

As one might expect, historical records of that Fourth of July 1783, are scant. Indeed, there is no record of an observance of that Independence Day anywhere in the State except at the town of Salem. Surely other observances probably did occur without a chronicler present to preserve the day for posterity, and with equal certainty we may assume that due to the inadequate communications of the period, many of the citizens of the State never learned of the resolution of the General Assembly or the Governor's proclamation.

But the Moravians at Salem did hear of it, and with characteristic devotion and piety, they observed Fourth of July 1783, as a Day of Thanksgiving. An account of the events of the day written in a diary kept by a member of the congregation survives. It is as follows:

July 4. According to the order of the government of this State we celebrated a day of thanksgiving for the restoration of peace. The congregation was awakened by the trombonists. At the beginning of the preaching service the Te Deum was sung, with trombone accompaniment. The Watch-Word for January 20th, the day on which the Peace Preliminaries were signed, was: The God of Jacob is our refuge, taken from the 46th Psalm, which gave opportunity to use this Psalm as the text for the sermon, which was preached by Br. Benzien. The service closed with the singing of: Glory to God in the highest. At two o'clock there was a happy lovefeast, during which a Psalm of Joy was sung with thankful hearts. In the evening at eight o'clock the congregation again assembled in the Saal, and the choir sang: Praise be to Thee, Who sittest above the cherubim. Then the congregation formed a circle in front of the Gemein Haus, and from there passed in procession through the main street of the town, with music and the antiphonal song of two choirs. The street was illuminated. Returning to the Gemein Haus the congregation again formed a circle, and with the blessing of the Lord was dismissed to rest. Hearts were filled with the peace of God, evident during the entire day and especially during the procession, and all around there was silence, even the wind being still. (Records of the Moravians in North Carolina, Edited by Adelaid L. Fries, M.A., Archivist Of The Moravian Church In America, Southern Province, page 1841 (Vol. IV 1930).)

In the words of Patrick Henry—

No free government, or the blessings of liberty, can be preserved to any people without a frequent recurrence to fundamental principles.

I applaud the action of the National Exchange Club and the North Carolina District Exchange Clubs in establishing numerous freedom shrines which serve as a reminder of the fundamental principles of government and liberty that inspired our forefathers to unite in the struggle that gave birth to the United States of America. I urge my colleagues in the Senate to join with me in supporting the resolution that I am today introducing to give added meaning and significance to Independence Day.

Mr. President, I ask unanimous consent that the joint resolution be printed in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 49

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation designating July 4 of each year as "Independence Day" and calling upon Government officials to display the United States flag on all Government buildings and the people of the United States to hold appropriate ceremonies on that day.●

By Mr. DECONCINI (for himself and Mr. DOLE.):

S.J. Res. 50. Joint resolution designating July 17, 1981 as "National P.O.W - M.I.A. Recognition Day."; to the Committee on the Judiciary.

NATIONAL PRISONERS OF WAR—MISSING IN ACTION RECOGNITION DAY

Mr. DECONCINI. Mr. President, I am introducing today a resolution to designate July 17, 1981 as "National Prisoners of War—Missing in Action Recognition Day."

The entire Nation shared a sense of joy and relief with the safe return of our hostages from Iran. The aftermath of the euphoria surrounding that event is a particularly opportune moment to reflect upon the tremondous sacrifices endured by our former POW's, their families and the families of those who are still listed as missing in action. Despite physical torture, inhumane living conditions and deprivations of every kind, our POW's maintained total allegiance to their Nation. Despite the severe psychological readjustment suffered by many, their families remained loyal. Despite the agony of not knowing the fate of loved ones, relatives of our MIA's have never lost faith. These sacrifices must not be forgotten.

The horrors of war will never be erased from the minds of the combatants. The additional traumas suffered by POW's, who saw their comrades die as a result of torture, starvation, exposure, disease, and the lack of medical attention, have left emotional scars that can never be truly healed. But this Nation can express its debt of gratitude for their selfless service and it is fitting that we do so.

The numbers of living prisoners of war are not insignificant. The Veterans' Administration indicates that there were approximately 94,176 former POW's still alive on January 1, 1981. These individuals have suffered emotional and long-term health problems as a result of their internment, yet many have found it difficult to prove service connection either because they were not interned for the requisite 6-month period or because there was an absence of adequate medical information available at the time of their repatriation. I am pleased that the Veterans' Affairs Committee will be considering legislation to rectify some of the problems being encountered by our POW's and I urge the Members of this body to give this legislation the serious attention it deserves. In the interim, I call upon my colleagues to support the resolution I am introducing today to designate July 17, 1981 as "National POW-MIA Recognition Day."

We owe an enormous debt of gratitude to all our veterans, but the extreme sacrifices endured by our POW's deserve special recognition. Likewise, let us honor the relatives and families of those whose wartime fate remains unresolved. These are indeed the bravest of the brave.

By Mr. DOLE:

S.J. Res. 51. Joint resolution authorizing and requesting the President to issue a proclamation observing the 35th anniversary of CARE (the Cooperative for American Relief Everywhere, Inc.), and designating May 10 to 16, 1981, as "CARE Week"; to the Committee on the Judiciary.

CARE WEEK

● Mr. DOLE. Mr. President, the Senator from Kansas is pleased to introduce this joint resolution today in the Senate which designates the week of May 11 as "CARE Week" and recognizes 35 years of outstanding service by the Cooperative for American Relief Everywhere, Inc.—better known by most of us as CARE.

CARE was conceived in 1945 by 22 major American organizations made up of cooperatives, relief agencies, religious organizations, and labor, in order to aid the needs of millions of men, women, and children left destitute in Europe after World War II. CARE was a cooperative venture, conceived by cooperatives in

this Nation and today, CARE carries that cooperative spirit through all nations in which they help the sick and hungry.

Since 1945, CARE has grown with assistance from the passage of Public Law 480, providing major supplies of food from the United States and in 1962 CARE branched out into the medical services with the beginning of medico.

Today CARE is more than just feeding hungry people—CARE also provides instruments for self-help and development to farmers and teachers in their communities and villages, education of modern medical techniques and child care, and the implementation of long-range 5-year plans in agriculture in providing loan funds and food-for-work projects.

Partnership programs are now carried out by CARE in nutrition, development, and health care. And, throughout all program and relief efforts, the aim of CARE to help the impoverished help themselves is clearly seen since these efforts undergird the assistance, rather than completely supporting a project.

CARE is the second largest nonprofit, nonpolitical, nonsectarian, nongovernmental agency, and with over 46,000,000 contributions received over the years CARE has continued to grow. The organization of CARE's staff and operations in utilizing contributions is truly outstanding—the CARE organization delivers in excess of $5 worth of aid for each dollar contributed.

Whether feeding hungry children in a Third World nation, or setting up temporary homes after natural disasters, as they did in Italy last year, the Cooperative for American Relief Everywhere, Inc. (CARE) I believe can be held as symbol of pride for this Nation.

Mr. President, I would urge my colleagues to join me in cosponsoring this resolution and to pass it quickly to the President for his signature so the week of May 11 can be designated as "CARE Week" for 1981.●

ADDITIONAL COSPONSORS

S. 38

At the request of Mr. BURDICK, the the Senator from Florida (Mr. CHILES) was added as a cosponsor of S. 38, a bill to amend title XVIII of the Social Security Act to authorize payment under the medicare program for certain services performed by chiropractors.

S. 155

At the request of Mr. SCHMITT, the Senator from Oklahoma (Mr. NICKLES) was added as a cosponsor of S. 155, a bill to amend the Internal Revenue Code of 1954 to make additional interest from savings eligible for exclusion.

S. 160

At the request of Mr. SCHMITT, the Senator from South Dakota (Mr. ABDNOR) was added as a cosponsor of S. 160, a bill to authorize the Secretary of Agriculture to convey certain National Forest System lands, under specified conditions, to direct the Secretary of Interior to certify survey monuments within 180 days, and for other purposes.

S. 265

At the request of Mr. PERCY, the Senator from Wyoming (Mr. SIMPSON) was added as a cosponsor of S. 265, a bill to amend the Congressional Budget Act of 1974 to establish procedures for setting targets and ceilings, in the congressional budget process, for loans and loan guarantees under Federal credit programs.

S. 267

At the request of Mr. DECONCINI, the Senator from Nevada (Mr. LAXALT) and the Senator from North Carolina (Mr. HELMS) were added as cosponsors of S. 267, a bill to amend title 28, United States Code, to provide that the Federal tort claims provisions of that title are the exclusive remedy in medical malpractice actions and proceedings resulting from federally authorized National Guard training activities, and for other purposes.

S. 432

At the request of Mr. MATHIAS, the Senator from Mississippi (Mr. COCHRAN) was added as a cosponsor of S. 432, a bill to establish a Commission on the International Application of Antitrust Laws.

S. 464

At the request of Mr. DURENBERGER, the Senator from Montana (Mr. BAUCUS) was added as a cosponsor of S. 464, a bill to amend the Internal Revenue Code of 1954 to adjust provisions governing private foundations.

S. 473

At the request of Mr. DURENBERGER, the Senator from California (Mr. CRANSTON) was added as a cosponsor of S. 473, a bill to amend the Internal Revenue Code of 1954 to provide that the amount of the charitable deduction allowable for expenses incurred in the operation of a motor vehicle will be determined in the same manner Government employees determine reimbursement for the use of their vehicles on Government business.

S. 492

At the request of Mr. D'AMATO, the Senator from Mississippi (Mr. COCHRAN), the Senator from Alabama (Mr. HEFLIN), and the Senator from South Carolina (Mr. THURMOND) were added as cosponsors of S. 492, a bill to increase the income tax exclusion of dividends and interest received by individuals.

S. 517

At the request of Mr. BENTSEN, the Senator from Alabama (Mr. HEFLIN) was added as a cosponsor of S. 517, a bill to amend the Clean Air Act to provide for further assessment of the validity of the theory concerning depletion of ozone in the stratosphere by halocarbon compounds before proceeding with any further regulation of such compounds, to provide for periodic review of the status of the theory of ozone depletion, and for other purposes.

S. 570

At the request of Mr. MATHIAS, the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of S. 570, a bill to amend title VIII of the Act commonly called the Civil Rights Act of 1968 to revise the procedures for the enforcement of fair housing, and for other purposes.

S. 613

At the request of Mr. THURMOND, the Senator from Arizona (Mr. GOLDWATER) was added as a cosponsor of S. 613, a bill to amend section 1951 of the United States Code, and for other purposes.

S. 649

At the request of Mr. BAUCUS, the Senator from Pennsylvania (Mr. HEINZ) was added as a cosponsor of S. 649, a bill to amend the Internal Revenue Code of 1954 to provide that the executor may elect, for estate tax purposes, to value certain items at an amount equal to the adjusted basis of the decedent in such items and to remove certain limitations on charitable contributions of certain items.

S. 660

At the request of Mr. BOREN, the Senator from Idaho (Mr. MCCLURE) was added as a cosponsor of S. 660; a bill to amend title IV of the Social Security Act to provide for a demonstration program of block grants to States in lieu of Federal matching or aid to families with dependent children.

S. 700

At the request of Mr. WALLOP, the Senator from Wyoming (Mr. SIMPSON) was added as a cosponsor of S. 700, a bill to amend chapter 45 of the Internal Revenue Code of 1954 with respect to the exemption of the State share of Federal royalties from the Crude Oil Windfall Profit Tax and to insure the deductibility of certain severance taxes.

SENATE JOINT RESOLUTION 40

At the request of Mr. RIEGLE, the Senator from Minnesota (Mr. BOSCHWITZ), the Senator from New Hampshire (Mr. HUMPHREY), the Senator from Alaska (Mr. MURKOWSKI), and the Senator from South Carolina (Mr. THURMOND) were added as cosponsors of Senate Joint Resolution 40, a joint resolution to designate April 26, 1981, as "National Recognition Day for Veterans of the Vietnam Era."

SENATE CONCURRENT RESOLUTION 4

At the request of Mr. DOLE, the Senator from Illinois (Mr. PERCY), the Senator from New Jersey (Mr. WILLIAMS), the Senator from California (Mr. CRANSTON), the Senator from Mississippi (Mr. COCHRAN), the Senator from South Carolina (Mr. HOLLINGS), and the Senator from North Dakota (Mr. BURDICK) were added as cosponsors of Senate Concurrent Resolution 4, a concurrent resolution expressing the sense of the Congress with respect to implementing the objectives of the International Year of Disabled Persons (1981).

AMENDMENT NO. 9

At the request of Mr. ZORINSKY, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of amendment No. 9 proposed to S. 509, a bill to amend section 201 of the Agricultural Act of 1949, as amended, to delete the requirement that the support price of milk be adjusted semiannually.

SENATE CONCURRENT RESOLUTION 15—CONCURRENT RESOLUTION RELATING TO EXTENDING THE GRAIN EMBARGO ON EXPORTS TO THE SOVIET UNION

Mr. MATTINGLY (for himself, Mr. JEPSEN, Mr. BOREN, Mr. BUMPERS, Mr. ANDREWS, Mr. HATFIELD, Mr. PRESSLER, Mr. BOSCHWITZ, Mr. GRASSLEY, Mr. DOMENICI, Mr. ABDNOR, Mr. GOLDWATER, Mr. WEICKER, Mr. QUAYLE, Mr. MURKOWSKI, Mr. ARMSTRONG, Mr. MCCLURE, Mr. KASTEN, Mr. ROTH, Mr. RUDMAN, Mr. SIMPSON, Mr. WARNER, Mr. PRYOR, Mr. SASSER, Mr. DENTON, Mr. DIXON, Mr. SYMMS, Mr. SPECTER, Mr. BURDICK, Mr. ZORINSKY, Mr. HAYAKAWA, Mr. HATCH, Mr. HART, Mr. DURENBERGER, Mr. GARN, Mr. HELMS, Mr. EAST, Mr. NICKLES, Mr. THURMOND, Mrs. HAWKINS, Mr. BAUCUS, Mr. D'AMATO, Mr. MELCHER, Mr. EXON, Mr. DECONCINI, Mr. PERCY, Mr. TOWER, Mr. INOUYE, Mr. LAXALT, Mr. DOLE, and Mr. SCHMITT) submitted the following concurrent resolution; which was referred to the Committee on Banking, Housing, and Urban Affairs:

S. CON. RES. 15

Resolved, That it is the sense of the Senate that during any period during which there is in effect an embargo on the export of grains to the Union of Soviet Socialist Republics (regardless of the date on which the embargo began) there shall also be an embargo on the export of any other goods or services to such country.

AMENDMENTS SUBMITTED FOR PRINTING

PUBLIC BUILDINGS POLICY, AMENDMENT NO. 10

(Ordered to be printed and referred to the Committee on Environment and Public Works.)

Mr. STAFFORD submitted an amendment intended to be proposed by him to the bill (S. 533) to establish public buildings policies for the Federal Government, to establish the Public Buildings Service in the General Services Administration, and for other purposes.

PUBLIC BUILDINGS ACT OF 1981, AMENDMENT

Mr. STAFFORD. Mr. President, today I am submitting an amendment to S. 533, the Public Buildings Act of 1981. This amendment would replace section 307 of the bill as introduced, as well as make conforming changes in other sections.

The purpose of the amendment, Mr. President, is to take into consideration some of the hearing comments we received on this section which deals with the requirement to construct and design public buildings so that they are fully accessible to handicapped persons. Because of the interest in that section and the amendment which I am now introducing, the Committee on Environment and Public Works would like to receive further public comments on the amendment within the next week so that they can be considered as part of the hearing record on the bill.

Mr. President, I ask unanimous consent that the text of the amendment be printed at this point in the RECORD.

There being no objection, the amendment ordered to be printed in the RECORD, as follows:

On page 6, strike out all on lines 9 and 10 and insert in lieu thereof the following new clause:

(G) the extent to which it is fully accessible to physically handicapped persons in accordance with the Architectural Barriers Act of 1968, as amended,

On page 22, beginning on line 16, strike out all through page 26, line 17, and insert in lieu thereof the following:

SEC. 307. (a) Nothing in this Act (except for the provisions of this section) shall affect the applicability of the provisions of the Act of August 12, 1968, as amended, commonly known and hereinater referred to as the Architectural Barriers Act of 1968, as amended, to any building or facility.

(b) The Architectural Barriers Act of 1968 is amended—

(1) in sections 2, 3, 4, and 4a, by striking out "physically handicapped persons will have ready access to, and use of, such buildings" and inserting in lieu thereof "such buildings are fully accessible to physically handicapped persons";

(2) in section 5, by inserting before the period a comma and "and any contract for all or any part of the design, construction, or alteration involved shall so provide"; and

(3) in section 6—

(A) by inserting "(a)" before "The";

(B) by inserting "(hereinafter in this section referred to as the 'standard-prescribing agency head concerned')" after "section 4a of this Act",;

(C) by striking out "the Administrator or Secretary, as the case may be" and inserting in lieu thereof "the standard-prescribing agency head concerned"; and

(D) by adding a new subsection as follows:

"(b) No action may be taken under this section to modify or waive a standard issued under this Act unless—

"(1) in the case of a waiver, the waiver pertains to a building to be leased (other than a building to be constructed for lease) and the waiver is necessary to meet an emergency situation, or

"(2) in the case of a modification (A) the modification is no broader than necessary, and (B) in the case of a building to be constructed or altered, (i) the need for such modification was not reasonably foreseeable when the design for such construction or alteration was approved, or (ii) the standard-prescribing agency head concerned personally determines, pursuant to regulations prescribed by such agency head, that such modification is essential to achieving the purposes of the construction or alteration."; and

(4) by inserting at the end of the following new section:

"SEC. 8. As used in this Act—

"(1) the term 'physically handicapped person' means any individual with a physical impairment that precludes such person's use of a building to the same extent that an individual with unimpaired mobility can use such building.

"(2) the term 'fully accessible' means the absence or elimination of physical and communications barriers to the ingress, egress, movement throughout, and use of a building by handicapped persons and the incorporation of such equipment as is necessary to provide such ingress, egress, movement, and use and, in a building of historic, architectural, or cultural significance, the elimination of such barriers and the incorporation of such equipment in such a manner as to be compatible with the significant architectural features of the building to the maximum extent possible.".

ADJUSTMENT OF PRICE SUPPORT OF MILK

AMENDMENT NO. 11

(Ordered to be printed.)

Mr. ZORINSKY proposed an amendment to printed amendment No. 9 to the bill (S. 509) to amend section 201 of the Agricultural Act of 1949, as amended, to delete the requirement that the support price of milk be adjusted semiannually.

AMENDMENT NO. 12

(Ordered to be printed and to lie on the table.)

Mr. PRESSLER submitted an amendment intended to be proposed by him to the bill, S. 509, supra.

NOTICES OF HEARINGS

COMMITTEE ON RULES AND ADMINISTRATION

Mr. MATHIAS. Mr. President, I wish to announce that the Rules and Administration Committee will be holding hearings on Wednesday, April 1, 1981, and Wednesday, April 8, 1981, on Senate Resolution 20, televising the proceedings of the Senate. The hearings on both dates will be at 10 a.m. in room 301, Russell Senate Office Bui ding. The committee will be receiving testimony from Senators, Congressmen, news executives, congressional agencies, and other witnesses.

SELECT COMMITTEE ON SMALL BUSINESS

Mr. WEICKER. Mr. President, I would like to announce that the Senate Select Committee on Small Business will hold a hearing on the nomination of Michael Cardenas to be Administrator of the Small Business Administration.

The hearing will begin at 10:30 a.m., on March 23, 1981, in room 424, Russell Senate Office Building. For additional information please contact Michael Haynes of the committee staff at 224–5175.

ADDITIONAL STATEMENTS

A SALUTE TO THE NATION'S FARMERS ON AGRICULTURE DAY 1981

● Mr. PRYOR. Mr. President, at this time I should like to join my colleagues in recognition of Agriculture Day 1981. It is a most fitting tribute to our Nation's agricultural producers that we designate today, March 19, as Agriculture Day.

America's farms are the most efficient and productive in the world, yielding enough food and fiber to feed and clothe over 230 million Americans with sufficient surplus to make our agriculture industry the Nation's leading exporter.

In 1980 alone, we exported $40 billion worth of American agricultural products—the single most positive factor in our balance of trade. Were it not for these agricultural exports, the impact of this Nation's recent dependence on foreign oil purchases would undoubtedly be more severe.

Agricultural exports provide employment for 1.3 million workers, generating more than $82 billion in domestic economic activity. America's farmers produce 43 percent of the world's supply of corn and 60 percent of the world's soybeans. In addition, America is the leading exporter of rice, wheat, and coarse grain.

Mr. President, I wish to join in the salute to America's 2.4 million farms and

to farm families all across the land, not the least of which are those in my own State. Agriculture is, indeed, the heartbeat of America.●

NATIONAL AGRICULTURE DAY

● Mr. DOLE. Mr. President, I wish to call to the attention of my colleagues the fact that today, March 19, has been proclaimed by Congress, the President, and 46 States as National Agriculture Day. This is a day to pause, reflect, and pay tribute to the several million farmers and ranchers who constitute the "miracle" we call American agriculture.

The purpose of Agriculture Day is to increase the awareness and visibility of American agriculture and to celebrate the achievement and contributions of our total agricultural community. Local organizations throughout the Nation are mounting campaigns to share with the public why agriculture is the heartbeat of America.

Agriculture is our Nation's No. 1 exporter. Agricultural exports totaled a record $40 billion in 1980—by far the leading positive factor in the U.S. balance of trade. America's 2.4 million farms provide enough food and fiber for our domestic population—about 230 million—as well as exporting more than any other nation in the world. With less than 7 percent of the world's land, the United States produces 43 percent of the world's total wheat exports and 71 percent of the world's coarse grain exports.

The productivity growth for agriculture was five times greater than nonfarm industry over the past 5 years. It is indeed interesting to note that one farm worker supplies enough food and fiber for 68 people; the most efficient output in the world.

Mr. President, I would like to emphasize that the American consumer pays a smaller percentage of his disposable income for food than the residents of any developed nation of the world. On the average, the American consumer spends 14 percent of his after-tax income for food, a bargain, as compared to the Soviet Union where 35 percent is spent; India with 50 percent; Brazil, 37 percent; and in Japan 20 percent of disposable income is spent for food.

I should emphasize, in addition, that the American farmer is one of the most important consumers in our economy. Agricultural purchases of equipment, fertilizer, energy and other inputs are essential to the growth and prosperity of those industries. The continuation of a strong agricultural base is therefore as crucial to the American economy as a whole, as the reliable supply of farm products which are made available to the country and to the world.

The American farmer has accomplished impressive achievements, and his story needs to be told. We can all be proud that our farmers are the most productive in the world. Now we must also take steps so that the farmers and ranchers have sufficient incentive and profit to remain in production. We must avoid actions, such as the Soviet grain embargo, which pose disporportionate and undue hardships upon our most productive industry. Instead, it must be our primary objective as the 1981 farm bill is developed, to keep in mind the importance of agricultural exports and the importance of those policies which will enable the producer to receive a fair return at the mark place.

Mr. President, Agriculture Day comes at an appropriate time. Tomorrow is the first day of spring, a fresh new time for growth and for the rich Earth to again be broken to receive new seed. We who celebrate Agriculture Day are also planting a seed, an appreciation of the mutual interdependence of producers and consumers, so that we might continue the bountiful harvest for which American agriculture is known.

The Senator from Kansas wishes to express his personal appreciation to the American agricultural community. On behalf of all Americans, we applaud you and all you have accomplished for our country.●

A SALUTE TO THE GARDEN STATE

● Mr. BRADLEY. Mr. President, although New Jersey is the most densely populated State in the country, our "Garden State" has 8,000 farms and its farmers are first in the Nation in vegetable production per square mile. These farms are located within overnight shipping distance of 80 million people living along the eastern coast of the United States. Our farmers provide fresher products at lower cost and less energy consumption than those from other parts of the country.

New Jersey produces a diversity of fruit, vegetable and grain crops. The number one crop in terms of dollar yield is soybeans and approximately 55 percent of that crop is exported. New Jersey's output of blueberries is second in the Nation and its cranberries and spinach production rank third. It is fitting that we pay tribute to the agricultural community and it is even more appropriate that New Jersey farmers receive special recognition for their contributions to the economy of our State and Nation.

Mr. President, in view of the importance that agriculture has both for feeding our people and for producing a more favorable balance of payments through exports, I am pleased to join my colleagues in the Senate in supporting Agriculture Day 1981.●

FARMERS, WE SALUTE YOU

● Mr. HAYAKAWA. Mr. President, on the occasion of the first official observance of National Agriculture Day, I would like to say a few words in support of the farmers of the United States. They are, indeed, an integral part of society: One which is necessary for our very existence. The farmers' capacity to produce a food supply at the present level, has enabled the United States to become the great Nation that it is today.

As the leading industry in the United States, agriculture plays a vital role in the Nation's economy. For the past decade, the level of agricultural exports has been on the rise and reached a record high of $40.5 billion during fiscal year 1980. This was the leading positive factor in the U.S. balance of trade.

Today, U.S. farmers are the most productive in the world. However, we must look ahead to the future and prepare to confront the increasing need for food here and throughout the world. In order for us to meet growing demands and stay competitive in world markets, we as citizens, must focus our attention and efforts toward the development of agricultural research and mechanization.

As a Senator representing the No. 1 agricultural State, I urge every American to take a few minutes today to reflect upon the importance of agriculture and to pay tribute to the farmers of our country.●

AGRICULTURE: A STRONG AGRICULTURE MEANS A STRONGER AMERICA

● Mr. BAUCUS. Mr. President, I am very pleased to join my colleagues in celebrating our Nation's agricultural heritage today. The Nationwide observance of "Agriculture Day" is part of an important effort to tell the story of what agriculture means to America. For the first time since its inception in 1973, Agriculture Day is being celebrated as an official national observance. People all across our country are joining in a coordinated effort to explain the importance of agriculture to America. Spearheading this effort is the Agriculture Day Foundation. I am proud to note that one of the members of the Board of Directors of the Agriculture Day Foundation is a Montanan—Connie Townsend of White Sulphur Springs, Mont. I welcome Connie to Washington.

There is no more appropriate time than today to join in the effort to explain agriculture's vital contribution to the American way of life. For the past 2 months, the Federal budget has dominated the congressional agenda. For the next several months as we work to bring Federal spending under control and to get our economy moving again, the budget will continue to preoccupy Congress. But in searching for stability in the economy and a reduction in the rate of inflation, we must not lose sight—indeed, we cannot afford to—of the vital role that agriculture plays in our society. Nor can we afford to ignore the needs of our agricultural producers and their contributions to the health of our entire economy.

Most of us in this body are well aware of the significant role that agriculture plays in our society. Agriculture is our Nation's No. 1 industry with assets that total $927 billion. Agriculture is our Nation's No. 1 employer. More than 15 million people labor in some aspect or another of the agricultural industry. Agriculture is our Nation's No. 1 exporter with exports totaling a record $40 billion in 1980.

Yet, today, America's farmers and ranchers face some of the most serious economic conditions since the Dust Bowl

days of the 1930's. Record high interest rates, inflation, high production costs, and low prices, and President Reagan's continuation of the grain embargo all have contributed to one of the most difficult situations in the memory of many farmers. On top of all these woes, farmers and ranchers face potential drought of devastating proportions.

Mr. President, this year looms as an extremely important one to the future prosperity of agriculture. As America's farmers begin planting their spring crops, Members of Congress are breaking ground for the 1981 farm bill. Most of the current array of farm price support and loan programs expire in October of this year, and Congress must act to reauthorize this legislation. And while the budget is the No. 1 item on the minds of many Americans, I want to impress upon my colleagues the importance of our being ever mindful of the problems and needs of our Nation's agricultural producers and their contribution to the economic health of the entire country. Every American, not just farmers, has a stake in the outcome of the 1981 farm bill.

Mr. President, agriculture is vital to my State. It is also my State's No. 1 industry.

I would like to take this opportunity today to share with my colleagues some facts about agriculture in Montana and its relationship to Montana's economy.

As Montana moves into the 1980's, economic concerns loom large in the minds of her residents. Montanans justly are worried about jobs and business prospects. They want Montana to be a place where they can work and prosper. They want to be sure that Montana provides opportunities for their children and grandchildren.

Historically, options for expanding Montana's economic base have been limited. Most successful manufacturing and service businesses have been closely related to natural resources. Unfortunately, resource-based economies have exhibited a tendency to collapse when resources are depleted. Montana's beaver pelt industry, its gold industry, its buffalo hide industry and most recently, its copper industry have retracted as resources ran out Thoughtful Montanans can already foresee the end of the State's coal. oil. and gas, and are wisely preparing for that day.

Agriculture, however, is one sector with potential for real expansion. Based on renewable soil and water resources, agriculture can be a long-term, viable, and stable industry.

Montana's soil. its water. its grass. and rich farmland constitute an exceedingly valuable natural resource. Presently, agriculture generates over one-third of the economic activity in Montana. While the diversity of Montana's agricultural production extends along a wide spectrum of products, two crops dominate the scene. Together, wheat and beef cattle provide roughly 80 percent of Montana's agricultural receipts.

The average Montana farm covers 2,800 acres. Two thousand acres are ranchland and pasture which provide forage for 110 cattle and 23 sheep. Cropland totals 760 acres. Crops include 260 acres of wheat, 55 acres of barley, and 125 acres of hay. About 40 percent of the cropland is left fallow each year to conserve moisture and control weeds.

The average Montana agricultural producer is 51 years old and has been farming or ranching most of his life. In 1979, his farm produced a net income of only $5,226. Family members supplement this farm income by working at outside jobs.

The investment required to produce this modest farm income is a staggering $629,000. Land the farmer owns is valued at $488,000. The farmer has an additional $141,000 invested in equipment, livestock, and working capital. His debts total over $108,000.

The farmer's large equity largely results from relentless increases in land values during the many years he has been farming. This has led to the truism that "farmers live poor and die rich."

Mr. President, Montana's 62 million acres of agricultural land represent a most precious resource. Every Montanan has a stake in programs to stabilize farm income. Variations in Montana's business cycles are closely related to agricultural revenues. A good year for agriculture is a good year for Montana businesses and workers, while a bad year for agriculture reduces business earnings and personal income throughout the State.

Mr. President, agriculture has the potential to be a real growth industry in the coming decade. But this development will require a dedicated partnership on the part of producers, policymakers, and the nonfarm population. Agriculture faces many problems which are neither simple nor short term. To resolve these problems, to develop agriculture's full potential will necessitate that we continue to educate ourselves to the stake we all have in agriculture's prosperity.

Mr. President, I appreciate this opportunity to join in this effort.●

IRVIN R. TCHON

● Mr. PERCY. Mr. President, on December 5, 1980, the Illinois State Senate passed a resolution commending and honoring Irvin R. Tchon of Chicago for his outstanding leadership and distinguished service to the Polish-American community.

I have known Irvin Tchon for many years. His record of public service and devotion to community is surpassed by few others. Mr. Tchon has been honored by the Chicago City Council, Illinois House of Representatives, and other civic organizations.

Mr. President, I ask that the Illinois Senate Resolution No. 729 be printed in the RECORD.

The resolution follows:

SENATE RESOLUTION 729

Whereas, Irvin R. Tchon, registered pharmacist, is an active community and civic leader; and

Whereas, the Senate recognizes his outstanding efforts and achievements in pursuit of excellence in the Polish-American Community, in community consciousness, affirmative action, political education and human relations programs; and

Whereas, Mr. Tchon has an active interest and has participated in special drug awareness and educational programs designed to enhance community preparation, professional competence and quality of geriatric health care being provided to the Polish-American Community; and

Whereas, his distinguished public service has strengthened the democratic form of government, has served to exhibit the finest ideals of those of American heritage and has benefited all Americans; and

Whereas, he has given many years of unselfish service to the ethnic and minority people of Illinois, and has been honorary president of the Drug Abuse and Education Committee and Nursing Home and Geriatric Health Committee of the Polish-American Political League of Illinois; therefore, be it

Resolved, by the Senate of the Eighty-First General Assembly of the State of Illinois, that we commend and congratulate Irvin R. Tchon for his outstanding leadership and distinguished service to the Polish-American Community; that we express the hope that he will continue to serve his community with vision and enthusiasm; and that a suitable copy of this resolution be presented to Mr. Tchon.●

THE APPOINTMENT OF WILLIAM H. COLDIRON

● Mr. BAUCUS. Mr. President, no other department of the Federal Government is more intimately involved in the daily lives in westerners than the Department of the Interior. From the Fish and Wildlife Service to the Bureau of Land Management to the National Park Service, the Department manages, explores, develops, and preserves the millions of acres of Federal land stretching from Montana to New Mexico.

Accordingly, I am particularly pleased President Reagan has nominated William H. Coldiron as Solicitor of the Department of the Interior. Mr. Coldiron is a man who has intimate and extensive knowledge of the problems and the potential of the Western States. Although born and educated in Kentucky, he has long called Montana his home. Most recently, as director and vice chairman of the board of the Montana Power Co., Mr. Coldiron has been involved in projects that seek to tap the energy resources of the West to meet consumers' needs.

The experience Mr. Coldiron would bring to the Department is not, however, restricted to the public utility industry. As a professor at the University of Montana's School of Law from 1947 to 1950 and from 1951 to 1954, he was a respected authority in oil and gas law, water law, and mining law. This background together with his experience in resource management, uniquely qualify Mr. Coldiron to serve as the chief legal counsel for the Department of the Interior.

I look forward to the Senate's consideration of Mr. Coldiron's nomination and am confident it will be promptly confirmed. I am equally confident Mr. Coldiron will carefully discharge his duties, recognizing that he is a steward of the Nation's most valuable natural resource—its public lands. This role calls for careful judgment to assure that these public lands are not needlessly exploited, but are carefully utilized and. where appropriate, preserved for future generations.●

AMENDMENT TO THE TRADE ACT OF 1974

● Mr. MOYNIHAN. Mr. President, earlier today I introduced legislation which would amend the Trade Act of 1974 to preclude the extension of most favored nation trading status to nations which have expropriated or otherwise taken properties of American citizens without providing just compensation.

A number of nations have yet to settle with the United States outstanding debts resulting from their expropriation of American properties. Until agreements providing fair compensation are reached, favorable trading terms ought not to be offered those countries. It is my hope that the International Trade Subcommittee of the Senate Finance Committee will have an opportunity during the 97th Congress to examine the record of all those nations against which U.S. citizens have unpaid expropriation claims or awards, and that remedies to these injustices will be devised.

Of immediate and overriding importance, however, is that the Senate come to terms as soon as possible with one particular expropriation case which last year was the subject of extensive hearings in both Houses. I refer, of course, to the long outstanding expropriation debt owed by the Government of the Socialist Republic of Czechoslovakia to thousands of American citizens who hold certified awards against that nation.

In 1948, shortly after the Czechoslovak Communist Party seized power in a coup d'etat, the government there nationalized every industry and confiscated all foreign-owned property. Among the private foreign investment that was expropriated were land, buildings, factory equipment, and bank accounts belonging to American citizens—a few corporations, mainly individuals.

In 1958, pursuant to a law enacted that year, the Foreign Claims Settlement Commission reviewed claims by Americans against Czechoslovakia, and adjudged $113.64 million worth of the applications to be legitimate claims against the Czechoslovak Socialist Republic. Because the Prague government had not taken any steps toward compensation, Czechoslovak-owned steel mill equipment in the United States was seized and liquidated and the proceeds, about $8.5 million, were distributed among the Commission-certified claim holders.

Czechoslovakia today owes a balance of approximately $105 million to more than 2,600 U.S. citizens who were issued awards by the Foreign Claims Settlement Commission from 1958 to 1962 under the terms of the earlier legislation. Czechoslovakia owes additional sums on other U.S. citizen claims that have not yet been adjudicated, and it is also indebted to the U.S. Government itself for federally-owned properties confiscated after the Communist regime assumed power.

A large number of the private claimants are my constituents, although I understand that there are claimants in at least a dozen States. Many of them are naturally now quite elderly. Quite a few have already passed away without ever having been compensated fairly for the losses they suffered as a result of Czechoslovak expropriation after World War II.

Most of those concerned with this problem, including Senators LONG, SCHMITT, and myself, would have preferred that Czechoslovakia had settled this expropriation debt decades ago on the usual basis of bilateral negotiations. Indeed, each time the matter has been raised during these past 30 years, Congress itself has expressed its desire that the matter be resolved quickly and fairly, yet it has generously provided Czechoslovakia several opportunities to enter negotiations toward a mutually acceptable settlement.

When the original Czechoslovakian claims legislation was enacted in 1958, Congress urged Czechoslovakia to negotiate such a settlement then. In 1974, when Congress adopted section 408 of the Trade Act, entitled "Payment by Czechoslovakia of Amounts Owed United States Citizens and Nationals", Congress again demonstrated its concern, while affording the Government of Czechoslovakia another opportunity to negotiate an acceptable settlement. Last year, legislation similar to that which I am proposing today was introduced in both Chambers and marked up in the House. Supporters of the legislation did not press for immediate enactment because there were signs that serious negotiations were imminent. Again, we were disappointed.

Mr. President, we are no closer to a negotiated settlement today than we were in 1948. For over 30 years, the Government of Czechoslovakia has obstinately refused to negotiate an agreement which even remotely provides fair compensation to the thousands of Americans involved, although Czechoslovakia has enjoyed the benefits of the expropriated properties since 1948.

Fortunately, Mr. President, there is recourse available. Another consequence of the Second World War was the recovery by Allied Armed Forces in 1945 of much of the treasure that the Nazis had stolen from the museums and bank vaults of continental Europe. Included among the rescued wealth were scores of tons of monetary gold that had been taken from the national banks and treasuries of the occupied countries and hoarded in the private coffers of the Third Reich's elite. Following the war, Britain, France, and the United States established a joint commission to see to the return of the gold to its original owners. This was a Tripartite Commission. The Soviet Union found other ways to dispose of the looted wealth its army recovered than to return it to the original owners.

The Tripartite Commission for the Distribution of Monetary Gold, after sorting through the various claims of the postwar European governments, determined, inter alia, that Czechoslovakia was entitled to almost 25 metric tons of the gold that had been recovered, and the participating governments proceeded to transfer approximately 6 tons of the gold to Prague. At that point, in 1948, it was brought to the attention of President Truman that the new Communist government of Czechoslovakia had recently expropriated American property valued in excess of $113 million. Seizing the buck by the horns, the President ordered that all Czechoslovak gold still in the possession of the United States be held until fair compensation was provided to those Americans whose property had been taken. We still have that gold, Mr. President, approximately 9 metric tons, in the Federal Reserve Bank of New York. Since 1948, the British Government has cooperated in this action by also holding 9.5 metric tons of gold belonging to Czechoslovakia.

For most of these 33 years, the gold has been worth a small fraction of the expropriated American property. During the past few years the value of the gold has soared to the point where the Czechoslovak gold in our possession has been worth twice the worth of the property.

Mr. President, it is incumbent upon the Congress to take action to remedy this grave injustice. We have the means at our disposal. Accordingly, when S. —— is considered by the Finance Committee, I intend to offer an amendment that would do the following:

First. The Secretary of the Treasury would be authorized and directed to liquidate, at the highest available prices, approximately 9 metric tons of gold which belongs to the Government of Czechoslovakia but which is physically located in the Federal Reserve Bank of New York where it has been frozen by the United States since the Truman administration as security for Czechslovakia's expropriation debt.

Second. The proceeds of the liquidated gold would then be invested by the Secretary so as to yield the highest available return.

Third. That investment income periodically would be transferred by the Secretary to the Czechoslovakian Claims Fund in the Treasury for pro rata distribution to the American award holders until they are paid in full, with interest. After all U.S. citizens claims are paid from the Fund, the U.S. Government would then be compensated for its own losses.

Fourth. After all outstanding claims and awards are paid in full, the balance of the liquidated gold proceeds would be released to Czechoslovakia. Thus, Czechoslovakia's debt to our citizens would be repaid and Czechoslovakia would ultimately recover the full value of its liquidated gold.

Fifth. Once the gold is liquidated by the Secretary, Czechoslovakia would become eligible for further consideration for most favored nation trading status under the 1974 Trade Act. The liquidation would also make possible the release of additional gold belonging to Czechoslovakia which is physically located in the Bank of England, but which has heretofore been blocked by the United States.

My decision to offer this innovative legislative remedy comes after sober recognition of the fact that, more than 33 years after the seizure of American-owned properties, the Government of Czechoslovakia has demonstrated no inclination to compensate U.S. citizens ade-

quately for their losses, and it appears no closer today to offering an acceptable proposal.

I should point out, in the interests of historical accuracy, that in 1974 the State Department did reach an agreement with the Czechoslovak Government which would have resulted in:

First, payment by Czechoslovakia, over a long period of years, of $20.5 million to settle both the $105 million owed on the outstanding U.S. citizen awards, as well as all other unadjudicated American claims (the amount of which is unknown); and

Second, the immediate release to Czechoslovakia of the full 18.4 metric tons of gold held in the United States and Great Britain as security for the unpaid U.S. claims.

Congress found this arrangement wholly unacceptable and enacted section 408 of the Trade Act directing renegotiation of the settlement and blocking release of Czechoslovakia's gold until a new and adequate agreement was explicitly approved by Congress. I quote from the Finance Committee Report endorsing section 408 (S. Rept. No. 93–1298):

> One-sided agreements of this nature are especially dangerous to the United States and its citizens at this particular time in history when nations in various parts of the world are threatening to expropriate or nationalize U.S. properties worth billions of dollars, while other nations have already taken valuable U.S. holdings without the payment of just compensation. The United States simply cannot afford to proclaim in the face of this trend that expropriations of U.S. properties will quickly be forgotten if the taking nation ultimately offers a relative pittance in return.

More than 7 years have elapsed since Congress rejected the 1974 agreement, yet no visible progress has been made toward its acceptable renegotiation. Meanwhile, the value of the gold has risen sharply. Worth approximately $20 million when it was originally blocked by the United States, the gold is today worth almost $160 million, much more than the size of Czechoslovakia's debt to U.S. citizens.

Two matters of international law should be addressed in this case. The first of these questions has to do with the U.S. obligation to Czechoslovakia arising out of the Paris Reparation Agreement of 1946. The United States has indisputably recognized the right of Czechoslovakia to the gold as of the end of World War II, when it was recovered by American forces from the Nazis.

Today, however, 37 years after the end of World War II, the relevant consideration is the equally clear right of the United States to block the return of the gold (as the United States has done since 1948) and to use it to satisfy the claims of American citizens whose properties have been illegally seized by the Government of Czechoslovakia without just compensation. There exists a rather large and unambigious body of law which asserts the right of the U.S. Government to seize and utilize assets belonging to a foreign nation, but physically located in the United States, after that country has taken illegal expropriation actions against properties of U.S. citizens without making any provision for just compensation. Such, in fact, was the case when the United States in 1958 seized and subsequently liquidated the steel mill equipment belonging to Czechoslovakia in order to use the proceeds as partial payment of these same expropriation claims.

Let me point out that under the terms of my proposal, the United States would be rather more generous to the Czechoslovaks than we were in 1958 when the steel mill equipment was seized outright and sold to the highest bidder. According to the legislation I am proposing, the Czechoslovak Government would receive, in cash, the principal value of its gold—several million dollars—after the interest from its investment is used to pay the American claimants.

The second matter of international law here involved relates to the force and effect of U.S. participation in the Tripartite Commission for the Distribution of Monetary Gold established under the Paris Reparation Agreement of 1946. Paragraph 6 of the executive agreement which established the Commission states that "decisions of the Commission shall be by unanimous agreement of its members"—the United States, Great Britain, and France. Thus, it has been suggested that the United States must obtain the consent of Great Britain and France before it can liquidate Czechoslovakia's gold under the proposed legislation.

That contention is simply not sustainable, because it can reasonably be demonstrated that the mandate for unanimous consent applies exclusively to the original determinations made by the Commission regarding which nations were entitled to shares of the gold recovered from the Nazis during the war. The determination that Czechoslovakia was entitled to 18.5 metric tons of the gold recovered from Nazi Germany was such a unanimous decision. The requirement of unanimity could not sensibly apply to subsequent actions that a member nation of the Commission might undertake unilaterally to remedy subsequent injuries suffered by its own citizens by reason of a beneficiary nation's post-World War II violation of international law.

So far as I am aware, President Truman neither requested nor received the consent of the British and French when he made the decision to block the return of the gold to Czechoslovakia and to link its return to the settlement of that nation's expropriation debt to our citizens. Similarly, Congress did not request or receive the consent of the British and French in 1974 when it blocked the Czechoslovakian gold under section 408 of the Trade Act. Moreover, I am advised that the British have unilaterally blocked and claimed gold belonging to Albania under the Paris Reparation Agreement and the tripartite arrangement in satisfaction of certain British claims against Albania. Thus, while I would welcome the support of our European allies in this matter, I do not believe we are obliged to obtain their explicit assent before resolving this 33-year-old international impasse in the manner I propose.

It remains my hope that the Government of Czechoslovakia will render this legislation unnecessary by negotiating a fair, acceptable settlement providing for the prompt payment of all outstanding U.S. citizen claims and awards. But I am not optimistic. And, as the State Department conceded in a letter to Senators LONG, SCHMITT and me dated January 16, 1981:

> We know the process cannot be allowed to go on much longer . . . there is a compelling need to obtain fair compensation for the American citizens whose property was taken by the Czechoslovak Government.

While I still hope for a diplomatic solution, 33 years of unconscionable delay must teach us not to rest our hopes on such an outcome.

I submit for the RECORD the text of the proposed legislation which, absent an immediate, acceptable settlement, will be offered for enactment at the earliest feasible date.

The material follows:

PROPOSED LEGISLATION TO AMEND THE TRADE ACT OF 1974

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

"That Title IV of the Trade Act of 1974 (Title 19 U.S.C. § 2431, et seq.), entitled "Trade Relations With Countries Not Currently Receiving Non-Discriminatory Treatment," is amended by adding the following new section after Section 408 thereof entitled "Payment By Czechoslovakia Of Amounts Owed United States Citizens And Nationals."

"SEC. 408A. Procedure Whereby Czechoslovakia Would Qualify For Further Consideration of Eligibility For Nondiscriminatory Treatment (Most Favored Nation Status) By Discharging Its Indebtedness To United States Citizens And the United States.

"(a) Findings. The Congress finds that:

"(1) Approximately thirty-three years have passed since the government of the Czechoslovak Socialist Republic expropriated and nationalized properties belonging to nationals of the United States without any provision for just compensation;

"(2) Czechoslovakia has enjoyed the use and economic benefit of those properties over the entire thirty-three year period;

"(3) during approximately the same period of time, the United States has controlled, directly or indirectly, more than eighteen metric tons of gold belonging to the government of Czechoslovakia, the value of which has increased over the years so that the gold is currently worth far more than the amount owed by Czechoslovakia to nationals of the United States for the nationalization and expropriation referred to in subsection (1) above and on account of the additional claims referred to in subsection (5) below;

"(4) approximately six years have elapsed since Congress enacted Section 408 of the Trade Act of 1974 (19 U.S.C. 2438), which blocked the release to Czechoslovakia of the gold referred to in subsection (3) above and required Congressional approval of any agreement which would settle claims of nationals of the United States against Czechoslovakia, but no such agreement has been negotiated or submitted to the Congress since that time;

"(5) a number of United States nationals, who held certified awards against Czechoslovakia issued by the Foreign Claims Settlement Commission of the United States under Title IV of the International Claims Settlement Act of 1949, have died; other United States nationals holding such certi-

fied awards are elderly and in need of just relief without further delay; certified awards of a small number of United States businesses remain unsatisfied; other United States nationals hold claims against Czechoslovakia which must be further adjudicated and determined; additional claims of United States nationals against the Government of Czechoslovakia, which arose on or after August 8, 1958 as a result of Czechoslovakia's nationalization or expropriation of their properties without provision for just compensation, remain to be adjudicated and determined by the Foreign Claims Settlement Commission; other United States nationals hold bonds issued or guaranteed by the Government of Czechoslovakia which must be redeemed; and Czechoslovakia is also indebted to the Government of the United States for certain surplus property sold to Czechoslovakia under an agreement entered into in 1946 and for certain bank accounts of the United States in Czechoslovakian banks which were blocked by the Government of Czechoslovakia;

"(6) the long-standing inability of the United States and Czechoslovakia to negotiate a just, acceptable settlement of those awards and claims of United States nationals and the United States Government against Czechoslovakia has made it impossible for the two nations to enjoy full commercial and economic relationships, a condition that will continue indefinitely unless provision is made for the resolution of the indebtedness of Czechoslovakia.

"(b) PURPOSES.—The purposes of this section therefore are:

"(1) to provide for the payment, without further unnecessary delay, of all certified awards of nationals of the United States against the Government of Czechoslovakia heretofore determined by the Foreign Claims Settlement Commission under Title IV of the International Claims Settlement Act of 1949; for adjudication and payment of additional claims of nationals of the United States against the Government of Czechoslovakia which arose after August 8, 1958; for adjudication and payment of claims against the Government of Czechoslovakia which arose after January 1, 1945 in the case of certain persons who became nationals of the United States on or before February 26, 1948; for payment to other United States nationals who hold bonds issued or guaranteed by the Government of Czechoslovakia; for adjudication and payment of claims against the Government of Czechoslovakia in the case of certain persons who were not nationals of the United States at the time of expropriation, but who became nationals of the United States prior to the date of enactment of this section; and for payment to the Government of the United States for valid claims against the Government of Czechoslovakia through—

"(A) the sale of all gold belonging to the government of Czechoslovakia which is physically located in the United States;

"(B) investment of the proceeds of the sale of such gold in maximum interest-bearing, income-producing accounts, investments or securities;

"(C) utilization of the interest and income earned as a result of such investment to pay, in installments, all such certified awards, bonds and claims;

"(2) after all certified awards, bonds and claims referred to in paragraph (b)(1) have been paid in accordance with this section, to provide for the return of the balance of all such proceeds to the Government of Czechoslovakia.

"(c) Liquidation of Czechoslovakia's Gold in the United States; Investment of Liquidated Proceeds; Payment of Certified Awards and Other Debts of Czechoslovakia to United States Nationals and the United States Government.

"(1) On or as soon as practicable after the date of enactment of this section, the Secretary of the Treasury shall take and exercise full possession, title and control over all gold located in the United States which belongs to Czechoslovakia or which is being held for delivery to the government of Czechoslovakia under Part III of the Agreement on Reparation of January 24, 1946 or otherwise, and to sell such gold in the manner provided in paragraph (c)(2).

"(2) The Secretary of the Treasury shall sell all gold obtained under paragraph (c)(1) in such quantity or quantities as the Secretary may determine, in the United States or abroad, in such manner and at such prices, and on such terms and conditions, as will be most effective in creating the largest possible amount of proceeds in the shortest period possible in order to invest said proceeds as provided in paragraph (c)(3). The Secretary, in his sole discretion, may offer the government of Czechoslovakia the right to purchase such gold, in whole or in part, at the same price or prices at which it would otherwise be sold under the first sentence of this subsection. In the event any such offer is made, failure of the government of Czechoslovakia promptly to accept the offer within the time limit fixed by the Secretary, or to tender timely, satisfactory payment therefor after acceptance, shall constitute a rejection of such offer, and the Secretary may thereupon sell such gold, in whole or in part, to any other purchaser or purchasers on whatever terms and conditions shall be deemed appropriate or necessary.

"(3) The Secretary of the Treasury shall immediately invest, and reinvest as fixed-term investments mature, the proceeds of all gold sold pursuant to paragraph (c)(2) in accounts, investments or securities, here in the United States or abroad, which are safe, proper investments or depositories for fiduciary, trust, or public funds and which will produce maximum available interest or income for full payment, at the earliest possible date, of the awards and claims of United States nationals and the United States Government under the provisions of paragraph (c)(4). The Secretary may, in his discretion, invest such proceeds in maximum interest-bearing securities of the United States or securities of the United States sold at a discount, including bonds, notes certificates of indebtedness, and Treasury bills, and other obligations for the repayment of money, or for interest thereon, which are made, issued, or guaranteed by the United States.

"(4) The Secretary of the Treasury shall cover into the Czechoslovakian Claims Fund created by subsection 402(b) of the International Claims Settlement Act of 1949 (22 U.S.C. 1642a(b)) all interests and other income earned on the investments and reinvestments made pursuant to paragraph (c)(3) as and when such income or interest is received by or credited to the Treasury. Not less than once in every six-month period commencing after the first interest or other income is covered into such Fund, the Secretary shall pay and distribute the entire balance in the Fund at the time of each such distribution as follows and in the following order of priority:

"(A) Pro rata payments computed in the manner specified in Section 413(a)(2) of the International Claims Settlement Act of 1949 (22 U.S.C. 16421(a)(2)) to those nationals of the United States who hold certified awards against Czechoslovakia previously issued by the Foreign Claims Settlement Commission under Title IV of the International Claims Settlement Act of 1949, or awards hereafter issued after redetermination under subsection (d) of this section, until all such certified awards, together with interest on the principal amount of each such award at the rate of six per centum per annum from August 8, 1958 to the date of enactment of this section, are paid in full. Distributions shall be computed and paid by the Secretary under this subsection without reference to awards to be issued after redetermination under paragraph (d)(1) of this section, except such awards as, after redetermination, have been certified to the Secretary under paragraph (d)(6) of this section. After any award has been so certified, the recipient of such award shall participate in the aforementioned pro rata computations, distributions and payments.

"(B) Thereafter, pro rata payments computed in the same manner to nationals of the United States who hold awards hereafter certified to the Secretary under paragraph (d)(2) of this section, until all such awards, together with interest on the principal amount thereof at the rate of six per centum per annum from the date of nationalization to the date of enactment of this section, are paid in full.

"(C) Thereafter, pro rata payments to nationals of the United States on the unpaid balance due and owing to each of them on defaulted bonds issued or guaranteed by the Government of Czechoslovakia until all such bonds are paid in full. The Secretary, by regulations, shall establish a procedure whereby such bonds may be presented for payment and paid under this subsection.

"(D) Thereafter, pro rata payments to nationals of the United States who hold awards hereafter certified to the Secretary under paragraph (d)(3) of this section, until all such awards, together with interest on the principal amount thereof at the rate of six per centum per annum from the date nationalization to the date of enactment of this section, are paid in full.

"(E) Thereafter, the Secretary shall deduct from the Fund and pay into the "Miscellaneous Receipts" account of the Treasury amounts equal to the principal and interest owed by the Government of Czechoslovakia for $7,000,000 in surplus property which the United States sold to Czechoslovakia under an agreement entered into in 1948, and for the current dollar value of two bank accounts of the United States Government in Czechoslovakia blocked by the Government of Czechoslovakia.

"(5) If any person entitled to payment out of the Fund under this subsection is deceased or under legal disability, payments pursuant to this subsection shall be made in the manner provided in Section 413(d) of the International Claims Settlement Act of 1949 (22 U.S.C. 16421(d)).

"(d) Adjudication of Certain Claims.

"(1) The Foreign Claims Settlement Commission of the United States shall, upon application, reopen and redetermine the validity and amount of any claim against the Government of Czechoslovakia which was filed with the Commission in accordance with the provisions of Title IV of the International Claims Settlement Act of 1949 and which was denied by the Commission because the property upon which the claim was based was found by the Commission to have been nationalized or taken by the Government of Czechoslovakia on or after January 1, 1945, but prior to February 26, 1948, or which was denied because said property was not owned by a person who was a national of the United States on the date of such nationalization or taking. The provisions of Section 405 of the International Claims Settlement Act requiring that the property upon which the claim is based must have been owned by a national of the United States on the date of nationalization or other taking by the Government of Czechoslovakia shall be deemed to be met if such property was owned on such date by a person who became a national of the United States on or before February 26, 1948.

"(2) The Foreign Claims Settlement Commission shall also receive and determine, in

accordance with applicable substantive law, including international law, the validity and amount of claims of nationals of the United States against the Government of Czechoslovakia for losses resulting from the nationalization or other taking after August 8, 1958, of properties, including any rights or interest therein, owned at the time of such nationalization or other taking by nationals of the United States.

"(3) The Foreign Claims Settlement Commission shall also receive and determine, in accordance with applicable substantive law, including international law, the validity of claims against the Government of Czechoslovakia by any natural person who became a national of the United States on or before the date of enactment of this section.

"(4) Claims described in paragraphs (d)(1), (d)(2) and (d)(3) shall be redetermined in accordance with other provisions of Title IV of the International Claims Settlement Act of 1949, and regulations thereunder, which are not inconsistent with this section.

"(5) The Commission shall establish and publish in the Federal Register the period of time during which applications for reopening and redetermination of claims described in subsection (d)(1) and claims described in paragraphs (d)(2) and (d)(3) must be filed and the date for completion of its affairs in connection with the redetermination and determination of such claims. Such completion date shall not be later than two years following the final date for the filing of such applications and claims.

"(6) The Commission shall promptly certify to the Secretary of the Treasury the amount of each award issued after redetermination pursuant to paragraph (d)(1) and after determination pursuant to paragraphs (d)(2) and (d)(3) of this section.

"(e) Release of Proceeds to Czechoslovakia; Eligibility of Czechoslovakia for Further Consideration of Most-Favored Nation Treatment.

"(1) After all certified awards and bonds of nationals of the United States and all claims of the United States Government have been paid in accordance with subsection (c) of this section, the Secretary of the Treasury shall deduct from the Czechoslovakian Claims Fund in the Treasury such amounts as are necessary to cover the expenses necessarily incurred by the Treasury Department and the Foreign Claims Settlement Commission in the administration of this section. Amounts so deducted shall be covered into the "Miscellaneous Receipts" account in the Treasury. After such deduction has been made, all proceeds from the sale of gold pursuant to subsection (c), together with any balance remaining in the Czechoslovakian Claims Fund, shall be paid to the Government of Czechoslovakia in accordance with instructions which the Secretary of State shall provide.

"(2) Immediately upon liquidation of Czechoslovakia's gold under paragraph (c)(1) and initial investment of the proceeds thereof under paragraph (c)(2), the Secretary of the Treasury shall submit a report to the President and the Congress indicating that Czechoslovakia is qualified for further consideration, under the provisions of Sections 404 through 407 of this title, of its eligibility for negotiation and execution of a bilateral commercial agreement and extension of nondiscriminatory Most Favored Nation treatment of its products under the Tariff Schedules of the United States referred to in Section 401 of this Title.

"(f) Claims Against the United States. No court shall have any jurisdiction over any claim brought against the United States or any officer or agent thereof with respect to any action taken under this section and nothing in this section shall be construed to create any liability on the part of the United States in favor of the Government of Czechoslovakia, any agency or instrumentality thereof, or any person who is an assignee or successor in interest thereto, or any other liability of any kind against the United States.

"(g) Definitions.

"(1) 'National of the United States' shall have the meaning given such term in Section 401(1) of the International Claims Settlement Act of 1949 (22 U.S.C. 1642(1));

"(2) 'Agreement on Reparation of January 24, 1946' means the Agreement on Reparation from Germany on the Establishment of an Inter-Allied Reparation Agency and on the Restitution of Monetary Gold, signed for the United States on January 14, 1946.

"(h) Repeal of Section 408. Section 408 of Title IV of the Trade Act of 1974 is repealed as the date of enactment of this section, and upon such repeal, this section shall become Section 408 of said Act."●

SALINE COUNTY, ILL.

● Mr. PERCY. Mr. President, the Department of Housing and Urban Development recently decided to invite a number of Illinois communities, who had successfully competed in the preapplication process, to make full application for funding in the small cities community development block grant program. I had the pleasure of informing communities such as Saline County, Ill., that HUD had approved its project and would soon be requesting additional information for further review by the agency. HUD's reservation of $1 million indicates that Saline County has designed a fundable project to provide a much needed regional water system to serve a number of communities in Saline and, possibly in the future, nearby Gallatin County. This portion of Illinois has suffered very dry conditions this winter and water levels, before recent rainfall, had reached a critical level. The construction of a regional water system will help relieve the water supply problems that this area has endured. The value of the block grant concept, that is favored by the Reagan administration, is evident in this proposal, as Saline County officials were allowed to establish priorities for the use of these funds in their community. Pending review of these further submissions by HUD, award announcement is expected in June 1981.

The regional water system is expected to serve Harrisburg, Muddy, Equality, Raleigh, the Raleigh Water District and the Liberty-Ledford Water District. The system will include a complex of three wells, tapping an underground source in the Junction area, with a transmission line running to the area of Equality where the treatment plant-site is located.

Following the announcement of the block grant invitation, Farmers Home Administration also approved a community facilities loan to the Saline Valley Conservancy District in the amount of $6,700,000 to be repaid over 40 years at 5 percent interest to aid in the construction of the wells, water treatment plant, storage tanks, and transmission mains for the water system. An estimated 8,300 residents and commercial users will benefit by this new system.

Mr. William Endsley, chairman of the Saline County Board, and Ms. Shirley Ligon, manager of the Saline Valley Conservancy District, and their respective board members are to be commended on their successful efforts to resolve the problem of water shortage in the Saline County area. I am pleased to have had the opportunity to work with the Saline County officials on this project and congratulate them on their outstanding leadership.●

WHO SHOULD BE AN AMERICAN AMBASSADOR?

● Mr. PELL. Mr. President, the Foreign Relations Committee will soon be considering President Reagan's nominees for Ambassadorships around the world. The new administration has been correctly intent on having Ambassadors who will be able to articulate, defend, and promote support for the administration's policies.

At the same time, however, it ought to be incumbent upon any administration to choose the best people—whether career or noncareer—to serve as Ambassadors. These are critical times, and our country cannot afford to be represented abroad by people who are less than the very best available.

In this connection, Martin F. Herz, a former career Foreign Service officer and Ambassador to Bulgaria, recently wrote a very perceptive article, entitled "Who Should Be An American Ambassador?" which was published in the January 1981 edition of the Foreign Service Journal. I ask that the full text of this article be printed in the RECORD.

The article follows:

WHO SHOULD BE AN AMERICAN AMBASSADOR?

(By Martin F. Herz)

The question is not, and has never been, whether professionals or nonprofessionals ("political appointees") should be ambassadors. It is rather, how one chooses or finds or trains the best people to become ambassadors.

"The best people?" Is there some undertone of *elitism* in that question? Yes and no. If it is elitism to want the best possible surgeon to operate, to want the fastest-running and highest-jumping athlete to compete, to have the best-trained and temperamentally best-suited man or woman as an astronaut, then it is elitism also to want the best man or woman available to represent the United States abroad. But of course it is not elitism in the snobbish sense that is sometimes imputed to that word. It is, rather, a rational recognition that difficult and responsible tasks should be performed by the most highly qualified people.

Certainly the United States—indeed, any country with important interests abroad—requires high quality in its foreign representation. It is only good common sense to want the most vigorously selected, best trained and most highly skilled people to man that first line of defense. But high quality is not a monopoly of Foreign Services professionals.

Also, it is understood nowadays that there are no "unimportant" posts to which one can assign unqualified or poorly qualified ambassadors. As I shall demonstrate, there is plenty of damage that an unqualified man or woman can do in such a post—and in today's world there is no guarantee that an American embassy in a quiet, out-of-the-way country may not suddenly become the

focal point of American interest, perhaps in a wider regional context, which requires expert work of the highest professional quality.

What, then, do we mean by professionalism? Selection, training, experience, plus character and technical skills. If I distinguish between "skills," which are highly important, and the factor of "experience" (which of course helps to develop and sharpen skills), it is because the job of an ambassador requires skills of several kinds, only some of which are transferable from other professions or can be learned rather quickly; and all of them are not always found in one individual. In recent years the managerial aspect of running a large embassy has become so important that executive experience, for instance, the running of a large university, has come to be regarded as a qualification for running an embassy. Managerial skills are certainly more readily transferable than diplomatic skills.

This aspect of the question comes down to the one that has agitated also the medical profession (which I choose for parallels that could be cited with many other professions): Should a doctor or a managerial expert be in charge of a hospital? There are good arguments on both sides, but there is no argument whether a hospital administrator or a surgeon is better qualified to perform major surgery. In diplomacy, the manager of a diplomatic mission is also the surgeon who must "operate" in his conversations with the foreign minister and other elements of the power structure of the country to which he or she is accredited. He must make difficult diagnoses, and sometimes must prescribe (or recommend) risky therapy.

We have said that the managerial functions can be more easily delegated than the diplomatic ones. To come down to specifics: To appoint the governor of a Middle Western state to become United States ambassador to Mexico—a man who did not speak Spanish and had no background in foreign policy in general or Latin America in particular—would be about the same as to expect the governor of a South African province to perform, in the Groote Schuur hospital in Capetown, the heart transplant surgery that was previously performed there by Dr. Christian Barnard. With the difference that the nonprofessional diplomat has at his side a team that covers up for his mistakes and prevents as many as possible; whereas the unfortunate effects of bungled open-heart surgery are more quickly apparent. But it would be appropriate to make a governor who is a good executive the director of a hospital—on the understanding, of course, that he would leave the medical work to doctors.

What is it that makes a good diplomat, and thus a good ambassador, in addition to the factors that were enumerated above? The kind of empathy which comes from years spent in cross-cultural communication. *Fingerspitzengefühl* (the feeling one has in the tips of one's fingers) which is sometimes acquired by amateurs but is more frequently found among people who have had a great deal of experience. To use once more the medical parallel, there are diagnosticians who use all the apparatus of tests and examinations but make their most important decisions by intuition.

A gynecologist, for instance, has a patient who is brought to the hospital because of a suspicion of ectopic pregnancy, a potentially deadly complication. All the customary tests are made, and they are negative. The old professor and chief of the department, i.e., the old professional, says, "I think, nevertheless, that hers is an ectopic pregnancy. Take her to the operating room, we'll open her up." Which is done, and the patient turns out to have ectopic pregnancy, notwithstanding the negative indications given by the tests. The old professor is asked how he knew. He doesn't know himself. But he has over the years seen tens of thousands of pregnant women, including large numbers whose pregnancies were ectopic. He could "smell" the symptomatology, including elements that were not tested but which probably had been present in previous cases that he had seen. Experience paid, and a life was saved.

The same very often holds in the field of diplomacy. The thing that is not present in the equation is noticed by someone who has learned to notice also what is not there; the inflection of the foreign minister in saying something signals an opening to the experienced professional which is missed by the amateur. An obscure reference to past history conjures up the memory of a useful precedent. The right tone, the right word, the right moment are utilized, not only by intellectual judgment but through familiarity with conversations of similar kinds in which things turned out right or went off the rails. A "feel" for what is about to happen may be derived from a lifetime of sniffing the political atmosphere of foreign countries. The crisis, which inevitably is the first diplomatic crisis to the newcomer is, reminiscent in many ways of crises experienced before by the professional—he knows what comes first and what not to worry about and is thus able to concentrate on what matters most. Inevitably, someone who has been through a dozen diplomatic crises behaves differently in one than someone who does not have that experience.

In other words, professionalism *pays*. One can, of course, appoint a businessman or politician to command an aircraft carrier or an armored division, and some may display gifts of strategic intuition which make a crucial difference—and most, being surrounded by professionals, will make no fatal mistakes; but the chances of getting good results are greater if an aircraft carrier or an armored division is commanded by a man with specialized military experience. It can in certain cases be only *related* experience. Admiral Raymond A. Spruance, who had commanded battleships, made an excellent transition to a carrier task force; and some professors of international relations or diplomatic history have made serviceable ambassadors. But the odds are that people trained for the job will give better service. There are exceptions, which we will next discuss—for there have been terrible professionals and some excellent, even very distinguished, American ambassadors who were completely, or largely, inexperienced when they came to the task.

FIRST THE GOOD NEWS

It would thus be a great mistake to say, as fewer and fewer professionals are saying, that *all* American ambassadors must be professionals; and some presidents have chosen wisely among non-professional candidates for ambassadorships.

Roosevelt's choice of Averell Harriman to be ambassador to the Soviet Union was such a choice. It probably helped that Stalin, believing that the United States was run from Wall Street, also believed that Harriman was one of the wire-pullers who controlled the White House. He thus accorded him access of the kind which greatly helped Harriman in the accomplishment of his mission (as did the fact that the U.S. was an ally of the USSR, at that time). Harriman went on to a multiplicity of diplomatic posts in which he acquired additional experience, and there is no question that he acquitted himself with distinction in all of them.

I have served under three distinguished non-professionals: David K. E. Bruce, Douglas Dillon, and Ellsworth Bunker. I have no hesitation in saying that they were more distinguished than most of my career superiors. David Bruce had been a FSO in his youth and came to his first embassy from related work in London and Paris. He was also a historian and had been a sub-cabinet officer. He thus was no neophyte in foreign affairs. He went on to become the only American to have headed our three most important missions in the West (London, Bonn and Paris) plus Peking, NATO, and a highly responsible negotiating assignment. He had ready access to the top, knew how to operate the system, and possessed a personality that radiated the best of American culture. He was a man of the world in the best sense of that term. We don't have enough of this kind, and we can never have enough of them in ambassadorial positions.

Douglas Dillon seemed a mistake when he was appointed ambassador to France. He didn't even speak the language. (His father had originally been sought for the post.) His main qualification seemed to be that his family owned a famous vineyard in the Bordeaux area. But he surprised us by being an extraordinarily quick study, displaying empathy that was equal to that of many professionals, and making decisions and recommendations that could not have been surer and wiser. He went on to become undersecretary of state and secretary of the treasury. He learned on the job, deferred to experts as long as he felt insecure, and when the first crisis came displayed excellent judgment. I would consider him to be an exception because he lacked relevant background and experience even in a related field. (A more recent exception of the same kind may be Geri Joseph, our current ambassador to the Netherlands, who seems to have a natural aptitude for diplomacy in spite of, not because of, her background in journalism.) Exceptions of that kind should make us humble about generalizing.

Ellsworth Bunker is a different case. He was chosen to be ambassador to Argentina at the age of 57, and went on to become one of our most experienced ambassadors, serving also in Rome, New Delhi, in Washington as ambassador to the OAS, then in Saigon for six grueling years, until at 79 he undertook one of the most difficult and demanding negotiating assignments in helping to bring the Panama Canal treaty to completion. I am devoted to him and believe he will not take it amiss when I remark that in his first diplomatic post, where he is credited with "masterful inactivity," he was probably less qualified than would have been a professional and also less qualified than he was in later posts. We can learn something from his case: When someone is superbly gifted in the field of diplomacy, his best accomplishments are apt to come after the customary age of retirement. I would put Bunker at 80 up against any professional aged 50. At 80, in fact, he had longer high-level diplomatic experience than any American professional has ever had at age 50 or even age 60. In his case, too, we can thus say that "experience pays."

Among more recent appointments, who could cavil at the nomination of Senator Michael J. Mansfield to the post of ambassador to Japan where by all accounts he has turned in a superior performance? It may be that a professional like Marshall Green could have done as well; certainly he knows more about Japan—but Mansfield knows more about Washington and he has had 24 years of experience in following Far Eastern affairs from Capitol Hill. (The only irony of his appointment is that Green was retired at 63 whereas Mansfield, his cumulative experience standing him in good stead, became ambassador at the age of 74.) Similarly, though not on the same level, the appointments of Kingman Brewster to London and Robert F. Goheen to New Delhi, each from positions of university president, were distinguished ones. Brewster seems to have worked out well, whereas Goheen was something of a disappointment; but no one can say that either of these men lacked stature or was appointed in return for money or as some other kind of payoff.

NOW THE BAD NEWS

Ambassadorships have also, alas, gone to people who not only lacked any visible qualifications for the job but were clearly awarded the post in return for favors financial, political or both. Let us look first at appointments of the '30s and '40s: The millionaire Joseph P. Kennedy, pro-German and isolationist, was American ambassador to Great Britain at a time when that country had to steel itself against Nazi aggression; the amateur William C. Bullitt, enthusiastic for intimate relations with the Soviet Union, first went overboard in favor of the Soviet Union—only to become so disenchanted that later, as ambassador to France and afterwards, he could see Russia only as an eternal enemy. "General" Patrick J. Hurley, an oil lawyer and millionaire, who had been Hoover's secretary of war, was appointed ambassador to China during World War II under circumstances that have been most aptly summarized by Barbara Tuchman as follows:

Hurley was just what [Generalissimo] Chiang had always wanted in an envoy—a man with direct access to the president and no experience of China, who was easy to manipulate through his vanity. When Ambassador Gauss [a career professional] resigned at the time of Stilwell's departure, Chiang was only too pleased to ask for Hurley as successor . . .

The aftermath involved one of the greatest disasters of American diplomacy (all of which, however, must not be attributed to Hurley). As Tuchman summarized the situation, "Hurley accepted no guidance from his staff. Because he was over his head in the ancient and entangeld circumstances which he proposed to settle, he fiercely resented and refused the counsel of anyone more knowledgeable about China than himself. When the coalition blew up in his face and he found Chinese affairs resisting his finesse, depriving him of the diplomatic success he had counted on, he could find an explanation only in a paranoid belief that he was the victim of a plot by disloyal subordinates . . ." Not only did he help to bring about the ruin of a generation of China Hands but he contributed massively to American public misconceptions about China and Chiang Kai-shek which placed a heavy mortgage on American policy in the Far East for decades.

Perhaps the most notorious appointment of an unqualified ambassador in the years immediately after World War II was President Eisenhower's nomination of Maxwell Gluck, proprietor of a chain of ladies' dress shops, as ambassador to Ceylon, now Sri Lanka; but Gluck was not the worst appointment and became notorious only because the Senate Foreign Relations Committee, in a rare departure from its custom, acutally inquired—very briefly—into his qualifications. Having written extensively on that appointment [Journal, May 1978] I wish to record here that Gluck was not even the worst ambassador the U.S. has sent to Ceylon and many another political appointee, questioned as Gluck was questioned by Senator Fulbright, would have been shown up to be equally ignorant and perhaps even more so. Gluck was asked whether there was any connection between his nomination and the fact that he had contributed $30,000 to the political campaign; he squirmed. He was then asked about Ceylon and turned out to know virtually nothing about it. When asked the name of the prime minister of Ceylon he did not know it; and when asked who was the Prime Minister of India (Nehru) he said he knew but couldn't pronounce the name.

In the colloquy in the Foreign Relations Committee that ensued, Senator Fulbright said he had not wanted to embarrass Gluck by asking him to spell Nehru after the nominee had said he was unable to pronounce it, adding: "Anyway, I am not going to make a big fight about it. I am simply saying that—following up on the chairman's [Senator Theodore Francis Green's] letter, I think the department ought to be a little more concerned about sending—especially to India and that area, Ceylon—a man with no qualifications. That ought to be a position there for a professional man. I will grant that sending a man like that to Belgium can't do much harm, because the Belgians know us and can overlook such things. I don't think the Ceylonese or Indians will overlook a man who is totally unaware of things that are important to our relations with them."

I submit that what Fulbright said to his colleagues after the hearing was much more significant than what transpired between him and the hapless nominee, for it foreshadowed the attitude he took when he became chairman of the Foreign Relations Committee—that there were some countries where qualified ambassadors were desirable and others where their qualifications didn't matter; and later he extended that tolerant view to one which, according to someone who was closely associated with him, boiled down to saying: If the president of the United States wants to appoint a horse's asterisk (or words to that effect) as ambassador, he is entitled to do so. The dereliction of the SFRC in that respect deserves to be highlighted, for it would not have taken many hearings like that of Gluck to persuade the Eisenhower administration—and subsequent administrations—that it is politically risky to nominate unqualified candidates for ambassadorial positions. "Senatorial courtesy" is another problem, especially when members of the committee are themselves beholden to the nominee.

AND THE WORSE NEWS

While there were shocking appointments by the Eisenhower and Kennedy administrations, undoubtedly the worst record in terms of simony was established by the Nixon administration which literally auctioned off ambassadorships (or "chances" for ambassadorships) according to precise information developed in connection with the Watergate investigation. There would be no purpose in mentioning more than a few cases—they were too numerous. Arthur K. Watson, ambassador to France, contributed $300,000 to the Nixon campaign in 1971 and early 1972 but had also made earlier contributions. He was not one of our most successful ambassadors to France. Vincent De Roulet, son-in-law of the owner of the New York Mets, contributed (together with his father-in-law) some $183,000 before and after becoming ambassador to Jamaica where he did major damage to our relations due, inter alia, to an ill-considered public remark that he had the prime minister in his pocket, which of course led to an overturn in the political situation and other unfavorable consequences. Ruth B. Farkas, the wife of a department store executive, gave $300,000 and became ambassador to Luxembourg, following in the footsteps of such previous unqualified political appointees as Perle Mesta, the Washington hostess sent there by Harry Truman; Wiley Buchanan, the Texas millionaire and art collector sent by Eisenhower; and Kingdon Gould, the Washington parking lot magnate appointed by Nixon. (Luxembourg, by the way, had an excellent idea: It finally let it be known—discreetly, of course—that it was fed up with being a dumping ground for unqualified moneybag ambassadors—and as a result got a professional, James G. Lowenstein, who was well familiar with the concerns of that NATO ally.)

The situation had become so smelly that Jimmy Carter, during his 1976 election campaign, vowed that he would put an end to it. In an interview with C. L. Sulzberger of the New York Times in August, 1976 he said he was interested in "improving the quality of our major diplomatic appointments. I want these to depend firmly on merit. I am not under obligation to anyone, and I don't believe people should be paid off for helping elect a president by getting embassies." On November 9, 1976, after he had been elected, he said: "I plan to appoint diplomatic officials who have superb credentials, strictly on the basis of merit, not reward people for political favors. And that's a commitment that I've made on my word of honor. I'm not going to break it."

And then he nominated, among his first ambassadorial appointments, Mr. Philip H. Alston, Jr., a lawyer from Atlanta, Georgia, to be ambassador to Australia; Governor Patrick J. Lucey of Wisconsin to be ambassador to Mexico; Ms. Anne Cox Chambers, chairman of the board of Atlanta Newspapers and of the Cox Broadcasting System, to be ambassador to Belgium; and Governor John C. West of South Carolina to be ambassador to Saudi Arabia. He also appointed to Switzerland a building contractor named Marvin Warner whose only plausible claim to the position was the fact that he had made contributions to the election campaigns of both senators from Ohio plus the then chairman of the Senate Foreign Relations Committee, Senator Sparkman. ("I don't think there will be any question," one senator is supposed to have said about the impending hearings on Marvin Warner; "there better not be." Washington Post, June 7, 1977).

As indicated earlier, some of the Carter appointments were distinguished. In addition to Mansfield, Brewster and Goheen who have already been mentioned, the appointment of Thomas J. Watson, Jr., former president of IBM, to Moscow is interesting because of the reasoning that seems to have underlain it—that in an era of détente, the development of business relations by a businessman-ambassador would be especially felicitous. While there is no question that Mr. Watson is a person of substance, the reasoning behind his appointment overlooked these facts: (1) that even if détente had not run up against the invasion of Afghanistan, the major American concern in relations with the Soviet Union is survival, not money; (2) that sure judgment in the prediction of future Soviet behavior is among the most important contributions of an American ambassador in Moscow; and (3) that the promotion of business, as shown by the Japanese, French and German record, is more effectively entrusted to experienced diplomats than to businessmen. The business of businessmen is business; the business of diplomats is to influence foreign governments; and the "big ticket" items in business can be most effectively promoted by people with intimate knowledge of the workings of foreign governments and who are willing to use political skill to support the work of businessmen. Still, it is certainly true that a businessman-ambassador would probably have an especially high motivation to be of assistance in promoting business.

A novelty of the Carter administration was the creation of a Presidential Advisory Board on Ambassadorial Appointments, chaired first by Governor Reubin O. Askew and more recently by Clark Clifford. The board did not comment on all nominations since the president and the secretary of state decided which countries should go to career officers and which should involve multiple candidacies from non-career persons among whom the board is to choose one for recommendation to the White House. There is no doubt that the idea of the board had potential—it enabled, for one, the president to tell an insistent candidate that he personally would have loved to nominate him but that the board, to his intense regret, had chosen someone else. Also, the board itself, theoretically, could delve into the background and qualifications of nom-

inees and advise the president to desist from sending their names to Capitol Hill (and in some cases this was apparently done). But the composition of the board, which was heavily weighted in favor of politicians, representatives of minorities, and others who knew little or nothing about diplomacy, was disappointing from the beginning, notwithstanding some excellent and well-qualified members in its ranks. The board approved, even recommended, some of the obviously unqualified appointees of the Carter administration such as the Mr. Warner mentioned above, Milton A. Wolf (a construction company president) to Vienna, and the unfortunate Richard Kneip who became ambassador to Singapore and there astounded his staff by such questions as "You mean, there has been a war between India and Pakistan?" and "Did you say there are two separate Koreas? How come?"

WHAT IS TO BE DONE?

If we don't want the best, then nothing need be done. But if we do, we—the readers of this article and others who are concerned and wish to raise a voice in favor of upgrading the quality of ambassadorial appointments—can take into account some of the following considerations:

1. Give Weight to Experience. Career officers do not have a monopoly on qualifications for ambassadorial positions. However, experience in several Foreign Service posts and positions is more likely to point to such qualifications than experience in other work: Among ten candidates from the career service, the odds are that two or three may turn out to be weak or perhaps even misfits. Among ten non-career candidates, the odds are that the number will be considerably greater, especially if they do not come from fields closely related to foreign affairs. Experience counts—therefore, to the extent that potentially outstanding chiefs of mission can be identified early in their careers, to the extent that they can count on having more than one ambassadorship, the odds on developing outstanding ambassadors improve. Bringing along the most brilliant and competent officers to responsible positions in younger years—which is increasingly happening at present—gives the best promise of good results. The same is true, of course, of non-career ambassadors. Only the most outstanding candidates should be considered. Even then, if Thomas J. Watson, Jr., for instance, could have had prior apprenticeships as ambassador to Upper Volta and Bulgaria, he no doubt would have functioned considerably better in his position in Moscow.

2. Consider Character. Nicolson's dictum about character being the most important ingredient of a successful ambassador is still true. Yes, he also has to be an operator, but there is a distinction between skill in the organization game and cutting corners or buying favors or otherwise engaging in sharp practice. Moral courage is the first requirement of a good ambassador. It is found among both career and non-career candidates—but not as often as one might think. The idea that career people are too often "bucking for promotion" (or incentive pay) whereas non-career ambassadors are past such considerations is poppycock. Non-career ambassadors are sometimes more concerned about their "image" than they should be, and too often want so desperately to "succeed" that they violate Talleyrand's warning against exececssive zeal. Case studies of ambassadorial failures on the job (career as well as non-career) would bring this out with telling conclusiveness.

3. Beware of Vanity. It is the greatest enemy of a good diplomat—and of a bad one, too. Even superb professionals have fallen victim to it, letting a personal slight, for instance, color their judgment of the person who administered it; or failing to report (or reporting inaccurately) developments which cast an unfavorable light on themselves. But vanity is found less often in a disciplined career service than among non-career people some of whom become light-headed when addressed as "excellency" and begin to suspect that they are omniscient. A career officer has learned the benefits of staff work and is more likely to listen to professional advice than a non-career appointee. Some of the most horrible gaffes committed by neophyte ambassadors occurred because of their unwillingness to use their staffs. I would be less than candid, however, if I failed to note that there have also been career officers in ambassadorial positions who lost their moorings, displayed symptoms of hypomania, and began to think of themselves as a combination of Jesus Christ, Talleyrand, and Napoleon. Such men—regardless whether career or non-career—must be swiftly brought down to earth, and home.

4. Beware of Ethnic Appointments. It is a fallacy to believe that appointing an American of Polish extraction (such as former Postmaster General John A. Gronouski) to Poland will flatter the Poles; or that appointing someone of Italian descent (say, John A. Volpe) to Italy will flatter the Italians; or that appointing a black will flatter a black African country; or that appointing an American Hispanic (say, Julian Nava) as ambassador to Mexico will flatter the Mexicans. Whether they are flattered will depend on the qualifications of the appointee (quite aside from the question whether flattery is a good reason for any diplomatic appointment). If a Gronouski turns out not to speak Polish and a Nava turns out to know little about Latin American politics, the host country will be adversely impressed. The same goes for appointing a general to represent the United States in a country run either by a military dictator or by a political leader with a military background. When President Kennedy sent General James M. Gavin as ambassador to France, for instance, he no doubt thought that de Gaulle, being a general, would appreciate having an American general to talk with—but de Gaulle did not consider himself a general. He had nothing but contempt for "mere" generals, regarding himself to be far more, namely the embodiment of La France. Charles ("Chip") Bohlen, a man who knew European history backwards and forwards, spoke French fluently, and had met most of the European movers and shakers of the last thirty years, was a much more effective representative in France. He was also a more effective ambassador to the Soviet Union than any non-professional could have been at that time. It is true, on the other hand, that a person of stature will run no risk of being overly impressed by persons of high rank; so there is merit in appointing to a major post someone who has rubbed shoulders with important people. Both career and non-career candidates can fill that requirement.

5. Money Is No Qualification. Should the possession of money (as distinguished from the payment of it) be a qualification for appointment to the large embassies where representational requirements are important? The answer is that the United States is wealthy enough to meet the legitimate expenses of ambassadors—and that it is doing so right now in most cases. The Economist a few years ago, noting that Ambassador Walter Annenberg had said that he spent $250,000 a year of his own money to live in London in the ambassadorial style he considered appropriate, and that he had contributed $1.5 million to refurbish the residence, concluded that "there is no doubt that the job in London is expensive." Writing at that time under a pseudonym, since he was still on active service, the author of the present article suggested in a letter to the editor (printed in The Economist in January, 1973) that

"None of the expensive things that Mr. Annenberg did and which you list in your article seemed essential for the functions of an ambassador, unless you regard his giving of expensive gifts and his lavish entertaining as necessary for the conduct of diplomacy with your leadership. I cannot imagine why an American ambassador needs to prove to his guests by the opulence of his table or the number of footmen that the United States is a wealthy country.

Suppose an American ambassador invited only 12 people to a dinner instead of 64—perhaps that would give him more of a chance to talk with his guests; and as for the maintenance of Winfield House I suppose that if the government had its choice between an ambassador who is an amateur but who keeps the grounds impeccably, or an experienced professional who allows them to run down a little, perhaps it would not follow your implied advice and would opt for the man of intellectual and professional substance, rather than pecuniary substance."

Meanwhile all this has been proven by the successful tenure of Arthur A. Hartman, a career officer with no private fortune, as ambassador to France. Elliot Richardson, not a career officer but also without a personal fortune, was not daunted by the financial requirements in London. Mike Mansfield, and before him Douglas MacArthur II and Edwin Reischauer, managed in Tokyo without personal reserves expended by Robert Ingersoll. Chip Bohlen in Paris was able to make out, perhaps with some discreet support from the department at a time when the House appropriations subcommittee was still especially niggardly with representation funds. In any case, the burden of proof is now on those who believe that one has to be wealthy to be ambassador in one of the world capitals. If I were given such a position and found it impossible to make ends meet, I would cheerfully cancel the Fourth of July in favor of more small luncheons and dinners—without any impairment of relations.

6. Scrap the Board. The Presidential Advisory Board on Ambassadorial Nominations, so promising at first, must be judged a failure. It lacked the qualifications to determine the qualifications of ambassadors, consisting as it did of a large majority of people who never had anything to do with diplomacy (although it did, fortunately, include a few members like Averell Harriman, Dean Rusk, Carol Laise and one or two others who know from first-hand experience what the requirements are). While I have it on good authority that the board managed to serve the president as an alibi for turning aside some "terrible" would-be nominations, enough terrible ones have been certified to discredit the entire enterprise. If or when we have an honest and courageous president it should not be necessary to have a board to protect him against weakness, cowardice, or ignorance. Staffs are supposed to do that. If a president wishes to live up to the Carter statement that he would only appoint people with "superb credentials," "strictly on the basis of merit," he will need a body of a different composition to tell him who they are.

7. Wake Up the Senate. The Senate, and especially its Foreign Relations Committee, has been derelict in not looking into the qualifications of ambassadorial nominees and into undesirable reasons, such as political favors or campaign contributions, that might be behind their nominations. The information is available, in copious detail, that would permit at least a modicum of scrutiny to take place. It is not even necessary for this purpose that the examination of candidates be in great detail. Superficial examina-

tion, as the Gluck case and the gaffes of more recent appointees amply demonstrate, would bring out the most glaring lack of qualifications in a number of candidates. This, in turn, might lead to greater circumspection on the part of the White House and the political leadership of the State Department and would make them put the brakes on the kind of scandalous nominations that have been getting by without so much as a question. As indicated, the custom of "senatorial courtesy" is a problem. One way to solve it would be for the SFRC to adopt a rule whereby any of its members who have been recipients of money from a candidate should automatically disqualify themselves from consideration of his nomination.

8. Support the Chief. Finally, there is a question of the loyalty owed by the deputy chief of mission and the section chiefs and all the rest of an embassy's personnel to the ambassador who is, after all, the personal representative of the president and is entrusted with large responsibilities. This question has been raised in connection, for instance, with the publication by the Foreign Service Journal of a "whistle-blowing" article about the gaucheries, gaffes, and general incompetencies of an egregiously unsuited political appointee. The author of that article had been the ambassador's deputy. Is it right for such a man (or woman), whose very proximity to the chief of mission involves the sharing of knowledge in a position of personal trust, to lift the veil and reveal the feet of clay? In my opinion the answer is no, it is not fair, it is not right, it is an extremity to which one should resort only in desperate circumstances. Presidentially appointed chiefs of mission, even when they are incompetent, should be able to count on the loyal support and discretion of all their subordinates, and especially their DCM—unless it becomes necessary to tell the truth about their incompetence. As Winston Churchill wrote in connection with his appointment to become prime minister early in World War II:

The loyalties which centre upon number one are enormous. If he trips, he must be sustained. If he makes mistakes, they must be covered. If he sleeps, he must not be wantonly disturbed. If he is no good, he must be pole-axed. But this last extreme process cannot be carried out every day; and certainly not in the days just after he has been chosen.

In other words, loyalty to the chief of mission cannot be at the expense of the larger loyalty to the country and to those who govern it. Lest there be any misunderstanding let me make clear that "lifting the veil" on the chief has nothing to do with "lifting the veil" on policies with which one disagrees. An ambassador, or any of his subordinates, who believes such policies to be misguided has a duty to bring his views to the attention of Washington—and there are channels for this. But for the dialogue between Washington and the field to be constructive it must be confidential. "Whistleblowing" or policy criticism in a classified communication to the department of state is one thing, public disagreement with presidentially approved policy is quite another. Those who wish to disagree in public should resign and not expect to be protected by their career status against the consequences of indiscipline. Nothing that has been said about an officer's overriding responsibility to the country should be misinterpreted as recommending license to carry policy disagreements—whether within an embassy or between an embassy and Washington—outside the official family. The president must have continuing good grounds to count on the loyalty of every one of his appointees, and of course every Foreign Service officer is a presidential appointee. The president must also be able to count on their discretion—in not, for instance, rushing into print as soon as someone has left his post and "returned to private life."

Presidential recognition of the absolute loyalty of the Service to any administration—because it is nonpolitical—will also increase presidential confidence in career officers as desirable appointees to man the country's first line of defense, our diplomatic missions abroad.●

SUPPORT FOR THE REAGAN ECONOMIC PROGRAM

● Mr. DOLE. Mr. President, Congress is now dealing with the specific proposals that make up President Reagan's economic program, and it is clear that there will be controversy over many of the details, both with respect to proposed budget revisions and with respect to the administration tax program. But it is increasingly apparent that an overwhelming majority of the American people believe that the Reagan program takes us in the right direction. Our people do want spending brought under control and they do want lower tax rates, and it is up to Congress to follow through.

A fine example of the support the President is receiving is the recent endorsement of this economic program by the Associated General Contractors of America. On March 2, the Associated General Contractors wrote to President Reagan and to each Member of Congress to express their support for the entire administration package of spending and tax reductions. The AGC concluded that the proposed spending cuts would reduce Federal funds for construction by at least $18.2 billion. Nevertheless, the contractors felt that the entire package of spending and tax cuts would so benefit the economy, that every industry, including construction, would be better off if the package is adopted. This is striking evidence that the public is more than willing to accept reductions in Federal benefits provided that those reductions are fairly shared and designed to restore economic growth without inflation. Less Government interference in economic decisionmaking is in everyone's interest.

Mr. President, the Reagan administration has presented us with a balanced, evenhanded program for recovery. As Members of Congress consider possible modifications to the Reagan program, they should keep in mind the need to maintain that evenhanded approach. It is not our job to favor a particular group or sector, but to choose the policies that will do the most to aid the economy as a whole. President Reagan has pointed the direction, and the American people are showing that they want to follow his lead.

Mr. President, I ask that the letter to President Reagan by Mr. Ival R. Cianchette, president of the Association of General Contractors of America, be printed in the RECORD.

The letter follows:

THE ASSOCIATED GENERAL CONTRACTORS OF AMERICA,
Washington, D.C., March 2, 1981.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The Associated General Contractors of America, comprised of more than 30,000 firms including 8,500 of the nation's leading general contracting firms, pledges its complete support of your entire economic package of spending and tax cuts.

This support is predicated on the belief that the tax incentives you have proposed, combined with the actions you have already taken and propose to lift regulatory burdens from all industry, will benefit the entire U.S. economy and will justify the sacrifices involved in your plans to reduce federal spending.

We estimate that your proposals for spending cuts involve a minimum of $18.2 billion in reduced federal expenditures for construction and we accept this provided that your entire economic package is adopted by Congress.

Accordingly, we are writing each U.S. Representative and each U.S. Senator endorsing your entire economic package of spending and tax cuts and requesting prompt bipartisan approval of your entire economic package.

Sincerely,

IVAL R. CIANCHETTE,
President.

MESSAGE TO ALL MEMBERS OF CONGRESS

On behalf of the Associated General Contractors of America, and with the unanimous approval of the Executive Committee of the Board of Directors, I have today pledged complete support to President Reagan for his entire economic package of spending and tax cuts.

This support is predicated on the belief that the tax incentives proposed, combined with actions already taken by President Reagan and actions proposed to lift regulatory burdens from all industry, will benefit the entire U.S. economy and justify the sacrifices involved in the President's plans to reduce federal spendng.

President Reagan has been advised by me that his proposed spending cuts involve a minimum of $18.2 billion in reduced federal expenditures for construction over the next five years and that our willingness to accept such cuts is predicated on adoption by Congress of President Reagan's entire economic package of tax cuts and spending cuts.

Our endorsement is prompted by concern that some objections to President Reagan's proposals have the potential to eliminate needed tax incentives, retard regulatory reform and further damage our economy by refusing to accept that a reduction in federal expenditures has to be shared equally by all sectors in our economy.

This mailgram is being sent to all AGC National Directors, Chapter Presidents and Managers. I urge each of you to convey your support of President Reagan's proposals to him at The White House. It is important that the construction industry again demonstrate the capability of giving priority to the national interest as more important than our own special interest.

I re-emphasize that our support of President Reagan's program is support based on adoption of his spending cuts and tax cuts in their entirety.

IVAL R. CIANCHETTE,
President, AGC of America.●

FOUR YEARS AFTER THE ARREST OF SHCHARANSKY

● Mr. SPECTER. Mr. President, this weekend, another tragic anniversary was celebrated by Anatoly Shcharansky and his friends and supporters throughout the world. Sunday, March 15, marked the fourth year of his arrest by the Soviet secret police and the subsequent international outcry that followed his trial and sentencing for treason and anti-Soviet agitation and propaganda.

These 4 years have been extraordinarily difficult ones for Anatoly, his wife, Avital, and his mother and brother still in the Soviet Union. Before being tried, Shcharansky had been held incommunicado, unable to see family or friends. His health has rapidly deteriorated to the point where he has trouble reading for more than a few minutes because of painful headaches. Recent indications from Shcharansky and his mother point to his likely placement in solitary confinement—a prison within a prison. All meetings with family members have been canceled, correspondence from family and friends has been severely reduced and restricted. At a time when Shcharansky was to have ended his prison term and begun his more lenient 10-year term in labor camp, he is being subjected to even harsher conditions of confinement.

Mr. President, it is our moral obligation to insure that Soviet predictions are not realized—predictions that Shcharansky would soon be forgotten by Western public opinion and officialdom. It has been entirely too long a period since Shcharansky was first arrested until his continuing imprisonment 4 years later—all the more reason to remind ourselves of his plight and his unending ordeal.

As the Reagan administration conducts its thorough review of the future of United States-Soviet relations, I have no doubt that Soviet actions toward its own citizens, in violation of international law, will affect that review as much as will Soviet actions toward citizens of other nations, in violation of international law.

Shcharansky's name is no longer on the front page of Western newspapers, but his fate has not been forgotten. It is through the concerted efforts of all who remember that this year will be the last year that we celebrate Shcharansky's arrest. It is time to celebrate the realization of Shcharansky's dream to spend "next year in Jerusalem." ●

STUDENT ASSISTANCE

● Mr. PELL. Mr. President, on March 11, William G. Bowen, president of Princeton University, delivered a remarkably thoughtful address to the Princeton Club of Washington on the budget cuts in student assistance. President Bowen stressed the difference between basic and applied research and emphasized the vital importance of having strong participation in basic research if we are to continue our vitality as a nation.

Mr. President, I ask that the text of President Bowen's' address be printed in the RECORD.

The address follows:

REMARKS AT PRINCETON CLUB OF WASHINGTON

(By William G. Bowen, President, Princeton University)

I am very pleased to be here today and to have this opportunity to join with so many of our alumni in honoring those Princetonians who serve this nation so well as members of the Congress.

These are interesting—challenging—times for all of us, and certainly for those with direct and immediate responsibility for determining national priorities.

We meet today—through no prior arrangement on my part, needless to say—in the immediate aftermath of an announcement of the most sweeping budget-cutting intentions ever placed before the Congress. Some of the issues raised are so important for higher education, for the purposes Princeton serves, that I hope you will allow me to comment on two areas of particular concern: Research and student aid. It has not been my practice to use these occasions to discuss pending legislative issues, but I depart from past practice today in the hope of encouraging all of us to think together about longer-term objectives held in common by universities, the government, and the society.

Reducing the rate of inflation and improving the overall performance of the economy are plainly important goals for the universities as well as for the society at large. Indeed, given their "handicraft" nature (with the emphasis at Princeton, for example, on the senior thesis, precepts, and supervised independent work at graduate and undergraduate levels), universities have been especially vulnerable to the inflationary pressures of recent years; thus, they have a direct institutional stake in the success of efforts to reduce the rate at which prices rise.

Of course, there will continue to be lively debate among economists as to the right set of fiscal and monetary policies. (A distinguished economist, now himself out of favor, once said: "Only one man in a thousand understands the currency question, and I meet him every day.") There is, nonetheless, widespread agreement that reductions in Federal expenditures can help, and if a major effort is to be made to reduce spending, it seems clear to me that there should be no sacred cows: programs affecting every sector, including higher education, should be scrutinized carefully. It will not do to say: "Leave us alone; cut everyone but us."

As many of you know, we have worked hard, and successfully, at Princeton to balance our own budget, and I know from our experience both how painful it is to achieve reductions and how important it is to be prepared to cut selectively.

In Washington, as at Princeton, it is necessary to make the most careful choices in deciding which programs to terminate or cut back. It seems to me essential that immediate pressures for instant savings not lead inadvertently to the sacrifice of long-term goals critical to both the material and spiritual health of our society.

In the area of research, for example, it is important to understand the integral role that science and technology play in increasing productivity and the extent to which so many questions facing our society have scientific dimensions. For these reasons, among others, there is much to be said for having an eminently qualified science adviser in the White House. We should also remind ourselves of the contributions that can be made by scholars and advanced students in the humanities, the arts, and the social sciences. While economic circumstances may well require reductions in federal spending in these areas (and I believe that there are savings to be achieved), the ways in which this is done will matter greatly.

Within science and engineering, and in the spirit of being clear about priorities and being willing to make choices, let me stress the importance of distinguishing between basic and applied research—and then recognizing the more fundamental role of government in supporting the former. I believe it makes good sense to rely heavily on private companies to finance research at the applied end of the spectrum. In my view, lagging productivity has been—is—a major part of this country's economy problem; accordingly, new ideas and the capital expenditures needed to translate ideas in improved living standards should be encouraged within the private sector.

Of course, applied research grows from the seeds planted by basic research. And individual companies and industries, however generously motivated, cannot be expected to pay fully for research which by its nature can lead in unpredictable directions and which, if successful, almost certainly will bestow benefits so widely that no one firm or group of firms can capture them entirely for private uses. This simple rationale—the presence of what the economist calls "spill-over benefits"—means that profit-making enterprises cannot be expected to replace government as sources of support for most research at the "basic" end of the spectrum. Our future welfare depends critically on the ever-changing base of knowledge created, as it were, for its own sake, and here government must continue to be an important partner in the national effort.

Unfortunately, the environment for basic research in universities has been weakened by inadequate support for, among other things, facilities and equipment. Thus, I am particularly distressed by one of the smallest "savings" included in the most recent budget proposals—namely deferral of a $75 million program within the National Science Foundation for the upgrading of major research laboratories. These laboratories have fallen far behind the state-of-the-art, and one recent study showed that equipment in university laboratories is now, on average, twice as old as equipment in industrial laboratories. I do not believe that failure to spend relatively modest amounts of money here is a real "saving" at all: on the contrary, I think the result will be further damage to research and training efforts vital to long-term increases in productivity.

One of the great benefits of conducting research in the university environment is that advanced students can simultaneously receive training and contribute their own fresh perspectives to the research enterprise. For almost 30 years, a major expression of this nation's commitment to future scientific leadership has been the merit-based, portable fellowship program of the National Science Foundation that has attracted—and then supported—some of the best young scientific talent in the world. This does not seem to me to be the place, among all places within the educational sector, in which it is wise to seek dramatic economies; thus, I hope the Congress will think hard about the implications of terminating this most successful program before acting on the request of the Administration that no new NSF Fellowships be awarded.

A less obvious, but perhaps significant, ob-

servation is that the community of basic research scholars constitutes a vital national resource for purposes of defense, as the experience of World War II dramatized so vividly. With the memory of radar and other war-time contributions fresh in mind, much support of basic research in the post-war period was clearly meant to conserve and strengthen this national resource. In current discussions of defense, these considerations seem to have faded somewhat; they should not. Nor can we afford, as a nation, to neglect teaching and scholarship in such fields as Near Eastern and East Asian studies.

Much as the United States has benefited historically from an educational system unmatched anywhere, our future will depend even more on creativity and trained intelligence. The field of communications, electronics, and computers offers one particularly dramatic illustration of this point, as Dr. William O. Baker, '39, a Trustee of Princeton and former President of Bell Laboratories, testified before a Congressional committee:

"Talent is the basis for our whole national treasure here. Although materials are vital for the structure of some of the machines, in general the work is characterized by its complete dependence on human talent. There are no oil wells, there are no grainfields, and there are no mineral resources in this field. It is a creation of human imagination and human vision."

If basic research represents a long-term investment in new ideas, student aid is a long-term investment in the human capital of the country—in the individuals who in their turn will provide the leadership, and the citizenship, on which the country must always depend. Current discussion focuses, understandably, on specific program elements. Each component of financial aid should be seen, however, as part of an integrated whole that has been built carefully, with bi-partisan support in successive administrations and successive Congresses, to achieve what are truly national objectives. As we seek to address weaknesses in elements of this financial aid structure, to set sharper priorities, and to correct abuses, we must remember why these programs of student assistance came into being in the first place.

The present combination of Pell Grants (named appropriately in honor of our distinguished alumnus who has done so much to build these programs), Supplementary Grants (which aid needy students at more expensive institutions), work-study programs, federal loan programs, State scholarship programs, and substantial programs of financial aid provided by individual colleges and universities, has been designed to assist students at various income levels to obtain access to educational opportunities that otherwise would be beyond their reach financially—to make it feasible for students from all economic backgrounds to attend the full array of private and public colleges and universities, including the more expensive ones.

One result has been the achievement of a diversity of student backgrounds and perspectives that has been extremely valuable educationally as well as consistent with basic principles of equal opportunity—principles that must be given expression within the educational sector if they are to have meaning elsewhere in American society.

It would be short-sighted in the extreme to waste our most precious resources by in effect denying educational opportunity to talented young people who ask only the chance to develop their full potential. It would be contrary to the national interest to begin re-segregating major universities on the basis of financial means. And it would be very unwise, in my judgment, to disturb a rather careful balance that has been created between the complementary needs of the private and public sectors—especially as we move through a 15-year period when demographic trends are almost certain to create serious new stresses within all of higher education.

Fortunately, there seems to be broad agreement on these general propositions. I hope we shall have the wisdom—and the will—to translate them into sound legislative and administration decisions.

With regard to specific programs, let me begin by noting one area in which I believe savings can be achieved, consistent with basic principles of equity. Consideration should be given, in my view, to elimination of the educational benefits provided to college students under Social Security. These benefits are provided irrespective of financial need, and thus in some cases are provided to students otherwise able to meet their college costs. In many other cases, of course, these benefits are meeting real needs, but those needs can continue to be met through reaffirmation and extension of the government's commitment to need-based grant, loan, and work-study programs.

On my own scale of priorities, some of the changes in the Pell Grants suggested thus far, such as requiring a self-help contribution and looking afresh at the formula for determining the parental contribution, also seem less damaging to long-term objectives than other kinds of cut-backs one might envision in this extremely valuable program. It should be recognized, however, that if the full range of proposals were adopted, some 600,000 currently eligible students could be removed from the program next year. Of even more immediate concern is the fact that a substantial supplemental appropriation will be necessary this year if the maximum grant under this program is not to decline precipitously from its intended level of $1,800 to something in the range of $1,200.

The loan programs, and the changes proposed in them, raise more complex questions that cannot be discussed in full detail in the time we have together today. But I do want to suggest some priorities and principles for consideration.

The Guaranteed Student Loan program (GSL) is very important. If we are to expect each student to contribute to his or her own educational costs, it is essential that well conceived and well administered loan programs be available.

There is a compelling reason for governmental involvement in this particular type of loan program, in contrast with many other situations in which the government guarantees loans for commodities or business purposes of one kind or another. Put simply, when students seek loans for educational purposes, they have no collateral to offer; it is their human capital that is being augmented, but we do not, for excellent reasons, allow individuals to sell themselves or enter indentured servant status. This basic characteristic, so fundamental that it is often overlooked, explains why private capital markets cannot be expected to provide the requisite loan funds for students.

It does seem justifiable, however, to have different terms for different groups of borrowers. On the one hand, it seems proper—indeed important, from the standpoint of assisting needy students to borrow—that students with demonstrated need who simply must incur debt to meet educational costs not be asked to pay interest or accumulate interest obligations while in school. (To illustrate the importance of this provision, without the in-school subsidy the total cost of a Princeton undergraduate education would be increased by some $2,700 for a needy student borrowing under the GSL program, and this would be on top of an already substantial loan burden and an obligation to contribute both term-time and summer earnings. The impact on graduate students would be even greater.)

But considerable savings could be achieved if the in-school subsidy were restricted to need and eliminated for others who borrow to solve problems of liquidity or to extend payments into their working life-times. This latter group of students could be called upon to assume responsibility for interest charges incurred while in college. And it may well be right to allow interest charges for this group of borrowers, as well as for parents, to be set at some reasonable approximation of the market rate. I agree that it is hard to justify allowing individuals with adequate incomes to borrow at artificially low rates—especially when money markets make it possible for some to re-invest the loan proceeds so as to profit personally. There is no way to know how many students are in fact abusing the current program; certainly in our experience most students borrow reluctantly and for entirely legitimate purposes. In any event, allowing interest rates for borrowers above the strictly defined need level to reflect the cost of money more accurately would remove the possibility of abuse and also reduce considerably the cost of the program.

It is essential, however, that *access* to capital, under nonsubsidized terms, be maintained for students and parents (including those who have incomes well above normal notions of "need") who simply must borrow if they are to spread the costs of educational investments over reasonable periods of time. I know students at Princeton whose families simply could not meet expected family contributions without access to Guaranteed Student Loan programs, including some who have one or two brothers or sisters simultaneously going to college. It is difficult for me to believe that we want to discourage this form of investment.

I have been asked repeatedly if the Princeton student body will not become polarized between the very rich and those whose incomes are low enough to qualify for financial aid. So far, this has not happened. Students from families at all income levels are well represented at Princeton, but this has been possible—and will continue to be possible—only through access to loan programs that allow middle income families to invest in the education of their children—and that allow those students whose parents cannot or will not help them (for whatever reasons) to invest in themselves.

Why do those of us at Princeton care so much about all of this? Because of our conviction that the education we offer, and the research done by our faculty, make a difference—a most significant difference—to the life of this country. As Marvin Bressler, Professor of Sociology at Princeton has observed, Princeton has always believed that education is both a private treasure and a public resource. This year, eight seniors at Princeton won either a Rhodes or a Marshall Scholarship to study in England—out of a total of only 62 such awards nationwide. All eight have been receiving scholarships or financial aid in some form at Princeton—and I have no doubt that all eight will repay those investments many times over.

It is up to all of us, both individually and through our government, to see that future generations of young people have the same opportunities. And it is up to us, too, to see that the universities in this country, including Princeton, continue to be the home of ideas—that Val Fitch, in our Physics Department, who won the Nobel Prize this year, will be but one more in a continuing stream of faculty whose insights and vision deepen our understanding of the world and our place within it.

To the many practical arguments for the support of research and education, let me add, in closing, what I believe to be a still more fundamental proposition. I shall use

the words of this year's winner of the Woodrow Wilson Prize, Lewis Thomas '33, Chancellor of the Memorial Sloan-Kettering Cancer Center in New York. Dr. Thomas observed:

". . . As long as we are bewildered by the mystery of ourselves, and confused by the strangeness of our uncomfortable connection to all the rest of life, and dumb-founded by the inscrutability of our own minds, we cannot be said to be healthy animals in today's world.

"We need to know more . . . not for [the sake of] technology, not for leisure, not even for health or longevity, but for the hope of wisdom which our kind of culture must acquire for its survival."

It is this conception of the role of learning that speaks to many of us at deeper levels. For me, at least, it is compelling.●

GROWING MUNICIPAL LIABILITIES AND SECTION 1983

● Mr. HATCH. Mr. President, our cities and local governments, already trying to tread water in an ocean of financial obstacles, were recently dealt new blows by the Supreme Court. In its decisions in Thiboutot and Owen, the Court greatly expanded municipal liability under section 1983 of the Civil Rights Act.

The National Institute of Municipal Law Enforcement Officers is in the process of conducting a survey of member governments to determine the amount of claims pending against them under section 1983. To date, their survey reveals claims against small municipalities in excess of $3 billion, with nearly two-thirds of the survey uncompleted. While recognizing that the survey only represents potential liabilities, the figures are still impressive. The city of Sparks, Nev., for example, a community of 32,000 individuals and a budget of $11 million, has pending section 1983 claims of $15 million. Even a small number of adverse judgments could imperil municipal solvency in this kind of circumstance.

Mr. President, I ask that the institute's survey be printed in the RECORD. I believe that it argues very strongly in behalf of my recently introduced bills, S. 584 and S. 585.

The survey follows:

Partial results of NIMLO survey on current impact of section 1983 claims (March 1, 1981)

(Addendum to supplement to remarks of Aaron A. Wilson)

City and dollar amount of section 1983 claims now pending:

City	Amount
Jackson, Miss	$600,000
Buckhannon, W. Va	250,000
Hutchinson, Kans	1,450,000
Brookfield, Wis	180,000
Beatrice, Nebr	20,000
Peoria, Ill	8,000
Geary, Okla	115,000
Springfield, Mo	2,501,000
Algona, Iowa	2,000,000
Ames, Iowa	1,550,000
Wilson, N.C	7,560,323

INTELLIGENCE ACTIVITIES

● Mr. BIDEN. Mr. President, in the first few months after a new administration has taken office, it is often difficult to tell the ripples from the waves as the new President and his advisers review old policies and initiate new ones. The result is that the Congress, the press and the public may either overreact or underreact to what the new administration is doing or proposing to do.

It appears that we have been undergoing just such a process over the past 2 weeks regarding the Reagan administration's view of the Executive order governing the activities, especially the domestic activities, of the intelligence community.

It began with reports that representatives of the intelligence community had prepared proposals for revising the Executive order to "unleash" the intelligence community from provisions that now restrain spying on American citizens in the United States.

Specifically, so the reports went, the revised Executive order would drop the rule now requiring investigations of citizens to employ the least intrusive methods possible, eliminate the requirement that there be some indication that an American to be investigated is engaged in illegal activities, reduce the authority of the Attorney General to appraise intelligence activities and supervise the implementation of the Executive order, and relieve the intelligence community of its obligation to report to the Attorney General any illegal acts involving intelligence considerations for his determination as to criminal prosecution.

In short, Mr. President, these revisions, if adopted, would largely overturn the recommendations of the post-Watergate Rockefeller Commission appointed by President Ford to eliminate abuses of the rights of Americans at the hands of the intelligence community, as well as attempts such as occurred under the Nixon administration to use the intelligence community for partisan political purposes.

Predictably, there was a prompt and overwhelmingly negative reaction to these reported proposals on the part of Members of Congress, citizens, and organizations concerned with civil liberties. And there were some murmurs from within the Reagan administration that such a response amounted to an overreaction.

It now appears, however, Mr. President, that the negative reaction to those proposals is shared by key officers at the highest levels within the Reagan administration, including the President himself. If such is the case, it is very good news, indeed.

If there was one danger the learned and thoughtful men who devised our Constitution were determined above all else to avoid in the new Nation they were creating, it was the danger of a lawless government. Their profound appreciation of history and their own bitter experience had taught them that a government unchecked by firm and carefully calculated restraints would become—indeed, they believed inevitably would become—the worst oppressor of its own people.

Out of that determination, Mr. President, grew not only the Bill of Rights specifying the immunities of Americans from the actions of their Government, but also the system of checks and balances that lies at the very heart of our Government itself.

As an editorial in the March 12 New York Times reminded us, the Constitution today is not merely a quaint 18th-century document reflecting the archaic anxieties of our forefathers. If we remain faithful to it, it remains an extraordinarily contemporary impediment to the excesses of government.

In evaluating the proposals surfacing from within the Reagan administration, the Times recalled the commitments of both President Ford and President Carter "to maintain effective intelligence without sacrificing American freedoms" and pointed out that under the Nixon administration both the excesses of "Operation Chaos" and the illegalities of the Huston plan were justified—as their anonymous authors justify these more recent proposals—as a response to terrorism.

But, as the Wilmington News-Journal in my home State of Delaware said in a lead editorial last weekend, "the subversion of (the Nixon) era was not of the Nation's internal security but of the CIA itself," and the News-Journal also reminded us that the 1947 National Security Act which established the Central Intelligence Agency says the CIA "shall have no police, subpena, law enforcement powers, or internal security functions."

Mr. President, if we are to counter the threats of our adversaries and survive as a free nation, we must have effective and reliable intelligence, and much of what our intelligence agencies do must be done secretly. Little as Americans have traditionally liked secrecy in their Government, few Americans today would quarrel with that need, as they would not dispute the need at times for intelligence-gathering and counterintelligence activities within the United States itself. But there is no need to violate the law and the liberties guaranteed Americans to accomplish those necessary ends.

Two Presidents and a Presidential commission have agreed that no such license need be given to maintain good foreign and domestic intelligence. The commission headed by Vice President Rockefeller, in fact, concluded unanimously that "Presidents should refrain from directing the CIA to perform what are essentially internal security tasks. The CIA should resist any efforts, whatever their origin, to involve it again in such improper activities."

One of the signatories to that unanimous recommendation was Ronald Reagan, and it is gratifying to read in a March 18 New York Times front page story that, according to Presidential Counselor Edwin Meese 3d, the Reagan White House "is absolutely opposed to the CIA getting into domestic spying." An Associated Press dispatch the same day quoted Attorney General William French Smith as saying that "There is no question the Attorney General is going to play an important role." Even earlier, Deputy CIA Director Bobby Ray Inman, perhaps the most widely trusted man in the whole intelligence community today, had indicated that the proposed revisions would themselves undergo heavy revision before attaining any "official" status within the Reagan administration.

Mr. President, the Wilmington News-Journal concluded its comments by saying, "The lesson of the 1970's must not be forgotten * * * Any effort by citizens and legislators to prevent its recurrence is neither needlessly alarmist nor premature." The recent direction taken in the controversy over these proposals seems to confirm that view.

But, as the New York Times argued, the very consideration of such proposals, at any level within the Reagan administration, demonstrates the need now, more than ever, for Congress to remain alert until the issue has been finally resolved. Despite the assurances now emanating from the Reagan administration, significant ambiguities remain to be clarified in whatever document is finally made officially public.

This controversy, Mr. President, points up once again the defect in leaving the rulemaking for intelligence activities solely in the hands of any President, whose best intentions may be heavily influenced by executive responsibilities for the direct management of the intelligence community. The two Intelligence Committees of the Congress have proved, even by the admission of the present Director of Central Intelligence, that they can exercise legislative oversight of intelligence activities without compromising them. Congress has successfully met that responsibility, but another remains before us.

The wisdom of the Founding Fathers, the recent all-too-well-documented abuses of the intelligence process, and the proven competence of the Intelligence Committees all argue forcefully that the time has come for Congress to meet its responsibility for determining legislatively how domestic intelligence and counterintelligence activities are to be conducted effectively without putting hard-won American liberties at risk.

Mr. President, I ask that the New York Tims editorial, "Son of Operation Chaos," and the Wilmington News Journal editorial, "CIA Must Adhere to Writ," be printed in the RECORD.

The articles follow:

CIA MUST ADHERE TO WRIT

The Central Intelligence Agency, according to the 1947 National Security Act, "shall have no police, subpoena, law enforcement powers, or internal security functions." The CIA's record in the 1970s included calculated White House-inspired violations of that charter.

CIA operatives broke into the office of Daniel Ellsberg's psychiatrist during the Pentagon Papers controversy. A CIA team

burglarized Democratic National Headquarters and precipitated the national political upheaval that has since come to be known simply as Watergate.

Some of the most painful knowledge to come out of that era was the documented exploitation that compromised the integrity of both the CIA and the Federal Bureau of Investigation. Both engaged in covert activities for partisan political purposes that neither was intended to serve.

The necessary secrecy which both require if they are to operate effectively makes it difficult to monitor their compliance with restrictions in their charters. Nevertheless, severe restrictions were placed on the activities of both after the revelations of the 70s and the CIA was forbidden to engage in domestic surveillance, surreptitious entry and other covert operations more properly the function of the FBI.

Adm. Bobby Ray Inman, deputy director of the CIA, acknowledges that the Reagan administration is now considering an executive order restoring such authority to the CIA. Adm. Inman insists that all this is still under discussion but he is clearly not opposed to the idea.

He made it clear that he believes premature revelation of the discussions was prompted by some government bureaucrats in charge of supervising intelligence operations to prevent abuses. Adm. Inman characterized them as "people who are worried about the impact on their current status or jobs."

That might indeed be the case. But it is also very possible that the concern of such persons might be a genuine fear that President Reagan, in his zeal to combat terrorism and foreign espionage, might re-establish the conditions that allowed such cynical abuse of the CIA's mission and its agents.

The lesson of the 1970s must not be forgotten. The subversion of that era was not of the nation's internal security but of the CIA itself. Any effort by citizens and legislators to prevent its recurrence is neither needlessly alarmist nor premature.

SON OF OPERATION CHAOS

In the name of anti-terrorism, some people in the Reagan Administration are pushing a proposal to put the Central Intelligence Agency back into the business of spying on Americans. In the name of decency, the President should shoot it down.

Only that would reaffirm the commitments, made by both Presidents Ford and Carter, to maintaining effective intelligence without sacrificing American freedoms.

The circulating proposal would revive the time, not long past, when the C.I.A. thought nothing of opening the mail of innocent citizens, illegally searching homes and infiltrating political organizations. When Presidents finally cracked down on those abuses it cost the nation nothing in security.

Yet the agency, responding to a Reagan White House call for ideas to combat terrorism, proffered a new executive order that would clearly bend the Constitution.

There is a dismaying callousness implied here. Do those promoting the idea think the nation has already forgotten the Huston plan that figured so prominently in the Nixon impeachment proceedings? Do they think people do not remember Operation Chaos, in which the C.I.A. collected files on 13,000 people and indexed 300,000 names in a fruitless effort to link domestic dissenters with foreign espionage?

Cleaning up after Chaos required a Presidential commission, headed by former Vice President Nelson Rockefeller, which said the C.I.A. had far exceeded its legitimate and lawful function. One commission member (identified by it as a political commentator and former California Governor) was named Ronald Reagan, and he joined in this unanimous recommendation:

"Presidents should refrain from directing the C.I.A. to perform what are essentially internal security tasks. The C.I.A. should resist any efforts, whatever their origin, to involve it again in such improper activities."

That remains good advice for the President and the C.I.A. But look at what has been suggested: Eliminate the rule that requires agents investigating citizens to use the least intrusive means possible . . . Downgrade the Attorney General's role as a check on the legality of spying techniques . . . Scratch the need to show cause that a surveillance target is engaged in subversion.

In the last day or so, some important second thoughts have surfaced. Adm. Bobby Inman, who is leaving the directorship of the National Security Agency to become the No. 2 man at C.I.A., says he fears that some people will hastily commit themselves ideologically before they understand the facts. He is right. But the larger lesson remains unchanged: Such turnabouts dramatize once again the need for having Congress fix the rules, instead of leaving them vulnerable to the stroke of a White House pen.

Those who are pushing the changes say that increased terrorism at home and abroad makes them necessary. But Operation Chaos, and the Nixon Administration's short-lived Huston plan, were also justified as responses to terrorism. The new spying proposal amounts to an open call for Government lawlessness.

At least Tom Huston, who urged President Nixon to permit break-ins and harassment of political dissidents, conceded that his proposals were illegal and, if discovered, a potential source of embarrassment. Does an Administration headed by a former member of the Rockefeller Commission feel no such embarrassment?●

S. 724—TO REMOVE CERTAIN LANDS FROM THE WICHITA MOUNTAINS WILDLIFE REFUGE, OKLA.

● Mr. BOREN. Mr. President, I am pleased to cosponsor legislation offered by my distinguished colleague from Oklahoma, Senator NICKLES, which directs the Secretary of Interior to convey 90 acres of land—part of the Wichita Mountains Wildlife Refuge near Lawton, Okla.—to the Wichita Mountains Easter Sunrise Service Association.

This is identical to legislation which I cosponsored last year with my former colleague, Senator Bellmon. Unfortunately, final action was not completed on the legislation before Congress adjourned sine die.

The legislation provides that this land may be held as long as it continues to be used for public recreational and cultural activities. In the event that the land is no longer used for these purposes, title will revert back to the U.S. Government to be administered as part of the National Wildlife Refuge System.

This land has been used for almost 50 years as the site of a nationally known Easter sunrise service. This service is part of a rich historical and cultural heritage which is cherished by Oklahomans and tens of thousands of out-of-State visitors who travel to Lawton, Okla., each year to view this pageant.

This legislation is necessary to assure that the site is maintained as the location of this famous Easter spectacle.

The Wichita Mountains Easter sunrise service was started by the Rev. Anthony Mark Wallock in 1926 at a different site in the Wichita Mountains. The site was moved in 1933 because the over 20,000 persons who attended could not be accommodated at the smaller location.

From its inception, the pageant has operated by the policy that the service would always be nonsectarian and open to all persons.

When it became necessary to move the site, citizens of Lawton and nearby communities joined with the local chamber of commerce and officials in State government to secure Federal assistance. First, authority was granted by the U.S. Department of Agriculture for use of about 160 acres of land which was then part of the Wichita National Forest. Later, in 1936, the Bureau of Biological Survey of USDA took over control of the land which included "The Holy City," as it was referred to in WPA files.

At still a later date, the entire area of land became known as the Wichita Mountains Wildlife Refuge and was operated by the Bureau of Sport Fisheries and Wildlife, part of the Fish and Wildlife Service of the U.S. Department of the Interior.

A Federal grant of $13,000 was provided to make the site ready and to move props to the new location. Then, U.S. Senator Elmer Thomas and U.S. Representative Jed Johnson went to President Franklin D. Roosevelt with correspondence and resolutions from all of Oklahoma's major cities in an attempt to convince him that the pageant constituted a rich historical event for Oklahomans and all Americans.

A grant of $94,000 from Federal funds was unconditionally set aside for the pageant. It was handled through the Lawton Chamber of Commerce since no organization representing the service had been incorporated up to that time.

The WPA completed buildings on the grounds of the Holy City. A ceremony to celebrate their completion and to dedicate the facilities was held on March 31, 1935.

By this time, the Wichita Mountains Easter Sunrise Association had been incorporated. On December 15, 1936, the association accepted the release of the buildings and improvements from the WPA, accepting full responsibility for maintenance and operation of these facilities.

Several important changes were made in 1938, the year in which over 180,000 people attended and heard Senator Thomas read a personal message from President Franklin D. Roosevelt. Because of the early arrival of so many worshippers, the performance was changed into an all-night service.

Audiences continued to grow. Special buses and trains brought spectators from all directions. In 1939, 30 large buses were used to take visitors out to the "Holy City."

The entire 1939 service, as well as the one in 1940, was broadcast by CBS.

The Reverend Wallock died in 1948, and the pageant was turned over to co-directors who continued the tradition.

Directors have included George Hutchins, Jimmy Hysaw, the Reverend

Lambert Orton, Jack Batten, J. O. Smith, Craig Pierson, Dave Sandstrom, Col. Jack Rhodes, Millard Coody, Wes Miller and L. A. Ellis.

It was the Reverend Wallock's lifelong dream that a statue of Christ be erected as part of the Holy City site. Children of the area were asked to donate pennies toward a fund for this purpose.

In 1970, the association began a new drive to secure funds for the statue. The fund was started with the money which had been saved from childrens' pennies. Dedication of the statue was held on November 9, 1975.

All funds used to operate the pageant are donated by private sources.

Mr. President, this Easter Sunrise Service means a great deal to all Oklahomans and to visitors who attend every year. For many years, the pageant has operated on a use permit granted by the U.S. Department of the Interior. This legislation would provide the association with the assurance that lands on which the Holy City is located could be retained. It offers a degree of certainty to pageant supporters which they have not had up until this time.

I urge my colleagues to join me in supporting this bill.●

BYE, SCHOOL LUNCHES FOR THE TRULY NEEDY

● Mr. BURDICK. Mr. President, I want to bring to the attention of my colleagues an article that appeared in the New York Times recently written by Marshall Matz. Mr. Matz was formerly general counsel to the Senate Select Committee on Nutrition and Human Needs. He has written a very thoughtful article on the impact of cuts in child nutrition programs proposed by the administration. Before we vote on these, I would urge all my colleagues to consider the repercussions Matz has discussed in this article. I ask that the article be printed in the RECORD.

The article follows:

BYE, SCHOOL LUNCHES FOR THE TRULY NEEDY

(By Marshall L. Matz)

WASHINGTON.—While seeking to cut $1.575 billion from the $3.918 billion child-nutrition budget in fiscal 1982, the Reagan Administration has listed school lunches for the "truly needy" as one of seven programs that will not be affected by the drive to reduce Federal spending. On the contrary, poor children will be affected, for millions who qualify for a free or reduced-price lunch under the nutrition program stand to be lopped from it.

Granting that the Administration is proceeding in good faith, it appears that its analysis of the lunch program is being limited to only one dimension: direct Federal support to the states for free lunches.

Students qualifying for a reduced-price lunch are not being considered "truly needy," and the Federal subsidy for such lunches would be slashed substantially. Though some six million middle-class students—those whose family of four earns more than $15,630 a year—are likely to drop out of the program because of dramatic increases in lunch prices, the Administration apparently considers this irrelevant to the availability of the program to the poor. However, as participation drops, many schools, unable to finance the programs or unwilling to continue them because they no longer serve all the students, will end them, and they will be lost to the entire community, including the poor. Overall, of the 27 million in the program, conservatively nine million can be expected to drop out or be forced out.

The Agriculture Department's commodity-support program constitutes a major part of the proposed cutback in general assistance. Commodity support, unlike cash assistance, cannot be divided between free and paid meals. The commodities (such as potatoes, peaches, ground beef) are shipped in bulk to the states and then to schools; it is not possible for cooks to use different amounts of such commodities in preparing free meals and paid meals. Thus, the commodity cut will be felt across the board, affecting poor children receiving free lunches along with everyone else.

Not considered in the President's claim that the $1.575 billion cut will not hurt the "truly needy" is the effect on lunches of the Administration's proposal to deduct the cost of school meals from a person's food-stamp allotment. This request, labeled a "food-stamp cut," seems to be viewed as irrelevant to the lunch program. Other assistance called "nonessential" includes nutrition education and training, as well as equipment assistance to schools, both of which benefit the poor.

Under current law, the general subsidy for each lunch served in the 1981–82 school year (fiscal 1982) will be 39.5 cents per student per meal in cash and commodities. If the Administration's proposals are enacted, the 39.5 cent subsidy will be completely eliminated and the cost of a lunch can be expected to approximately double. It is this cut that represents the bulk of the child-nutrition savings. It is also this modest subsidy to middle-class students that has prevented the lunchroom from becoming economically and, in some cases, racially segregated.

The school-lunch program operates like a business. It receives income from four sources—Federal, state, and local governments, and the students—and if income does not equal expenses, local programs will close. Unlike food stamps or aid to families with dependent children, the lunch program does not involve direct payment to individuals. All income, from whatever sources, goes into the same school-lunch cash register. It is not possible to withdraw $1.575 billion from the child-nutrition budget and reasonably expect that the poor will not be affected.

The Federal effort to eliminate child malnutrition dates back at least to the creation, in 1946, of the national school-lunch program. Since then, the Federal commitment to child nutrition has grown steadily, along with the evidence of its success. When a team of medical doctors returned in the late 1970's to the poor rural counties they had visited 10 years earlier to determine if any progress had been made in combating hunger, they concluded, and reported to Congress: "Our first and overwhelming impression is that there are far fewer grossly malnourished in this country today than there were 10 years ago." Their report attributed the progress directly to Federal nutrition programs.

America's nutrition programs have been amazingly successful, perhaps more than any other social-policy endeavor. The "war on hunger," originally declared by President Richard M. Nixon in 1969, has been an unsung bipartisan success story that has dramatically reduced malnutrition and increased human productivity. It is incumbent on those who advocate cutting back our nutrition programs to show that such changes will not reverse the progress we have made.●

ANATOLY SHCHARANSKY

● Mr. LEVIN. Mr. President, last Sunday, we marked the fourth anniversary of the arrest and imprisonment of Anatoly Shcharansky, the Soviet Jewish activisit whose conviction triggered a lasting political and public outcry.

In 1973, Anatoly Shcharansky first submitted his application for a visa to Israel. At that time, he was refused on the grounds that he possessed classified information. He was repeatedly denied permission to emigrate on the same grounds regardless of the known fact that the institute in which he was working as a computer technologist did not deal with classified information.

He became active in the Helsinki Watch Committee in Moscow in 1976 and was soon the victim of harassment by the Soviet secret police, the KGB. In March 1977, he was arrested on charges of treason and placed in solitary confinement in Moscow's Lefortovo Prison.

Recently, his mother, Ida Milgrom, who I met while I was in the Soviet Union in 1979, has reported that she has learned from Anatoly that all of his family meetings for 1981 have been canceled and that he will be able to write only one letter every 2 months instead of the two letters per month he was previously permitted. He was told that he cannot include messages in his letters to his wife and friends as he has been able to do in the past, and he was told that many of his mother's letters to him are being withheld by the prison authorities.

It appears that Anatoly Shcharansky is being punished more severely than in the past. A recent article in the New York Times, from one of its Moscow correspondents, Anthony Austin, further describes Shcharansky's situation. I ask that the article be reprinted at the conclusion of my statement.

Mr. President, the treatment of Anatoly Shcharansky is demonstrative of the continued disdain of the Soviet Government for the human rights of those persons in the Soviet Union who possess views contrary to those dictated by the Soviet Government. We must continue to focus attention on the problems faced by religious minorities in the Soviet Union and by those who have expressed their desire to emigrate from the Soviet Union and those who wish to be reunited with their family members outside of the Soviet Union.

Perhaps our continued expressions of outrage will encourage the Soviet Union to uphold the agreements they have made with the other nations which have signed the Helsinki accords to recognize and provide basic human rights and religious freedom to its citizens.

The article follows:

[From the New York Times, Mar. 5, 1981]

SHCHARANSKY IS PLACED IN LOCKUP WITHIN HIS LABOR CAMP IN SOVIET

(By Anthony Austin)

Moscow, March 4.—Anatoly B. Shcharansky, a convicted dissident, has been placed in a prison inside the labor camp where he is serving a 13-year sentence on charges of treason and espionage, his brother, Leonid, said today.

"We suspected as much when we received a letter from him recently telling us that he now has more time to read and that he is allowed to write us once every two months," Leonid Shcharansky said. "That is the quota for people in prison. Up to then, he was allowed to write twice a month."

Leonid Shcharansky said he and his mother, Ida Milgrom, inquired two days ago at the Moscow office that administers labor camps, and "they confirmed to us that my brother has been in prison since December."

"They said they did not know why he was put in prison but would ask," he said, "although they added that they would not necessarily pass the information on."

Mrs. Milgrom and Leonid Shcharansky were permitted to visit Anatoly Shcharansky in the labor camp, near Perm, last April. They reported that his health, which earlier had caused them worry, was improving, and that he was learning metalworking.

Anatoly Shcharansky, a computer technician, has been active in the human rights and Jewish emigration movements. Accused in the Government newspaper Izvestia of betraying secrets to the Central Intelligence Agency, he was picked up by the security police in March 1977 and was held incommunicado in Moscow's Lefortovo Prison until his trial in July 1978. He was convicted of treason, espionage and anti-Soviet agitation and was sentenced to three years in prison followed by 10 years in labor camp. A prison term is considered a harsher sentence than a term in labor camp.●

AN ETHICS CODE

● Mr. WALLOP. Mr. President, the Senate Ethics Committee, mandated by Senate Resolution 109, is engaged in a comprehensive review of the Senate Code of Official Conduct. As chairman of the Ethics Committee, the review has given me a chance to reflect on the concept of an Ethics Code. It seems of paramount importance that the Senate maintain and foster a positive concept of ethics for the institution and the public.

An Ethics Code should be a statement of ethical concerns as well as specific prohibitions for their enforcement. Currently, however, this is not the case. Our present Ethics Code, Senate Resolution 110, is basically legalistic and prohibitive in nature, and is devoid of any substantive discussion of ethics.

It is unfortunate that the Senate Ethics Code has come to mean rules or regulations of an accusatory nature which, in some way, are supposed to influence Members to be ethical and deter those who contemplate unethical behavior.

Although the present Code of Rules may have an impact "after-the-fact" as a standard to judge unethical conduct by, it does little to promote a positive understanding of ethics or build a tradition of ethical considerations. The present code only sets forth prohibited conduct without any substantive mention of ethics. I consider this a basic flaw because it confuses the purpose of an Ethics Code.

If the Ethics Committee is to achieve its purpose of protecting and enforcing standards of institutional integrity, an Ethics Code must go beyond the scope of prohibitive rules.

Ethics must be understood as an attitude and a way of thinking rather than merely regulation by rule of law. I am not suggesting that a set of prohibitions is not an ethical standard, but what I am suggesting is that such prohibitions provide a minimum standard for ethics in the Senate. An Ethics Code must go beyond the letter of rules to ethical principles.

A Code of Ethics is in large part a statement of our ethical beliefs. Ethical standards are measured not so much by written words, but more by our individual and collective actions. The ethical character of the Senate is the sum of our individual actions.

In conclusion, I contemplate a Senate Ethics Code as a much broader idea that encompasses not only specific prohibitions, but also positive statements of ethics, helping to rekindle the strong tradition of ethical concern in the Senate. Every Senator has an ethical duty not to compromise the public trust.

Any breach of this duty weakens the fabric of belief, trust, and support which contains the Senate tradition.

It is beyond dispute that the great majority of our conduct is worthy of the highest praise, but we must, as a unified body, reassert our commitment to ethical standards by developing an Ethics Code that we can take pride in and comport with our own without legal counsel to guide us every inch of the way.

A recent article by the Hastings Center on revising the U.S. Senate Code of Ethics has come to my attention as an excellent attempt of thinking through the problems of the present Senate Code of Ethics. I do not endorse every aspect of the Hastings Center article because I do not agree with many of their points of view.

Yet, I think, the article could be very valuable to Senators in taking a different approach to constructing an Ethics Code for the Senate. The observations made in the article may be helpful in our attempt to restate the ethical traditions of the Senate through a new code and new consciousness of principle.

Mr. President, in order to share the Hastings Center article with my colleagues, I ask that their viewpoint be printed in the RECORD.

The article follows:

MODEL CODE OF ETHICS FOR THE U.S. SENATE

PREAMBLE

The Senate of the United States, in order to maintain the integrity of representative government and to sustain the confidence of citizens in their representatives, hereby establishes a Code of Ethics that shall apply to all members.

The Constitution of the United States invests "all legislative power" in the Congress and, together with other laws and customs, provides certain standards of conduct for Senators in the performance of their official duties. Yet the Constitution, law, and custom remain silent on many activities of public life that may be wholly improper or at least morally dubious. Without abrogating the discretion that individual Senators must enjoy in determining the ways in which each fulfills the public trust, the Code of Ethics sets forth rules that, by the authority of the Senate as a whole, shall guide the judgment and govern the conduct of each of its members. While it is not the function of this code to specify the means of its implementation and enforcement, it is a requirement that such means responsibly be maintained by the Senate, and altered from time to time as circumstances require.

The Senate as a body and Senators as individuals are entrusted with extraordinary power and responsibility. With this great power must go greater obligation. Both the Senate as a whole and individual Senators must therefore observe standards that in some cases are more stringent than those that apply to other citizens, to other public officials, and to other public bodies.

This Code of Ethics divides the moral responsibilities of Senators according to the principal functions Senators serve in our system of democratic government. A Senator is, at once, a public official, a representative of his or her constituents, a legislator, a colleague, an employer, and, at times, a candidate for a renewed term of office. This code is based on the understanding that these roles can be, and often are, different from each other, however much they may overlap on occasion. This code does not imply that the obligations of one or more of these roles necessarily always take precedence over others. On the contrary, the competing moral requirements of the different roles are a major source of ethical dilemmas, many of which will admit of no clear resolution.

In the broadest of their roles, Senators are public officials. As such, they have an obligation to obey the laws of the land, and to respect the constitutional basis of American government and the specific constitutional foundations for the office of Senator. In addition, as a public official, a Senator should avoid all conflicting interests and influences that might undermine, or appear to undermine, independent judgment on behalf of the public interest.

A Senator is also a representative and must be accountable to the public and accessible to constituents. The official activities of a Senator must be open to scrutiny by the public and colleagues. Senators must balance their special responsibility to constituents against the more general responsibility to promote the public interest. As a representative, a Senator must represent constituents in a way that ensures fairness, is consistent with the public interest, and avoids even the appearance of the influence of unacceptable special interests.

As a legislator, a Senator must act to protect the integrity of the legislative process, and to promote full and rational discussion.

As an employer who hires and supervises both a personal staff and also other employees of the Senate, a Senator should act in a just manner.

As a candidate, a Senator must observe the standards of civility and fairness that should mark the electoral process by which democratic citizens choose the men and women who will represent them.

No code of ethics can anticipate every moral problem that a Senator may encounter. Nor in every case can a code provide rules of such precision that all uncertainty will be banished. A supplementary body of regulations, to which the code frequently refers, imposes more specific regulations where such specificity is possible and desirable. Each of the rules is accompanied by a comment. The purpose of the latter is to elucidate the meaning of the rule and to provide its underlying philosophical and ethical rationale.

Like all other citizens, a Senator must be guided by conscience and by general moral principles. The purpose of this code is to provide Senators with those more specific moral standards and rules that will serve to guide them in their efforts to remain faithful to their public trust as representatives and legislators. Senators will face difficult choices and conflicting moral demands. An adherence to this code will guide Senators in their moral decisions and will help assure citizens that Senators remain faithful to the pursuit of the public good.

I. The Senator as public official

Obedience to the Constitution and the Law

(1) A Senator shall uphold and obey the Constitution and laws of the United States

of America, and shall cooperate fully in their enforcement. A Senator shall disclose to the appropriate authority information that provides reasonable cause to believe that any person, including another Senator, has committed a substantial violation of law that affects the integrity of the legislative process.

Comment

It is axiomatic that one holding a position of public trust shares the obligation of every citizen to observe the law scrupulously. A formal admonition to Senators to respect this obligation, therefore, may seem to restate a truism, but it serves an important purpose by clearly vesting jurisdiction in the Senate Select Committee on Ethics to investigate allegations of illegal conduct. Such jurisdiction is appropriate, because even violations of law that have no immediately apparent relevance to the discharge of Senatorial duties can significantly impair public confidence in the institutions of government. Through Rule I(1), the Senate preserves the option of imposing its own sanctions on Senators whose conduct manifests their disregard for or defiance of the law, whether or not this conduct has been penalized by other authorities. The use of the term "laws of the United States of America" is intended to include the laws of those states and municipalities that may apply to a particular Senator.

The second section of Rule I(1) addresses the troubling situation of a Senator who has a firm basis for believing that a colleague or an associate has breached the law. Our society has a long tradition of repugnance toward any kind of "informer" principle, and most citizens feel no special obligation to expose misconduct. But public officials should hold themselves to a higher standard. What may appear to a single Senator as an isolated instance of poor judgment could, after systematic investigation, prove part of a pattern of malfeasance with serious consequences for the nation. Thus, Senators are enjoined to reveal illicit behavior that might have such consequences—e.g., bribery or perjury—on the part of lobbyists, staff, and Senate officers as well as fellow Senators. Rule I(1) in no way suggests that Senators should overract to suspicion or rumor, nor is it applicable to trifling infractions. Its purpose is simply to compensate for the natural reluctance to perform a distasteful task by reminding Senators of their duty, in this as in all circumstances, to keep the public interest paramount.

Promotion of the Public Interest

(2) A Senator shall strive to promote the public interest and the common good of all the people of the United States. Senatorial office is a public trust requiring that a Senator shall not subordinate the public interest to the particular interests of any individual, party, region, class, or group.

Comment

Although Senators are elected by the citizens of a particular state, their actions and decisions have a direct and significant effect on all the people of the United States. Therefore, the office of Senator imposes on the indivdiual who holds it a public trust and a public responsibility in the broadest sense. Like other federal officials, Senators must have as their primary concern the well-being of the nation as a whole. In defining this primary obligation, the national scope of a Senator's legislative and policy-making authority, and not the narrower basis of his or her electoral selection, is determinative.

As a practical matter, Senators are faced with the difficult tasks of balancing the different and sometimes conflicting interests of various groups in the society and of assessing the differential impact of laws and policies on various segments of the population. By itself, an injunction to promote the public interest provides neither a formula for simplifying these judgments nor a substantive definition of what "the public interest" requires. This can only be done on a case-by-case basis and must be sensitive to changing circumstances. But as an explicit statement of a Senator's obligation to be constantly attentive to the broadest implications and the wide-ranging impact of his or her official acts, this Rule does define the frame of mind within which a Senator should make these judgments, and it requires that a Senator be on guard against legislative decisions that are consistently and systematically biased in favor of some narrow interests or some particular group.

In legislation and policy pertaining to the conduct of foreign affairs, a Senator's official actions affect not only the citizens of the United States but the citizens of other nations as well. When they are acting on matters of foreign policy, Senators may properly give precedence to the public interest and common good of the people of the United States. However, this responsibility cannot be divorced from the broader objective of promoting justice, peace, and human well-being throughout the world, and a Senator should strive to respect and protect the human rights of all persons independent of their national affiliations.

Use of Office for Private Gain

(3) A Senator shall not use the office for private gain.

(a) A Senator shall not promote legislation or otherwise use the office for the purpose of enhancing personal financial interests or those of his or her immediate family.

(b) A Senator shall not knowingly accept any gift that might influence improperly, or that might reasonably appear to influence improperly, his or her conduct of office; and a Senator shall obey the limitations and disclosure regulations established by the Senate pertaining to the receipt of permissible gifts.

(c) A Senator shall obey the limitations and disclosure regulations established by the Senate pertaining to the acceptance of honoraria.

(d) A Senator shall not maintain, or have maintained for personal use, an unofficial office account; and a Senator shall obey the regulations established by the Senate pertaining to the reimbursement of office expenses.

Comment

The principles of the American democratic tradition demand that government never serve as an instrument for the exclusive benefit of a few but that it serve to promote and enhance the well-being of the nation as a whole. Considerations of personal gain must therefore never be allowed to distort a Senator's commitment to the promotion of the public good. Moreover, a Senator must carefully avoid situations that create the appearance that motives of personal gain are influencing his or her official conduct. The four subparagraphs of this Rule contain specific prohibitions relating to these general concerns.

First, Senators must not abuse their public trust by using the authority, prerogatives, and resources of their official position to further their own financial interests or the financial interests of their immediate family. Subparagraph (a) of this Rule supplements federal bribery statutes and follows the precedent of earlier Senate rules in prohibiting this abuse.

Second, gifts to Senators by parties with a direct interest in the legislative process inherently raise questions of propriety and improper influence. The gift relationship naturally creates sentiments of gratitude and reciprocity in the recipient. In private life these sentiments are important human virtues, and no one would want to discourage Senators from acting on them under the proper circumstances. However, the extraordinary authority and power of a Senator's position in the government invite the misuse of the gift relationship for political ends, and those sentiments of gratitude toward the donor that are laudable in private life may well distort the judgment of even the most conscientious public official.

Therefore, both to protect the public from the improper influence of special interests in the legislative process and to protect Senators from unwarranted suspicions that they have been influenced improperly, it is necessary to circumscribe the receipt of gifts within well-defined and narrow limits. Subparagraph (b) of this Rule provides a general guideline that requires a Senator to be on guard against accepting gifts, from any source, which might reasonably be thought to be offered in an attempt to exert improper influence, and it further requires a Senator to obey the Senate regulations pertaining to gifts.

Third, the acceptance of honoraria, like the receipt of gifts, may raise questions of improper influence and the misuse of office for financial gain. Moreover, activities involving honoraria ordinarily bring a Senator into contact only with the most well-off and advantaged members of his or her constituency, and, without regulation, the receipt of honoraria might create an incentive for a Senator to allocate too much time to this segment of the constituency. [See Rule II-(2)(a).] Thus it is appropriate for the Senate to limit and regulate this practice. Subparagraph (c) of this Rule requires a Senator to obey Senate regulations pertaining to the acceptance of honoraria.

Fourth, the use of private funds and "unofficial accounts" to defray expenses incurred in connection with the conduct of office also raises questions of propriety and creates the appearance of improper influence. Subparagraph (d) of this Rule is based upon the principle that, in general, official expenses should be paid for by public funds specifically appropriated for that purpose. Thus it prohibits the maintenance and use of unofficial accounts and requires that a Senator obey Senate regulations concerning those funds that may be used to defray official expenses.

Performance of Official Duties and Outside Activities

(4) A Senator shall devote full time and attention to the performance of official duties. A Senator shall not engage in any outside business or professional activity or employment, whether for compensation or not, that is inconsistent or in conflict with the conscientious performance of official duties; and a Senator shall observe the regulations established by the Senate pertaining to business and professional activities.

Comment

The complexity and volume of public business that comes before the Senate demand that a Senator devote full time and attention to official duties. Legislation at the federal level is not a part-time or occasional endeavor. Senatorial office demands total commitment and dedication to onerous and time-consuming responsibilities that are an inherent part of that office.

This Rule stops short of imposing a total prohibition on all private business or professional activities. But it does prohibit those activities that involve conflicts of interest and thus are incompatible with the conscientious performance of official duties. And, in the case of permissible outside business or professional activities, it does require

that a Senator not allow such activities to detract from the conscientious performance of official duties. This Rule also requires a Senator to comply with the specific regulations established by the Senate pertaining to outside earned income and private professional activities.

II. The Senator as representative

Public Accountability

(1) A Senator shall be accountable to constituents, colleagues, and other public officials by promoting public scrutiny of official activities and by revealing information that will enable constituents to make informed judgments concerning the Senator's conduct of office.

(a) A Senator shall obey the limitations and disclosure regulations established by the Senate pertaining to financial assets and interests.

(b) A Senator shall disclose, upon reasonable request, his or her vote on any legislative matter.

(c) A Senator shall disclose organizational affiliations and such other matters to the same extent and in the same manner that Congress requires officers of the executive and judicial branches to make them public.

Comment

In a democratic society representatives act, at least partly, as agents of those they represent. While there is room for discretion and judgment on the part of the representatives, Senators must always be responsive to those represented and always accountable for their actions to those on whose behalf they act. In addition, as members of a collective body and as public officials, they must be accountable to their colleagues and other public officials.

It is not sufficient that a Senator believe he or she is acting in accordance with the best interests of constituents or the general public. A Senator must provide the information on the basis of which his or her activities can be independently scrutinized and judgment passed. Such judgment, whether passed by the electorate or a Senator's colleagues, is only reasonable if based on those factors relevant to assessing the conduct of a Senator. Citizens must be able to determine the possible biases that may affect a Senator's judgments and actions.

The requirement of full public financial disclosure is a means to an end and not an end in itself. The evil to be avoided is that official decisions may be motivated by something other than the public interest. One concern is that the personal financial interests of a Senator may influence opinions and votes. It has been suggested that Senators divest themselves of holdings affected by their actions or abstain from voting on issues that affect their financial interests. But the difficulty of delimiting the range of issues that affect a Senator's holdings, as well as the wish not to deprive constiuents of full representation, have led the Senate to disclosure as the preferable method to deter conflicts of interest with respect to financial assets. Quite independently, such disclosure serves to promote public confidence in the integrity of the representative process.

The requirement of disclosure is compatible with there being instances in which a Senator faces such an obvious conflict of interest that the public interest will be best served by abstention from consideration and voting, or by divestiture.

No information can be more relevant to a reasoned judgment of a Senator than his or her voting record. While the practice of voting off-the-record may sometimes be desirable, citizens have the right to know what official position a Senator has taken on important legislative issues. Finally, knowledge of a Senator's organizational affiliations permits colleagues and constituents to form a more complete picture of the interests, pressures, and loyalties influencing a Senator's opinions and decisions.

Protection of Constituents' Interests

(2) A Senator shall protect and promote the legitimate interests of all the constituents he or she represents. A Senator shall strive in all cases to ensure that these interests are given a full and fair hearing in the deliberations of the Senate.

(a) A Senator shall be accessible to all constituents in order to become aware of their views on issues that fall within the jurisdiction of the Senate. A Senator shall take special care to attend to the needs and interests of those individuals or groups that might not otherwise obtain due consideration.

(b) Upon reasonable request, a Senator shall assist all constituents in their transactions with federal agencies. A Senator shall obey the regulations established by the Senate pertaining to such assistance.

Comment

The democratic system of representative government in the United States assumes that Senators will serve the needs and legitimate interests of their constituents. When a Senator acts in an official capacity, he or she acts on behalf of and in the name of constituents; they "constitute" his or her authority. At the same time, a Senator's decisions affect not only his or her own constituents but the nation as a whole, and therefore a Senator must also serve the public interest in the broadest sense. Rule I(2) addresses this latter dimension of a Senator's duty, and the present Rule covers the first of these two dimensions, a Senator's duty to constituents. Three points in the present Rule merit special emphasis.

First, a Senator's representational duty extends to all of his or her constituents. This duty is not limited to a particular class of persons within a state, such as the class of registered voters, the members of one political party, or the most well organized and vocal. A Senator may encounter strong pressures to favor such groups, but these pressures must be resisted because such favoritism violates a basic principle of the democratic system. In that system, once elected, a Senator becomes the representative of all the people in that state, not just the representative of those who voted for or helped to elect him or her. A Senator's failure to uphold this principle, the failure to transform the partiality of candidacy into the impartiality of office, is a serious breach of public trust. It harms members of the electoral opposition and nonparticipants by denying these individuals their right to effective political representation, and it undermines the authority and legitimacy of the Senate as a whole.

Second, an integral part of a Senator's representational duty is that he or she strive to ensure that the interests of constituents are called to the attention of other Senators and given a full and fair hearing in the legislative process. Hence, it is not sufficient that Senators simply use their own vote to protect and promote the interests of their constituents; they must also serve as the voice of those interests during all stages of the legislative process.

Third, a Senator's dual obligation as a trustee of the public interest and as a delegate of constituents' interests requires careful judgment and a conscientious weighing of legislative alternatives. It is the intent of the code that the present Rule and Rule I(2) be interpreted as mutually reinforcing imperatives. Over time, a Senator who consistently promotes the public interest of the nation as a whole will also and thereby serve as an effective custodian of the interests of his or her own special constituents. At the same time, experience has shown that when particular constituencies lack effective and active representation in the federal legislature, policies skewed in favor of those better represented tend to result and the public interest tends not to be served. The ideal then is for Senators judiciously to blend their responsibility as representatives with their responsibility as public officials. However, should a particular instance of irreconcilable conflict arise between the requirements of the public interest of the nation as a whole and the special interests of a Senator's constituency, the present Rule should be interpreted so that a Senator's general trust as a public official and his or her duty to the public interest as set forth in Rule I(2) take precedence.

If Senators are to promote and give voice to the interests of constituents, they obviously must keep informed about those interests and remain accessible to constituents. Subparagraph (a) of the present Rule addresses these responsibilities. As it is a Senator's representational duty to be responsive to the interests of all constituents, so too it is a Senator's duty to be familiar with the broad spectrum of interests and opinions held by constituents. Circumstances may require that a Senator take special steps to discharge this important responsibility since sole reliance on ordinary channels of communication and access may work to the unjust disadvantage of the least influential and the least well-off. Subparagraph (a) of the present Rule requires that a Senator be on guard against this sort of *de facto* disenfranchisement of any constituents.

Often a Senator will be called upon to assist constituents in their dealings with the federal government. Properly undertaken, this is an appropriate service that a Senator should make available to those constituents who request it. Procedural inquiries and other similar, basically informational services usually raise no questions of propriety or of the improper exertion of influence. However, the authority and prestige of Senatorial office is such that interventions concerning matters of substance or the merits of a case must be controlled and regulated because they may distort the deliberative process of government agencies and improperly advantage some interested parties to the detriment of others or the public. Therefore subparagraph (b) of this Rule explicitly reiterates a Senator's obligation to obey existing statutes and present or future Senate rules governing this type of activity.

III. The Senator as legislator

Obedience to Senate Rules and Respect for Colleagues

(1) A Senator shall exercise legislative powers by obeying the Senate rules, respecting the customs of legislative debate, and acting with courtesy and civility toward other Senators.

(a) A Senator shall not obstruct the legitimate procedures of the Senate.

(b) A Senator shall contribute a reasonable and fair share of attention to the collective duties of the Senate.

Comment

While each individual Senator will have particular duties to constituents, the public interest, and his or her conscience, the Senate has collective duties, some of which are specified by the Constitution and some by the requisites of representative democracy. In that respect, the Senate is a collegial body, one that must function as a whole on the most important legislative and representative matters. It cannot effectively or responsibly so function unless Senators recognize the duty and necessity of working in close harmony with each other and of mutually respecting both their individual and collective obligations.

It is recognized that deep political and value differences may exist among Senators,

reflecting similarly deep differences among the general public. That is perfectly proper. Nonetheless, these differences do not abrogate the duty to attend to the effective and fair deliberations of the whole body of the Senate. The deliberations of the Senate cannot be either effective or fair if Senators do not treat each other with respect, courtesy, and civility, however great their political differences.

The traditional practices and parliamentary rules of the Senate permit an individual Senator some measure of control and influence over the legislative process, allowing a small minority of its members to delay a bill they strongly oppose. Such practices and rules may safeguard minority interests and opinions from being too easily overridden by the wishes of a majority and thus build a prudent measure of caution and restraint into the legislative process. At the same time, however, they can be abused by those who find themselves in a position to obstruct legislative activity and who so for reasons of narrow partisanship or political self-interest. When the nation finds itself facing complex and pressing problems that require deliberate yet expeditious legislative action, such abuses threaten the integrity of the legislative process and undermine the credibility of the Senate as an institution. The purpose of subparagraph (a) is to call attention to a Senator's duty to the integrity and credibility of the Senate as a legislative body.

As part of their general duties, Senators also receive various committee and other assignments. Those assignments can be demanding, creating additional pressures upon time and energy. Nonetheless, it is a Senator's duty to bear and discharge a fair share of such assignments. The multiple duties and functions of a Senator require that collective obligations be equitably accepted, shared, and distributed.

Responsibility To Be Well Informed

(2) A Senator shall be informed about public matters that pertain to legislation before the Senate, shall be alert to the need for new legislation, and shall determine whether legislation is being properly and effectively administered.

Comment

Responsible legislative judgment, oversight, and voting are not possible in the absence of adequate information. The information will encompass factual data on legislative issues, knowledge of the positions and views of those who will be affected by legislation, and an assessment of the possible consequences of legislation, both in the short and long term.

It is not sufficient, however, for a Senator to respond only to problems raised by others or to become informed on legislation proposed by colleagues. The responsibilities of the Senate require also a determination of the need for new legislation, and it is thus the obligation of a Senator to be so sensitive to the general needs of the nation, as well as the specific needs of constituents, as to anticipate the need for new legislation. No less important is vigilant oversight of previously enacted legislation, to determine that it has been carried out in conformity with Congressional intent and to determine what changes, if any, should be made.

Exercise of Advice and Consent Powers

(3) A Senator shall exercise the powers of advice and consent with due regard both to the constitutional primacy of the President in the conduct of foreign affairs and in the appointment of senior executive and judicial officials, and to the general welfare of the people of the United States.

(a) A Senator shall not vote on a treaty merely for reasons of partisan, personal, or sectional advantage.

(b) A Senator shall inquire carefully and thoroughly into the objective qualifications, experience, character, and reputation of a Presidential nominee for high federal office. A Senator shall not refuse to confirm a nomination because of any characteristic irrelevant to the nominee's fitness for office, including, but not limited to, race, color, religion, sex, age, national origin, or physical handicap.

(c) A Senator shall exercise the prerogative of Senatorial courtesy in a manner that will insure the appointment of qualified public officials.

Comment

The powers vested in the Senate by Article II, Section 2 of the Constitution play an important role in our tripartite system of government. They reflect the concern of the Framers with the danger of concentrated and unchecked authority in the hands of one person. The Senate, in which every state is equally represented, was deemed the proper body to maintain residual control over Presidential action even in areas where it was acknowledged that the President must have considerable latitude. National debate about the appropriate limits of "advice and consent" has continued since 1787, and no provision of this code can offer a definitive resolution. But Rule III(3) can serve to remind Senators of the rationale for their endowment with these powers and indicate the sense of the Senate as to their ethical use.

Although there is considerable disagreement over the precise parameters of Presidential authority in the realm of foreign relations, few would deny that the President has the primary responsibility for initiating and shaping foreign policy, subject to Congressional approval. It is the President who must exercise the plenary power to speak and listen as a representative of the whole nation in the delicate and complex negotiation of a treaty. Yet there is a definite legislative effect from concluding an agreement with a foreign state, since treaties are designated part of the supreme law of the land by Article VI of the Constitution. In deciding how to vote on a treaty resolution, a Senator should always focus on the overall national interest, and reflect on the implications of that vote for our country's position in the world community. Because the ratification of a treaty can be accomplished only through the affirmative votes of two-thirds of the Senators present, it is essential that no Senator engage in trading what might be a decisive vote on a matter of national importance for personal or political advantage. That is the intention of Rule III (3) (a).

Subparagraph (b) of Rule III(3) is addressed to a number of complex issues. The Framers believed that requiring Senatorial confirmation of those nominated to become ambassadors, judges, and officers of the national government would prevent a President from creating an invincible political machine of loyal and subservant minions. In addition, since the President could not possibly have personal knowledge of the numerous candidates for appointment, the Senate was viewed as a valuable source of reliable information about their qualifications. The actual operation of the confirmation process, however, has been rather different from that contemplated by the Framers. The requirement of Senatorial approval has been extended to well over 100,000 officials and employees of the federal government. Obviously, the Senate cannot and should not subject every nominee for every office to the same degree of searching scrutiny. The scope of a Senator's obligations within the appointment process will vary considerably.

By established tradition, for example, a President ought to be entitled to broad discretion in choosing Cabinet members, since they will serve as confidential advisors and the architects of that administration. Similarly, President nominations for high-ranking office within the departments should not encounter politically inspired opposition. Otherwise, it would be unjust to hold the President accountable for the functioning of the executive branch. Diplomatic representatives also are frequently perceived as envoys of the President, charged with the duty of carrying out a particular program of foreign policy, and thus properly susceptible to somewhat less Senatorial influence. However, Senators may legitimately take a more active and partisan role in the selection of appointees to regulatory agencies and independent commissions, many of which require bipartisan membership as a matter of law.

Senators should be especially sensitive to their responsibilities with respect to the judiciary. The constitutional mandate of judges to preserve the rights of citizens against encroachment by the executive and legislative departments, and to adjudicate conflicts that may arise between the latter, makes it imperative that they in no way depend on political sponsorship or protection from either of the other two branches. Senators should be most careful to eschew purely partisan motives when considering the confirmation of nominees to the Supreme Court or Courts of Appeals, or in proposing candidates for appointment to the District Courts. Finally, a Senator should never permit personal prejudice or bias to distort the process of appointment for any position at whatever level.

The original vision of the Framers was that members of the Senate would exert no independent power of appointment, but would merely review the fitness of Presidential nominees. The development of the system of Senatorial courtesy, addressed in subparagraph (c), has dramatically altered and substantially complicated the process. This custom, by which individual Senators effectively select their own appointees to federal office within their respective states, does enable the people of each state to have some voice in the selection of those federal officials who have the most direct impact on their lives.

And it is entirely reasonable to assume that Senators are likely to be aware of outstanding citizens within their states who are suitable for public office. But the tradition of Senatorial courtesy is not always well understood outside the Senate, and has been criticized as operating to deprive the nation of the best available candidates for public service. Senators must be cognizant of the potential for abuse and guard against any tendency to fill government posts with appointees whose only qualifications are political. While it may often be legitimate to take into account the political activities and attitudes of a proposed nominee, these factors should be considered after it has been determined that the nominees is otherwise competent to fill the position in question. Public appointments should never be based solely on the dictates of narrow partisanship and local patronage.

Oversight of Administrative Agencies

(4) A Senator shall supervise the enforcement of law and implementation of policy by administrative agencies in an informed and dispassionate manner, with due regard for their independence.

(a) A Senator shall not be influenced by, or appear to be influenced by, any personal interest in the consequences of a specific administrative regulation or a specific administrative proceeding.

(b) A Senator shall not intervene in the operations of an agency in such a manner as to contravene the intent of Congress.

Comment

Another legislative responsibility intended as a check on the executive branch is that of legislative oversight. Unlike the "advice and consent" functions, however, the power

to probe into the departments of the federal government in order to discover corruption, inefficiency, and waste is typically exercised in committee, not by the Senate as a whole. In such a small and not always completely representative group, lacking the balance of countervailing forces in the entire body, each Senator must be particularly attentive to the appropriate scope of this prerogative. This Rule is directed toward the substantive, rather than procedural, aspects of a Senator's obligation to use restraint and responsibility in the discharge of this vital function. [The procedural issues are addressed in the more general context of Rule III(5).]

Subparagraph (a) underscores a particular application of the broader prohibition of real or apparent conflicts of interest. Some Senators in the past have actually divested themselves of property, e.g., television stations or airlines, which are subject to regulation by federal agencies. Others have disqualified themselves from reviewing and reporting on agencies that have jurisdiction over industries in which they, or those close to them, have substantial holdings. Without suggesting an inflexible solution to this problem, subparagraph (a) of Rule III(4) makes it clear that it would be highly improper for a Senator to compromise the integrity of legislative judgment by evaluating an agency while he or she has business, e.g., a license renewal request, pending before it.

A Senator must also resist the temptation to use an inquiry into agency operations as a pretext to refight long-lost legislative battles. If Congress and the President have authorized and appropriated the funds necessary to create a government agency, opposing Senators should not harass that agency or use their investigative authority to hinder its legitimate operations. While the exact dimensions of a Senator's role in this area cannot be delineated, Rule III(4)(b) calls attention to the need to seek and abide by reasonable limits.

Conduct of Committee Hearings and Investigations

(5) A Senator shall conduct committee hearings and investigations in a fair and effective manner.

(a) A Senator shall limit the scope of inquiry to those subjects that are amenable to federal legislative action and require fact-finding for a valid legislative purpose. A Senator shall seek only information relevant to potential legislation, and shall avoid any unnecessary inquiry into the private affairs of individuals.

(b) A Senator shall not exploit or abuse the powers of the Senate to compel testimony, to hold in contempt, to institute a lawsuit, or to recommend a grant of immunity, either for personal or partisan advantage or for the harassment or punishment of individuals.

(c) A Senator shall not divulge, in whole or in part, testimony taken or material presented during an executive session, without prior authorization by a majority of committee members.

(d) A Senator shall treat every witness before a Senate committee with courtesy and respect. Witnesses shall be afforded a reasonable opportunity to respond fully to each question and to consult with counsel during their testimony. Persons adversely characterized or discreditably referred to during a Senate inquiry shall be afforded an opportunity to respond, either orally or in writing.

Comment

The goal of a legislative hearing, unlike that of a judicial proceeding, is not the precise reconstruction of past events, but a forecast of the predictable consequences of some proposed action. This difference in purpose significantly alters the range of permissible legislative inquiry. By law, no legislative inquiry is an end in itself; it must be relevant to, and in furtherance of, a legitimate task of the legislative body. The Senate should not attempt to investigate matters that are within the exclusive province of the other branches of government or to usurp their functions and act as a law enforcement or trial agency. A Senator has no right to expose for the sake of exposure, or to delve into the personal life of an individual unless seeking information clearly required for a legislative decision.

The power of a Senate committee equals or excels that of any court. It can ask the Senate to impose sanctions for contempt of its authority on those who obstruct legislative functions or interfere with the conduct of committee business. Senate committees can issue compulsory process, administer oaths to witnesses (who then testify under penalty of perjury), and arrange for grants of immunity to elicit the testimony of one who invokes Fifth Amendment privilege. A Senate committee can even bring suit to enforce compliance with its lawful orders. At the same time, the Speech and Debate clause of Article I, Section 6 of the Constitution relieves Senators from any reason to fear legal reprisal for the abuse of these powers. Senatorial self-discipline, through subparagraph (b) of the present Rule, is virtually the only mechanism for inducing restraint in their application.

Because a legislative hearing is nonadjudicative, it does not require the panoply of due process associated with a proceeding that is determinative of individual status rather than public welfare. There is no constitutional mandate to allow witnesses in a legislative hearing to confront their accusers or have the effective assistance of counsel. Formal rules of evidence need not be observed. But the fact that the law does not afford witnesses before a Senatorial committee much procedural protection does not absolve Senators from obligations of fundamental fairness.

Disclosure of information obtained during a closed hearing, for example, is necessarily partial and selective. It can unjustly harm a witness who relies on the confidential nature of the session and who has no forum to complete the public record. Leaks from a hearing can hamper the future ability of a committee to obtain frank testimony and forthright cooperation. If committee members ignore their own rules, a witness may even be legally justified in refusing to produce evidence. Premature release of a draft or excerpt from an unapproved committee report, before testimony has been concluded and fully digested, may foster an initial public impression difficult to dislodge or correct later, even in the light of subsequently ascertained facts. Such an effect is totally inimical to the rationale for legislative investigation, and is specifically addressed in subparagraph (c).

The final paragraph of Rule III(5) does incorporate some notions derived from due process, but these notions are oriented to the purposes of legislative inquiry rather than to the rights of individual citizens. A Senator's principal interest in any hearing should be to achieve an accurate, balanced, and complete understanding of its subject. A calm and dignified atmosphere, in which a witness need not feel unduly apprehensive or defensive, is most conducive to honest and thoughtful testimony. Again, since a Senate legislative hearing is not accusatory in nature, it is proper for counsel to a witness to play a quite limited advisory role, but that role should not be vitiated by a Senator's impatience. While few witnesses may raise an objection to media coverage of their testimony, Senators should seriously consider the wishes of any witness who believes it could affect his or her capacity to provide a candid appraisal of a legislative question. Senators should never yield to the temptation to allow broadcasting or televising of a hearing solely for the sake of beneficial publicity, particularly if testimony taken during such a hearing may include disparaging references to individuals.

Expenditure of Public Funds

(6) A Senator shall make proper and efficient use of all public funds and resources, especially those designated for fact-finding and the dissemination of information.

(a) A Senator shall obey the regulations established by the Senate pertaining to foreign travel.

(b) A Senator shall avoid excessive use of mail, computer, and broadcast facilities, and shall not use them for purely personal ends.

Comment

As members of a body ultimately responsible for approving the level and types of governmental expenditure, Senators must be particularly scrupulous about their expenditure of funds for legislative purposes. All public officials stand in a fiduciary relationship with citizens and must confine their use of public funds to public purposes. But Senators, whose responsibilities include authorization of funds for their own use as public officials, have a special responsibility to maintain the integrity of governmental spending. Senators must be alert both to the misuse of funds, and to the wasteful use of monies spent for legitimate ends.

Foreign travel, for example, continually arouses public suspicion of the possible misuse of government money. While such travel often has a legitimate purpose, allowing Senators to learn at firsthand information relevant to the conduct of foreign and domestic affairs, there is always the possibility that the travel is undertaken primarily for personal enjoyment and benefit. Thus, a Senator who has been defeated or who is retiring from office and who cannot justify such expenditures in the brief period he or she remains in office is denied government funds for foreign travel.

One of the privileges granted Senators is the use of public funds for the dissemination of information by mail—the postage frank. While it is sometimes difficult to draw the line between material of an official nature and that for purely personal use, a Senator must be alert to the possibility of misuse and, in cases of doubt, draw the line in favor of the public interest.

But even when public funds are being used for legitimate legislative purposes, a Senator has an obligation to guard against the wasteful use of public resources. The frank, computer facilities, and broadcast facilities provided by the Senate can be used properly but wastefully or inefficiently. There is an obligation to use all public funds only as, and just to the extent that, the interests of the public warrant.

IV. The Senator as employer

Fair Treatment of Staff

(1) A Senator shall treat fairly the members of his or her staff, the staff members of the other Senators, and all other employees of the Senate.

(a) A Senator shall not engage in discriminatory employment practices (hiring, firing, promotion, compensation, or conditions of employment) on the basis of race, color, religion, sex, age, national origin, or physical handicap.

(b) A Senator shall assign staff members and other employees of the Senate only those functions and tasks for which they are legitimately employed.

Comment

All employers have an obligation to treat potential and actual employees justly and to make employment decisions based on those characteristics that are directly related to competent job performance. Individuals de-

nied employment or offered unfair terms of employment because of characteristics over which they have little or no control and which are unrelated to successful job performance are denied the equal respect owed to all individuals. Such a denial is a special wrong when inflicted by public officials who have an obligation to treat all citizens with equal respect and concern.

Members of the Senate have a special responsibility in this regard because the coordinate branches of government have no authority to control or review Congressional employment practices.

Rule IV(1)(a) is not intended to deny a Senator's traditional prerogative of choosing among competent potential employees those from a specific location or of a particular political affiliation.

Just as the duties of a Senator can be burdensome and difficult, so also can those of staff members and other employees of the Senate. They cannot effectively discharge their duties, either to individual Senators or to the Senate as a whole, unless they are assigned to exclusively legitimate, official duties. They are public, not private, servants. Nor can they be expected to perform effectively unless their personal rights, and the requirements of their official duties, are respected by Senators.

Responsibility for the Compliance of Staff With Senate Regulations

(2) A Senator shall take all reasonable steps necessary to ensure that staff members under his or her jurisdiction obey the regulations established by the Senate pertaining to staff conduct.

Comment

Rule IV(1) sets forth general norms of fairness and equity designed to govern an individual Senator's treatment of Senate staff employees. Within the framework of these norms, each Senator must be allowed considerable latitude and flexibility in determining the work routine and the type of administrative supervision that will best serve his or her needs. Thus it is entirely reasonable and proper that staff activities in each Senator's office will vary.

The behavior and conduct of staff members, no less than the behavior and conduct of Senators themselves, have an effect on the pursuit of the public interest, the effective representation of constituents, and the proper functioning of the legislative process in the Senate as a whole. Therefore, it is necessary and appropriate that the Senate establish general regulations pertaining to the conduct of all Senate staff employees. Rule VI(1)(b) provides that such regulations be established and enforced. The present Rule requires that Senators cooperate in the establishment and overall enforcement of such regulations, and it specifically charges each Senator with the responsibility of ensuring that these regulations are obeyed by those staff members who are under that Senator's direct supervision.

V. The Senator as candidate

Use of Official Position for Electoral Advantage

(1) A Senator shall not improperly use the privileges of office to gain political advantage in the electoral process. A Senator shall obey the regulations established by the Senate pertaining to mass mailing and the use of computer and broadcast facilities.

Comment

Incumbents have many advantages in attracting voter support. They are able to get media publicity through press conferences and committee hearings, to provide benefits to constituents at election time, and to make their views known by mass mailings. These advantages are inevitable and not necessarily to be judged unfavorably. But the privileges of office are subject to being used in ways that confer illegitimate advantage on incumbency. When a Senator uses the franking privilege to transmit material of a purely political character, it is a misuse of public funds for political benefit. To guard against this misuse the Senate has established limitations on the use of the frank that are in addition to existing statutory restrictions. Since it is often difficult to draw a sharp line between material of an official legislative nature and material of a political nature, the Senate has adopted the strategy of an absolute prohibition on any mass mailing within sixty days of an election in which the Senator is a candidate. In addition, by requiring a system of annual registration of mass mailings and opening the register to public inspection, the Senate seeks to reassure the public that the frank is not being abused.

When the issue is not settled by an absolute rule easily applied or by fairly obvious cases, it will require a Senator (or staff member designated for this task) to make decisions on a case-by-case basis. If it is genuinely unclear whether the material to be mailed is official or political, then the importance of being perceived as acting fairly suggests drawing the line in favor of the integrity of the electoral process. The body designated by the Senate to make such decisions should follow the same principle.

Use of Senate Employees for Campaign Activities

(2) A Senator shall not make improper use of the services of Senate employees for substantial campaign activities, and shall obey the regulations established by the Senate pertaining to their employment.

Comment

The purpose of this Rule is to ensure that Senate employees do not remain on the Senate payroll if they are substantially assisting in campaign activities. Quite legitimately, many of a Senator's activities will be political in nature. But there is a distinction between those activities and the specific activity of campaigning for election. By using the word "substantial," the Rule does not mean to exclude occasional, incidental, and minimal campaign activities on the part of an employee. Neither does the Rule mean to preclude such activities on employees' personal time, nor to preclude their designation to handle campaign funds. However, in the latter case, both an employee and a Senator should be aware of the potential for abuse if an employee is paid a Senate salary for official duties and another salary by a campaign committee for campaign activities.

Personal Use of Campaign Funds

(3) A Senator shall not convert campaign contributions to personal use.

Comment

The reasons for this prohibition are clear and require only a brief restatement.

First, citizens who have donated funds designated as campaign contributions have done so with the expectation that these funds will not be used for personal expenses. These citizens have a right to have their expectations fulfilled.

Second, to permit Senators to make personal use of campaign contributions is to invite situations in which Senators might be said to have used their official position to promote their own personal gain. Under many circumstances, the very fact that an individual is an incumbent Senator enhances that individual's ability to raise campaign funds. Thus campaign funds are a resource linked, if only indirectly, to a Senator's official position and status. This linkage is strong enough to warrant the prohibition contained in the present Rule. With this prohibition firmly and publicly in place and adequately enforced, both the authority of Senatorial office and Senators as individuals will be protected against suspicions of impropriety.

Third, the prohibition contained in this Rule will eliminate one circumstance that could lead to the improper exercise of official influence for the purposes of personal gain, and hence to a violation of Rule I(3). That Rule prohibits the receipt of direct compensation in return for official "favors." If their conversion to personal use were permissible, campaign contributions could serve as a cover for such illicit compensation. The present Rule is designed to close off this possibility and in so doing adds to the force and effect of Rule I(3).

VI. Enforcement of the code

Responsibility for Code Enforcement

(1) The Senate shall maintain effective and appropriate procedures for the promulgation and enforcement of the provisions of this code and the regulations pertaining thereto.

(a) A Senator shall cooperate fully in the enforcement of this code and all Senate rules. A Senator shall disclose to the appropriate authority information that provides reasonable cause to believe that another Senator has committed a substantial violation of this code.

(b) The Senate shall maintain effective and appropriate procedures for the promulgation and enforcement of regulations pertaining to the conduct of Senate staff employees.

Comment

Paralleling each Senator's obligation to obey the Rules set forth in this code, the Senate as a whole has an obligation to insure that these Rules are fairly and effectively enforced. The Constitution gives the Senate sole authority to regulate the official conduct of its members. This authority is a public trust that imposes on the Senate the duty to maintain procedures of self-regulation and self-governance that will ensure the highest ethical standards of conduct. This duty is the basis for this Rule.

Subparagraph (a) of this Rule addresses each Senator's individual obligation to assist the Senate as a whole in carrying out its collective responsibility for self-regulation and self-governance. The effect of any ethical code on the actual behavior of those who subscribe to it depends largely on their willingness to participate in its impartial and consistent enforcement. The Senate is characterized by intricate relationships of long duration and mutual interdependence. Self-regulation in such a context is difficult at best. In the absence of an outside enforcement authority, it is particularly important that individual Senators acknowledge their responsibility to assure conscientious compliance with this code. If a Senator is asked for information or assistance in connection with an inquiry into another Senator's conduct, compliance with that request should be prompt and complete. Likewise, a Senator should be able to call upon fellow members for help in responding to or rebutting any such inquiry. Of the manifold claims on a Senator's time and attention, few should receive higher priority than maintaining the collective probity of the Senate.

The final clause of subparagraph (a) is parallel to the final clause of Rule I(1) of this code, and essentially the same considerations raised in the Comment on that clause are applicable here. Senators should reflect carefully on the eventual ramifications of allowing unethical conduct by their colleagues to escape notice, and must not hesitate to bring to the attention of the relevant Senate committee any serious abrogation of a Senate rule.

Finally, subparagraph (b) of this Rule addresses the Senate's collective responsibility to oversee and to regulate the conduct of staff

members. An individual Senator's responsibilities in this regard and his or her special responsibility for those employees he or she directly supervisss are addressed by Rule IV(2).●

THE ONLY POSSIBLE PUNISHMENT

● Mr. LEVIN. Mr. President, I would like to take a moment to comment on George Will's recent editorial on the death penalty, "The Only Possible Punishment," which appeared in the Washington Post on March 12, 1981, and which focused on the capital crime committed by Steven Judy, who was recently executed by the State of Indiana.

Mr. Will asks us to push aside our moral repulsion to executions by the State and replace it with a sense of moral outrage toward those who take the lives of innocent victims such as Mrs. Chasteen and her three children. He suggests that we cannot be both outraged by violent acts and unwilling to seek vengeance through the death penalty at the same time. Mr. Will would have us believe that the death penalty is the only way to prevent such crimes from occurring and that in the absence of clear proof as to whether or not the death penalty serves as a deterrent to violent crimes, we have to rely upon commonsense which dictates that the fear of death will deter those like Steven Judy from committing such crimes. Moreover, George Will determines in his column that in light of society's suffering as a result of the violent crime, the burden of proof as to whether or not the death penalty acts to deter should be placed upon those who believe it does not.

The March 10, 1981, Washington Post account of Judy's death in Indiana's electric chair reveals that 48 hours before he was to be executed Steven T. Judy was asked whether or not he thought that the death penalty served as a deterrent to crime. "No", he replied. Commonsense would tell us that if the State of Indiana capital punishment law did not deter Steven Judy from committing a crime so heinous it was sure to convince a jury to vote for the death penalty, it is unlikely that it will deter others like Judy who are capable of committing crimes punishable by death.

Perhaps Mr. Will overlooked the March 10 New Times account of Judy's execution which stated:

> Mr. Judy had steadfastly refused to appeal his murder conviction, saying that he would rather die than spend the rest of his life in prison.

So much for the argument that the fear of death deters violent crimes—three of the four men who have been executed in this country since the Furman decision have resisted any efforts being made on their behalf to appeal their own executions. Commonsense might lead one to believe that to the capital offender, the fear of life in prison is greater than the fear of death. There are those who would conclude that if members of society must satisfy the desire for vengeance when these horrendous crimes are committed, greater vengeance could be had by sentencing capital offenders to life in prison with no chance of parole.

I ask that the article by George Will be printed in the RECORD.

The article follows:

THE ONLY POSSIBLE PUNISHMENT

(By George F. Will)

According to his lawyer, Steven Judy was intelligent, witty and kind in conversation but had "this thing about beating up women." The story of how Judy did his thing should stir doubts in those opponents of capital punishment whose minds are not closed as tight as eggs.

Judy, who was executed March 9 by Indiana, committed his first rape when he was 13. Pretending to be selling Boy Scout raffle tickets, he forced his way into a woman's house, raped her, stabbed her more than 40 times (hard enough to break his knife), smashed her on the head several times with a hatchet and cut off her thumb. Miraculously, she survived.

Such is the criminal incompetence of America's criminal justice system, Judy was on parole in Illinois (he had served just 20 months for viciously beating a stranger—a woman) and was free on bond in Indiana (the offense was armed robbery; the bond was just $750, in spite of his lurid record) when he committed what he says was his 13th rape. It certainly was his last.

Pretending that his car was disabled, he got a passing motorist to stop. He raped her, killed her, then drowned her three small children in a creek. He never expressed remorse, and advised the jury to impose the death sentence, lest he someday be released and kill again.

Until recently I opposed capital punishment, categorically, in writing and actions. (I initiated the campaign that culminated in Connecticut"s first commutation of a death sentence.) However, the categorical nature of my position—I believed that evidence was irrelevant—certainly was wrong. And I may have been wrong on the issue itself.

One of two serious arguments for capital punishment is that it almost certainly can be a significant deterrent of significant crimes. If that is so, then refusing to execute killers in certain kinds of cases amounts to refusing to prevent the death of innocent persons, and is clearly immoral.

There now is sophisticated research that strongly suggests a deterrent effect. Furthermore, the principal argument against the deterrent effect is weak. The argument is that in most jurisdictions where capital punishment has been abolished there has been no immediate, sharp increase in what had been capital crimes. But in those jurisdictions, the actual act of abolition was an insignificant event because for years the death penalty had been imposed rarely, if at all. Common sense—which deserves deference until it is refuted—suggests that the fear of death can deter some premeditated crimes, including some murders.

The second powerful argument for capital punishment concerns a need for moral symmetry between crime and punishment. A society practices self-indulgent humanitarianism when it spares the likes of Judy in order to spare itself the unpleasantness of contemplating and administering capital punishment. The visceral reaction most humane people have against capital punishment actually is relevant to the case for that punishment.

Capital punishment is indeed horrible. That is why it can deter, and why, deterrence aside, it is a proper expression of virtuous sentiments. In his book, "For Capital Punishment," Walter Berns argues that the purpose of punishment and dramatic poetry can be similar:

"Capital punishment, like Shakespeare's dramatic and Lincoln's political poetry . . . serves to remind us of the majesty of the moral order that is embodied in our law and of the terrible consequences of its breach. . . . The criminal law must be made awful, by which I mean awe-inspiring, or commanding 'profound respect or reverential fear.' It must remind us of the moral order by which alone we can live as human beings, and in our day the only punishment that can do this is capital punishment."

Whether the authority to impose the ultimate punishment serves the expressive and teaching function that Berns correctly assigns to the law suggests an empirical question. But his position is plausible. And in a society suffering an epidemic of murder and other serious crime, the burden of proof is on opponents of capital punishment.

Rather than dispatch that burden with evidence and argument, many opponents simply assert the impropriety of the sentiments that Berns wants the law to teach by expressing. Part of the program of liberalism involves making people feel ashamed of sentiments essential for a decent society—sentiments such as anger about crime, and the desire for vengeance against criminals. Those are virtuous sentiments when grounded in a sense that the important laws express more than calculations of social utility. Those laws express a natural, life-enhancing moral order.●

INTERVIEW WITH THE SECRETARY OF THE NAVY

● Mr. HOLLINGS. Mr. President, one of the brightest lights of the new administration is its Secretary of the Navy, John F. Lehman, Jr. I am a longtime advocate of a strengthened Navy and have spoken many times on the declining state of our sea power. Thus, I am tremendously encouraged by the appointment of someone who appreciates the needs and understands, as perhaps nobody else in the country, the tactics and mechanics of getting the job done.

In the current issue of Sea Power magazine, Secretary Lehman shares some of his strategic and tactical thinking with us. The interview makes impressive and informative reading, and documents compellingly the kind of policy America must follow in order to achieve an enduring naval preeminence. Our new Secretary combines a unique geopolitical intuition and understanding with an overwhelming nuts-and-bolts knowledge, and this happy circumstance augurs well for his tenure at Navy—and, more importantly, for the future of this country.

For all of us in the Chamber who will be participating in the vital process of rebuilding America's defenses, this article is "must" reading, and I commend it to every Senator. Additionally, for those Senators who may not be totally familiar with John Lehman's background, I also commend the biographical portrait accompanying the interview.

Mr. President, I ask that the interview from the March issue of Sea Power, and the biographical sketch entitled "The New SecNav," both be reprinted in today's edition of the CONGRESSIONAL RECORD.

The material referred to follows:

THE NEW SECNAV

President Reagan announced on 23 January the selection of John F. Lehman, Jr., to be Secretary of the Navy.

Lehman—a businessman, scholar, author, Naval Reserve lieutenant commander and flight officer—was confirmed by the Senate on 29 January, and took the oath of office on

5 February to become the sixty-fifth Secretary of the Navy, and at age 38 one of the youngest men ever to hold that post.

He is also one of the best qualified. Prior to his appointment he had been president of the Abington Corporation, a Washington, D.C.-based management firm that specializes in defense matters.

The new SecNav has been intimately involved in national defense and foreign affairs matters since the late 1960s, moreover, serving consecutively as: a staff member of the Foreign Policy Research Institute at the University fo Pennsylvania (1967–69); special counsel and senior staff member to Dr. Henry Kissinger on the National Security Council (1969–74); a delegate to the MBFR (Mutual Balanced Force Reduction) negotiations in Vienna (1974–75); deputy director of the U.S. Arms Control and Disarmament Agency (1975–77); and (since 1977) chairman of the Republican National Committee's Defense Advisory Committee.

A native of Philadelphia, Pa., Lehman was educated at St. Joseph's College (B.S. in International Relations), Cambridge University in England, as an Earhart Fellow (B.A. with Honours Law and M.A. in International Law and Diplomacy), the University of Pennsylvania (Ph.D. in International Relations), and Johns Hopkins School of Advanced International Studies (Visiting Fellow).

Lehman enlisted in the Pennsylvania National Guard in 1964, transferred in 1966 to the Air Force Reserve, and in 1968 left the Air Force Reserve to accept a direct appointment, in the rank of ensign, in the Naval Reserve. He since has been promoted to the rank of lieutenant commander and designated a naval flight officer (bombardier-navigator) with the Naval Air Reserve Unit, assigned to Medium Attack Wing One, Naval Air Station, Oceana, Va.

Articulate as well as knowledgeable, Lehman has authored or co-authored a number of publications on national and international defense and foreign affairs. Among them are: *The Prospects for Arms Control*, ed, by J. E. Dougherty and J. F. Lehman, Jr. (McFadden: New York, 1965); *Arms Control for the Late Sixties*, ed. by J. E. Dougherty and J. F. Lehman, Jr. (Van Nostrand: Princeton, 1967); *The Executive Congress and Foreign Policy*, by John Lehman (Praeger: New York, 1976); and *Aircraft Carriers: The Real Choices*, by John Lehman (Sage: Beverly Hills, Calif., 1978).

Lehman and his wife, the former Barbara Wieland, live in McLean, Va., with their two children, Alexandra, 3½, and John F., III, 1½.

INTERVIEW WITH THE SECRETARY OF THE NAVY

(Sea Power Editor-in-Chief James D. Hessman and Navy League Executive Director Vincent C. Thomas, Jr., visited Navy Secretary John F. Lehman, Jr., in his office, a few days after the new SecNav was sworn in, to discuss Navy/USMC problems, programs, prospects, and policies. Following is the text of the SEA POWER interview with Secretary Lehman.)

SEA POWER. Considerable coverage was given your and [Chief of Naval Operations] Admiral [Thomas B.] Hayward's contention that the U.S. Navy no longer has the "thin margin of superiority" over the Soviet Union's naval forces. That is, of course, a major departure from the previous contentions of both the present and the immediate past CNOs. Can you elaborate on the specific gains the Soviets have made that have brought about this alarming reevaluation of the change in our relative positions?

LEHMAN. First of all, you have to understand that the answer to the question of who is ahead is a judgmental matter and not inherently quantifiable. I think the CNO articulated quite well in the hearing why he has changed his judgment—which was based on his evaluation of where we stood at the time that he conducted the evaluation, based on the advice of those who were out with the fleets and on their perception of Soviet operations and capabilities and their demonstrated use of the new Soviet weapons we have known have been in the pipeline for a long time. But he can speak to that matter better than I can.

Q. Still, why the difference? Your views in this area have always been strong.

LEHMAN. As you know, I have a different base of experience and judgment. I come at it from a different geopolitical perspective. I came to that same judgment a while ago. As you know, I have testified in previous years to that effect. And that testimony was based on my perception that the real question in naval superiority is this: "Who can succeed in carrying out their naval mission against the adversary's determined opposition?" Today, I believe, the Soviets are in a position to succeed in certain areas of the world for certain periods of time against our determined opposition. Now, it's easy to argue that they have a much simpler job than we do. Their job is to deny us access to resources and allies for periods of time in certain key areas of vital interest to us; it's to interdict the sea lanes and deny us access. Access, a single word, is really the key.

Q. During those same hearings, you recommended a shipbuilding program of at least 30 ships a year, while Admiral Hayward indicated at least 17–18 should be included in the program. Why is there such a wide disparity in numbers, and what will the Navy's ultimate goal be from your point of view at this time?

LEHMAN. I think the 30-ship target—which includes new construction and modernization—is a valid target to restore naval superiority. It remains to be seen how many ships we can get in this year's, and next year's, budgets. It would include major SLEPS [Service Life Extension Programs] and overhauls, and also pulling certain ships out of mothballs like the Oriskany or the Bon Homme Richard or any of the Iowa-class battleships. I think 30 is a valid target and achievable. I'm not sure yet whether we can reach 30 this year or next year. It depends on yard capacity, on which yards can take which ships at which rate, on how fast we can move prudently with the problems of lead ships, etc. We may want to build 10 LSD–41s [landing ship dock amphibious assault ship] or whatever the number is, but it may not be prudent to build them at the rate of four a year.

Q. What about the AEGIS [fleet air defense cruiser] program? You sounded very determined on that.

LEHMAN. AEGIS is one of our highest ship priorities right now, because if we are serious about regaining superiority the key to it is being able to prevail in those high-threat areas against the maximum Soviet threat in the areas of vital interest to us. I don't mean we have to threaten them in every single area around the periphery, but in areas of vital interest to us and our allies we have to be able to go in and take whatever they can throw at us and come off first best, having guaranteed continued access to those vital maritime areas.

Q. So AEGIS is a very high priority. How many ships . . .

LEHMAN. Yes, AEGIS is very high on our list. I think we ought to have a target of two AEGISes per battle group for the future, for the out years. I say this in a speculative sense because this is only my second day on the job. I suspect we may not be able to get that high a rate on AEGIS right away because of the problem of preparing additional yards, or preparing those yards now building them, for that kind of rate. But 30 ships is a valid overall SCN [ship construction Navy] target. I'd like to see us get to it this year. I don't know whether yard capability or the manpower freeze and ceilings will allow us to meet that target right away, but I believe we can meet it in the near future.

Q. In times past you articulated a philosophy that 15 battle groups will be needed. If that's so, does this mean we should get started immediately on a big building program, so that goal can be attained in the foreseeable future? Also, would the big ships have nuclear power?

LEHMAN. My recommendation would be that, first of all, let's settle the nuclear power issue. I believe the case is overwhelmingly for nuclear power for a large aircraft carrier. In my opinion, there's no longer any serious debate over that, as I read the data. So I don't think the power part of it is an issue. I believe that the most expeditious way to go now is for another Nimitz-class carrier, with the survivability modifications that are available, and that we should go for it at the earliest possible date.

Yes, we need more carriers, and I support bringing Oriskany back on the line in a deployable condition, but in a phased stage so that we don't have to do all of the modifications we eventually want right away. However, we should go about reactivating it in the beginning in a way that would give it at least a 15-year deployable life. I think we can get to 15 battle groups before this administration is over.

Q. Will that give you what you want—in battle groups? That would mean asking for a carrier in three of the next four budgets.

LEHMAN. I haven't gotten into it enough to know exactly the pace of new carrier construction, or of the SLEP program, or what we would do with the training carrier, what the Oriskany reactivation schedule would be, or whether we might even want to bring out the Bon Homme Richard. So I'm not too prepared to say what the new construction schedule would be, except to say that there would have to be some new construction, and I'd like to get started on it right away.

Q. In the meantime, you still have a requirement to maintain two carrier task forces in the Indian Ocean. That requirement is having quite an impact on your deployment schedules, on wear and tear on the ships, and on people. How long do you think you can sustain that requirement before you get behind the power curve on overhauls and on maintenance, and also in the impact on morale?

LEHMAN. I intend to take a very hard look at the management and capability side of what that does to our force and make my recommendations very early on, if there are modifications needed to that deployment schedule from my point of view. Any decisions as to whether two task forces are needed there for national security will be taken at levels above my pay grade—and really by the President, ultimately. I will be prepared to recommend to the President modifications of that schedule if the long-term interests of he Navy require it, and if our ultimate objective of maintaining a capability to preserve our access in that part of the world would be affected. In other words, if we have to balance short-term current deployment schedules against long-term requirements for a stabilization of the area, I would opt for the long-term solution.

Q. Would overseas homeporting help by having some of your ships and crews—and their families—based overseas on a more or less permanent basis? It would cut down on the family separation problem.

LEHMAN. One of my personal priorities will be to look into the homeporting issue. Again, I think the CNO has pulled together an excellent data base from which to take another hard look at this. I think homeporting would be attractive in several areas of the world

Q. Including Cockburn Sound, in Australia?

LEHMAN. That's a possible option. I don't lean toward any one place, and won't, until I have had time to really study the area. However, I do lean heavily toward homeporting in principle, even with all of the problems and difficulties that I am well aware of after having been through the Athens exercise [an earlier homeporting controversy] in the past. I know there are risks and costs, but I believe it is going to be necessary to have more overseas homeporting if we are to achieve naval superiority.

Q. One of the biggest impacts of homeporting will be on the retention of personnel. And that brings up a very blunt question: Is the all-volunteer force [AVF] working? If not, what should be done to make it work? Or should we go to a draft, or maybe even shift to a system of universal national service?

LEHMAN. I think the AVF is working insofar as a peacetime armed force is concerned. I have grave doubts about how our forces would perform if tested in some areas, because the combination of the hemorrhage—and that is what it has been—of our trained cadres of career people and of certain quality problems in accessions [recruits] over the last few years do not give us the right mix of skills and capabilities that we need for a fully combat-ready force—that we need in all of the armed services.

But I also think that the all-volunteer concept has not been given a full, fair test. And the President is committed to doing that, to giving it that test. This is not rhetoric. Everybody says, "Let's give it another chance." This would be more than that. It would be a serious effort to test the concept by making sure that the target populations that we want to recruit from—men and women—are indeed given the message about what opportunities are available to them by enlisting. I don't think they are now getting that message.

Q. Why not? Don't you have enough recruiters, or what?

LEHMAN. As I said in my testimony, I have been told that about 30% of American high schools still refuse access to military recruiters. And I called on the committee in my testimony to take legislative action to correct that. I think that's outrageous. It is terribly unfair to those kids, because even though today the compensation and educational benefits and career opportunities are still not what we would like them to be, they are very attractive and in the interests of many high schools kids. The benefits they can get even now would improve their lives greatly.

Q. I know you served on active duty in the Naval Reserve . . .

LEHMAN. My own brother put off going to college for a year to go into the Navy in the 4 x 10 program [one of several Navy recruiting programs which provide special benefits]. He got a tremendous amount out of that experience—going through boot camp, going to "A" School [for special training in a Navy technical skills area], getting his wings as an aircrewman, and flying every summer with the VP [patrol aircraft] community. He thinks it is one of the most valuable experiences he could have had.

But how many high school kids even know there is a 4 x 10 program? I am sure there are many kids just like my brother, who has since graduated from a university near the top of his class, who would greatly benefit from the experience. There are a lot of kids who are being denied that opportunity simply because there are some high school administrators with, I believe, an anti-military bias who are denying kids their rights to get the facts and make their own choice. But the opportunity is still not as attractive across the board as I would like to see it, and I think that's the other part of the problem.

Q. How would you correct that?

LEHMAN. Well, I personally oppose overloading the compensation part of the equation in the lower ranks—in the initial first-tour enlisted ranks. I don't believe that pouring a lot of pay and allowances into that end will solve our all-volunteer force problem. I think that if we can go with restoring the GI Bill and increasing the educational benefits to first-tour enlistees, then that's the way to go. That way you will attract a broader cross section of the kind of people, the intelligence levels you want—a broader cross-section of American society in other words—and you will reward those kids in a more equitable way without front-loading the budgetary impact of an all-volunteer force.

Q. If you had your druthers, how would you set up the system?

LEHMAN. I believe we should have a system with a generous student loan program for people who have completed a two-year enlistment. If they stay in a Ready Reserve unit, doing their 50 drills a year, for every year that they do so after they finish their initial tour they ought to have a substantial portion of the loan forgiven—just as the NDEA [National Defense Education Act] loans for teachers are forgiven. I think there's a lot that can be done, without a huge budgetary impact, that can give the all-volunteer force a much fairer test.

Q. But if that doesn't work?

LEHMAN. Maybe after we've done that, we will look at it again and say: "We still are unable to get in the kind, the quality, and the numbers of people we need." I have an open mind on that. If that is still the end result, then I will be among the first to take a strong position advocating going back to the draft. I believe a peacetime draft is an unpleasant thing to have, but having an unready force is a more unpleasant thing. However, I'm not prepared to go to the first unpleasant thing unless I'm sure that the second unpleasant thing is the only alternative.

Q. In the interim, you still are going to have problems retaining all the skilled people you need. So here's a two-part question on that: (1) Do you still advocate a sizable pay increase for those in the upper echelons of the enlisted ranks; and, (2) Are you giving any consideration to a suggestion we understand was made to you a month or so ago that you explore bringing back retired personnel into the Navy, to give you the skills you need—if only for the time being—to get you over this very large shortage of experienced petty officers?

LEHMAN. Again, emphasizing that this is only my second day on the job, and that what I am giving you is my personal opinion rather than my official studied position—I am not yet in a position to take an official position—I think we have to go as soon as possible, *starting this year*, to get military pay back to the 1973 standard-of-living levels. I would personally favor a one-shot get-well package, but I also am well aware of the overarching need to get our economy back in shape. However, I'm *not* prepared to substitute rhetoric for pay.

Q. As you said, that's next year. What do you see in the way of pay raises this year?

LEHMAN. At most, I am prepared to see the *completion* of a get-well package delayed until the 1983 budget, which would have to include a final, get-back-to-1973-living-standards measure. At a minimum this year, I believe, we are just about dead even with where we were last year. Because as good as last year's 11.7% pay raise was, and the other measures that were taken—and they certainly brought some people ahead of where they were a year ago—overall, I think, people have been left right about where they were, because inflation has gone further than the 11.7%.

Q. That's not good. It's just treading water.

LEHMAN. It's worse than that, really. Our guys, our retention targets, are the very people who are hit hardest in those areas of the CPI [Consumer Price Index] that are hardest to figure—housing and mortgage costs. I think there is a good case to be made that those who get Social Security, for example—and Social Security was hiked about 14% last year—are not in the housing market, whereas our guys who only got 11.7% *are* in the housing market, and very heavily so. So their cost of living problem is probably even greater than the CPI rate would indicate.

Q. Well, the pay raise helped, but it didn't really close the gap?

LEHMAN. I don't think we have gotten our people well with that one hike. There *was* a tremendous psychological benefit just in showing that Congress was serious even against determined administration opposition last year. That message got across to all our troops, so the mood is upbeat. But the worst thing that could happen now would be to have all these great expectations lead to nothing but temporizing in the coming year, and I will do all in my power to see that that doesn't happen.

Q. Is another pay raise your highest people priority then?

LEHMAN. Our very first operational need is to get that retention problem solved, and to stem the outflow of those skilled and dedicated folks that we are losing to the point where, if the hemorrhaging goes too far—and in some areas it already has gone to far—the problem will be almost too hard to solve. Who do you get to train the new guys coming in? Well, we're going to solve it, solve that problem. Pay is the first and foremost condition or thing we have to have before we can start working on the other livability and deployment and family problems. We must give our people a fair standard of living and get out guys out of the welfare lines and off the food-stamps dole. We must pay them fairly to keep them in. It's that simple. So I will push very strongly on that.

Q. I gather the entire Reagan administration is of one mind on that, and that there won't be any problem coming from the other agencies of government.

LEHMAN. No, I don't believe there will be. I have talked with David Stockman [Director of the Office of Management and Budget] about the whole situation and he understands it; he knows what's going on. So I don't foresee any problem in getting approval for a major compensation package to move toward those people goals we've set.

Q. In the interim, though, is there any possibility you might want to get some short-term help from the retired community?

LEHMAN. I know Admiral [Isaac C.] Kidd [former Supreme Allied Commander Atlantic] has made that recommendation. It is a very interesting one that I want to take a look at, because I want to make sure, if it is feasible, that we do it. And by "feasible" I mean I'm not going to be dissuaded from doing something new like that by comfortable bureaucrats who say, "That's just not the 'done' thing." If we can do it, and if the payoff is right, I will do everything possible to get something like that approved.

Q. There's a natural corollary to that, which leads to another two-part question concerning the use of the U.S.-flag merchant marine to help in both the people and the platform areas: (1) Are you considering working much more closely with the merchant marine, perhaps through the ARAPAHO program [a proposal to base ASW helicopters and weapons modules on board merchant ships] which President Reagan seemed to indicate he would favor; and, (2) in any case, how do you plan to solve the

present sealift shortage—which involves both the Navy's amphibious forces and the U.S.-flag merchant fleet?

LEHMAN. Well, I believe that our merchant fleet and all of our commercial maritime activities are an integral part of our maritime supremacy. We've got to view sea power as a whole and I, for one, am going to spend a good deal of time attempting to work with the Maritime Administration and the Department of Commerce Assistant Secretary for Maritime Affairs to attempt to see that the U.S. Navy's considerations are on the right side of the scales when Congress considers legislation to assist American-flag carriers and the merchant marine generally.

As to specific programs, it's too early . . . I think the ARAPAHO program is an interesting concept, but I'm just not far enough along yet to take a considered position on how it could be applied and what marginal increment of maritime superiority it would give us. It's a very interesting concept and could well be pursued. But I don't know; I'm not enough up to speed yet to comment on that specific program.

Q. Over the years, and especially during the last administration, we've seen the Department of Defense involved in all kinds of research in new weapons, communications, and so forth, but the payoff was not as great as perhaps it should have been. During the hearings you were on record as saying "We should chase fewer rainbows in R&D." Could you amplify on that—on what you think we had better do along these R&D lines, particularly along the line of getting more ships and aircraft into the fleet, and maybe having less on the drawing board?

LEHMAN. Well, this is a balance you need. You have to be very careful you do not damage the innovations and the true insights that come from enlightened research activities. Because of the uniqueness of its system the United States will always have a big advantage, an inherent advantage, in technological innovations, and I don't want to hamper the Navy's participation in research and its ability to capitalize on that advantage. But I believe that we—by that I mean the armed services—have spent far too much of our scarce resources going down the engineering development line on top of many programs that never panned out. Even some of those that have panned out have not yielded a big enough increment of additional capability over what they replaced to pay for the non-recurring development costs that it took to get that added capability. I believe that unless there is a demonstrable—an almost "order of magnitude"—increase in capability an entirely new development program is usually not justified, and I would oppose sinking a lot of engineering development funds into programs that do not clearly, by the time they reach full scale development, promise a quantum jump in capability.

Q. That's the Russian philosophy, isn't it? "Better" is the enemy of "good enough"?

LEHMAN. I would rather have higher production rates of weapons and have stockpiles of 30-day—better yet, 90-day—war-fighting levels of weapons systems that may be 5 percent less capable than what we could have had if we had pursued the program longer in R&D. Today we have a lot of sophisticated systems but not enough in the locker. If war should break out we'd be in trouble. I was struck last year at the Farnborough [England] Air Show, looking at what the Free World had done, inventing—redundantly inventing—about five or six new bombing systems on about six different airplanes and each one a reinvention of the wheel. We can't afford that; we can't afford to duplicate non-recurring development costs to the extent that we have.

Don't get me wrong. Competition and some redundancy are useful. Let's say there should be two or three bombing systems in the Free World, but I don't believe it is necessary to have 20 some, which is what we have. I would rather give up that marginal increment of improvement, if it's a small increment, for a new-generation system and get a bigger payoff, at economical rates, from the investment we have already made in systems that are in production so that we can get more of them out into the field.

That does not mean that we can afford to let the Soviets get a generational advantage in weapons systems, either. Again, each area—AEW [air early warning], ASW [antisubmarine warfare], etc.—has to be looked at carefully so that in going for more efficient production we don't yield to any potential adversary a possible qualitative advantage that is unacceptable operationally.

Q. Along these same lines, a congressional panel headed by Congressman [Richard H.] Ichord [D-Mo.] recently recommended shifting, on a pretty broad scale, to multi-year procurement, and estimated you could get perhaps 10 to 15% more for your procurement dollars that way. Do you personally favor such an approach, and do you think the Reagan administration is going to recommend that approach to Congress?

LEHMAN. I would like to defer answering you on that, or giving you a definite answer, anyway. The arguments, to the extent I have followed them in Congress, are very compelling—to me—to go to multi-year procurement. But I would want to become more immersed in the details and see what possible drawbacks there might be. I certainly believe we have to provide defense contractors and suppliers with a more stable business environment than we have over the past 10 years. A lot of smaller subcontractors that make our free enterprise system work have been driven out of the market because they are not big enough to cope with the uncertainties in the seesawing defense procurement program and because of the high number of development programs that get terminated before they reach high production runs—or any production runs. Anyway, those are the rainbows I was talking about. A lot of people have said, "To hell with chasing rainbows, I'm not going to bid on another defense contract."

So we've got to find a way to stabilize the market and make practicable the business that we're offering defense contractors so they can invest prudently in capitalization in order to bid competitively on contracts. Otherwise, we are going to continue to create monopolies among suppliers, and oligopolies—which I think already prevail to an alarming degree on the defense subcontractor level, and some contractors as well. All of that drives the cost up exponentially, so maybe multi-year procurement is one step toward a cure. But I'm not prepared, and I don't know enough about it yet, to take a firm position and say, "Yes, that is definitely something we need to have right now."

Q. Let me ask yet another two-part question, this one about the MX program. There has been a lot of talk about putting the MX to sea. Were this decision to be made, it would give the Navy quite a large share of the defense budget; in many eyes, it would be a disproportionate share. With all you must do to build up our conventional forces, are you concerned that, were it decided that MX would go to sea, you might be hamstrung by attempts to reduce the size of the Navy's budget because it was so large and because others disregarded what obviously must be done to rebuild the Navy?

LEHMAN. No, absolutely not. If I were convinced that the national security required the Navy to have 80% of the budget, I would have no hesitation in going to the mat for every dollar of the 80%. However, on the strategic side, I think, the Navy must discipline itself in a different way.

I mean, for general purpose forces, involving command of the sea, our naval perspective should not be subject to question by the other services. On the other hand, our judgment on how to fight in the Fulda Gap [on the NATO Central Front in Europe] should not be imposed on the Air Force or the Army. But I think that in strategic affairs all the services have to have a purple-suit approach, and forget our one-service perspectives. We in the Navy are custodians of one leg of the deterrent triad. The Air Force happens to be custodian of the other two legs of the triad—that's simply because of the modes of the triad those three legs happen to be in. The Army could just as well, or the Navy could just as well, probably manage the ICBM program—if that was the way it should be done. There is no inherent reason why they couldn't manage it.

Q. You support the present division of labor, then—in strategic forces anyway?

LEHMAN. Well, I'll say it again. The color of our suit should have nothing to do with it. I am a firm believer in the requirement for a triad. I would like a quadad, or a quinad, or whatever more we can get. The more you can complicate the threat to the enemy the greater leverage you have in deterrence. If you simplify the threat and allow them to focus all their R&D in one area, against one kind of threat—the submarine threat, or a land-based ICBM threat, or the bomber threat—obviously they could move much faster and more effectively to counter that threat. But if they have to divide their effort, their R&D effort—and their production, deployment, manning, and training—against five different kinds of threats, well, clearly, they will never get to the point where they can safely say they can defend against all of them. It's beyond common sense to think that they could.

So a triad is a very good multiplier to have against different kinds of threats. I do believe we should keep the triad.

Q. Those are really good points. Relating them to the MX . . .

LEHMAN. The MX involves two separate issues. One is the survivability of the land-based missile leg of the triad, and that is really a question about its basing mode. The other issue involves maintaining parity in counterforce capabilities against Soviet hard targets so there is a rough equality in threat, and hence in payoff, against a surprise attack. Right now they, the Soviets, have a high incentive to launch a surprise attack, because they can probably wipe out today maybe about 90% of our ICBM [intercontinental ballistic missile] force. And that's simply unacceptable. Now if we say the answer to that is, "Well, we'd better launch on warning and fire our missiles before they are destroyed," that would be totally unacceptable. For two reasons: (1) It's impossible, considering human nature, to expect a decision to be made in the flight time of an ICBM. (2) It puts a hair-trigger, mutual-suicide pact in the equation, because those missiles already launched in or against an attack are probably a mixed lot; some would be countervalue, and some not. It would not be practicable to try to retarget all of them for other options in the flight time of an incoming missile, for the vary same reasons that you can't make a decision in the same 45 minutes anyway. So, that scenario just doesn't make sense. I think we can dismiss "launch on warning" or "launch under confirmed attack" as our response.

Q. What would be your response, then?

LEHMAN. Another response would be to rebase our Minuteman missiles and use them in a multiple aim point system. I think probably multiple aim point is the only option we can go to today, because the

above-ground types of mobile missiles are subject to barraging and are not survivable moving around on train tracks or roads or whatever, because they are too vulnerable to barrage and blast-effect kinds of attacks. So you're going to have to go underground. And Minuteman would certainly be one way to go.

But that would solve only one-half of the equation, the survivability half. It would not solve the need to add substantial numbers of hard-target kill-capable warheads to the deterrent force.

Anyway, Minuteman is the second alternative. It might be a desirable option, but it only solves one-half of the problem.

Q. Are those the only alternatives, though? We asked earlier about . . .

LEHMAN. The third option is to put the MX missile to sea. But the problem there is that in effect you are going back to a dyad deterrent and are losing the leverage of a triad. I am personally convinced today that the Trident I and Trident II missiles can give us a hard-target kill capability and we can probably close the gap, the hard-target kill gap, by going ahead with the Trident II. If we deployed "X" times the present number of Trident submarines with "X" times the number of programmed Trident missiles we *would* close the gap. There is no reason why we can't give a hard-target kill accuracy to both the Trident I and the Trident II if we want to, if we want to do it. I myself think, by the way, that we should—in any case, in any scenario. If we solve that half of the equation, at least, we'll have gained quite a lot. All of the options we're talking about—whether it's the SUM program [Shallow Underwater Missile system—an MX alternative] or the Hydra [code name for an undersea missile test program] or whatever—are still subject to the same kind of countermeasures that the Soviets have to work on anyway to counter our SSBN [ballistic missile submarine] force. Just what the right answer is for the MX missile I don't know right now. I have some other thoughts on it, but this isn't Air Force Magazine, so I guess there isn't any point in saying anything more on that particular subject.

Q. We'll close with this one last question: Mr. Secretary, we've discussed ships and missiles. Let's get to a question that should be dear to your heart. What aircraft, including helicopters, do you, as a pilot, see will be the workhorses for the Navy in the next decade. Do you believe V/STOLs [verticle/short takeoff and landing aircraft] have a bright future, for instance, and can go into production, or should they spend a little longer time in the R&D pipeline?

LEHMAN. Well, first of all, let's clarify one thing. There's been a lot of confusion about my status—whether I'm a pilot or an NFO [naval flight officer]—and the reason is that I went through pilot training down at Kingsville [in Texas], but also got NFO wings, at Pensacola. And, in fact, I do fly, I go both ways—I still fly down at Kingsville. But technically I'm an NFO. It's not easy to clarify, I know, but that's the way it is.

But to get to your aircraft question. That is one of the first places where we've got to get the production rates up and get more metal into the fleet. We've also got to get production rates higher in order to get the per unit cost down on the weapons that are now in production. I believe that the F–14 [Tomcat fighter aircraft]—and, in fact, all the programs that are in production today—they all have a useful role in the fleet. The AV–8B [V/STOL aircraft]? The Commandant [of the Marine Corps, General Robert H. Barrow] makes a strong case for the Marines' unique need for that aircraft. And on matters concerning the kinds of weapons systems that the Commandant believes are necessary for the Marines, I believe ultimately that's *his* call, not mine. I can argue with him on things; I can . . . I have the responsibility for balancing competing requirements, but I do not believe I should be in the position of trying to tell either CNO or the Commandant which weapons better meet a recognized requirement. I don't believe that is the Secretary of the Navy's role.

If it were to come down to a straight competition—"you've got to have either one or the other aircraft"—at this point I'm not sure where I would come out on the AV–8B. But again, that's just because I'm not into the details of the job enough yet to know what I need to know about the program, so I'm not yet prepared to take a position on it. I think we need more aircraft in all of the other programs that are now in production. I think we need more F–14s, more A–6Es [Intruder attack aircraft], more EA–6Bs [Prowler electronic countermeasures aircraft] and I think we need higher production rates on the F/A–18 [Hornet fighter and attack aircraft].

Q. Both versions?

LEHMAN. Well, there is really only one version. The name's a misnomer. They consolidated the two versions in one airframe a few years ago. So you're only buying one airplane. How you use it—I mean, that's the advantage of it. It's genuinely a swing fighter. That's one of the potential real advantages. When you have a deck of F–18s or you have light attack squadrons equipped with F–18s, if you go into a high Backfire [Soviet bomber] threat area you can take your light attack squadron and put them out on fighter stations. Conversely, if—and it is an "if"—you have F–18 fighter wings aboard rather than F–14 fighter wings, when you've established clear air superiority you can swing your F–18 fighter squadrons to augment your attack aircraft. So that's the advantage, conceptually, of the swing fighter.

Q. Why do you think the F–18 has gotten such a bad press—in some papers, anyway?

LEHMAN. The big payoff of the F–18 will come in the life cycle costs—this was designed into the program from the beginning. The payoff idea has been to pay more in the beginning, and maybe even sacrifice some performance, to get high reliability and maintainability, and low ratios of maintenance hour per flight hour, higher fuel efficiency, and so forth. So that's where we expect to get the payoff on the program.

But all of our aircraft programs need higher production rates than they now have. We could save a lot of money. You know, we could save on the order of $2.5 million an airplane by achieving even modest increases in production rates.

Mr. Secretary, I see we've run over our time. Thank you again for meeting with us, and best of luck in your job.●

GLOBAL SOLAR TREATY: ENERGY FOR PEACE A PROPOSAL

● Mr. DIXON. Mr. President, it has come to my attention that Mr. Luis Kutner of Chicago, an attorney in that city, has recently published, in the North Dakota Law Review, a thoughtful article regarding solar energy.

I submit for the RECORD for my colleagues' review, in the hope it will stimulate their consideration of our Nation's need for alternate forms of energy.

The article follows:

GLOBAL SOLAR TREATY: ENERGY FOR PEACE A PROPOSAL

(By Luis Kutner*)

I. INTRODUCTION

The world's energy reserves are limited as consumption of energy is increasing at an astronomical rate. Fossil fuels represent a finite reserve which will become less available.[1] Though atomic energy has been regarded as an infinite source of energy, little progress has been made towards the elimination of toxic wastes. The ability to store such wastes is limited. The world's largest disposal area, at Hanford, Washington, encloses a stretch of the Columbia River and a tract of land covering 650 square miles. It has cost more to bury live atoms than to entomb all the mummies of all the Pyramid Kings of Egypt.[2]

Present sources of energy have polluted lakes and streams throughout the world. Niagara Falls has lost its pristine purity, while Lake Erie bears the smell of death and Lake Michigan hovers close to a similar fate. Atomic energy has contaminated the air with radioactive poisons. No scientist fully understands the effect of nuclear explosions upon the atmosphere.

These trends will become magnified as the world's population increases with ever-growing urbanization. Already thirty-eight percent of the world's population is urbanized, with one-fifth in cities of over 100,000 persons. More than 375 million people are concentrated in cities over 1,000,000 in population. If this trend continues, over half the world's population will be living in cities within fifteen years, and within fifty-five years everyone would be urbanized. A world city or Eucumenopolis may well emerge.[3]

Proponents of breeder reactor stations argue that nuclear power is the only viable energy alternative as fossil fuels begin to run out. If nuclear fission were to meet the projected energy demand to the year 2025, about 15,000 reactors, several times larger than the largest currently operating, would have to be constructed. Sustaining these reactors would require the recycling of twenty million kilograms of plutonium annually. Every year enough plutonium would be recycled around the world to fabricate some four million Hiroshima-size bombs.

Clearly, a new source for energy is needed which will be inexhaustible, economical, readily accessible, and which will produce a minimum of waste by-products. Solar energy provides the answer. In a single second, four million tons of solar matter are converted into energy—more energy than man has used since the beginning of civilization—and hurled into space in the form of heat, light, and other radiation. About one-fifth of all energy around the world comes from solar resources: wind power, water power, biomass, and direct sunlight. By the year 2000 such renewable energy sources could provide forty percent of the global energy budget; by the year 2025, humanity could obtain seventy-five percent of its energy from solar resources. Such a transition would not be cheap or easy, but its benefits could far outweigh its costs and difficulties.

GLOBAL SOLAR TREATY

The rewards are very great. The storehouse of solar energy is inexhaustible. Every two days sunlight provides the United States with energy equal to all its remaining fossil fuel reserves.[4] Solar energy has already been used to operate space satellites with compact solar batteries, and temperatures of 5,400 degrees have been focused in an experimental furnace at Mount-Louis in the French Pyrennes by the use of 3,500 small mirrors. A number of consumer items have already been developd which make use of solar energy, including radios, fans, refrigerators, automobiles, boats, and heating units.[5]

The art of solar forecasting is still rather primitive. Scientists are optimistic, however, that in the near future reliable short-range solar prediction will be available, which may suggest a practical method for harnessing

Footnotes at end of article.

the enormous energy of the sun for the good of all mankind.[6]

II. PROPOSAL FOR A SOLAR POWER STATION

The May, 1969, issue of Solar Energy contains a paper by Dr. Peter Glaser of Arthur D. Little, Inc., suggesting the application of the technology of the space program to the launching of a solar power station to generate power for use on earth.[7] The feasibility of establishing a satellite with sufficient capacity to supply the entire world (or part thereof) with solar power is no longer in serious dispute. The problem is one of cost and motivation.[8] Changing from centralized breeder reactors and fossil fuels to decentralized solar energy would create fundamental social, economic, and political change.

Apart from the difficulty of financing and the complex international legal problems, the feasibility of solar power stations will depend upon the following prime considerations:

(a) Assembly of a large-area satellite in space from components sent up from the earth. With the recent Apollo successes, this would appear to be feasible, although difficult.

(b) Transmission of the power from the satellite to earth by high-power beamed microwaves using very high efficiency amplifiers. While good amplifiers are presently available, these would need substantial improvement to achieve as near 100 percent efficiency as possible. Another problem is the necessity of a very accurate setting of the transmitting antenna on the satellite, but this would appear solvable in light of modern electro-optics and servo-system technology.

(c) The development of a photovoltaic conversion cell with a high conversion efficiency. Present cells are made of silicon, and have a conversion efficiency of 15 percent. The maximum theoretical efficiency for converters of this type is about 24 percent. Organic photovoltaic effects are known, and their efficiencies are very low. But they are not, in theory, limited to 24 percent, so that theoretically efficiencies of up to 80 percent could be hoped for.[9]

The difficulties in evolving an international solar energy system are formidable, but may be resolved within the capabilities of systems engineering and do not require the discovery or development of new physical principles. Though costs may not as yet be accurately determined, rough estimates may indicate whether large-scale solar power is a viable alternative to nuclear power. The search for solar power is less of a technological gamble than was the effort to land a man on the moon.

The feasibility of such a project, involving the use of a resource of outer space for the benefit of all mankind, is a matter of particular concern to the jurist, whose task should be to anticipate this development and suggest legal mechanisms to assure maximum social benefit. Scientific and technological innovation do not automatically assure social well-being.[10] An international mechanism must be developed to assure the application of technology for the furtherance of human dignity, a universally shared value.

III. PROPOSAL FOR THE INTERNATIONAL USE OF SOLAR ENERGY

The development of a solar energy satellite can be undertaken within the context of the law of outer space. As the late Adlai Stevenson observed, "[i]n outer space we start with a clean slate." [11] Efforts to achieve cooperation in outer space began even before the launching of Sputnik, with the International Geophysical Year in 1957.[12] Space law became a topic for research and discussion by international law societies, and the International Astronautical Foundation was founded. In 1961, in a unanimous resolution, the General Assembly of the United Nations established the basic framework of space law.[13] Various special committees dealing with outer space were established. The resolution also provided that international law, including the United Nations Charter, applied to outer space and celestial bodies, and that outer space and celestial bodies were free for exploration and use by all states in conformity with international law, and therefore not subject to national appropriation.

In 1962, the General Assembly, in another unanimously adopted resolution, reaffirmed these principles, declaring that the exploration and use of outer space shall be carried on for the benefit and in the interest of all mankind. The resolution further stated:

"States bear international responsibility for national activities in outer space, whether carried on by governmental agencies or by non-governmental entities, and for assuring that national activities are carried on in conformity with the principles set forth in the present Declaration. The activities of non-governmental entities in outer space shall require authorization and continuing supervision by the states concerned. When activities are carried on in outer space by an international organization, responsibility for compliance with the principles set forth in this Declaration shall be borne by the international organizations of the States participating in it." [14]

The resolution further provides that in exploring and using outer space states shall be guided by the principles of cooperation and mutual assistance, and shall conduct all of their activities with due regard for the corresponding interests of other states. States conducting activities in outer space which would harmfully interfere with the activities of other states are required to undertake appropriate international consultations. The state which launches an object into outer space retains jurisdiction and control over such object, its component parts, and any personnel aboard while in outer space. Such objects or component parts found beyond the territorial limits of the state of registry shall be returned to that state, which shall provide identifying data upon request. Each state launching or procuring the launching of an object into outer space, or from whose territory or facility an object is launched, is internationally liable for any ensuing damages. The resolution also provides that "States shall regard astronauts as envoys of mankind in outer space" [15] and render to them all possible assistance in the event of an accident.

In 1967 the General Assembly adopted, after a period of considerable negotiation, the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies.[16] The Treaty reaffirms the principles previously enunciated by the General Assembly dedicating outer space to a policy of international cooperation, promoting equality of all subjacent states, and providing for international law to be the focal point for the settlement of disputes. Article IV of the Treaty restricts military activity in outer space, stating that the parties agree not to place in orbit around the earth, install on the moon or any other celestial body, or otherwise station in outer space, nuclear or any other weapons of mass destruction. The parties further pledge that the moon and other celestial bodies shall be used exclusively for peaceful purposes and expressly forbid their use for the establishment of military bases, installations, or fortifications, testing of any type of weapons, or conducting military maneuvers.[17] The Treaty does not forbid the use of military personnel in outer space, and permits the launching of earth satellite for military reconnaissance. The Treaty is unclear in its definition of "station," and its application to aerospace vehicles or to the launching of missiles with a trajectory through space is uncertain. The term "peaceful" is also subject to dispute.[18]

No definition has been formulated as to what constitutes outer space.[19] The General Assembly resolution adopting the Treaty requested a study of the problem, and the Committee on the Peaceful Uses of Outer Space held a number of sessions to consider the problem.[20] One suggested approach would be based on altitude, with the atmosphere divided into four zones: the troposphere—approximately seven miles above the earth's surface; the mesophere—22–50 miles; the thermosphere—55–250 miles; and the exosphere—250 miles and beyond.[21] This approach, however, lacks relevance, as space vehicles do not fly only within certain zones. One space law authority has proposed the "Von Karman Line" as the boundary between outer space and air space, which falls roughly at 52 miles altitude, the point at which an object traveling 25,000 feet-per-second loses its aerodynamic lift and centrifugal force takes over.[22] The exact point, however, would vary with atmospheric conditions, design changes, and other technology affecting flight characteristics. A third proposal is based on the perigee of satellites—that orbital point nearest the earth when the earth is the center of attraction—with the boundary between air space and outer space set as the lowest altitude at which an unpowered satellite will orbit the earth at least once.[23] This point would also vary with constantly advancing technology. Other approaches suggest setting the limit at the point at which state sovereignty ends; where the state ceases to have the ability to control the air space. This, however, would also vary with technological changes.

Another provision in the General Assembly resolutions and the Treaty which remains unclear is the provision that space exploration "shall be carried out for the benefit and in the interests of all nations." In the negotiations preceding the drafting of the Treaty, the United Arab Republic suggested a provision which would have accorded rights to non-space powers to use outer space facilities for their own benefit.[25] The United States takes the position that the language which was ultimately adopted in the Treaty does not imply a distributive largess to the community of nations beyond existing meteorological and other scientific satellite information exchanges and beyond the spiritual benefits conferred by the opening of new vistas of knowledge.[26] The "benefit" is regarded as merely a general concept, a goal and general purpose. No free ride is contemplated which would secure for non-contributing countries the benefits of those bearing the expense; therefore, a United States satellite is not available for use by other states without consent.

The Treaty also provides for the mandatory reporting of space activities to the Secretary General of the United Nations, who is given the duty to disseminate information to the General Assembly.[27] This provision involved considerable negotiation, as th Soviet Union opposed stricter reporting requirements.[28] The Soviet Union also rejected proposals which would have established compulsory jurisdiction of the International Court of Justice and permitted an international organization to be a party to the Treaty. International organizations are recognized to have the right to constituent states bear responsibility for compliance.[29]

The Treaty provides in Article X that states shall consider on an equal basis any requests by other states to build tracking facilities on their territory to observe the flight of space objects which the requesting state has launched. A state is not obliged to

Footnotes at end of article.

grant the request unless appropriate mutual arrangements are made. The state on whose territory a tracking station is to be located is free to establish the conditions under which representatives of other states may use its resources. Accordingly, a bilateral agreement would be negotiated by the states concerned.[30]

The law of outer space is also based upon international practice, as derived from a matrix of international agreements between states, many of which are informal and made at the interdepartmental level.[31] The programs of the National Aeronautics and Space Program have involved the close cooperation of other states, including the use of territory for tracking stations, communication points and facilities, data acquisition centers, and recovery facilities and personnel.[32] This has included both the meteorological satellite projects and satellite communications. States have reported the launching of satellites and space findings to the United Nations.[33]

NASA experiments resulted in development of a communications satellite system. In 1963, the International Telecommunications Union held an Extraordinary Administrative Radio Conference (EARC) in Geneva, Switzerland, to consider the allocation of frequencies for communications satellite service.[34] In 1962, the United States Congress enacted the Communications Satellite Act, which created a private corporation, the Communications Satellite Corporation (Comsat), to participate in the global telecommunications system.[35] Comsat is subject to regulation by the Federal Communications Commission, the Attorney General, and the State Department.[36] The International Telecommunications Satellite Consortium (INTELSAT) was conceived to act as a group of joint venturers, public and private, combining their technical and financial resources to establish and operate facilities which each participant uses to provide services within its defined market area. The operating entities did not merge their separate and distinct legal personalities. INTELSAT is an organ for cooperation and consultation, rather than an operating agency making international decisions which are binding on nations.[37] The European countries formed a single entity, the European Conference on Satellite Telecommunications (CETS), to resolve differences among them.[38]

In 1964, the United States signed a multilateral agreement with ten other countries,[39] and Comsat signed a separate multilateral agreement with ten other communications entities, public and private.[40] A quota was devised for investment by each member in the project, and an Interim Communications Satellite Committee was established, with responsibility for the design, development, construction, establishment, maintenance, and operation of the space segment of the system. Comsat was designated as the manager. Contracts on behalf of the consortium are entered into by Comsat in its own name acting on behalf of INTELSAT. Comsat seeks prior approval from the FCC before acting within the Committee.[41] The Committee and INTELSAT do not have a separate legal entity, although they are designated as "international organizations" for certain purposes under United States law. The Committee and its assets, although immune from taxation, are not immune from suit and judicial process, and the officers and employees of the Committee do not enjoy immunity for acts performed in their official capacity, although the representatives of signatories serving on the Committee do enjoy immunity.[42] INTELSAT is immune only from taxation.[43]

Comsat's quota in the consortium was originally set at 61 per cent, and will not be reduced below 50.63 per cent. The percentages of ownership by participating countries is based primarily on the volume of long-distance telephone traffic of the respective countries suitable for satellite communication. No signatory, with the exception of Comsat, has a quota exceeding 8 per cent, and membership on the Committee requires a quota of at least 1.5 per cent. There are seventeen representatives of signatories on the Committee. In addition to themselves, they represent twenty-three signatories which are not Committee members. Votes on the Committee are proportionate to the quota allocated to the signatory represented or to the combined quotas of a group of signatories represented. For the most part the Committee has functioned without formal votes. On certain issues action may be taken by Comsat plus representatives of signatories totalling 12.5 per cent voting in favor of a proposal. If a decision is not reached within 60 days, action may be taken by a vote of Comsat plus 8.5 per cent.

In addition to INTELSAT, a number of other independent programs have been launched. The Soviet Union has a domestic and international program. Communications satellites are also an important tool for communications and education in the developing countries, particularly those with large land mass, such as India, Pakistan, and the African countries.[44] The present INTELSAT arrangement, however, leaves many of the undeveloped countries unrepresented on the Committee. A major problem in the future will be the role these countries are to play in the system.

American officials have sought the participation of the Soviets in seeking to develop a single satellite system. There has been considerable cooperation between the two countries on satellite communication experiments. At the time of the discussion with Russian officials concerning membership in INTELSAT, the Soviet Union did not have substantial international traffic in telegraphy or telephone communications and therefore its investment quota would have been as low as one or two per cent, which had serious political implications for a great world power. The official Soviet attitude toward INTELSAT became even more critical after the agreements establishing the consortium were signed. Soviet critics attacked the influence of Comsat and the system of weighted voting. Soviet spokesmen, however, currently favor a single coordinating system. The arrangement must be amended, however, to permit Soviet participation.[45]

Space law clearly requires international cooperation, and may provide guidelines for the international use of a solar space station. The need for making the benefits of solar energy available to all mankind is manifest. The concept would be particularly beneficial in providing an immediate source of power to the developing nations. Solar power from one satellite station could encompass the energy needs for an entire region, transcending national boundaries. At the same time, the ability to develop and launch a solar satellite is limited to perhaps two world powers, while fuel supplies and other energy sources are unevenly distributed.[46] Clearly, a means must be devised for the international distribution of this resource.

One approach would be for the United States to proceed to develop solar space stations and, by a series of bilateral and multilateral agreements, distribute the solar power to other nations, perhaps on the basis of rate charges. The United States could provide safeguards, as in distributing isotopes for atomic energy,[47] that would prevent the use of solar energy for military purposes. INTELSAT provides a precedent for this approach. If the Soviet Union also develops solar power stations, a rivalry could ensue in distribution of the energy, or the two powers could formulate an agreement for distribution, thereby perpetuating world domination.

This approach, however, would tend to create distrust and resentment among the smaller nations. The ability of the United States and the Soviet Union alone to develop and distribute solar energy would appear to the rest of the world to establish these powers in a position of imperium. These nations may choose to opt out of the system rather than submit to such domination. Implicit in the United Nations resolutions on space law is the universally shared value of maximizing the international participation of all peoples.

Accordingly, a multilateral approach is preferable, which would insulate the use of outer space and the resulting benefits from big-power rivalry. A supra-national authority should be envisioned to develop solar power satellite stations and distribute solar energy. Precedent for this approach lies in the proposal made by Bernard Baruch in 1946, calling for the establishment of an International Atomic Energy Authority[48] to control all potentially dangerous atomic activities, and in the subsequent establishment of the International Atomic Energy Agency.[49]

Such an authority could be empowered to enter into arrangements with the United States and the Soviet Union for the experimentation and development of solar space satellites. Both powers would engage in the project as a joint venture. Financing could be undertaken by an international corporation receiving contributions from participating states, assessed *pro rata* according to population, need for power, and gross national product. Shares of stock and debentures could be sold to individual investors, and additional financing might be obtained from the International Bank for Reconstruction and Development.

The supra-national authority could formulate regulations to provide safety devices and other precautions in the use of solar energy. It could set rates and determine priorities. Solar energy would be dispensed only for peaceful uses. It would not be developed and used as a weapon for destruction, nor utilized for the production of implements of war. Moreover, the authority would be empowered to deny solar benefits to states which engage in aggressive war or refuse to abide with the principles of the United Nations Charter or with peacekeeping resolutions. Accordingly, the ability of a United Nations authority to dispense solar energy would enable it to impose sanctions to promote international peace.

The proposed solar energy agency could be established pursuant to a treaty entered into through the auspices of the General Assembly. A resolution would proclaim the principle of international use of solar energy and call for the negotiation of a solar energy treaty. After negotiation, the treaty would be adopted by General Assembly resolution and submitted to the member states for ratification. Adherence by the two super powers and at least twenty states, including a certain number of states on the Eur-Asian, African, or Latin American continents, could establish the operation of the authority. The appended proposed draft treaty might be used as a model to establish the international authority.

APPENDIX

Draft treaty for a global solar energy authority

Preamble

The Parties, in accordance with Resolutions of the General Assembly of the United Nations and the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, declare that solar energy, as a resource of outer

Footnotes at end of article.

space, be used for the benefit of all mankind and for peaceful purposes.

Article I

The Parties agree to form an International Solar Energy Agency, which shall be comprised of an Assembly, a Council, and a Secretariat.

1. The Assembly shall be comprised of all states that adhere to this Treaty and shall meet at least annually. The Assembly shall consider and set forth general policy for the development of solar space satellites and for the distribution of solar energy. Voting shall be in accordance with contributions to the authority determined by a formula to be set out herein.

2. The Assembly shall designate a Council of fifteen members, who shall have the duties of directing the Agency and of resolving any disputes which may arise among the States adhering to this Treaty with regard to the application of any of its provisions. The Directors shall include the five permanent members of the Security Council of the United Nations and ten other members, who shall serve for terms of three years.

3. The Secretariat shall prepare the agenda for all Assembly and Council meetings, receive and transmit communications, collect and disseminate technical information, and advise the Assembly and Council regarding all technical matters. The Secretariat shall implement all directives of the Assembly and the Council, license the use and distribution of solar energy, and conduct inspections.

Article II

The Agency is empowered to establish a Solar Energy Corporation to undertake the development, launching, and operation of solar space satellites and to distribute power therefrom. The said Corporation shall be entitled to own and sell real and personal property, and to acquire and hold patents, trademarks, and copyrights. The Corporation shall seek capitalization through the sale of shares to states and other political entities, corporate entities and associations, and individuals. The Corporation may borrow money and engage in other forms of funding.

Article III

Each State adhering to this Treaty shall agree to contribute to the capitalization of the Solar Energy Corporation in accordance with an agreed upon formula based upon gross national product, population, and need for power. The directors of the Corporation shall be the members of the Solar Energy Agency Council.

Article IV

The Corporation shall act on behalf of the Agency in contracting for new development, operation, and use of solar energy satellites, and may thereby contract with national and regional space authorities.

Article V

All solar energy acquired by the use of space satellite stations in accordance with the provisions of this Treaty and regulations issued pursuant thereto may be used only for peaceful purposes. No such solar energy may be used as, or for the development of, weapons of mass destruction, nor may such energy be used for the development or production of items intended for military use. This provision does not preclude the use of such energy for the development and deployment of items intended for use by an international peacekeeping authority under the aegis of the United Nations.

Article VI

The Agency is empowered to dispatch personnel periodically to note compliance with the provisions of Article V and with other provisions of the Treaty.

Article VII

The Agency and the Corporation may deny any State the benefits of solar energy upon the directives of the Security Council of the United Nations if the said State refuses to comply, as determined by the Security Council, with the peacekeeping provisions of the Charter and with Security Council resolutions.

Article VIII

The Agency and the Corporation shall cooperate and coordinate their activities with the Economic and Social Council of the United Nations, the United Nations Secretariat, the International Atomic Energy Agency, and other specialized agencies.

Article IX

Disputes regarding the application of this Treaty may be referred by the Council, with the concurrence of the parties involved, to the International Court of Justice.

At Hanford, the live atoms are kept in tanks constructed of carbon steel, resting in a steel saucer to catch any leakage. These are enclosed in a reinforced concrete structure and the whole construction is buried in the ground with only the vents showing. In steel sepulchers, each with a million gallon capacity, the atoms are very much alive. Their radioactivity keeps the acids in the witches' brew boiling. In the bottom of the tanks the temperature is well above the boiling temperature of water. There has to be a cooling system, therefore, and it must be continuously maintained. In addition, the vapors generated in the tanks have to be condensed and scrubbed; otherwise a radioactive miasma would escape from the vents. Some of the elements in those high-level wastes will remain radioactive for at least 250,000 years. It is most unlikely that the tanks will endure as long as the Egyptian pyramids.

[10] In 1912 the illusion existed in some minds that development of the airplane would itself prevent war. B. VON SUTTNER, DIE BARBARISIERUNG DER LUFT 1 (1913).

[11] 46 DEP'T STATE BULL, 181 (1962). It has been noted, however, that keeping space development peaceful may be difficult:

The limitation of the use of outer space to peaceful pursuits can be divided into two subsidiary problems: (1) keeping space from becoming another and even more terrifyingly swift and brutal avenue of mass destruction on earth, as the seas and the air have become, each in turn, as war technology developed, and (2) keeping outer space from becoming still another theatre for great power rivalries in peacetime and hence another source of hatred, fear, competitive power disadvantage, conflict and war. This is the dual problem of peace in space.

H. TAUBENFELD & R. TAUBENFELD. MAN AND SPACE: POLITICS, LAW, ORGANIZATION 6 (1946). *See also* Reece, *The Solar Blackout*, MOTHER JONES, Sept./Oct., 1980, at 28.

Reece's article notes that several large corporations, such as Exxon, American Smelting and Refining Corporation (ARCO), Dyneer Corporation, Libby-Owens-Ford, Mobil Oil, Optical Coating Laboratory, and Shell Oil, have recently moved into solar energy development. A push by giant corporations to acquire independent solar technology firms began picking up steam after the establishment of federal research and development programs in 1973. Solar programs are also being developed internally by several large corporations. Wall Street solar investment counselor Anthony Adler has predicted that once the solar market matures it will be totally dominated by large corporations and utilities. *Id* at 30.

The question remains whether solar investments by oil companies are designed to retard solar development or stimulate it. During the 1970s, a series of meetings took place between government and corporate executives. While their goal was to devise a new energy policy for the United States, including a program of solar development, the impact was to "[d]eter the public from identifying solar energy as a possible means of altering the present economic and geopolitical structure of the United States." *Id* at 34.

ORDER OF PROCEDURE

Mr. PERCY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS SUBJECT TO THE CALL OF THE CHAIR

Mr. BAKER. Mr. President, certain negotiations are now going on, in an attempt to expedite the final disposition of this measure. While those matters are being explored, there is no good purpose to be served by the Senate continuing in session for the moment.

So I ask unanimous consent that the Senate now stand in recess subject to the call of the Chair.

There being no objection, the Senate, at 2:27, recessed, subject to the call of the Chair.

The Senate reassembled at 2:52 p.m., when called to order by the Presiding Officer (Mr. RUDMAN).

The PRESIDING OFFICER. The Chair recognizes the majority leader.

ORDER OF PROCEDURE ON MONDAY

Mr. BAKER. Mr. President, I believe that it is unlikely that we can accomplish much more today on the debate on the milk price support bill or other matters that may properly come before the Senate. In a few moments I am going to ask unanimous consent that the Senate stand in recess until Monday.

Before I do that, Mr. President, might I inquire of the Chair when we reconvene on Monday, and after the expiration of the time allocated to the two leaders under the standing order, plus any special orders, what will be the business before the Senate?

The PRESIDING OFFICER. The business before the Senate at that time will be S. 509.

Mr. BAKER. I thank the Chair.

Mr. President, after the routine details of the Senate have been taken care of on Monday, it would be my expectation that much of the day would be devoted to debate on the pending business or any amendments or other matters in respect thereto.

Since we have already provided that any votes that were ordered on today would be stacked on Tuesday beginning at 2:30 p.m., I ask unanimous consent, that when the Senate returns to the consideration of S. 509 on Monday next, any votes that may be ordered thereon or in respect thereto be stacked in sequence following any votes that are ordered today on that measure and related thereto and under the same terms and conditions as previously ordered.

Mr. ROBERT C. BYRD. Mr. President, I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 9 A.M., MONDAY, MARCH 23, 1981

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate completes its business today, which it is about to do—and I urge any Member who has any further business to transact to come to the floor at this time—it stand in recess until the hour of 9 a.m. on Monday, March 23, 1981.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR CERTAIN ACTION UNTIL 5 P.M. TODAY

Mr. BAKER. Mr. President, I ask unanimous consent that during remainder of the day today, until 5 p.m., Senators be permitted to introduce bills, resolutions, and statements, and that committees be authorized to file reports.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR COMMITTEES TO FILE REPORTS TOMORROW

Mr. BAKER. Mr. President, I ask unanimous consent that on Friday, March 20, 1981, between the hours of 9 a.m. and 3 p.m., committees be authorized to file reports.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, and I do not think I will have any objection.

Mr. President, I have no objection.

Mr. BAKER. Mr. President, I thank the minority leader.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR CERTAIN ACTION DURING RECESS

Mr. BAKER. Mr. President, I ask unanimous consent that during the recess of the Senate over until Monday, March 23, 1981, messages from the President of the United States and the House of Representatives may be received by the Secretary of the Senate and appropriately referred, and the Vice President, the President pro tempore, and the Acting President pro tempore be permitted to sign duly enrolled bills and joint resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF CERTAIN SENATORS ON MONDAY, MARCH 23, 1981

Mr. BAKER. Mr. President, are there any special orders in favor of Senators already entered for Monday next?

The PRESIDING OFFICER. There are none.

Mr. BAKER. I thank the Chair.

Mr. President, I ask unanimous consent that on Monday next, following on after the recognition of the two leaders under the standing orders, that there be special orders for not to exceed 15 minutes in favor of the Senator from Tennessee (Mr. BAKER), the Senator from New Mexico (Mr. SCHMITT), the Senator from North Carolina (Mr. HELMS), the Senator from Kansas (Mr. DOLE), the Senator from Oregon (Mr. HATFIELD), the Senator from Wyoming (Mr. SIMPSON), the Senator from Nevada (Mr. LAXALT), the Senator from Idaho (Mr. MCCLURE), the Senator from New Mexico (Mr. DOMENICI), and the Senator from West Virginia (Mr. ROBERT C. BYRD).

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. BAKER. Mr. President, as I indicated earlier, in a few moments I will ask that the Senate stand in recess until Monday next. Before I do that, I wish to state that the Senate will not be in session on tomorrow or Saturday, but that

beginning next week the Senate will be in session on Monday beginning at 9 o'clock, at which time the Senators will be recognized under special orders heretofore provided for.

I expect that there will be fairly generous time allocated for the transaction of routine morning business on Monday.

At the close of morning business, as the Chair has advised us, the Senate will resume consideration of S. 509 and matters related thereto. According to the order just entered, any votes which may be ordered on matters related to this business will be stacked until the following day on Tuesday, to follow on after the votes ordered this date, and to begin after the conclusion of those votes which will begin at 2:30 in the afternoon.

The Senate will be in session on Tuesday, on Wednesday, on Thursday, on Friday, and perhaps on Saturday.

It is my hope, Mr. President, that the Senate can turn to the consideration of the Resolution of Reconciliation and Instructions, which I believe may be ordered reported by the Senate Budget Committee today. That, of course, will depend on when that report is received by the Senate, when it is available under the rules of the Senate, including the 3-day rule. I will reiterate it is the intention of the leadership on this side to proceed to the consideration of that resolution as soon as it is available under the rules, or as soon as it may be reached by an earlier unanimous-consent agreement.

Mr. President, there may be other matters that could be brought before the Senate on Monday, Tuesday, Wednesday, or Thursday. The Senate will dispose of those matters as they are available and may be dealt with by unanimous consent or become available to the Senate on either the Executive Calendar or the Calendar of General Orders for legislative business.

Mr. President, I observe that the distinguished Senator from Arizona is on the floor. If he has business to transact, I am prepared to provide another period for the transaction of routine morning business if that would be helpful.

Mr. DECONCINI. Mr. President, that would be helpful.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business to extend not longer than 15 minutes, in which Senators may be permitted to speak for not more than 5 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 97—TO "CAP" SENATE STAFF AND PREVENT MORE SENATE OFFICE BUILDINGS

Mr. DECONCINI. Mr. President, I am pleased to be an original cosponsor of Senate Resolution 97 which will, for the first time, put a ceiling on Senate employment while, at the same time, prohibit the construction of any new Senate office buildings in the future. My distinguished colleague, Senator PROXMIRE, is to be commended for bringing this resolution to the floor at a time when the Architect of the Capitol is about to unveil a capital improvement master plan that, if fully implemented, could cost the American taxpayers $500 million. As the Architect's master plan will indicate, the basic, fundamental reason why additional office buildings will be needed in the future is the continuous growth of House and Senate staffs. Now, I am certainly not being critical of the Architect of the Capitol for putting together this master plan.

He was directed by the Congress to do so and he did his job. But what his final product tells me is that if the Congress continues to let its staffs grow and grow and grow, we are going to need to build a small metropolis to house all of the House and Senate employees. The Architect's master plan is nothing more than testimony to the fact that if staffs continue to grow, even at half their historical, 20-year rate, we are going to have to build at least five new House office buildings and a new Senate office building complex across the street from the existing Dirksen and Russell Senate Office Buildings.

Mr. President, there is no dodging the issue. The major reason these new office buildings will be needed down the road is the proliferation of congressional staff. Senate staff, for example, has grown from 1,943 in 1955 to approximately 6,550 at the end of last year—an increase of 237 percent in the last 25 years. I understand that the Architect has indicated that the present level of Senate staff, including those currently working in various satellite offices across the street and in other office buildings, can be accommodated in the existing Russell, Dirksen Senate Office Buildings and the Hart Senate Office Building, once it is completed. However, if staff continues to grow at its historical rate, soon staffers will be shoulder-to-shoulder in cramped quarters again, and another Senate office complex will be on the drawing board.

This resolution that we are introducing will address the real problem right at the source, by capping the growth of staff and saying no to any more Senate office buildings. I would also hope that my colleagues on the House side would take note of this initiative in the Senate and rethink its plans for future construction of House office buildings on the other side of Independence Avenue.

Mr. President, the fight against the construction of new Senate office buildings is not a new fight for either the Senator from Wisconsin or the Senator from Arizona. In 1979, Senator PROXMIRE, myself, and a number of my colleagues on both sides of the aisle fought the final appropriation for the completion of the Hart Senate Office Building. On July 18, 1979, by a narrow vote of 49 to 46, the final $57.5 million appropriation was approved for the completion of the Hart Building. I voted against that appropriation and still believe that the Hart Building has been an unnecessary waste of the taxpayers' money. Also, in 1979, I cosponsored Senator PROXMIRE's resolution. (S. Res. 216), that called for "no more Senate office buildings after the Hart Building was completed." That particular resolution had over 25 cosponsors, but was never reported out of the Rules Committee to the full Senate for a vote.

So, Mr. President, the idea of prohibiting the construction of new Senate office buildings is not a new idea—only a timely and appropriate one. Adding a cap on Senate staff addresses the critical missing link that must accompany a ban on future office building expansion. I would hope that my colleagues in both parties will recognize the necessity of showing the American taxpayer that we are serious about controlling our own bureaucracy here on Capitol Hill and willing to say no to any new construction of office buildings in the Senate. The adoption of this resolution will send a loud and clear signal to the American public that we are willing and able to make the tough, economic sacrifices that are necessary to control the cost of Government. I urge the adoption of this resolution.

EXTENSION OF TIME FOR ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that the time for the transaction of routine morning business be extended to not later than 3:30 p.m. this afternoon, under the same terms and conditions as previously ordered.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEATH OF FORMER SENATOR PETER H. DOMINICK OF COLORADO

Mr. ARMSTRONG. Mr. President, I seek recognition on a sad mission. It is my duty, with utmost regret, to announce the untimely passing of our dear friend and former colleague Peter Dominick, who passed away last night in Florida.

At the appropriate moment, I will have much to say about the inspiration of Peter Dominick's life. I just learned of this a quarter of an hour ago.

As I was riding over here on the subway, many things came to mind. One recollection of this great citizen of our State and great American that flashed to my mind was the first time I met him in Colorado when he was running for public office. He came up to me and stuck out his hand and said, "Hi, I'm Pete Dominick."

There was something about the manner of this man, who was then a State representative—this was before he was elected to the Congress of the United States—that impressed me, as it did many thousands of people in our State, that he was a person destined for greatness, as indeed it turned out he was.

Members of this body and his many friends in Washington will recall that, having served with distinction in the State legislature in Colorado, he came to Washington as a Member of the U.S. House of Representatives, beginning in 1960, and 2 years later was elected to the Senate; and I am sure that many of those who now serve in this body will recall with affection and the utmost regard his service here.

Peter Dominick was a man of great physical vitality. He was a tennis player, an athlete, and a scuba diver until just a few years ago, when a most unfortunate illness sapped him of most of his ability to take part in the normal physical activities of day-to-day life.

It was in the last year, as he battled with that illness, after he had left the Senate, after he had slipped from the public's view, that he exhibited the quality for which most of us will remember him for a long time to come, and that is the courage which was an integral part of his character.

In face of an illness which would have completely demoralized a lesser man, Peter Dominick fought back to the very end, retained a keen interest in the affairs of our Nation, in the work of the U.S. Senate, and in the people around him.

I saw Pete Dominick last at a dinner, an appreciation dinner in his behalf, just a few months ago. On that occasion, a former Member of this body and the then chairman of the Republican National Committee, Bill Brock, came out to lead several hundred of Peter's friends in celebration of his life and service. It was an opportunity to express to him the deep sense of obligation and the gratitude that many of us felt.

On that occasion, it so happened that I was privileged to hand to Peter and to his wife, Nancy, a bound volume which included letters and congratulatory statements and telegrams from many Members of this body.

Mr. President, Peter Dominick's service and dedication and life itself were a great inspiration to me personally and to all the people of my State. I shall miss him greatly. My family and I will remember, in our prayers, Nancy and the others of the family who loved Peter, and I know that many Senators will wish to do the same.

Mr. BAKER. Mr. President, it was with great sadness that I heard the announcement of the death of our former colleague and my good friend, Peter Dominick.

Memories flood back in my mind of his service here, his contribution to this Chamber and to his State—indeed, to the Nation.

For me, there is a special personal feeling, because Peter Dominick was one of my earliest friends in the Senate. I knew him before I came to the Senate. He encouraged me to run for the Senate. He came to Tennessee and campaigned for me when I ran for the Senate.

I looked to Peter Dominick for guidance and friendship during my earliest years in the Senate. It was with great sadness, then, that I learned that he passed away.

I extend my sympathy to his wife, Nancy, and to his family, particularly his children. I wish them well.

I join the Senator from Colorado in expressing, I am sure, the sentiments of every Member of the Senate when we say that we will miss him.

Mr. HART. Mr. President, together with all our colleagues, I was deeply saddened to learn of Senator Peter Dominick's death.

In his 12 years in the Senate, Peter Dominick combined all of the qualities a good legislator should have: Intelligence, dedication, skill, background, and a willingness to apply himself to the most difficult tasks.

Senator Dominick demonstrated time after time both in the Senate and in the State he loved, the courage of his convictions. He fought vigorously for what he believed in and he served Coloradans in the noblest way at all times.

Senator Dominick was a gallant man who showed us the meaning of courage. He will be deeply missed by his colleagues and by the people of Colorado. His legacy will live on.

Our prayers are with Nancy Dominick and her famly.

ORDER OF BUSINESS

Mr. BAKER. Mr. President, I know of no further business to come before the Senate.

We have provided, I believe, for the introduction of statements and bills and the filing of reports by committees until 5 p.m. today. Is that correct?

The PRESIDING OFFICER. The understanding of the majority leader is correct.

RECESS UNTIL 9 A.M., MONDAY, MARCH 23, 1981

Mr. BAKER. Mr. President, under those conditions, as a mark of respect to the memory of the deceased Hon. Peter H. Dominick, late a Senator from the State of Colorado, I move that the Senate stand in recess until the hour of 9 a.m. on Monday next.

The motion was agreed to; and at 3:29 p.m., the Senate recessed until Monday, March 23, 1981, at 9 a.m.

NOMINATIONS

Executive nominations received by the Secretary of the Senate March 17, 1981, under authority of the order of the Senate of March 17, 1981:

COMMODITY CREDIT CORPORATION

Seeley Lodwick, of Iowa, to be a member of the Board of Directors of the Commodity Credit Corporation, vice Dale Ernest Hathaway, resigned.

William Gene Lesher, of Virginia, to be a member of the Board of Directors of the Commodity Credit Corporation, vice Ray V. Fitzgerald, resigned.

DEPARTMENT OF AGRICULTURE

Seeley Lodwick, of Iowa, to be Under Secretary of Agriculture for International Affairs and Commodity Programs, vice Dale Ernest Hathaway, resigned.

John B. Crowell, of Oregon, to be an Assistant Secretary of Agriculture, vice Malcolm Rupert Cutler, resigned.

William Gene Lesher, of Virginia, to be an Assistant Secretary of Agriculture, vice Alex P. Mercure, resigned.

DEPARTMENT OF DEFENSE

Fred Charles Ikle, of Maryland, to be Under Secretary of Defense for Policy, vice Robert W. Komer, resigned.

William H. Taft IV, of Virginia, to be General Counsel of the Department of Defense, vice Togo D. West, Jr., resigned.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Emanuel S. Savas, of New Jersey, to be an Assistant Secretary of Housing and Urban Development, vice Donna Edna Shalala, resigned.

DEPARTMENT OF JUSTICE

Rudolph W. Giuliani, of New York, to be Associate Attorney General, vice John H. Shenefield, resigned.

Carol T. Dinkins, of Texas, to be an Assistant Attorney General, vice James W. Moorman, resigned.

D. Lowell Jensen, of California, to be an Assistant Attorney General, vice Philip B. Heymann, resigned.

Theodore B. Olson, of California, to be an Assistant Attorney General, vice John M. Harmon, resigned.

DEPARTMENT OF THE INTERIOR

William H. Coldiron, of Montana, to be Solicitor of the Department of the Interior, vice Clyde O. Martz, resigned.

Executive nominations received by the Senate March 19, 1981:

DEPARTMENT OF ENERGY

R. Tenney Johnson, of Maryland, to be General Counsel of the Department of Energy, vice Lynn R. Coleman.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

John J. Knapp, of New York, to be General Counsel of the Department of Housing and Urban Development, vice Jane McGraw.

SMALL BUSINESS ADMINISTRATION

Michael Cardenas, of California, to be Administrator of the Small Business Administration, vice Arthur Vernon Weaver, Jr., resigned.

HOUSE OF REPRESENTATIVES—*Thursday, March 19, 1981*

The House met at 11 a.m.

Rabbi Sidney S. Guthman, D.D., Temple Shalom, Seal Beach, Calif., offered the following prayer:

Lord of the Universe, Author of Liberty, to Thee we pray.

Let there be for bigotry no sanction, for intolerance no assistance.

For Thy bountiful blessings upon this land, we are indeed grateful beyond words.

We now humbly implore Thee to continue to favor us with Thy divine guidance. Do Thou inspire our legislators to reaffirm the principles of the Founding Fathers and to embody them in wise laws.

We beseech Thee, O merciful Father, to bless our country. May it ever be opulent but generous, strong but just, firm but wise, a shining example for all mankind to emulate.

Long may our land be bright with freedom's holy light. Great God our King.

May this be Thy will. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

RABBI SIDNEY S. GUTHMAN

(Mr. LUNGREN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LUNGREN. Mr. Speaker, on behalf of the people of the Long Beach, Calif., area, I would like to welcome a friend of mine to Washington and to these Chambers today. Dr. Sidney Guthman has long been one of the most active and concerned community leaders and I want to thank him for leading us in the invocation this morning.

In fact, there is probably no greater measure of his concern than the fact that he would interrupt his transit from sun-drenched Israel to balmy southern California in order to come to cold Washington, D.C., to take care of his business here.

In the course of my civic involvement in southern California, I have repeatedly crossed paths with Rabbi Guthman—he has been a veritable dynamo of personal involvement in civic and local government activities back home—so it is highly appropriate that we should be graced with a man of his caliber this morning.

It is fair to say that Dr. Guthman is himself an institution in Long Beach. During the past 6 years as rabbi at Temple Shalom in Seal Beach, his 15 years of service as chaplain of the VA hospital in Long Beach, and his 20 years as rabbi at Temple Sinai in Long Beach he has demonstrated a level of civic involvement that is rare, to say the least.

He has for many years served as a director of the Long Beach Symphony Association and has worked for a full decade on the Long Beach Commission on Community Improvement.

Seldom have I met an individual of such energy and commitment, and I am pleased and honored that Dr. Guthman could be with us here today to deliver the invocation before the House.

Welcome to Washington, Rabbi Guthman, and do not be too disheartened by these cold, Canadian winds that are blowing through the city today.

ADMINISTRATION'S DRUG DEREGULATION POLICIES MAY HAVE DAMAGING EFFECT ON CONSUMERS

(Mr. GORE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GORE. Mr. Speaker, the administration has professed to the Congress and the public its desire to encourage competition and reduce costs in private industry by eliminating unwarranted Government regulation. This is a laudable goal, but the reality of some early administration policies unfortunately contradicts these pronouncements.

An example is to be found in Health and Human Services Secretary Schweiker's decision to stay the Food and Drug Administration's approval of any new generic drugs until further notice. This prevents new competition in the pharmaceutical industry until further notice. For several years, FDA has allowed generic drug manufacturers to rely on existing scientific data to document the safety and efficacy of much less expensive generic versions of previously approved brand name drugs. This policy, by avoiding lengthy, duplicative, and very expensive retesting, has encouraged generic drug competition, and has begun to dramatically reduce prescription drug costs to consumers. In addition, paper NDA's have facilitated cost-lowering efforts in publicly funded drug reimbursement programs, such as medicaid. It is an antiregulatory, procompetition policy that makes eminent sense in this period of high inflation and sagging industrial performance.

Nevertheless, Secretary Schweiker, who is highly knowledgeable about various aspects of drug regulation and who compiled an outstanding record on health issues in his years of distinguished service in the Senate, has suspended this policy to allow himself additional time for review. Last week, I chaired a hearing before the Oversight and Investigations Subcommittee of the Energy and Commerce Committee that further probed the reasons behind this action.

Evidence presented to the subcommittee raised serious questions concerning the administration's ultimate intentions with regard to the paper NDA policy. Clearly, this action has grave economic implications for consumers.

DEFENSE SPENDING AND BUDGET CUTTING

(Mr. SYNAR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SYNAR. Mr. Speaker, it is obvious to most of us that the American people are demanding reductions in Federal spending, and the President has challenged us in Congress to approve nearly $50 billion in budget cuts. The people of my district are prepared to accept reductions in Government services, so long as all Federal spending programs are scrutinized for waste and inefficiency. We owe it to the American people to review every spending program, including the Department of Defense.

I was interested to see that Elmer Staats, the Comptroller General of the United States, recently advised the Secretary of Defense of 15 areas of waste and inefficiency which, if corrected, could save the taxpayers up to $4 billion per year by 1985. He also identified several other areas where additional economies within Defense could increase that total annual savings to $10 billion per year.

Most of us in both parties are committed to real increases in defense spending this year. And I plan to support sizable increases this year and in the future. But as we add to the Pentagon's budget, we must be sure we are

getting the lean and mean, efficient defense we are paying for.

I hope that Secretary of Defense Weinberger will take a close look at the Comptroller General's recommendations. We cannot tolerate wasteful, inefficient Government spending, whether it be in defense or domestic programs.

TV SERIES ON MIA'S GIVES FALSE HOPES TO AMERICAN FAMILIES

(Mr. MONTGOMERY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MONTGOMERY. Mr. Speaker, ABC News is running a series of three programs indicating that Americans missing in action still could be found in Southeast Asia who are being held captive in this faraway land.

Mr. Speaker, I think I know something about this subject. I think I know this subject as well as any American, having served as chairman of the House Select Committee on Missing Persons, serving on the Presidential commission that went to Vietnam, and also having gone to Vietnam 12 times myself.

There is no hard evidence that any Americans are still alive who want to come home, and the Defense Department only yesterday issued a statement saying it has no good evidence that any Americans are still being held captive in Southeast Asia. The sad part of the ABC series is that it gives the American families of the missing false hopes that their loved ones are coming home.

DEFICIT CLONING

(Mrs. SCHROEDER asked and was given permission to address the House for 1 minute and to revise and extend her remarks and include extraneous matter.)

Mrs. SCHROEDER. Mr. Speaker, the bright promise of genetic engineering has found its way into the Reagan administration's proposed economic package.

The administration's defense budget will grow us another complete deficit, perhaps larger than the deficit we are allegedly getting rid of. One would have thought that balancing the budget meant counterpoising outlays against revenues. No. It means replacing one set of outlays with another set.

Or, to look at it from a new perspective, deficit cloning.

Rather than anything so complicated as recombinant DNA, the formula is quite simple: Cut nondefense spending, much of which is problematic because the numbers are based in part on optimistic economic figures and questionable assumptions about legislative actions, then increase defense spending, but only by a fraction of what the real increase will be, again, because the numbers are built on economic and legislative contingencies, none of which are anywhere near certain.

The result will be a new deficit, perhaps larger than the old one.

Michael R. Gordon, in the National Journal, "The Inflation Factor," March 14, 1981, and Leonard Silk, in the New York Times, "A Risky Course on Forecasting," March 18, 1981, have additional details:

THE INFLATION FACTOR

The Defense Department's latest quarterly acquisition report is not exactly exciting reading. It's chock-full of figures and carries no exhortation about the need to strengthen U.S. defenses to meet the challenges of this "dangerous decade," as Reagan Administration officials refer to the 1980s. But as Congress gets down to examining the Administration's plans to send defense expenditures soaring, it should take a close look at this relatively obscure document. For a reading of the report, released two weeks before the Reagan defense budget, suggests that the tab for the Administration's defense plans may well exceed the $1.4 trillion in projected outlays during the next six years.

What prompts such a conclusion are some disturbing statistics about the impact of inflation on defense procurement. The report notes that the cost of 47 major weapons systems has risen to $310.2 billion, a $47.6 billion jump since the last acquisition report was released in September. In large part, this increase is simply the result of replacing the Carter Administration's inflation projections with more realistic forecasts supplied by defense contractors.

The cost of procuring the F-18 fighter, for instance, has climbed to $37.9 billion from $29.7 billion in September. Some $4 billion of this increase, the report states, is the result of using the higher inflation projections. The same procedure adds $2 billion to the M-1 tank and $2.3 billion to the "fighting vehicle systems" armored personnel carrier.

Increases of this magnitude are confirmed by other studies that show costs in the defense industry running ahead of the general inflation rate. A recent report on the F-18 by the General Accounting Office, for example, quotes a Navy official as saying that "the fiscal 1981 budget submission for 60 aircraft would have been 15 per cent higher" if the Defense Department had used the aerospace industry's inflation projections instead of those supplied by the Office of Management and Budget.

In his first appearance before the Senate Armed Services Committee as Defense Secretary on Jan. 28, Caspar W. Weinberger revealed that one reason for the Reagan Administration's request for additional funds for fiscal 1981 and 1982 was the Carter Administration's inflation assumptions. "The inflation rates upon which [the Carter spending requests] have been based seem to me to be underestimated," Weinberger said. "They reflect, I think, desires rather than realistic rates of inflation."

As disturbing as these underestimates may be, the problem may soon get worse. For despite Weinberger's initial testimony, the Administration is now basing its defense budget on inflation projections that are far more optimistic than the Carter Administration's or the acquisition reports.

The following table indicates just how optimistic the Reagan budget planners are. It lists the inflation assumptions used by the Reagan and Carter Administrations for six fiscal years, along with a projection by the Congressional Budget Office (CBO) on the rate of inflation in defense procurement.

	Percent					
	1981	1982	1983	1984	1985	1986
Reagan	10.0	8.7	7.3	6.2	5.5	5.5
Carter	10.4	9.7	8.6	8.0	7.2	6.4
CBO	10.4	10.4	11.0	10.2	9.4	8.6

In fiscal 1981 and 1982 alone, the Administration's downward "inflation adjustment" would lop $3.8 billion off defense costs compared with the Carter estimates.

In political terms, there's no mystery about the Administration's inflation assumptions. Acknowledging the prevailing rates of inflation in the defense industry might hurt the Administration's plan to change inflationary expectations and could contribute to the public perception that defense spending is free of budgetary constraint. Already, according to the Reagan recipe, defense outlays will climb from 24.1 per cent of the federal budget in fiscal 1981 to 36.8 per cent in fiscal 1986.

And, to be fair, it is entirely possible that the use of multi-year contracting, favored by many Pentagon officials, will help contain inflation in the defense industry. If the Reagan defense budget fuels a dramatic expansion of that industry's productive capacity, that will lessen inflation too.

But it is at least equally likely that the increase in defense spending—whatever the prospects of the Administration's over-all economic plan—will further inflate the costs of scarce materials used in defense production and aggravate present production bottlenecks, raising costs.

Given the massive increases the Administration seeks in procurement, an error of a percentage point or two in the inflation prediction could lead to an underestimate of billions of dollars in defense spending needs. That, in turn, could breed inefficiencies.

One time-honored way of dealing with an unexpected scarcity of funds is to stretch out the purchase over a longer period, increasing unit costs. The acquisition report notes, for example, that "funding shortfalls caused in part by low prior estimates of inflation contributed another $2 billion," in addition to the $8.3 billion resulting directly from the current use of higher inflation projections, to the costs of the F-18 fighter, the M-1 tank and the armored personnel carrier.

Unexpected procurement needs could escalate costs even further. The cost of a land-based MX missile system is pegged conservatively at $50 billion. But that could rise to well over $100 billion if the Soviet Union exceeds the SALT II arms limits and the United States responds by expanding the MX network or coupling it with an expensive antiballistic missile system.

Senior Administration officials are aware of these potential pitfalls and have assured the Pentagon that they will support requests for more funds if their forecasts are wrong.

In examining the defense budget, Congress would do well to consider whether it, too, is prepared to back requests for even more funds for defense in a few years or

whether it should do some cutting now to avoid problems later.

A RISKY COURSE ON FORECASTING

Thorstein Veblen, renowned as the author of "The Theory of the Leisure Class," was once asked how he would distinguish between history and conjectural history. "It's like the difference," he said, "between a horse and a sawhorse." Without resorting to analogies, one might say that history is what actually happened, according to the best evidence available, and conjectural history is what some author says might have happened.

A similar difference is developing between forecasting and conjectural forecasting—that is, between statements about the future based on evidence drawn from the past and those based on the conjectures or hopes of some economist or politician, advocating a particular program.

Obviously, no economic forecast can be made with 100 percent certainty that it will occur. All forecasts are based on certain assumptions, including the assumption that relationships that occurred with some degree of consistency in the past will occur in the future. If that key assumption is false, all economic forecasting is worthless.

But, by the market test of the sums of money business is willing to pay for forecasting (one of the growth industries of the postwar period) economic forecasts are not worthless. Beyond the market test, statistical analyses of the records of past forecasts by reputable and objective analysts, such as Prof. Victor Zarnowitz of the University of Chicago, confirm the business judgment that, while the forecasts are virtually never right on target, they have been consistently reliable enough to justify further use. The test of any theory, in economics as in the natural sciences, is how useful it is for prediction.

Businessmen, however ideological they may be when it comes to politics, are as devoted to getting the most accurate possible predictions as any scientist. Indeed, the leading modern philosopher of capitalism, Joseph A. Schumpeter, maintained that the emergence of business calculation in the late Middle Ages was responsible for developing scientific rationality.

"In this respect," he said, "it is highly significant that modern mathematical experimental science developed, in the 15th, 16th and 17th centuries, not only along with the social process usually referred to as the Rise of Capitalism, but also outside the fortress of scholastic thought and in the face of its contemptuous hostility."

The fortresses of scholastic thought—the monasteries and medieval universities—saw rationality as a threat to faith and the established order. But businessmen regarded quantitative rationality as the key to determining costs and increasing profits.

Businessmen and investors, in their profit-seeking activities, try to see life just as it is. If long-term triple-A bonds are selling to yield about 13.5 percent—as they are now—that means that the market expects inflation to continue at an average rate of 10 percent or more over the coming decade or longer.

Admittedly, the market might be wrong, and many even hope it is wrong. In its heart of hearts, the market may eagerly want the Reagan Administration to succeed in reducing the rate of inflation to 4.2 percent by 1986, as the Administration says it will; but the market is clearly not putting its money where its heart is. Instead, it is putting its money where its mouth is—and where the mouths of its advisers are.

For business corporations are continuing to pay heed to the private economists and econometric forecasting services that are telling them to stay cautious about the outlook. The Federal Reserve, they warn, is likely to stay in a tough tug-of-war with fiscal policy. In fact, worse budget deficits than the Reagan Administration is projecting seem to lie ahead.

The Congressional Budget Office says that Federal outlays in the 1982 fiscal year are likely to be $20 billion higher than the Administration is saying, and hence the budget deficit will more likely to be $65 billion than $45 billion. Alice Rivlin, the head of the office, under heavy attack by some conservative Republicans, continues to call the numbers as she sees them.

Mr. Reagan's budget director, David A. Stockman, denounces the private econometric business services, such as Data Resources, Inc. and Chase Econometrics, as "cynical and destructive," charging that they produce gloomier analyses than the Administration's because they have "a vested interest in the politics of the past."

Are the econometricians really being political, at the unlikely risk to their own business interests? Or is it the full-time politicians who have replaced Professor Schumpeter's "fortresses of scholastic thought" as the principal foes of capitalist rationality? If so, this is a risky course that could lead not only to poor forecasts but to wrong-headed and dangerous policy decisions in government as in business.

INTRODUCTION OF RESOLUTION CALLING FOR INVESTIGATION OF MURDERS OF AMERICAN MISSIONARIES IN EL SALVADOR

(Ms. OAKAR asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. OAKAR. Mr. Speaker, today I am introducing a resolution calling on the President of the United States to demand a swift and satisfactory completion of the investigation into the brutal murders of the four American missionaries in El Salvador last December, and to initiate investigations of the murders and disappearance of three other U.S. citizens.

It is evident that since January our State Department has placed a low priority on this investigation. Apparently policy has been more important than people.

Moreover, the current administration has in recent months displayed a disgraceful lack of concern and solicitude in making information available to the families and communities of the slain missionaries, and to the public as well.

I am asking the President to expedite this investigation and to report its progress regularly to the House of Representatives, because the American people place a high priority on this matter.

Furthermore, I am asking the President to commission the FBI to investigate allegations of the involvement in these murders of certain Salvadoran nationals residing in the United States. To allow a Salvadoran "mafia" to conduct its own war against social reform from our own shores is an outrage.

A satisfactory conclusion of this investigation will have three significant effects in restoring faith in U.S. foreign policy:

First, it will convince extremist elements that our antiterrorist policy is sincere and evenhanded.

Second, it will convince the Salvadorans themselves that we also place a value on the lives of the 15,000 or more Salvadorans slaughtered there in the last year and a half.

Third, it will announce to the Government of El Salvador that if they cannot reduce the internal violence in their country, we will not continue to supply assistance that has no hope of benefiting the people of El Salvador.

I urge my colleagues to support this resolution. American involvement in El Salvador is, ultimately, the responsibility of this body of Representatives. Let us make our voices known.

HELP FOR SOMALI REFUGEES

(Mr. WALGREN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WALGREN. Mr. Speaker, I would like to underscore the serious plight of the Somali refugees in east Africa who have fled Ethiopia. House Concurrent Resolution 68, sponsored by the gentleman from Connecticut (Mr. MOFFETT) and the gentleman from Pennsylvania (Mr. GOODLING), urges private agencies in the United States to provide immediate humanitarian assistance to Somalia to aid these refugees. The resolution also calls on the President and appropriate Federal agencies to work with other nations to come to the aid of the Somali refugees.

As of January 1, over 1 million refugees have entered the Somali Democratic Republic. Most of these refugees are living in refugee camps, homemade huts in semidesert land. Ninety percent of these refugees are women and children under the age of 15. Death of children from measles and diarrhea is common. Malnutrition is rampant.

Somalia, with a normal population of 4.5 million people, is one of the poorest countries in the world, with 1 doctor per 12,000 people. The Somali Government, with extremely limited resources, has provided what it can, but it is not equipped to handle this huge influx of people. The refugee problem in Somalia would be the equivalent of 45 to 50 million refugees entering the United States in 1 year.

We cannot expect this tiny country to absorb—and feed—all of these needy people.

Though we Americans have a great humanitarian tradition and have shared our resources with many unfortunate and distressed people, the United States alone cannot take on the total task. This is why our resolution specifically urges the President and other executive branch officials to seek assistance from other nations in providing food, medicine, and other resources to the Somali. Helping Somalia would not only be a generous act on the part of the United States and other countries, it would also lead to new ties of friendship in the world among the countries involved.

Mr. Speaker, I hope that the Members of the House will join me in supporting this resolution so that we might do our part to fulfill the humanitarian obligation of decent nations everywhere to the Somali refugees.

NO U.S. MILITARY SALES TO SAUDI ARABIA

(Mr. WEISS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WEISS. Mr. Speaker, the President's proposed military sale to Saudi Arabia violates a 1978 agreement with Congress and reveals the administration's willingness to submit to Saudi demands.

The Saudi-owned F-15's which the administration plans to outfit should not have been provided 3 years ago. Now the President is compounding this mistake by allowing that nation to hold us in international constraints with threatened cutoff of Saudi oil. The Saudi kingdom's demands for friendly support are unreasonable and the United States should not bow to them.

Saudi Arabia is our largest supplier of oil, but has not helped us build up our strategic petroleum reserve. Neither does Saudi Arabia support our peace efforts in the Middle East, and it opposes the sovereignty of the Jewish State of Israel. Yet President Reagan is offering this nation the offensive military equipment which would make it possible for the Saudis to launch an air attack on Israel. And though the President has said he wants to put an end to terrorism, these military supplies will be going to a nation which refuses to denounce the most widely known terrorist group, the PLO.

It is essential that for both moral and strategic reasons the Congress insist that the President adhere to our 1978 agreement and not sell this equipment to Saudi Arabia.

HOUSE SUBCOMMITTEE ACTION WOULD THWART RELIEF ON DAIRY PRICE SUPPORTS

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, yesterday an agriculture subcommittee walked through fire, crossed mountains, and forged raging rivers to avoid President Reagan's urgent request for relief on dairy price supports.

Seldom have we seen such drastic steps taken to do such drastic damage to the President's program. The subcommittee actually adopted a mimeographed piece of paper that had not even been filed as a bill.

The mimeographed instrument now incorporated into the text of the bill introduced by the gentleman from Iowa (Mr. HARKIN), calls for a 4-year dairy price support program, a 4-year extension of a special veterans and armed services program and a change in the permanent appropriation on commodity purchases. Since there have been no public hearings or knowledgeable analysis of this dairy lobby proposal that was suddenly and surprisingly sprung yesterday, I hesitate to offer any analysis of its eventual damage to the taxpayers, consumers and to the dairy industry itself.

Let there be no mistake about the message in this action, Mr. Speaker. The milk lobby had its way with one of our committees. Other lobbies will attempt similar subterfuge in other committees and we have to be on our guard. This is a vivid example of the raw power of special interest lobbying. I hope the full committee and the full House will exercise better judgment.

□ 1115

INVITATION FOR PHILOSOPHICAL AND ECONOMIC DIALOG CONCERNING TAXES

(Mr. CONABLE asked and was given permission to address the House and to revise and extend his remarks.)

Mr. CONABLE. Mr. Speaker, today again, I would like to invite philosophical and economic dialog about taxes in a special order that I have reserved immediately following this session. It will be an opportunity to put aside at least at this stage in the proceedings political and strategic considerations in an effort to understand the real tax options that face this country and the impact they are likely to have on the economy both in the short and the long term.

Tax changes are in the air, Mr. Speaker, and it is wise for my colleagues and all concerned Americans to understand the full implications of the options that do face us. I hope we will have participation by other Members in this dialog and that it will continue right up to the point where we have to decide what direction we are going to take in taxes. Please come to the special order if you are interested.

EDUCATION AND LABOR COMMITTEE SHOULD LEARN TO READ

(Mr. BAILEY of Missouri asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BAILEY of Missouri. Mr. Speaker, on Tuesday my Democratic colleagues on the Education and Labor Committee criticized President Reagan for being unclear on budget cuts, and then promptly voted for a budget that exceeded even former President Carter's proposals. As an example, President Reagan proposed $2.4 billion for child nutrition programs. The Carter administration had called for $3.8 billion for child nutrition and the committee with incomprehensible insouciance recommended $4.2 billion. For another example, the committee voted to increase spending for public service jobs, including CETA, by about 12 percent over the former President's budget. As a member of the Education and Labor Committee, I was disappointed by this clear lack of commitment by the majority to fiscal responsibility.

The Education and Labor Committee should learn how to read. The administration's proposals clearly outline a comprehensive plan to decrease Education and Labor's contribution to our monsterous Federal deficit. Had my free-spending colleagues read these proposals, they might have learned that eliminating high-income families from college student grant programs will not decrease to any large degree college student enrollments. Had they read the proposals and listened to their constituents, they would have understood that cutting back on spending for the arts and humanities is not a priority concern of grassroots America when compared to our concern to be able to meet more basic human needs. And had the committee adequately studied the administration's proposals and spoken to affected constituencies, I am sure that they might have learned that those constituencies will support savings and never dreamed they would get more.

Perhaps when the committee has had time to exercise their reading skills a bit more and reflect more calmly on our fiscal crisis, they will give more responsible consideration to the President's proposals, and with an opportunity to study the Senate's proposals perhaps we in the House will even learn to count.

NATIONAL AGRICULTURE DAY

(Mrs. SMITH of Nebraska asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. SMITH of Nebraska. Mr. Speaker, today, March 19, has been officially designated as "National Agriculture Day." I hasten to join with my colleagues from leading agricultural areas of the Nation in stressing the importance of this day.

It gives us an opportunity to point with pride to the many unsung contributions agriculture makes, day in and day out, to a free economy and a healthy populace.

The theme for agriculture's day in the sun is: "Agriculture—It's Your Heartbeat, America." This theme is well chosen because any qualified person charting the anatomy of the American economy would diagram agriculture as its heart.

What else provides the lifeblood of vital elements for economic well-being? Consider these facts: Agriculture is the No. 1 industry in the United States with assets of $927 billion. It is the Nation's No. 1 employer, providing employment to over 15 million people. It is the Nation's No. 1 inflation fighter with productivity growth five times that of nonfarm business over the past 5 years. And agriculture is the Nation's No. 1 exporter, sending over $40 billion in agriculture products overseas in 1980.

The heartbeat of the American economy is strong and robust because the men and women involved in the production of food and fiber on our farms and ranches are dedicated to a livelihood that has advanced productivity to where each farmer produces for himself and for 58 others at a cost of 17 percent of the after-tax income of the average American worker.

My State of Nebraska shares a leading role in this production bonanza. The Cornhusker State is the fifth largest agriculture State in the Nation and is always among the top 10 States in cash receipts for crops and livestock.

Nebraska is No. 1 in the Nation in the production of alfalfa, popcorn, and Great Northern beans. It is No. 2 in fed cattle and calves, cattle on feed, commercial cattle slaughter, and commercial livestock slaughter. Nebraska is No. 3 in the production of corn for grain, sorghum for grain, and all cattle and calves. It is No. 4 in Winter wheat.

The 63,000 farmers and ranchers in our State have a proud record of doing their part in making this the best fed Nation on Earth; and in providing supplies of food and fiber that we can sell around the world and offset some of the billions we pay out for imported oil.

They have a right to be honored on this National Agriculture Day. Our distinguished Governor, the Honorable Charley Thone, well known to the Members of this body as a staunch friend of agriculture who left his mark on legislation and programs, has issued an official proclamation about Nebraska's participation and observance. Business firms and agriculture associations in the State are engaged in special efforts to salute the importance of agriculture to the State and the Nation.

I ask all of those in this body to also join in the recognition we are making today of the Nation's biggest and most important industry—agriculture. It deserves all the good things we do in its behalf today.

AMERICAN FARMER IS APPLAUDED ON AGRICULTURE DAY 1981

(Mr. REGULA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. REGULA. Mr. Speaker, it is appropriate that this day is set aside as Agriculture Day, and I am especially pleased to have the opportunity to praise American farmers and the agricultural industry. My own State of Ohio is perennially among the top 10 or 12 States in the production of agricultural products and ranks ninth in agricultural exports, so I am delighted to be able to add my comments to those of my colleagues on this special day.

Those of us whose roots are in agricultural communities are keenly appreciative of the quietude and sense of belonging we find there. Especially since we are concerned about the family in America, we should look to this community where such families have always been part of its great strength. Perhaps it is those and other qualities that have long made the farming areas of our country a favorite subject of poets. Nor can the more tangible importance of rural America be overstated. The productivity of American farmers satisfies food needs in the world as well as within our own country's boundaries.

Domestic demand for food has expanded, and growth in world population has meant an ever increasing global dependence upon the U.S. agricultural industry. Exports of U.S. farm products in fiscal year 1981 are expected to reach a record $47 billion. Certainly this provides us with an opportunity for a humanitarianism unmatched in history, and agricultural exports continue to provide the one bright spot in an otherwise dismal balance of trade picture.

The agricultural industry is our Nation's largest employer and biggest industry. Its 14 to 17 million workers utilize assets totaling $927 billion, equal to about 88 percent of the capital assets of all manufacturing corporations in the United States. This is especially impressive since farmers have come through an extremely tough decade. Inflation, interest rates, and energy costs have all skyrocketed. Although farm production costs have increased a staggering 84 percent in the last 10 years, food remains a bargain in America. In 1960, the average American spent 28½ percent of his income on food; today we spend only 16 percent.

These figures are ample testament to the strength of American agriculture—a strength that the people of this Nation depend upon. So, on Agriculture Day, 1981, I applaud the American farmer and wish him continued success in the future.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore (Mr. LAFALCE). The Chair desires to make an announcement.

Pursuant to the provisions of House Resolution 81, the Chair desires to inform Members that the official picture of the House while in session will be taken immediately after the approval of the Journal when the House convenes on Thursday, March 26, 1981.

TOO BIG A STAFF—TOO MUCH SPENDING

(Mr. COLLINS of Texas asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COLLINS of Texas. Mr. Speaker, the first vote in the House that we are going to take which is a major challenge for this year is, Are we going to cut the staff budget? What we really need to know is, Are we going to cut the budget for our own congressional committee staff? Committees have too big a staff. We have too much spending for staff expense, so here is our opportunity to provide an inspiration for America.

There are so many committee staffs that need to be cut, such as Rules, Ways and Means, Merchant Marine, District of Columbia, but I want to refer to my own, the Commerce Committee, which in 1974 had a staff of 58, and this year Commerce is asking for 177. Last year it was an overspending committee. Last year Commerce spent $3,659,477. This year the Committee on House Administration has approved for Commerce a $4,043,000 budget. A 20-percent cut would make the committee much more efficient.

If Congress is going to provide an example for America, we need to cut the subcommittees like the one I serve on. I am the ranking member on Communications. We have 1 Republican staffer, but they have 18 Democrat staff.

79-059 O - 1984 - 41 - (Vol. 127 Pt.4)

The Democrats do not need 18. We know they might need a few more to understand the issues, but Democrats do not need 18 if we can understand the issues with 1 staffer for the Republicans.

Our country has more government than it needs. We have more regulations than we want. And we have more taxes than we can afford to pay.

Reducing the size of committee staff is the place to start, because smaller staffs will do their work and not dream up new laws, new regulations, new agencies just to keep busy and justify their job.

NATIONAL CYSTIC FIBROSIS WEEK

(Mr. CONTE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CONTE. Mr. Speaker, today as I did in the last Congress, I am introducing a resolution that will designate the week of September 20-26, 1981, as "National Cystic Fibrosis Week."

It is not often that we have the opportunity to bring hope to a group of America's youth without spending a penny of the taxpayer's dollars. By setting aside a special week devoted to the problems and needs of those afflicted with cystic fibrosis, we will increase the public's awareness. Hopefully, the public will take our lead and provide the support to eventually whip this disease.

Through my work with the Cystic Fibrosis Foundation, I have come to appreciate what it means to be born with this disease. To a person with cystic fibrosis, each day brings an agonizing succession of therapy treatments, a multiplicity of pills, and the threat of long hospital stays. Each day also brings a chilling emotional distress to the patient and family because they know that this regimen of therapy will only delay the inevitable—early death.

Therefore, Mr. Speaker, I urge my colleagues to join with me in supporting this legislation in order that we may demonstrate our concerns for this debilitating disease and our hope that it will be eradicated.

I request unanimous consent to revise and extend my remarks.

AMERICANS ARE AWAKENING TO THE REALIZATION THAT GOVERNMENT CANNOT BE THE ANSWER TO ALL OUR PROBLEMS

(Mr. SMITH of Alabama asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SMITH of Alabama. Mr. Speaker, the folks in my Alabama congressional district elected me on the promise I would work diligently to bring excesses in Government waste, spending, and regulation under control. Since coming to Washington I have received hundreds of letters from constituents who are very close to unanimous in their support for President Reagan's economic plan. The letters are supportive even when implementation might mean sacrifice because people are frightened by the continued downward spiral of our economy.

I am convinced my district is typical in this regard, and that all across this land Americans are awakening to the sobering realization that Government cannot be the answer to all our problems. Urgent change is mandatory if we are to pull ourselves up from our present sad state. The results of the last election give evidence of the electorate's cry for help.

I thought that cry had been heard in Washington and that all my colleagues would realize the advisability of supporting reforms, if only for political reasons. Unfortunately, that is not the case. The majority in the House of Representatives are requesting funding increases for committee investigatory staffs, that are almost totally within majority party control.

I want to formally register my alarm regarding these funding increase requests. How can Congress ask the American people to make sacrifices while continuing to escalate congressional costs? I worry this series of votes is symbolic and demonstrates a continued indifference to the will of the voters.

Syndicated columnist Don Lambro testified this week before the Budget Committee regarding waste within Congress. Although these comments by the author of "Fat City" deal with needed reforms beyond the particular scope of the committee staff increase legislation, the comments are relevant, and I commend them to the attention of my colleagues.

And I think Congress would do well to start in its own backyard by getting rid of unnecessary expenditures and agencies such as the Office of Technology Assessment, much of the Congressional Budget Office, automatic elevator operators, the congressional gymnasiums, end the subsidies on the Senate and House restaurants, slash the franking privilege for promotional campaign mailings, stop the handouts of Agriculture and Interior Department yearbooks and other giveaways, abolish or merge the subcommittees that hold few if any hearings, get rid of unnecessary staff positions such as press secretaries, end the congressional florist service, and get rid of chauffeured-driven cars for the leadership.

Clearly we should be looking for ways to limit spending. I urge my colleagues who support increases to consider full well the implications and potential repercussions of such a vote.

One of the most flagrant aspects of the committee increases under consideration is the Post Office and Civil Service Committee plan to establish a redistricting data center, complete with computers, to advise Members of the House of Representatives with regard to redistricting. This is an abuse of public trust and my objections are logical and numerous.

To begin with, the Constitution clearly provides that redistricting authority be given to the States. Thus, a congressionally controlled computer represents a usurpation of State jurisdiction. It is meddling clear and simple.

The potential for abuse is obvious. Such a center would give unfair advantage to incumbents and I have no doubt it would be used to influence the redrawing of political boundaries.

The funding request for this center is 360,000 hard earned taxpayer dollars. I cannot begin to imagine how support for the redistricting center and the staff increases could be justified to constituents who are suffering so from inflation. This is not a legitimate expenditure.

I am very proud of the freshman class of the 97th Congress because the freshmen have spoken with one voice in opposition to these increases in funding. The freshmen know the will of the people and will not ask the American people to make inequitable sacrifices.

Again, I urge my colleagues in support of these abusive measures to reconsider.

LEGISLATIVE PROGRAM

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, I ask for this time for the purpose of inquiring of the acting majority leader the program for next week.

Mr. SKELTON. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I will be happy to yield.

Mr. SKELTON. The program for next week beginning on Monday, March 23, is that the House will meet at noon for a pro forma session; that on Tuesday, March 24, the House will meet at noon for another pro forma session; on Wednesday, March 25, the House will meet at 3 p.m. At that time the House will consider the House Committee funding resolutions. Of course, this is subject to a rule being granted by the Committee on Rules.

On Thursday, March 26, the House will meet at 11 o'clock.

I might point out to the gentleman that there will be a call of the House at that time.

The official photograph, I might add, of the Members of the 97th Congress will be taken on the House floor immediately following the call of the

House on that day, Thursday, March 26.

Also, we will be taking up the dairy price supports bill, which is in the Committee on Agriculture today. That, of course, as the gentleman well knows, is subject to a rule being granted.

Further, there will be three resolutions which would seem to be uncontroversial, one dealing with the Vietnam veterans' commemorative day, one dealing with National Diabetes Week, and one dealing with Jewish Heritage Week.

I also advise the gentleman that on Friday, March 27, the House will not be in session. I hope that answers the gentleman's inquiry.

Mr. MICHEL. I thank the gentleman.

I might make inquiry of the gentleman whether or not he has any intelligence as to what kind of rule will be granted for the House Committee funding resolution? The gentleman will recall that they were originally scheduled as individual resolutions several weeks ago and put off that week as well as last week.

It is my understanding that they are probably going to be all grouped together in one resolution, which then prompts an inquiry from our side as to under what kind of rule we will be considering that resolution. Will the rights of the minority be protected to the extent that a substitute could be offered from our side, or at least a motion to recommit with instructions? Is the gentleman prepared to respond to that kind of inquiry?

Mr. SKELTON. I can say to the gentleman that as he undoubtedly already knows, the Committee on House Administration has already reduced the total authorized amounts for the House Committee funding in 1981 to a figure below the authorized levels of 1980. It is my understanding that a floor amendment will be offered by the Democratic leadership which will make further reductions in authorized amounts for 1981, which would add up to a total cut of some 10 percent from the total 1980 authorized amounts.

In answer to the gentleman's question as to what the rule might be, I am not sure that anyone not on the Committee on Rules, or even members of that committee, could answer that correctly. I think we might point out that in the past the rights of the minority have been protected.

Mr. MICHEL. I might simply say to the gentleman that a 10-percent reduction from an authorized level of last year is not satisfactory to the minority side. We would, I am sure, be much more inclined to go with a 10-percent reduction from the expenditure level of last year.

We would hope that when the measure comes before the Committee on Rules that they might be amenable to our request for an opportunity to vote on that either as a substitute or a motion to recommit.

Mr. SENSENBRENNER. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Wisconsin.

Mr. SENSENBRENNER. I thank the gentleman for yielding. Just so that the understanding is clear, would the gentleman from Illinois please explain the difference between the 10-percent cut from the authorized level and the 10-percent cut from the actual 1980 expenditures?

□ 1130

Mr. MICHEL. I cannot give the gentleman specific figures, but it has been traditional around here to have a particular authorized level of expenditure for the committees that is pretty much in excess of what we really know as a practical matter will be spent.

Therefore, a reduction in the level of authorization would be, in my opinion, a phony reduction. That type of reduction would amount to a strawman in this case as it would have no real relation to what is actually spent and would not necessarily amount to any savings from last year. If you really want to make a significant reduction to be commensurate with what we are asking the rest of the country to do, then you would take the operating levels of the expenditures for last year and cut that 10 percent to make a meaningful reduction. That would be my response to the gentleman's inquiry.

Mr. SKELTON. I appreciate the gentleman's comments. I will be sure, sir, that the gentleman's thoughts are passed on to the Rules Committee.

Mr. MICHEL. I am deeply grateful to the distinguished gentleman from Missouri.

ADJOURNMENT TO MONDAY, MARCH 23, 1981

Mr. SKELTON. Mr. Speaker, I ask unanimous consent that when the House adjourns today, it adjourn to meet on Monday, March 23, 1981.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. SKELTON. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

STUDENT LOAN PROGRAMS

(Mr. PEYSER asked and was given permission to address the House for 1 minute and to revise and extend his remarks and to include extraneous matter.)

Mr. PEYSER. Mr. Speaker, today I want to enter into the RECORD messages, letters from colleges; one from the district of the gentleman from North Carolina (Mr. HEFNER), Pfeiffer; Baylor College in the district of the gentleman from Texas (Mr. MATTOX); Holy Redeemer College, in the district of the gentleman from Wisconsin (Mr. ASPIN); Catholic University in the district of the gentleman from Washington, D.C. (Mr. FAUNTROY); and Bryn Mawr, in the district of the gentleman from Pennsylvania (Mr. COUGHLIN).

The message, Mr. Speaker, is the same in all of them. It says that if we go ahead with the cuts that are being proposed, the slashes that are being proposed in student aid programs throughout this country, we are going to be doing more to hurt the youth of this country than any action this Congress has ever taken in recent years.

I am hopeful, Mr. Speaker, that we will not fall prey to that and we will stand and be loyal to the students who we have made commitments to now and in the past.

PFEIFFER COLLEGE,
Misenheimer, N.C., February 27, 1981.

Hon. PETER A. PEYSER,
U.S. Congress,
Washington, D.C.

DEAR CONGRESSMAN PEYSER: This will acknowledge with appreciation your interest in maintaining a viable approach to financing student choice and access to higher education. Rest assured that this institution and I stand ready to present our concerns to appropriate Congressmen at such time as is most valuable. We, of course, have discussed with our friend, Congressman Bill Hefner of the Eighth District here in North Carolina, our concerns and feel confident that he and his staff stand ready to consider the position of Pfeiffer College with reference to the several student aid programs.

In the meantime, our best wishes to you and others who are joining with you in this campaign.

Sincerely yours,

CAMERON WEST,
President.

BAYLOR COLLEGE OF DENTISTRY,
Dallas, Tex., March 2, 1981.

Congressman PETER A. PEYSER,
Committee on Education and Labor,
Washington, D.C.

DEAR CONGRESSMAN PEYSER: Thank you very much for your letter of February 22, 1981 concerning the possible cut backs in the area of federally supported student loans.

Without doubt, cut backs in the student loan program, particularly for students coming from middle income and low income families, could have a disastrous effect on higher education. As costs of education escalate it will be more important than ever to have financial support available for those students who are in need.

I certainly applaud your efforts on behalf of the student loan program and will look forward to working with you in this regard.

Sincerely,

RICHARD E. BRADLEY, D.D.S.,
President and Dean.

HOLY REDEEMER COLLEGE,
Waterford, Wis., March 4, 1981.

Hon. PETER A. PEYSER,
House of Representatives,
Washington, D.C.

DEAR MR. PEYSER: Thank you for your letter of February 22, expressing your concern about suggested cuts in the national budget in student assistance programs. I, my colleagues and the students of our College share your concern that these cuts do not seriously harm higher education which forms a very critical factor in maintaining the well-being of our Country, both economic and intellectual.

Any suggestions which your office may have for how we can participate in helping Congress and the Administration deal realistically with student assistance programs will be gratefully received by us and energetically pursued.

Sincerely,

Rev. J. ROBERT FENILI,
Acting President.

THE CATHOLIC UNIVERSITY OF AMERICA
Washington, D.C., March 16, 1981.

Hon. PETER A. PEYSER,
House of Representatives,
Washington, D.C.

MY DEAR MR. PEYSER: Thank you for your recent letter pointing out the threat to student loans and basic opportunity grants in the current efforts to balance the federal budget. I am happy to respond to your request to assist in your efforts as a member of the Education and Labor Committee to sustain these programs.

It is encouraging to know that you, and others in Congress, are supportive of the student assistance programs which are so essential to our students and to the institutions of higher education they attend. To assist in your efforts, data from our institution for the current year might be useful:

Program	Number of students (duplicated)	Amount
Basic educational opportunity grants	639	$670,262
Supplementary educational opportunity grants	342	273,809
College work study	756	756,168
Guaranteed student loans awarded	530	1,526,838
Pending [1]	1,890	5,932,743
National direct student loans	666	608,814
States student incentive grants	196	122,781
Total	5,019	9,891,415

[1] Some of these students are not attending this semester and/or have canceled their applications.

These figures clearly indicate the essential importance of these programs to a large proportion of our students. (Total enrollment 8,031; FTE 5,554). Their significance for the financial condition of our University budget, which is currently $44,000,000, is also painfully apparent.

I hope these statistics will help in your efforts to ward off one of the most serious threats to both private and public higher education. Clearly, the major impact will be on private institutions. There is the real possibility that a significant number of private institutions will be seriously damaged or closed as a consequence of discontinuance of these loans and grants.

The future of our nation is dependent upon the education of its future citizens. In a democratic society, both public and private institutions should thrive. The projected cuts would destroy the healthy balance between institutions of higher education in this country and deprive large numbers of worthy students of the education they seek and need to become productive members of our society.

If there are further ways in which you think we can be helpful, please let me know. Many thanks for your interest in this important issue.

With all good wishes,

Sincerely,

EDMUND D. PELLEGRINO, M.D.,
President.

BRYN MAWR COLLEGE,
Bryn Mawr, Pa., March 13, 1981.

Hon. PETER A. PEYSER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN PEYSER: Thank you for your letter of March 4, 1981. It is reassuring to know that you will take an active role in defending the higher education loan programs and Basic Educational Opportunity Grant and Supplemental Education Opportunity Grant programs.

I have written to Senators John Heinz and Arlen Specter and Congressman Lawrence Coughlin to encourage them to consider the impact of the proposed cuts on the higher educational community. Using some figures from Bryn Mawr College, I hope to have demonstrated the importance of the grant and loan programs for our students and, consequently, for the institution itself. A copy of the letter to Senator Heinz is enclosed for your information.

Please keep us informed of approaches you feel are effective for us to take in the next few months.

Sincerely yours,

MARY PATTERSON MCPHERSON.

Enclosure:

BRYN MAWR COLLEGE
Bryn Mawr, Pa., March 13, 1981.

Hon. JOHN HEINZ,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HEINZ: I write on behalf of Bryn Mawr College to urge you to act on the supplemental appropriation to maintain funding of Pell Grants and Direct Loans for FY 1981 and to consider the impact of the proposed cuts in student aid programs for FY 1982 and subsequent years.

At this time of the year finances dominate our attention and time for we have just concluded preparation of the 1981-82 budget and brought it to the Board of Trustees for their approval. Our Board took a surprising action which I relate to you for it has bearing on current actions in Washington designed to alter federal support for higher education. The Board rejected our proposed tuition levels for undergraduate and graduate students in favor of higher levels. They did this in order to increase the amount of financial aid available to needy undergraduates and to allow us to begin to close the gap between the rise in the cost of living and the increases we have been able to make in faculty salaries over the past twelve years.

As all reasonable people do, we at Bryn Mawr College know that the rate of inflation must be cut; therefore we regret having to raise the costs of the education we provide. But private colleges and universities are, as you know well, both consumers of high-cost commodities (for example, energy, books, faculty) and tuition-dependent for their operating revenues. In 1981-82 student fees will account for 61% of our revenues, yet because tuition will cover only 55% of educational and general expenses, all students do, in a sense, receive financial aid.

Colleges like Bryn Mawr could probably have student bodies comprised entirely of those able to pay their educational costs in full. But the result would be a vastly different Bryn Mawr College, with students more similar in background, more homogeneous in interests and ambitions, and, in many cases, less gifted. The character and quality of the classroom experience and daily life would change for the worse, for it is the variety and diversity in the backgrounds and natures of their fellow students to which students and faculty respond and which contribute to the distinctive character of our institution. This diversity is something for which we must pay. In order to have students who come from all parts of the country and from all economic levels, as well as from abroad, we must provide scholarship and loan support. This year $2,000,000, an amount equal to about 10% of the budget and from the College's own sources, has been awarded to about one-third of the students. Almost twice as many students meet the costs of their education with federal help in the form of Pell Grants, Supplemental Educational Opportunity Grants, National Direct Student Loans and Guaranteed Student Loans. Some 863 students (more than half the student body) borrowed through the Guaranteed Student Loan Program, including 425 undergraduates whom the College was unable to aid directly. Undoubtedly many of our currently enrolled students will be seriously affected by the proposed changes in federal loan programs. Based on currently available figures, we have been able to estimate a cut of 15-30% in Pell Grant levels and 16% in National Direct Student Loans. The impact of the cutback in the Guaranteed Student Loan Program is difficult to estimate until we know the eligibility standards. Because of the numbers of our students benefited by the program, we anticipate a very serious impact on our enrollments if the program is cut as proposed.

Certainly we do not expect the federal government to guarantee the survival of private higher educational institutions by providing monies to their students equal to the higher tuition and residential costs. But Supplemental Educational Opportunity Grants and Basic Educational Opportunity Grants are necessary if we are to continue to make private higher education available to students from low- and middle-income families; and Guaranteed Student Loans, even with tighter eligibility standards, will be essential for many others. When the opportunity for abuse is trimmed, rightly, out of the Guaranteed Student Loan Program, the fine basic concept of the program should remain to guarantee access by the majority of the college-bound population to a wide variety of alternatives. This, in turn, will help preserve the diversity in our higher educational institutions, a diversity—it was reassuring to read—in which President Reagan believes.

For these reasons I respectfully urge your thoughtful consideration of the impact

which the proposed cuts in the higher education funding programs will have.

Sincerely yours,

MARY PATTERSON MCPHERSON.

VOICES OF THE PEOPLE ARE HEARD ON BUDGET CUTS

(Mr. GARCIA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GARCIA. Mr. Speaker, just briefly I would like to say that every day from here on in I will be introducing into the RECORD the concern of those persons who are today the silent majority. It seems that the silent majority has become the majority and all I can say is that I will enter into the RECORD every day those voices from throughout America who are opposed to the budget cuts, to the insensitivity of the President and the insensitivity of the Houses on both this side and the other side, and that these will appear in the RECORD so that historians, as they look upon the CONGRESSIONAL RECORD, will see very clearly that there were Americans in 1981 who were very much opposed to what is taking place.

Mr. Speaker, recently we have heard from the Reagan administration the fanfare relative to the supposed favorable support they are receiving regarding their budget cuts.

Let me just say that I did not believe it then and I do not believe it now, that response to these cuts has been as favorable as reported. People in my district and from around the country have been contacting me voicing their displeasure and concern over these drastic cuts. I insert for the RECORD the following remarks from my constituents as they relate to the budget cuts:

ASSOCIATION OF NEW YORK
NEIGHBORHOOD HEALTH CENTERS, INC.,
New York, N.Y., March 2, 1981.

Hon. ROBERT GARCIA,
223 Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN GARCIA: On behalf of the sixty-five Community and Migrant Health Centers in the State of New York, serving 300,000 persons, I am writing to you to ask your support in retaining this very essential program.

The very existence of the Health Center program is now being threatened by the President's proposal to consolidate it along with 34 other programs, as well as to reduce the spending level by 25 percent. Congress created this program specifically to meet the health needs of medically underserved areas. Underserved areas are characterized by a complete lack of or a shortage of physicians and/or health facilities, high rates of infant mortality, large populations of elderly citizens, high levels of poverty and Americans who are unable to pay for their medical services.

Because of your concern in the Congress, today there are 1,083 centers which serve five and one-half million Americans. These centers are located in every State and 73 percent of all congressional districts have at least one such Health Center.

The Community Health Center program, we believe, deserves your continued support for several reasons:

They are critical to the populations they serve. About two-thirds of the Health Centers are located in rural areas and one-third in urban. Without the Health Centers these individuals and families would not have access to any health care.

Under the block grant approach proposed by the President, it is estimated that between 50 percent to 75 percent of these programs would close. While it may be wise to block grant to the States some categorical programs, such as the small categorical prevention programs, the Health Centers should not be included in this proposal.

The Health Centers have proven to be highly effective and efficient when costs for health services are compared to other providers. For example, Health Centers have reduced hospitalization for their patients by 25 percent to 50 percent thereby saving millions of dollars of public and private health care expenditures. Comparing the cost per visit for a Health Center patient to that of a Medicaid patient or other insured patient, Health Center costs were 41 percent less. The Health Center program is probably the most cost efficient and cost conscious program in the entire Federal system.

Keeping in mind the President's concern for providing incentives for the private sector to be involved in the delivery of services.

The Health Center program is in fact part of the private sector. Health Centers are fully incorporated, as not-for-profit entities (as are many hospitals) that provide services to portions of your constituents in your respective districts that perhaps have no other source of quality health care.

Should the President's proposal to cap Medicaid be approved, many states would be tempted to make up their projected shortfall by using dollars from the consolidated health programs. Since the proposed dollars for the consolidated health programs would be only 75% of 1981 levels, then even less would be available for the consolidated programs should they opt to bolster their Medicaid programs. Hospitals, many of which are already in a financial crunch will be further in debt, and their ability to provide services to the uninsured will be non-existent. I raise the point because it is to these same troubled hospitals—rural and urban—that those in need of Health care must turn. This can only pose tremendous financial burdens upon the states, which eventually will bring the pressure from the states back upon you in Congress for relief. Cost wise, it will then be unrealistic trying to start up funding again for these programs.

President Reagan has gone on record supporting the fact that local communities must have a real say in what they need, and how their dollars will be spent; well here is a model that is based on local governance. When there is a problem in the Center, the consumers turn to their respective representatives on the Center's governing board for amelioration of their problem. In America there is today an environment where the expectation of consumers to be involved in matters affecting their lives has been raised, and that expectation should not be reversed.

The Health Center program indeed meets the concerns that are held by all of us. They are cost effective, deliver high quality care, reduce the dollar expenditure, are controlled locally, and are within the private sector.

We urge you to support the continuing authorization of Secs. 328, 329 and 330 of the Public Health Service Act (amended 1979) at an appropriation level of:

Sec. 328: $7 million.

Sec. 329: $48 million.

Sec. 330: $390 million.

We respectfully request your written support to your respective Health Committee Chairperson to insure that the existing Health Centers maintain their present level of health care to the 5,500,000 Americans, who would otherwise have no health services.

Very respectfully yours,

PAUL MEJIAS,
Executive Director.

The Health Center program depends on grant support from several sources, National Health Service Corps, Maternal and Child Health, Family Planning, Social Services, and Medicaid, and they must be considered in total context rather than as a 25% cut in one program alone. The multiple impact of these proposed cuts taken as a whole mean that the losses would be much greater. For example, if all cuts were enacted at once and block grant took effect October 1st, 1981 it would mean that services to 3,000,000 patients will end and 560 programs would be terminated including some 5,200 contracts with local hospitals, pharmaceutical suppliers, speciality physicians, banks, and local vendors, totaling in excess of $200,000,000.

Block Grants would require States to hire personnel to administer programs at the state level while not providing the additional funds to do so, thereby further reducing the amount of funds available for services (i.e. programs support levels which are a separate line appropriation are eliminated).

If the Health Centers are included in Block Grants the impact of the President's proposal will be:

The loss of services to 2,008,000 people in medically underserved areas.

The closing/termination of 394 community-based private non-profit Health Centers.

The elimination of between 3,970 and 4,040 jobs in the health professions in local areas.

The Health Center program was created specifically to meet the deficiencies of the private and public sectors, i.e. meeting the health needs of the uninsured or those in remote rural migrant areas. It does not compete with the private sector. The private sector does not provide health care to a person who is unable to pay and the majority of private practitioners do not accept medicaid.

Health centers reduce hospitalizations as 6 studies clearly show and are more cost effective than other providers. For example, without a Health Center these people will flood outpatient departments where costs are 50% higher—and someone will foot the bill. Or they will go without health care until the condition is serious enough to require hospitalization where costs will be at least 500% higher.

Additional state levels of administrative agencies will be required (larger than their federal counterparts (10 regions vs. 50 States). This is no reduction, but rather an increase in the overall U.S. cost of health care. Moreover, the accomplishments and effectiveness of State administered programs cannot be effectively monitored.

In addition to the above:

Services in the Migrant Health Centers will be terminated for 172,550 migrant and seasonal farmworkers who by virtue of their transience and two-parent family structure will be unable to qualify for State medical assistance. This includes total elimination of the hospitalization program which covers inpatient care for 3,800 people.

The elimination of 2,120 jobs in the health professions, through local health centers.

The closing/termination of 52 migrant health centers or projects.

As with community health centers, when total funding is considered, these programs depend on numerous resources proposed by the Administration for cuts and delegation to the States. Thus if President Reagan's proposal is adopted in full, it would mean the termination of 80 Migrant Centers and services to 300,000 patients would no longer be available.

COALITION OF NEW YORK CITY JUDGES IN SUPPORT OF THE LEGAL SERVICES CORPORATION,
New York, N.Y., March 11, 1981.

Hon. ROBERT GARCIA,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN GARCIA: Because of our unique responsibility to ensure that justice is administered equally and fairly, we as Judges have a stake in Congressional reauthorization of an adequately funded Legal Services Corporation. Both the orderly administration of justice, and the fairness of the outcome in individual cases, are generally dependent upon adequate representation. The programs funded by the Legal Services Corporation have provided much of this needed representation in New York City for the past thirteen years. In addition, thousands of needy people who have nowhere else to turn for advice and counsel prior to litigation in civil claims rely upon the services provided by the legal services programs funded by the Legal Services Corporation.

The President's proposal to eliminate all funding for an independent Legal Services Corporation is particularly abhorrent to us as members of the judiciary. We likewise oppose any reduction in the program's funding or a move to discretionary funding by the states. Accordingly, we urge continued authorization of the Legal Services Corporation at levels necessary to provide the services needed.

Limitations on or elimination of funding are not the only perils facing the legal services program, however. Other perils are proposals which would impose unreasonable restrictions on the legal service permitted, such as on representation of migrant workers and aliens, and on representation before administrative and legislative bodies on policy matters affecting needy clients. Such limitations deprive needy persons of necessary representation and cripple the morale of the dedicated staff who are committed to meeting the local needs of their clients.

In addition, there are proposals to allocate a substantial proportion of the federal funds to the private bar, often mislabeled "judicare". Characterizing such proposal as "judicare" implies an element of judicial approval which is untrue and therefore misleading. Although the private bar has and must continue to make substantial contributions to the representation of the disadvantaged, it cannot adequately duplicate the structured commitment and continuity of an independent and non-partisan staff devoted exclusively to the service of disadvantaged clients.

Accordingly, as judges, we support continuation of the Legal Services Corporation in its present form, and oppose the President's recent budget recommendation to eliminate this essential program.

Sincerely yours,

Housing Court Judge Arthur Aaron, Acting Supreme Court Justice Myriam Altman, Housing Court Judge Anthony Andreacchi, Supreme Court Justice Sidney Asch, Civil Court Judge Pelham St. George Bissell III, Supreme Court Justice Arthur Blyn, Civil Court Judge John A. K. Bradley, Housing Court Judge Antonio Brandween, Acting Supreme Court Justice Herman Cahn, Appellate Division Justice John Carro.

DR. MARTIN LUTHER KING, JR., HEALTH CENTER,
Bronx, N.Y., *March 11, 1981.*

Hon. ROBERT GARCIA,
U.S. Congress, Longworth House Office Building, Washington, D.C.

DEAR CONGRESSMAN GARCIA: I am writing to urge your support of the full 1981 budget for the Health Systems Agency of New York City and in opposition to the administration's proposed cuts. In addition I urge full funding for the 1982 fiscal year for the HSA program.

It seems to me that several examples can be given of the contribution which HSA's have made to the field of health and the public. Local area HSA's have published information showing the death rates resulting from open heart surgery by hospital. An important result of that has been that hospitals with low survival rates in connection with this operation have voluntarily closed down their program. The HSA's have also published information showing the number of beds used in specialty areas i.e. obstetrics and pediatrics and where the use of these beds have fallen below the critical level needed to maintain excellence, hospitals have voluntarily closed these services. In short, HSA's have achieved important goals despite not having regulatory authority.

Finally, while the HSA's have not been successful in preventing hospitals from pursuing their acquisition of CAT Scanners, they have made the public aware of the tremendous costs in medical technology and the necessity for rationalizing its use. Certainly the HSA system has not been as successful as its proponents would have wished but there can be little question that it has made contributions far and beyond what its critics concede. Finally, at least in our areas of the country, the HSA's have played a critical role in introducting the voices and roles of women, minorities and the poor into the health care field. This can be seen clearly from the stress that HSA plans have put

on the provision of ambulatory primary health care as a priority.

Fully 70% of the American health care dollar goes to hospitals. HSA's have shown capacity for reducing and containing hospital costs. We hope you share our view that the HSA system is cost effective and should be maintained.

Sincerely,

RAPHAEL O. LEWIS,
Executive Director.

MISERICORDIA HOSPITAL MEDICAL CENTER,
Bronx, N.Y., March 6, 1981.

Hon. ROBERT GARCIA,
Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN GARCIA: My organization wishes to inform you of our outrage regarding the administration's intent to severely reduce funds for health planning in FY 1981 and eliminate such funding in FY 1982.

Action of this nature by the administration would be a severe blow to health planning efforts in New York City. The history of the New York City Health Systems Agency has been one in which consumers play a vital role. Its process has also provided major concern for cost containment, more equitable distribution of resources, and overall better health planning.

Such efforts should not be discouraged or sifted at a time in which certain health care goals must be reduced through health planning mechanisms such as the Health Systems Agency.

Sincerely,

RICHARD IZQUIERDO, M.D.,
Vice Chairman.

SETTLEMENT HOUSING FUND, INC.,
New York, N.Y., March 13, 1981.

Hon. SAMUEL PIERCE,
Secretary of HUD, U.S. Department of HUD,
Washington, D.C.

DEAR SECRETARY PIERCE: I am writing to express my concern about the proposal to increase rent in HUD-assisted Section 8 projects from 25 to 30 percent of income. Such policy, if enacted will not result in significant cost savings to the federal government but will impact negatively on family budgets of persons already struggling hard to survive.

Section 8 funds are reserved for the maximum contract rents, as if tenants pay nothing. The tenants' contributions are placed in an escrow account to cover future increases in operating costs or decreases in tenant contributions due to loss of income. Thus the increase to 30 percent of income means an increase in the escrow fund, not a reduction in spending.

The families at the higher end of the income limits are most affected, because the absolute dollar increase is larger for them. For example, in New York the highest income for a family of 4 at initial occupancy is $19,950. Assuming that there are two children in the family, the rent would go from $403 to $484 a month. It is easily possible that this family would leave the project and be replaced by a family earning $4,000, who would pay $71 at 25 percent of income or $85 at 30 percent of income. Obviously the eventual cost (to the escrow fund) of subsidizing the lower income family will be much higher.

In short, by forcing unconscionably high rents on lower income families, HUD would be raising the eventual cost of the subsidy program. The possibility of achieving an income mix would be much less likely and the overall effect extremely unfortunate.

I would urge you to reexamine this plan in view of the effect on the tenants and the probability that cost savings would not be achieved.

Sincerely yours,

CLARA FOX,
Executive Director.

TAX PROPOSALS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. CONABLE) is recognized for 60 minutes.

Mr. CONABLE. Mr. Speaker, I am anxious today to continue the discussion of taxes from a philosophical and economic viewpoint which I initiated more than a week ago in a similar special order.

At that time, I talked about the four major categories of tax options that were facing the Congress during this spring's tax effort. The first was, of course, depreciation reform. I described that as being the one element in a potential tax bill that seemed most clearly to have a consensus behind it.

Second, rate cuts, the heart of the President's proposal.

Third, the possibility of targeted savings plans of one sort or another.

Fourth, the so-called Gephardt proposal which would provide an income tax credit for a portion of the social security tax paid.

I wish not to ignore, but to discard for the purposes of the discussion this morning, the first and fourth options and to concentrate on the relative advantages and disadvantages of rate cuts as opposed to targeted savings plans of one sort or another.

It seems likely to me, Mr. Speaker, as the debate unfolds here in the course of the spring, that the probable area of compromises between the President's men and the President's opponents are going to be between the targeted savings plans and the rate cuts. I personally support the President's plan, but I think it is important that the Members understand the advantages and disadvantages of these two options so that they will be able to participate with a sense of priority in the inevitable process of compromise.

Many of us on the Republican side of the aisle have in the past sponsored targeted savings plans of one sort or another. I have participated actively in designing several of them and am the prime sponsor of some of them. They represent a special type of tax reform.

In talking about them this morning, I wish to set aside also those issues which have to do with individual inequities in the tax system. Among these issues of equity are the marriage penalty tax and the Gephardt-Conable charitable bill.

While these things are very attractive options that I am sure the Congress will want to consider this spring, they are nonetheless not the type of alternative to rate cuts that would be of a primarily economic significance, like the targeted savings plans.

The proponents of rate cuts and the proponents of the targeted savings plans start with a consensus that there is something wrong with the economy, that our tax policy has been too oriented toward encouraging consumption and not enough toward encouraging savings. There is no disagreement about that among the adherents of these two major alternatives.

It is claimed by those who are in favor of the targeted savings plans that rate cuts do not insure that tax reductions will be used primarily for savings and therefore that tax reductions are inadequate to meet the economic need that has developed over the years as we have encouraged consumption and discouraged savings.

The rate cut advocates, on the other hand—favoring an across-the-board type of tax reduction as opposed to the practice that we have followed in redistributive tax reform over the past 12 years—say that since you are giving after-tax increases to middle- and upper-class taxpayers with an across-the-board rate cut, it is probable such people will use these increases in greater degree for savings and investment than those at the lower end of the scale. That is, of course, one of the issues between the redistributive tax reform people and the across-the-board rate cut people: Those who believe in redistributive reform talk about the equity of giving bigger tax cuts to poor people, even though they acknowledge that poor people with very severe income limitations are likely to improve their standards of living with increased after-tax income rather than saving it.

Well, President Reagan has said that we must concern ourselves with equitable issues but that first we must get the economy moving again. He has urged us not to ignore, but to postpone, consideration of the problems of poor people. Saying that redistributive tax reform has not worked, he wants to get the economy creating jobs first, promising structural changes affecting tax equities afterward.

It is easy to argue that there has not been any real solid economic evidence adduced for the effect of across-the-board rates cuts and the encouragement it will give to savings and investments. We have all heard complaints about the "rosy scenario." But logic is with the President. If people of adequate income are getting tax cuts they are much more likely to save and invest than people of inadequate income who must, of necessity, look to increased consumption to improve their lot.

The targeted savings plan people, in other words, are saying to the President: If savings is the problem, let us design a tax system which will condition tax cuts on the money being saved. We can do that by excluding from taxation certain types of economic income providing they are directed into bank accounts, insurance policies, segregated trust funds, or equity investment of one sort of another.

By such targeting we can be sure the specific economic needs of the country are met by conditioning the whole tax cut on savings.

Now let me say, Mr. Speaker, that it is obvious that the targeted savings plan people are not concerning themselves any more for the poor people than are those who are talking about across-the-board rate cuts. Poor people on subsistence allowances are not going to get any tax reduction at all unless they save, and it is obvious that if they have limited purchasing power, they are not going to be in any position to save in order to get the tax cut.

□ 1145

For them, if they pay any tax at all, at least rate cuts are sure and are conditioned. Saving may for them be a very uneconomic operation, because they cannot defer their consumption.

The issue, then, of inequity should not really be a major issue between those who favor targeted savings plans and those who favor across-the-board rate cuts. It is in each case a different legislative response to the perception that the economy is not functioning well because we have inadequate saving and investment, and in either case equitable considerations are deferred to economic tax reform opportunities.

Now, let us look at what the basic circumstances are in our tax system nowadays, because that has something to do with the way the public will respond to rate cuts and to targeted savings plans.

First of all, I think we should acknowledge that the 1978 tax figures show that in fact poor people pay comparatively little income tax. The bottom 46 percent of the taxpayers, those who earn $10,000 or less, pay 4 percent of the income tax. Poor people pay very substantial taxes; they pay more taxes than they did 10 years ago, but they do not pay more income taxes because of years of redistributive tax reform. They have been virtually dropped off the bottom end of the income tax scale.

The effect of this, as bracket creep forced middle and upper income people into higher and higher tax brackets, was to create a tax system which was increasingly progressive. We reduced taxes for low-income people, but we let taxes go up for middle and upper income people as a result of the impact of inflation on the graduated income tax, the phenomenon known as "bracket creep," and the result was that we increasingly raised the marginal tax rates for those in the middle and upper income. That, of course, is considered to be the long-term condition which has discouraged savings and investment among people of substantial earning power or with substantial capital for investment.

The effect of rate cuts then, while minimal among low-income people, will be to reduce the marginal tax rates for everyone else, and in reducing the marginal tax rates the group of very sturdy new economists called the supply siders feel that they have given a very strong incentive to investment and to savings. They may have over-stressed the economic effects of rate cuts, but there is a good deal of truth in what they say.

You can make a case for greater actual savings resulting from targeted savings plans, but I do think that the targeted savings plans will have some rather unfortunate effects on the tax system, and ultimately on the total economy. The rate cuts do not narrow the tax base at all. The same people will be paying taxes who were paying taxes before, and economic income will still be subject to tax but at a lower rate.

Thus, the marginal rates will come down but the tax base will remain the same. In contrast, the targeted plans, in almost every case take a portion of the Nation's economic income outside the tax system either through deferral or through exemption, and therefore narrow the tax base for the income tax. That is something we have been doing for a long time here, Mr. Speaker. It is easy to confer benefits on people by removing their interests or their income, from taxation. We have increasingly tended to do that as a means of problem-solving rather than appropriating money from the Treasury directly to apply through the processes of this body to Government programs.

Through tax exemption, tax deferral, tax preference, we have tended to provide specific areas of problem-solving—many say in not a very efficient way—but that is one of the modes of problem-solving that this body has elected time and again.

Now, if you take some portion of the economic income of the country outside of the tax system, the tax base narrows, and that means that what remains subject to tax must be taxed at a higher rate in order to raise the staggering sums of money the Government is spending on goods and services.

That particularly is true with respect to earned income. One of the reasons that the unions, through collective bargaining, have been bargaining mostly for fringe benefits is, this is the only way they can protect themselves from high marginal tax rates as more and more of the unearned income has gone outside the tax system through preference. Earned income, other than fringe benefits, has had to carry a greater and greater burden. So, we find our working people struggling to try to negotiate tax-deferred or tax-exempt fringe benefits in order to protect themselves from high marginal rates in much the same way unearned income has protected itself from high marginal rates by specific types of tax privilege designed to take their economic income outside the tax system.

It may appear to be a perfectly acceptable way of reducing taxes, this taking of economic income outside the tax system, but it does, of course, have the effect of distorting, ultimately, the tax burden that the Nation has to carry. In one way or another, it creates tax havens that reflect discreditably on Government, and it also means that economic income subject to tax is going to be taxed at a higher marginal rate than it needs to be if we maintain a broad tax base. I think it is important for people to understand that, because I frequently am told: What is wrong with reducing taxes by taking money outside the tax system? There is nothing wrong with it, but it does have some long-term distorting impact. It does have some long-term discouragement for those economic activities which are still subject to taxation because it raises the residual basic taxes unnecessarily high.

Mr. WYLIE. Mr. Speaker, will the gentleman yield?

Mr. CONABLE. I yield to the gentleman from Ohio.

Mr. WYLIE. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I came to the floor for another purpose, and I want to get in a 1-minute speech a little later on, but as I sat here and listened I could not help but be impressed by the scholarly speech which the gentleman is now making. I want to compliment him. I want to go back and read this in the RECORD a little later on.

Also, as I listened, I guess I am a proponent of the so-called targeted savings tax plan to increase savings, in that I put in a bill which would increase the exemption from taxation on interest on savings deposits up to $10,000. I am not under any apprehension that Congress is going to pass a bill like that today or tomorrow, but I did want to dramatize the fact that in the United States, among all the industrial countries, the amount of disposable income which goes into savings deposits is the lowest. It is highest in Japan, and Japan does not tax interest on savings deposits.

Mr. CONABLE. If the gentleman will yield briefly on that, it is interest-

ing to note that most countries' tax systems are very different from one another, but that most of the rest of the developed world does provide very specific incentives to savings and investment of the sort the gentleman is describing as being subject to his sponsorship. Japan this past year had about a 20-percent savings rate. Germany, France, and England had somewhere in excess of 10 percent, as did Canada. The United States during the past year had a 5.6-percent savings rate, and it has been as low in this country as 3 percent. Of course, many of these other countries have inflation rates comparable to ours, and so it is misleading to say that the only reason for us to have such a low savings rate has been our level of inflation, although that also discourages savings. Nobody wants to sit on a big pile of eroding cash. But obviously the tax incentives built into these other countries' systems are relevant also at arriving at the higher savings rate than we have.

Mr. WYLIE. Well, yes, of course, and that is a very cogent observation. Also I might say that in the case of West Germany, West Germany thought there was a direct tie-in between the amount of capital which was available for investment in the private marketplace and the amount of savings deposits, long-term savings, so they passed a law which stated that if you left the money in for 5 years and drew interest on it during that period, that the West German Government would match it. It was such a good move on the part of West Germany that I think they are going to have to repeal that. It was a little more than they thought it might be.

Of all the industrial countries, the United States is the lowest in the amount of savings which goes into regulated financial institutions, and I use that phrase advisedly—regulated financial institutions—because our thrift institutions are in some difficulty because they do not have money to loan out on a long-term basis, as you know. Some of the commercial banks are in some difficulty also.

So, I do think we need to address this problem. I thought this would be a dramatic way in which to do it. Also, this is the kind of approach which could have widespread appeal and is easily understood. The phrase "double taxation" comes to mind. People who have put their money in savings institutions have already paid taxes, so it just seems to me that it is an easily understood way to get some money into investment portfolios or into financial institutions, and possibly invested money into the private market. Anyhow, I would like to have the gentleman consider that seriously in his deliberations.

Mr. CONABLE. Obviously, it is going to be considered. As I said, in all probability the ultimate bill will involve some sort of trade-off between rate cuts and targeted savings plans. Down the road, if we continue to put economic income in this country outside the tax system, we are going to have such a narrow base and burden of taxation for the remaining taxable income in the country that we will find the income tax no longer is a suitable way of financing Government operations. At the end of that road we will face a broadly based consumer tax like the value-added tax, which I personally would very much regret.

For that reason, I hope this body will move with some restraint in taking economic income outside the tax system. The process of doing that inevitably so erodes the income tax that we will have to fall back on some other essentially non-American type of taxation not based on ability to pay, but in all probability more suitable for politicans in that it will include a whole lot of economic activity and be sufficiently responsive so that it will be submerged at a fairly low level in a very wide tax base of some sort.

□ 1200

We have to be careful not to overdo the preference, exclusion, exemption, and deferral aspects of taxation because they could be quite destructive in terms of the tax philosophy that has guided this country ever since the constitutional amendment which permitted the income tax to be the major vehicle of our financing.

Mr. Speaker, I yield to the gentleman from Ohio (Mr. WYLIE).

Mr. WYLIE. Mr. Speaker, I thank the gentleman for yielding, and I only wish to say that I do appreciate the contribution he is making. That is the point I wanted to make.

Mr. PARRIS. Mr. Speaker, will the gentleman yield?

Mr. CONABLE. I yield to the gentleman from Virginia.

Mr. PARRIS. Mr. Speaker, would the gentleman care to make an observation, consistent with his discussions that he just had with the gentleman from Ohio (Mr. WYLIE), as to whether the reduction of the maximum tax on unearned income from 70-percent to 50-percent has some certain appeal that could fit into the category of the narrowing of the tax base the gentleman alluded to?

Mr. CONABLE. Mr. Speaker, that is analogous to a rate cut. The same income that is subject to the 70 percent tax would be subject to the 50 percent tax.

Let me say to the gentleman that the possibility he is mentioning, which was espoused by some of our leading liberals this past week in the cosponsorship of bills reducing the maximum tax on unearned income from 70 percent to 50 percent, is one of the beneficial side effects of rate cuts, and, therefore, in sponsoring this measure they have found a way to get one of the benefits of rate cuts without supporting rate cuts. It is a benefit from a tax reform viewpoint to reduce the maximum tax on unearned income from 70 to 50 percent because then you have the same maximum tax on earned and unearned income and a tax rate very close to the corporate tax rate, and thus you have sharply reduced incentives to tax sheltering and toward the type of manipulation which tries to convert one type of income into another type of income, either unearned income into earned income or individual income into corporate income, for the purpose of tax minimization.

Because we have had such sharply escalating progressivity in our tax system, we have put a premium on the types of tax manipulation which would offset very high marginal tax rates with artificial tax losses of one sort or another, and much of the tax reform this Congress has gone through since 1969 has been designed to catch the big fish that slips through the net completely by uneconomic activity of a tax-avoidance nature.

In other words, much of our tax reform has been designed to prevent sheltering. It has greatly complicated the tax code.

In that respect, let me say that that is another unfortunate effect of the targeted savings plans. The targeted savings plans, every one of them, adds a new complexity to the tax system, requiring a whole new set of regulations and tax rules for the circumstances under which that type of economic income will be excluded from taxation.

In other words, it adds to the complexity of an already terribly complex system, while rate cuts, if anything, make the system more simple, eliminating the necessity for the type of sheltering which has been the whole reason back of much of the complex tax legislation over recent years.

Mr. Speaker, does the gentleman from Virginia (Mr. PARRIS) have a further request? I yield to the gentleman.

Mr. PARRIS. Mr. Speaker, I appreciate the gentleman's yielding, and I would like to add my plaudits along with those of the gentleman from Ohio (Mr. WYLIE), to the gentleman from New York (Mr. CONABLE) on his statement today. It is consistent with the thorough and thoughtful comments that we have come to expect from the distinguished gentleman from New York, who in my view at least is one of the Nation's true experts on tax policies as they affect the Nation's economy, I commend the gentleman for his service to the Nation and to his colleagues in bringing us this statement his morning.

Let me just make mention of some material that was presented to us at a hearing this morning in the Subcommittee on Housing and Community Development of the Committee on Banking, Finance and Urban Affairs by a distinguished former colleague, Mr. David A. Stockman, the Director of the Office of Management and Budget. I would like to review just very briefly with the gentleman from New York some of the comments made at that time and discuss some of the issues on which he is so knowledgeable and experienced.

You will recall, Mr. Speaker, that when the President took office only two months ago, the economic picture confronting us was grim. Inflation had grown from 1 to 1½ percent a year in the early 1960's to about 13 percent in the past 2 years. Not since World War I had we previously experienced 2 years of back-to-back, double-digit inflation. At the same time, the rate of economic growth the most important single measure of ability to improve our standard of living, dropped significantly in the last decade.

In the past 3 years productivity has actually fallen, interest rates have reached a level of more than 20 percent, interest rates are 15 percent for those who would borrow money to buy homes, there are almost 8 million people out of of work and the threats of lay-off and unemployment hang over millions of others. All who work are frustrated by their inability to keep up with inflation. Our national debt is approaching a trillion dollars. Interest on the public debt this year will be over $90 million. And unless we change the proposed spending for the fiscal year beginning October 1, we will add another almost $80 billion to the debt.

The President's overall program for economic recovery delivered to us on February 18 is designed to break the inflationary psychology that now grips the Nation's economy and to restore investment, job creation, and economic growth to our economy.

This serious set of economic problems has been exacerbated by the Government itself. The Federal Government—through tax, spending, regulatory, and monetary policies—has sacrificed long-term growth and price stability for ephemeral short-term goals. In particular, excessive Government spending and overly accommodative monetary policies have combined to give us a climate of continuing inflation. Such inflation has, itself, helped to sap our prospects for growth. In addition, the growing weight of haphazard and inefficient regulation has weakened our productivity growth. High marginal tax rates on business and individuals have discouraged work, innovation, and the investment necessary to improve productivity and longrun growth. The resulting stagnant growth has contributed to further inflation in a vicious cycle which can only be broken with a plan that attacks broadly on all fronts.

There are four essential elements to the President's plan:

First, budget reform actions that will produce a sharp downward shift in Federal spending growth rates from an average of 16 percent in the last 2 years to 6.1 percent from 1981 to 1982, requiring fiscal savings of $48.6 billion in fiscal year 1982.

Second, a major tax reduction, including a 3-year, 30-percent reduction in individual income tax rates and a significant modification of depreciation schedules for plant and equipment.

Third, a far-reaching regulatory reform program to alleviate excessive cost and compliance burdens, and

Fourth, a stable monetary policy to steadily reduce the growth of money and credit.

The budget reform portion of the President's plan outlines a comprehensive multiyear program for ending the recent unsustainable upward spiral of Federal spending and borrowing. Achieving control over Federal spending is an essential cornerstone of the President's overall economic recovery program.

The effects of the President's economic program will be a significant lowering of inflationary expectations and a dramatic improvement in the underlying economy. Once again economic choices—involving working, saving, and investment—will be based primarily on the prospect of real rewards for those productive activities that improve the true economic well-being of our citizens. It is our firm belief that adoption of the President's plan will spur economic growth and development through increased productivity, stimulation of private investment, and the creation of additional jobs.

I will not take the gentleman's time to go on, but I will be happy to make additional material available to the gentleman from New York.

I would simply say that I sincerely hope that the gentleman from New York will continue his dialog on the floor of this House to attempt to bring the attention of the Members to the fact that we cannot continue to persist in the inflationary and economic tax programs that we have witnessed for the past decade.

Mr. CONABLE. I thank the gentleman from Virginia (Mr. PARRIS) for his contribution, and I will read the material with considerable interest.

Mr. Speaker, there is one other advantage of rate cuts over targeted savings plans that I would like to mention. This was called to my attention by the distinguished gentleman from New York (Mr. KEMP) the other day, and it was a point that I had not thought of before.

Savings in this country are derived from after-tax earnings. In other words, a new saver must save some money out of his earned income and must pay a paid tax on it first. In this sense investment income is taxed twice, because it has to be taxed before it can be saved—it is after-tax income that goes into savings—and then, when it begins to provide an economic return as a result of the investment, it is taxed again.

The targeted savings plans eliminate only one aspect of this tax process. You are saving only the tax on the unearned income resulting from the investment. If you reduce the rate of tax generally and across the board, you are then providing, first of all, some relief for the earned income which provides the source of savings, and you are also providing relief from the tax that is attributed to the unearned income resulting from your savings. You have a bigger pool of potential savings, and more incentive to save.

In this sense, then, an across-the-board rate cut provides a double tax wallop for savers. It is not true of targeted savings plans. The source of money or the money which must go into whatever tax-exempt or tax-deferred savings is provided by the targeted savings plan must first be earned and must be subject to taxation, quite possibly at a more steeply progressive rate, because of the fact that you are taking increased unearned income out of the tax system via the targeted savings plan.

I guess, Mr. Speaker, what I am saying here today more than anything else is that I hope people will consider the long-term economic effects and tax reform effects of the type of change we make. Each has its advantages. I should say in this respect that one of the most interesting advantages of the targeted savings plans is the very thing for which Congress is getting a bad name.

We are alleged to be too subservient to special interests. Well, there are lots of special interests that have a particular advantage to be derived from the targeted savings plans, and I do not think that is bad. For instance, the targeted savings plans relating to bank accounts will have the banks all out promoting them. That is not a bad idea.

The fact that banks will benefit from the tax preference we create is not undesirable, because it means we are more likely to get more savings than we would if the banks were not willing to do the promoting for their own self-interest. In fact, then, one of the disadvantages of the across-the-board rate cuts is that since they benefit everybody but do not benefit in a special way any one of our institutions in this country, they do not have promoters backing them.

The great pressure is toward the targeted savings plans because there are organized economic interests that will benefit from the targeted savings plans, and I want to repeat that I do not think that is necessarily bad. We can have the most economically constructive tax preferences on the books

that are available, and they will not have anywhere near the effect they could have unless the people know they are on the books and know how to take advantage of them via the promotional activity that special interest groups can give them.

It is not a bad idea that we have savings encouraged by people who stand to benefit from them. Bankers, brokers, segregated fund managers, the insurance companies, and so forth, are there to provide service, and if the Government has provided an opportunity for service by tax exclusion of some sort, by tax preference of some sort, the effect may be to have ultimately a larger amount of savings than we would have had were the Government to have been immaculate in the process and done nothing that could possibly benefit an interest group incidental to the granting of the preference.

Now, in mentioning that, I do think, however, that it is apparent that one of the big disadvantages politically that the rate cuts have at this point is that there is nobody, other than the President himself and that small but vocal group of supply side economists who think rate cuts are the way to go. There is no other group pushing rate cuts, while there are many interest groups out pushing the targeted savings plans since they would stand to benefit particularly from them. Maybe rate cuts would be better for the people, but we will never know unless the people bestir themselves in uncharacteristic fashion, to outlobby those economic interests who can benefit from special types of savings. At this point, the President seems to be the prime lobbyist for the people.

Mr. CAMPBELL. Mr. Speaker, will the gentleman yield?

Mr. CONABLE. I yield to the gentleman from South Carolina.

Mr. CAMPBELL. Mr. Speaker, I thank the gentleman for yielding.

The point the gentleman is making is, I think, a very crucial point, in that the targeted savings actually only shifts moneys, existing savings. It does not create a new pool of money for savings, whereas a tax cut in and of itself can create additional funds in the marketplace that could go into savings.

Is that a correct assumption of what the gentleman is saying?

□ 1215

Mr. CONABLE. That is one of the things I am saying, yes, and I think it is an important point to make. Much of what we do in special-interest tax legislation of one sort or another is to shift the flow of funds already existing in one form or another into a different form of savings or investment. That is not necessarily bad; but it means that the Government is performing a manipulative role rather than a creative role. It is allocating capital through taxes just as it does by Government-guaranteed loans and things of that sort, as well as by appropriations.

So I think it is important that we see that there is a much more basic change going on through rate cuts than there is through the creation of a new preference which will take already existing funds from one form into another.

Mr. CAMPBELL. Exactly. I totally agree with the gentleman. Let me ask him one more question, if I might. As we seek to reduce the marginal tax rates and at the same time are subjected to the arguments from many people that a tax reduction is inflationary, is it not true that we are not creating new dollars, and that in fact the argument that the people are then going to spend or save their own money is inflationary—which is what some people argue—whereas if the Government kept it and spent it, it is not inflationary? Is it not true that we are talking about the same dollars? We are not creating new dollars. There is no new money coming in through a tax cut. It is merely a change or a shift from Government to individual.

Mr. CONABLE. That is absolutely true, if in fact it is accompanied by an expenditure reduction on the part of the public authorities, which otherwise would be spending money we have left for the people.

Mr. CAMPBELL. Absolutely. Of course the balance of the program is such that when we do reduce the Government expenditures and in fact cut the marginal tax rate and encourage savings in this country, then we have in fact put into being a program that has to have a downward push on inflation, which is the objective that we are all seeking; is that a fair statement?

Mr. CONABLE. I think so. I think we have to be realistic about the time frames involved, and sometimes we are overenthusiastic about how quickly we can bring about increased productivity through increased savings.

Mr. CAMPBELL. I totally agree with the gentleman. It is almost as if we were steering a giant ocean liner, and we may turn the wheel. We may only turn it one degree and that degree may be in the right direction. It may take quite a time to make the total turn, but we are seeking that degree; is that correct?

Mr. CONABLE. The important thing is that we bring about a change in direction, even if it takes some time. We are dealing with very long lead-times here, but the problem has been that for a long time we have been headed in the wrong direction. Up until now we have spent most of our time on short-term considerations, and have eroded our national capital to the point where we are eating our own seed corn.

Mr. CAMPBELL. The gentleman is, I am sure, keenly aware that if we become bogged down in minutia, if we lose sight of the fact that we are seeking a fundamental change of direction, then and at that point we do subject ourselves to merely tinkering with an economy, merely shifting existing savings, merely targeting or reallocating scarce resources, being the monetary supply, instead of doing anything that would have a basic change.

Mr. CONABLE. I agree with the gentleman absolutely. I do think that targeted savings plans go beyond mere tinkering because in some cases they will have the effect of encouraging people to defer consumption and to put their money instead directly into savings—and that is the basic problem we are trying to deal with here.

However, even though that may be one effect of the targeted savings plans, I find inadequate appreciation here in our body of the long-term result of taking economic income outside the tax system in increasing amounts, which I am afraid will have a tremendously distorting and ultimately stultifying effect on an economy which has to raise its taxes in some way. I personally prefer the graduated income tax, if it is not too progressive, to all the regressive alternatives in the form of consumer taxes or value-added taxes as I said, they are at the end of the road, unless we maintain a broad tax base with lower rates rather than excluding from taxation specifc items of economic income.

Mr. CAMPBELL. So if I understand the gentleman correctly, then he is arguing that, first, we have to have a reduction in marginal tax rates; second, our followup could then be the possibility of some targeting, but if you were to target at this time, you might be getting the cart before the horse and not really solving the problem, and may never solve it.

Mr. CONABLE. I think the gentleman makes the point I am trying to make. I personally at this point prefer the rate cuts for reasons I have adduced. I think it is time for fundamental change and not for modest adjustment. That being the case, the rate cuts seem at this time to be an appropriate approach. I do not preclude the possibility of allocating our savings in some way that will be particularly beneficial to the public interest, and I do expect this confrontation between rate cuts and targeted savings plans to be the central issue in the tax debate this spring.

Since there are strong adherents on both sides, since there is a political surcharge on this debate which involves the major parties in confrontation over it, and since the President's program has been categorically de-

scribed in terms of rate reduction rather than in terms of trying to improve the rate of savings, regardless of how we do it, it will be interesting to see how the spring goes. It is my hope that my colleagues on both sides of the aisle will consider the long-term as well as the short-term implications of the potential tax cures for an economy which everybody agrees has insufficient savings, insufficient investments, and long-term factors which have left our productivity curve flat on the floor, and our goods increasingly noncompetitive with the goods of other developed countries.

Mr. Speaker, I yield back the remainder of my time.

GEORGE ED OVERBEY, SR.

(Mr. HUBBARD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HUBBARD. Mr. Speaker, I would like to compliment my colleague, the gentleman from New York (Mr. CONABLE), for his excellent remarks regarding taxation. He is an outstanding member of the Committee on Ways and Means.

Mr. Speaker, my remarks today are in honor of the late George Ed Overbey, Sr., who died February 20 at the age of 68 in his hometown of Murray, Ky.

This outstanding Kentuckian was a senior partner in the Murray law firm of Overbey, Overbey & Overbey, which included my deceased friend and his two attorney sons, George Ed Overbey, Jr., and William Donald Overbey.

Through the years I have admired and appreciated George Ed Overbey, Sr.

This longtime friend of mine served in the Kentucky State Senate for three terms—1947-51 and 1955-63. Senator Overbey served as president pro tem of the Kentucky State Senate and served in the earlier years of his law career as Calloway County attorney. One of his many outstanding accomplishments is his being one of the founders of the first radio station in Murray. He is survived by his lovely wife, Dorothy Overbey, and a third talented son, Robert Key Overbey, of Calvert City, Ky.

Naturally, I extend to the family and many friends of George Ed Overbey, Sr., my sympathy upon the death of this beloved friend of mine.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries.

IMPOUNDMENT CONTROL ACT RESCISSIONS—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 97-34)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Appropriations and ordered to be printed:

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report 33 proposals to rescind a total of $2.8 billion in budget authority previously provided by the Congress, and one new deferral of $8.0 million.

The details of the rescission proposals and the deferral are contained in the attached reports.

RONALD REAGAN.

THE WHITE HOUSE, *March 19, 1981.*

CITY OF COLUMBUS, OHIO, RAISES MONEY FROM CITIZENS TO AID IN STOPPING MURDER OF ATLANTA'S CHILDREN

(Mr. WYLIE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WYLIE. Mr. Speaker, I rise to speak of the terrible tragedy now affecting the city of Atlanta. The senseless and brutal murder of Atlanta's children is an unspeakable crime of the first magnitude. Its implications go far beyond that city's boundaries. It is an ongoing problem we all must seek to solve.

Along these lines, I am proud to report that the city of Columbus, Ohio, which I represent, last Tuesday presented Mayor Jackson with a check for $41,000 to aid in the investigation of the murders. The money was raised from volunteer contributions of many, many people in central Ohio who wanted to help end this awful situation. This is more money than any other city in the United States has raised for this purpose. I commend my constituents and the originator of the drive, Mr. Clifford Tyree, for their spectacular efforts.

LEGISLATION TO GIVE MILITARY PERSONNEL A TAX BREAK

(Ms. FIEDLER asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. FIEDLER. Mr. Speaker, for the last few months my staff has been discussing an important concept with me on the members of the military. Today, Secretary Weinberger announced the concept publicly, and, therefore, I have today introduced my piece of legislation aimed at making service to our country more desirable.

For years we have been seeing a loss of qualified men and women in our armed services. For example, less than half of our officers reenlist. Our Ready Reserves are 700,000 men short. And, over one-third of those newly enlisted never finish their first enlistment. A large portion of this problem is centered on the fact that we have failed to adequately compensate our servicemen and servicewomen. The continuing stories of military families on food stamps and the reports that our servicemen in Germany are forced to take handouts from the German people is a national disgrace.

Therefore, today I have introduced legislation to give our service personnel a tax break as an incentive to retaining them in the military and as an incentive to young people to enlist, thereby negating the need for a draft. The legislation is very simple. It excludes the first $1,000 per month a member of the service earns from being taxed. That means a maximum of $12,000 per year per person would be exempt from income taxes. If our fighting men and women are given an incentive to enlist and to stay in the service, our manpower problems will soon disappear.

□ 1230

DEPARTMENT OF DEFENSE CIVILIAN PERSONNEL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri (Mr. SKELTON) is recognized for 20 minutes.

Mr. SKELTON. Mr. Speaker, were we to go to an army base somewhere in America and see a young busy soldier raking the leaves, we might ask—why is he not taking parachute training? Why is that young soldier not working as a mechanic on a tank? Why is that uniformed young American not doing something constructive so we as a nation may be better militarily prepared?

Today, I wish to speak of a little known aspect of military readiness—the need for defense civilian personnel. As we all know, President Reagan, as part of his economic recovery program, has proposed a reduction of 60,000 civilian employees from the Federal Government's rolls. What is not as well known is that within this overall decrease in Federal civilian employment is a recommendation for a fairly substantial increase in civilian employees for the Department of Defense.

It is not a particularly attractive step to advocate increases in Federal civilian employees. However, I want to state my support for the willingness to

recognize the facts of life in this area of national defense by requesting an increase of approximately 39,000 civilian employees for the Department of Defense for fiscal year 1981 and fiscal year 1982.

Since the pre-Vietnam buildup period civilian employment in the Department of Defense has decreased by almost 200,000 personnel. Over the same period, agencies in the Federal Government outside the Department of Defense were increasing in civilian employment by more than 250,000. So, while Federal Government employment figures have remained fairly constant, a major shift within the Government has occurred from the Department of Defense to other Federal agencies, such as HEW and the like. I am including the following table that illustrates the point.

EXECUTIVE BRANCH CIVILIAN EMPLOYMENT

[In thousands]

	Fiscal years—		
	1964	1974	1980
Department of Defense	1,176	1,098	990
Other	886	999	1,142
Total	2,062	2,097	2,132

Mr. Speaker, this shift in Federal employment has not been without effect in the Department of Defense.

The reductions have had a serious impact on military readiness. I recognize that linking civilian strength in the Department of Defense to readiness seems contradictory. The fact is, Mr. Speaker, civilians today perform some of the most critical tasks in insuring that our military forces are ready to fight. Let me give you some examples.

The technology of most sophisticated military equipment—particularly the bulk of our combat aircraft—is now designed so that maintenance crews on the flight line do not actually repair damage equipment. When sophisticated hardware needs repair, it is now in a self-contained unit—a black box—which is simply removed and a new one substituted. The black box itself or the aircraft in its entirety, when necessary, are then sent to central maintenance depots in the United States where the actual repairs are accomplished by civilian employees. The task of upgrading and overhauling tank engines and turrets is done by civilians. The components of combat helicopters are maintained by civilians, as is the overhaul of our naval vessels.

In fact with the shortages in experienced petty officers in the Navy, a very small but nevertheless very important part of the work done to maintain aircraft on our carriers now deployed in the Indian Ocean is done by civilians who work on the ships. Today, no U.S. carrier leaves port without approximately 30 civilians aboard to train and assist Navy personnel.

The simple fact is that our military aircraft, ships, and tanks cannot operate in peacetime—to say nothing of wartime—without this civilian support. Shortages of civilians have contributed to the allegations we have all heard that too large a percentage of our equipment is not ready to perform.

These depots are one of the two places the additional civilians for the Department of Defense will show up. The other is in the Army where today, because of past reductions in civilian personnel, the Army must dedicate almost two full divisions of active duty personnel every day in substitution for these lost civilians. This borrowing of military personnel impairs the Army's readiness for combat.

Military personnel, to be effective, must train not only to improve their individual skills, but they must train with units because effective units are the key to successful combat operation. Borrowing personnel—often key noncommissioned officers—prevents Army units from performing effective training. Also, at the Army training bases themselves only 70 percent of the instructor positions are manned because the NCO's supposed to be training soldiers are being used to perform functions on the base normally performed by civilians. Mr. Speaker, the additional civilians will truly assist readiness.

There is one further area where additional civilian personnel are still needed—military medical facilities. There is probably no single part of the military structure that has more impact on a service member's morale and feeling of being well-treated for themselves and their families than the medical care system. We ask great sacrifices of our servicemen—serving overseas in areas far from their family—to sail in the Indian Ocean for many months at a time away from any contact with their loved ones. In such conditions, military personnel can face such sacrifices as long as they know their families are well taken care of. In large part, this means good medical care.

In an effort to improve the military medical care system, the Congress passed new legislation increasing bonuses for military physicians last year. The purpose of the bonus is to assist in retaining more of these doctors to improve medical care delivery in the military. However, additional pay alone will not be enough, nor will keeping doctors alone solve the problems in the military medical care system.

There is a shortage in civilian military personnel that permit the medical system to function. The civilians set up appointments and provide clerical assistance to the doctors. The assistance of these personnel considerably expands the capability of the doctor to use his time effectively, as well as provide the administrative support that permits the medical system to serve its patients more fully.

The Congress can—and should—urge that some of these additional civilians be used in the medical care system.

Although the proposed increase in civilians is more than justified, as part of my support for this increase for additional civilians, I will urge that the Congress carefully monitor the Department's program to insure that these additional civilians actually end up at the operating levels where they are needed. In any government agency, good intentions do not always reach the intended target. The Congress can and should oversee the allocation of this civilian increase to insure it is really used to improve military readiness.

In conclusion, Mr. Speaker, in a very real sense, the additional funding the President has requested this year to improve the posture of our military forces cannot be effectively spent and we would be wasting the taxpayer's money if we provided it without these additional civilians that will permit our armed services to increase their readiness, and, as we all know, readiness is the greatest element to deterrence.

AGRICULTURE DAY, 1981

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. DE LA GARZA) is recognized for 60 minutes.

● Mr. DE LA GARZA. Mr. Speaker, I ask all Members of the House and, for that matter, all Americans to join in recognizing today as Agriculture Day, 1981.

This is a recognition of the fact that American agriculture is a basic element in the welfare of every one of our citizens. When agriculture is efficient, progressive, and productive—as ours has been—all of our citizens are better off. When the 3 percent of the population which supplies our food and fiber suffers from economic distress, however, it is a warning signal of potential problems for all the rest of us in the future.

We are celebrating Agriculture Day at an appropriate time. In our House Agriculture Committee, we are currently at work on a major farm bill. We hope that legislation will be developed on a bipartisan basis and will point the way to an economically healthy, profitable agriculture in the future.

It is not surprising, Mr. Speaker, that many of our citizens do not think much about the role which agriculture plays in their lives.

People normally do not think much about water until the well runs dry. We have a habit of taking for granted many of the things on which we depend for comfort, for convenience, and for life itself.

We take food for granted, because American farmers and farmworkers have made sure that we have plenty of it.

When we do that, we are making a mistake. When we take things for granted, we may ignore the fact that if we want to guarantee an adequate supply of food and fiber in the future, we will need to assure the continuation of progress in agriculture.

The meaning of this day goes far beyond our own borders. American food is a vital element in the lives of millions of people in all parts of the world. The importance of our food in preventing world hunger is very great now, and we know that it will be even greater in the future.

With less than 7 percent of the world's land, the United States is producing about 43 percent of the world's corn and about 60 percent of the world's soybeans. This country supplies nearly half of the world's wheat exports and an amazing 71 percent of the corn and other coarse grains which flow into world trade.

These are numbers, and numbers are sometimes not exciting. What I think we should do today is to look at what these numbers mean.

The simple fact is that if American farmers and their workers were not so amazingly efficient and productive, millions of people would be faced today with malnutrition and even starvation. The fact is that the rest of our economy would be in far worse shape than it is.

Our agricultural exports brought in some $40 billion in receipts last year. When you consider the number of dollars we have been sending abroad to pay for imported oil and other products, you must realize that the American dollar would be in sad shape without the dollars which flow back to pay for our farm products.

Our farmers amount to less than 3 percent of our population today. But that is not the total of the impact of agriculture on our domestic economy.

Overall, more than 15 million Americans today have jobs in some phase of agriculture. Nearly 4½ million people work on farms, and up to about 10 million more men and women are working in processing, storing, transporting, and merchandising our food and fiber. When you add it up, some form of agriculture or agriculture-related industry accounts for about one of every five jobs in our economy.

For consumers, there is good reason to celebrate Agriculture Day as a second national day of thanksgiving. American agriculture has given us the world's best diet at, by and large, a very low cost.

Food prices have risen in recent years. But when we complain about that, let us take time to realize that the average American's food bill has not gone up as fast as his earning power. The average factory worker, for example, can buy about 50 percent more bread with 1 hour's labor these days than he could 30 years ago. Facts like that may be blurred at times in concern about today's inflation problems—but they are facts which demonstrate that the American farmer has done his share and more for the welfare of his fellow citizens.

I was glad to be among the sponsors last year of House Joint Resolution 560 which designated today as Agriculture Day, 1981, and which authorized the President to issue a formal proclamation of the day.

The proclamation was issued by President Reagan on February 13, and Agriculture Day is being celebrated today in many ways in hundreds of communities and big cities across the Nation. I am glad we are paying this deserved tribute to all of our citizens involved in agriculture. I hope we all keep their contributions in mind all through the rest of the year.●

MR. JOSEPH ROSENTHAL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. PHILLIP BURTON) is recognized for 5 minutes.

● Mr. PHILLIP BURTON. Mr. Speaker, this evening in San Francisco, a reception is being held for Pulitzer Prize-winning photographer Mr. Joseph Rosenthal. This event marks his retirement from the San Francisco Chronicle after a distinguished career spanning 35 years with this fine institution.

On this occasion, I want to share with my colleagues some reflections on Mr. Rosenthal's retirement. While his artistry with the camera has won him acclaim worldwide, especially his memorable and most inspiring photograph of the flag raising on Iwo Jima, it has been that special ability of his to capture the human experience in its most native sense that continually impresses viewers of his work. Mr. Rosenthal has indeed a rare gift and talent, one that I hope even in retirement he will continue to use.

It is my pleasure to call this to the attention of my colleagues as Mr. Rosenthal and his work are very much part of our Nation's heritage and so much a part of what makes San Francisco the great city that it is.●

EDUCATION FOR THE HANDICAPPED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Iowa (Mr. TAUKE) is recognized for 5 minutes.

● Mr. TAUKE. Mr. Speaker, the number of letters streaming into my office each day over the past 4 weeks clearly indicates that many people are concerned that in our zeal to halt inflation and get our economy turned around we may neglect the critical needs of some people.

When I served on the Education and Labor Committee, I had the opportunity to carefully review the legislation providing educational funds to the handicapped. This program in particular has been very beneficial to many people. It is the type of program which should continue in order to help people become as self-sufficient as possible.

I support the thrust of the President's proposals to reduce Federal spending, stop the skyrocketing growth of Government, and send signals to the American public that serious solutions to the problems of our national economy are being attempted. At the same time, however, I want to be certain that Congress insures essential programs, particularly those that affect the poor, disabled, and elderly. Therefore, in analyzing the proposals, we should only eliminate those programs that are wasteful and least cost effective.

With this thought in mind, I hope to support block grants to the States for the handicapped education programs. But I will be watching to be sure that these programs are not short changed. We have a responsibility to help the handicapped become productive members of our society.●

UNEMPLOYMENT INSURANCE EXTENDED BENEFITS IMPROVEMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LAFALCE) is recognized for 10 minutes.

● Mr. LAFALCE. Mr. Speaker, the current Federal program, administering the payment of extended benefits to unemployed workers who have exhausted their regular unemployment benefits, is replete with inequities and fails to consistently provide necessary funds to areas which suffer chronically high unemployment. The present Federal law which controls the payment of extended benefits requires that the fate of unemployed workers in all States is inextricably tied to the overall national picture of unemployment. This is, indeed, a harsh blow to many regions which suffer greater joblessness due to worsening conditions in some sectors of the national economy, but do not share in the economic boom in other regions of the country.

The Federal-State Unemployment Compensation Act of 1970 mandates

that the Nation, as a whole, is triggered on to the extended benefits program when the insured unemployment rate (IUR) for the entire country is 4.5 percent or greater. When the national IUR falls below 4.5 percent, an individual State may remain triggered on if the State's own IUR equals at least 4 percent and is 120 percent of the average State IUR in the corresponding period in the previous 2 years; or, at the State's option, it reaches a flat 5 percent level.

The anomalous result of such a system is that States with chronically high levels of unemployment may not meet the independent criteria for remaining triggered on—while other State's with much lower levels of real unemployment, but which are comparatively worse off than they were during the previous 2 years, do qualify to continue receiving extended benefits.

Mr. Speaker, today I am introducing legislation which would rectify the faults in the system which prevents extended benefits from being paid to many deserving workers. My bill contains provisions which would abolish the inequities which currently permeate the system and it would also save money in the current fiscal year. These revisions in the current law embrace some of President Reagan's proposals to deal with the unemployment insurance program, and also change the law so that workers in States which suffer chronically high levels of unemployment will be sure to receive much-needed extended benefits.

The bill which I introduce has essentially two features. First, the bill would abolish the national trigger mechanism. As I have mentioned, the national trigger has caused great hardship to jobless workers whose fate rests upon fluctuations in the Nation's economy, totally beyond the control of their State of residence. Workers in many States have found, when the Nation has triggered off, that their extended benefits are summarily terminated because the national unemployment picture has improved—despite the fact that the job situation in their own State has worsened. This has been the case even though the deeper joblessness in such a State is caused by national factors. For example, the present decline in automobile sales is clearly a problem which manifests itself in national car-buying trends. Obviously, however, this problem creates much greater burdens for workers in those States which are heavily involved in auto-related industries. Repealing the national trigger will put an end to this inequitable treatment of many workers.

Second, my bill would establish a State IUR level of 3 percent in order to trigger on a State to the extended benefits program. This change is necessary for essentially two reasons. In the period since the Federal-State Unemployment Compensation Act has been in effect, the coverage of the program has, wisely, been expanded to include many public service employees. However, since these persons generally incur lower rates of unemployment than workers in the private sector, the calculation of IUR has been skewed by including the relevant employment figures of these public service employees. Therefore, the currently required IUR levels which must now be met are simply no longer appropriate given the nature of the program. In addition, stark economic realities of the past decade mean that we now face higher underlying levels of unemployment than when the extended benefits programs was first initiated. Thus, the relevant IUR levels must be adjusted if this program is to remain a viable one—providing assistance where it is needed most.

Because the current law provides benefits to all States when the Nation is triggered on, rather than targeting funds to areas of high unemployment, the present program leads to excessive expenditures by the Federal and State governments which share, equally, the costs of the extended benefits program. I am pleased to note that compared to current law, my bill would allow savings of over $400 million in Federal and State expenditures in fiscal year 1981.

Ultimately our goal must be to provide the needed stimulus to boost the economy and return workers to their jobs. In the meantime, we must not permit workers in some States to be penalized by improved economic conditions in other States. We have a duty to provide needed aid to persons who are out of work due to factors beyond their control. We must also formulate a plan which directs taxpayers dollars to those areas most in need of such money. This bill marks a significant step in achieving these aims.●

EXPORT-IMPORT BANK FINANCING NOTIFICATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. NEAL) is recognized for 5 minutes.

● Mr. NEAL. Mr. Speaker, I am referring to the House today a notification from the U.S. Export-Import Bank on proposed financing to assist in the sale of jet aircraft valued at $230,175,000 to the Government of Israel for use by El Al Israel Airlines or by a new Government-owned airline.

The Eximbank is prepared to authorize a direct credit of $172,631,250 and a financial guarantee of $23,017,500 to make possible this sale of two new Boeing Co. 737-200 jet aircraft, the U.S.-made components of four new Boeing 767-200's, spare engines, and related parts.

This Eximbank notification was referred to me as chairman of the Banking Committee's Subcommittee on International Trade, Investment and Monetary Policy. Section 2(b)(3)(i) of the Export-Import Bank Act of 1945, as amended, requires that the Eximbank notify Congress of proposed loans or financial guarantees, or combinations thereof, of $100 million or more. Unless the Congress determines otherwise, the Eximbank may give final approval to the transaction after 25 days of continuous session of the Congress after notification.

I am submitting for the RECORD at this time the Eximbank's notification, which provides the terms and details of the proposed financing. I would welcome any comments or questions my colleagues might have about this proposal.

The Eximbank material follows:

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., March 12, 1981.

Hon. STEPHEN L. NEAL,
Chairman, Subcommittee on International Trade, Investment and Monetary Policy, House Banking Committee, U.S. House of Representatives, Rayburn House Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: In accordance with Section 2(b)(3)(i) of the Export-Import Bank Act of 1945, as amended, I have reported to the President of the Senate and the Speaker of the House of Representatives on an application currently pending consideration by the Bank. I am taking the liberty of providing you with a copy of this statement.

Sincerely,

NANCY S. PIGMAN,
Congressional Relations Officer.

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., March 12, 1981.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives, The Speaker's Room, U.S. Capitol, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to Section 2(b)(3)(i) of the Export-Import Bank Act of 1945, as amended, Eximbank hereby submits a statement to the House of Representatives with respect to the following transaction involving U.S. exports to Israel.

A. DESCRIPTION OF TRANSACTION

1. Purpose

Eximbank is prepared to authorize a direct credit of $172,631,250 and a financial guarantee of a supplier credit in the amount of $23,017,500 to the Government of the State of Israel (Government) to facilitate the purchase in the United States of two new Boeing 737-200 jet aircraft, the U.S. components of four new Boeing 767-200 jet aircraft, spare engines and related spare parts. The total U.S. export value for this transaction is estimated to be $230,175,000.

2. Identity of the parties

The Government of the State of Israel, the borrower, has been involved either as borrower or guarantor in numerous transactions with Eximbank since the inception of the State of Israel and its repayment record has been excellent. The Government is the borrower because El Al Israel Airlines, Lim-

ited may be reconstituted or superseded by another Israeli flag-carrier, owned by the Government, and the latter entity may be the user of the 6 aircraft.

3. Nature and use of goods and services

The principal goods to be exported from the United States at this time are two Boeing 737-200 short/medium range jet aircraft, the U.S. components (including installed engines) of four Boeing 767-200 medium range jet aircraft, spare engines for both models, airframe spares, engine spares and ground support equipment. The airframes and related spares will be manufactured by The Boeing Company of Seattle, Washington. The engines and related spares will be manufactured by the Pratt & Whitney Division of United Technologies, Inc. in Hartford, Connecticut. These two companies will subcontract with numerous U.S. companies for major portions of the airframe and engine manufacture.

These aircraft will replace aging, fuel inefficient aircraft now being operated by El Al. They will not be operated on routes normally served by U.S. carriers but mainly on Israeli/European and Israeli/Egyptian routes. Deliveries for the 737's are scheduled in September and October 1982 and deliveries for the 767's are scheduled in August and November 1983 and March 1984 (two aircraft). The non-U.S. components of the 767 jet aircraft will be financed by local Israeli bank borrowings.

B. EXPLANATION OF EXIMBANK FINANCING

1. Reasons

Airbus competition has been alleged to exist in connection with this transaction but not proven. However, during the pre-purchase discussions, Airbus Industries did approach Arkia Israel Inland Airlines, Ltd., a private Israeli carrier which is considering expanding its fleet, and made to Arkia an attractive financing offer. This offer was of course known to the Government and El Al. In fact over the past few years El Al has been approached by Airbus but the former has decided to buy Boeing aircraft principally on the basis of competitive financing then provided by Eximbank.

It should be noted that the Government is endeavoring to require the user of the aircraft to conduct its commercial operations much like nongovernment airlines: profitable operations, avoidance of featherbedding and sound debt management, even in a difficult environment of accelerating fuel and other inflationary costs. Because a large number of Israel's commercial aircraft are fuel and route inefficient, the Government seeks Eximbank financing assistance to purchase fuel efficient, smaller short and medium range jet aircraft to replace the aging 707's and 747-100's.

The Boeing Company estimates that the export of the U.S. goods will provide 5,000,000 man/hours for Boeing, its subsidiaries and its sub-suppliers. Additional benefits which will flow to the United States from the transaction include sizeable follow-on exports of spare parts, and ground support and other related equipment.

2. The financing plan

The financing plan for the total U.S. procurement supported by the Eximbank direct credit and the financial guarantee of the supplier credit, to be provided by The Boeing Company or one of its subsidiaries at the same rate as for the Eximbank direct credit, is as follows:

	Percent of U.S. cost	Amount
Cash payment	15	$34,526,250
Supplier credit[1]	10	23,017,500
Eximbank direct credit	75	172,631,250
Total	100	230,175,000

[1] Guaranteed by Eximbank.

(a) Eximbank Charges

The Eximbank direct credit will bear interest at the rate of 9¼% per annum, payable semiannually. Eximbank will charge a commitment fee of ½ of 1% per annum on the undisbursed amounts of the Eximbank direct credit; a guarantee commitment fee of ⅛ of 1% on the undisbursed amounts of the supplier credit; and a guarantee fee of ½ of 1% on the disbursed amounts of the supplier credit.

(b) Repayment Terms

Aggregate disbursements under the supplier credit and the Eximbank direct credit will be repaid by the Government in three repayment schedules of 20 equal semiannual installments beginning (i) April 30, 1983, for aircraft and spares delivered during the period ending March 30, 1983; (ii) May 31, 1984, for aircraft and spares delivered during the period April 1, 1983 through April 30, 1984; and (iii) September 30, 1984, for aircraft and spares delivered during the period May 1, 1984 through July 31, 1984. Under each of the repayment schedules the first two installments and part of the third installment will be applied to the repayment of the supplier credit and the balance of each schedule will be applied to the repayment of the Eximbank direct credit.

Attached is additional information on Eximbank activity in and economic data on the country involved in this transaction.

Sincerely,

JOHN L. MOORE, Jr.

ATTACHMENT 1.—EXIMBANK EXPOSURE IN ISRAEL

[As of Dec. 31, 1980; in thousands of dollars]

	Outstanding	Undisbursed
Direct loans and CFF loans	180,997	312,155

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. GRISHAM) to revise and extend their remarks and include extraneous material:)

Mr. TAUKE, for 5 minutes, today.

Mr. PARRIS, for 20 minutes, March 23, 1981.

(The following Members (at the request of Mr. SKELTON) to revise and extend their remarks and include extraneous material:)

Mr. SKELTON, for 20 minutes, today.

Mr. GONZALEZ, for 15 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. LAFALCE, for 10 minutes, today.

Mr. NEAL, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. GRISHAM) and to include extraneous matter:)

Mr. CARMAN.
Mr. WAMPLER.
Mr. KEMP.
Mr. GILMAN in two instances.
Mr. RINALDO.
Mr. MCCLORY.
Mr. FRENZEL in three instances.
Mr. SAWYER.
Mr. GREEN.
Mr. BAFALIS.
Mr. TAUKE.
Mr. CARNEY.
Mr. LOTT.
Mr. MADIGAN.
Mr. DERWINSKI.
Mr. NELLIGAN.

(The following Members (at the request of Mr. SKELTON) and to include extraneous matter:)

Mr. CONYERS.
Mr. ROSENTHAL.
Mr. HALL of Ohio.
Mr. BREAUX.
Mr. OBERSTAR.
Mr. RODINO.
Mr. APPLEGATE.
Ms. MIKULSKI.
Mr. HUGHES.
Mr. HUBBARD.
Mr. MINETA.
Mr. BEDELL.
Mr. WAXMAN.

ADJOURNMENT

Mr. SKELTON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 42 minutes p.m.), under its previous order, the House adjourned until Monday, March 23, 1981, at 12 noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

843. A letter from the Chairman, U.S. Nuclear Regulatory Commission, transmitting a draft of proposed legislation to amend the Atomic Energy Act of 1954, as amended to authorize the Commission, upon determination that such action is necessary in the public interest, to issue an interim operating license authorizing fuel loading, low-power operation and testing of a nuclear power reactor in advance of the conduct of a hearing; to the Committee on Interior and Insular Affairs.

844. A letter from the Acting Assistant Secretary of the Army (Civil Works), transmitting a Corps of Engineers report on the Richard B. Russell Dam and Lake (pumped storage), Ga. and S.C., in partial response to resolutions of the Senate and House Committees on Public Works adopted January 14, 1966, and May 5, 1966, respectively (H. Doc. No. 97-35); to the Committee on Public Works and Transportation and ordered to be printed.

845. A letter from the Director, Office of Technology Assessment, transmitting the annual report of the Office for calendar year 1980, pursuant to section 11 of Public Law 92-484; to the Committee on Science and Technology.

846. A letter from the Secretary of Health and Human Services and the Secretary of Housing and Urban Development, transmitting notice of a delay until August 1, 1981, in the submission of the report on shelter and basic living needs of chronically mentally ill individuals, required by section 802 of Public Law 96-398; jointly, to the Committees on Energy and Commerce and Banking, Finance and Urban Affairs.

847. A letter from the Comptroller General of the United States, transmitting a report on the value added tax (PAD-81-60, Mar. 3, 1981); jointly, to the Committees on Government Operations and Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ST GERMAIN: Committee on Banking, Finance and Urban Affairs. Report on monetary policy for 1981 (Rept. No. 97-10). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. MICHEL:

H.R. 2629. A bill to amend section 201 of the Agricultural Act of 1949, as amended, to delete the requirement that the support price of milk be adjusted semiannually; to the Committee on Agriculture.

By Mr. BAFALIS (for himself, Mr. MARLENEE, and Mr. SENSENBRENNER):

H.R. 2630. A bill entitled "Tax Credit for the Elderly Improvement Amendments of 1981"; to the Committee on Ways and Means.

By Mr. BINGHAM (for himself, Mr. BONKER, and Mr. LAGOMARSINO):

H.R. 2631. A bill to provide for the payment, out of the proceeds of gold belonging to the Government of Czechoslovakia, of certified awards of nationals of the United States against the Government of Czechoslovakia and to provide for the release of such proceeds to Czechoslovakia after all such awards and certain other debts are paid; to the Committee on Foreign Affairs.

By Mr. BOLAND (for himself, Mr. MINETA, and Mr. CONTE):

H.R. 2632. A bill to amend Public Law 96-36 to authorize additional funds to plan for the development of the area south of the original Smithsonian Institution Building adjacent to Independence Avenue at 10th Street SW., in the city of Washington; to the Committee on House Administration.

By Mr. BREAUX:

H.R. 2633. A bill to amend section 924(c) of title 18, United States Code, to strengthen existing mandatory penalties for using or carrying a firearm in the commission of a felony; to the Committee on the Judiciary.

By Ms. FIEDLER:

H.R. 2634. A bill to amend the Internal Revenue Code of 1954 to exclude from gross income certain amounts of the military compensation of members of Active or Reserve components of the Armed Forces of the United States; to the Committee on Ways and Means.

By Mr. FISH:

H.R. 2635. A bill to allow the termination and modification of certain fixed-price procurement contracts between the United States and small business concerns because of increases in the price of rare and precious metals; to the Committee on Small Business.

By Mr. GILMAN:

H.R. 2636. A bill to provide for the distribution within the United States of the International Communication Agency film entitled "In Their Own Words"; to the Committee on Foreign Affairs.

H.R. 2637. A bill to regulate commerce and to prohibit unfair or deceptive acts or practices in commerce, and for other purposes; jointly, to the Committees on Energy and Commerce and the Judiciary.

By Mr. GINGRICH:

H.R. 2638. A bill to provide mandatory social security coverage for Members of Congress; to the Committee on Ways and Means.

By Mr. GREEN (for himself, Mr. HORTON, Mr. VENTO, Mr. ZEFERETTI, Mr. ADDABBO, Mr. BONKER, Mr. FORSYTHE, Mr. SCHEUER, Mr. STARK, Mr. BENJAMIN, Mr. ROE, Mr. YATRON, Mr. SIMON, Mr. ROSENTHAL, Mr. IRELAND, Mr. SCHUMER, Mr. MURPHY, Mr. BAFALIS, Mr. SOLARZ, Mr. BURGENER, Mr. FAZIO, Mr. MARKEY, Mr. COTTER, Mr. FISH, Mr. CORCORAN, Mr. CORRADA, Mr. BINGHAM, Mr. RICHMOND, Mr. GUARINI, Mr. STOKES, Mr. HUGHES, Mr. CROCKETT, and Mr. PEPPER):

H.R. 2639. A bill to enhance the detection of motor vehicle theft and to improve the prosecution of motor vehicle theft by requiring the Secretary of Transportation to issue standards relating to the identification of vehicle parts and components, by increasing criminal penalties applicable to trafficking in stolen vehicles and parts, by curtailing the exportation of stolen vehicles, and by establishing penalties applicable to the dismantling of vehicles for the purpose of trafficking in stolen parts, and for other purposes; jointly, to the Committees on Energy and Commerce, Foreign Affairs, the Judiciary, Post Office and Civil Service, and Ways and Means.

By Mr. HEFTEL (for himself, Mr. OTTINGER, Mr. MARTIN of North Carolina, Mr. ROUSSELOT, Mr. DOWNEY, Mr. JEFFORDS, Mr. STUDDS, Mr. SAWYER, Mr. EVANS of Georgia, Mr. MURPHY, Mr. FAZIO, Mr. GEJDENSON, Mr. NEAL, Mr. YATRON, Mr. WOLPE, Mr. DIXON, and Mr. MAVROULES):

H.R. 2640. A bill to amend the Internal Revenue Code of 1954 to provide nonrefundable tax credits for investments in qualified industrial energy efficiency and fuel conversion projects, and for other purposes; to the Committee on Ways and Means.

By Mr. LAFALCE:

H.R. 2641. A bill to revise the trigger provisions of the Federal-State extended unemployment compensation program; to the Committee on Ways and Means.

By Mr. MADIGAN (for himself, Mr. CORCORAN, Mr. DANNEMEYER, Mrs. FENWICK, Mr. GARCIA, Mr. GREEN, Mr. GUARINI, Mr. LENT, Mr. RINALDO, and Mr. SPENCE):

H.R. 2642. A bill to authorize the use of heroin for terminally ill cancer patients; to the Committee on Energy and Commerce.

By Mr. MINETA (for himself, Mr. HOWARD, Mr. ANDERSON, Mr. LEVITAS, Mr. OBERSTAR, Mr. NOWAK, Mr. FARY, Mr. YOUNG of Missouri, Mr. RAHALL, Mr. APPLEGATE, Ms. FERRARO, Mr. ATKINSON, Mr. BONER of Tennessee, Mr. DE LUGO, and Mr. SUNIA):

H.R. 2643. A bill to provide for the improvement of the Nation's airport and airway system, and for other purposes; jointly, to the Committees on Public Works and Transportation and Science and Technology.

By Mr. MURPHY (for himself and Mr. SIMON):

H.R. 2644. A bill to extend authorizations of appropriations for programs established in the Alcohol and Drug Abuse Education Act; to the Committee on Education and Labor.

By Mr. RODINO (for himself and Mr. MCCLORY):

H.R. 2645. A bill to authorize additional judicial positions for the courts of appeals and district courts of the United States; to the Committee on the Judiciary.

By Mr. SAWYER:

H.R. 2646. A bill to amend section 1963 of title 18 of the United States Code to create a rebuttable presumption about the forfeiture of property of persons convicted of racketeering offenses involving violation of drug laws, to provide that the property forfeited in connection with such racketeering offenses, and the proceeds from such property, be used for local, State, and Federal drug law inforcement, and to provide that certain profits or proceeds of persons convicted of racketeering offenses involving violations of drug law are subject to forfeiture; to the Committee on the Judiciary.

By Mr. SCHULZE:

H.R. 2647. A bill to amend the Internal Revenue Code of 1954 to equalize the dollar amounts of income tax withholding on gambling winnings from horseracing, State-conducted lotteries, and certain other wagers; to the Committee on Ways and Means.

By Mr. VOLKMER:

H.R. 2648. A bill to amend the Internal Revenue Code of 1954 to reduce individual and business income taxes; to the Committee on Ways and Means.

By Mr. BAFALIS (for himself, Mr. COLLINS of Texas, Mr. JEFFRIES, Mr. BUTLER, Mr. BENJAMIN, Mr. DANNEMEYER, Mr. WHITEHURST, Mr. MCDONALD, Mr. MADIGAN, Mr. GINGRICH, Mr. WILSON, Mr. WHITTAKER, Mr. LOTT, Mr. IRELAND, Mr. LIVINGSTON, Mr. LUNGREN, Mr. EVANS of Georgia, Mr. KRAMER, Mr. LEE, Mr. SOLOMON, Mr. MOORE, Mr. DUNCAN, Mr. HANSEN of Idaho, Mr. GOLDWATER, Mr. SPENCE, Mr. MOTTL, Mr. ROBERT W. DANIEL, JR., Mr. MITCHELL of New York, Mr. LAGOMARSINO, Mr. CHAPPELL, Mr. SNYDER, Mr. ROBINSON, Mr. BURGENER, Mr. CAMPBELL, and Mr. YOUNG of Florida):

H.J. Res. 211. Joint resolution proposing an amendment to the Constitution to alter Federal fiscal decisionmaking procedures; to the Committee on the Judiciary.

By Mr. CONTE:

H.J. Res. 212. Joint resolution to designate the third week of September as "National Cystic Fibrosis Week"; to the Committee on Post Office and Civil Service.

By Mr. HOLLENBECK (for himself, Mr. SANTINI, Mr. ROE, Mrs. FENWICK, Mr. LENT, Mr. KOGOVSEK, Mr. CORRADA, Mr. FORSYTHE, Mr. GUYER, Mr. SOLARZ, Mr. ANNUNZIO, Mr. OBERSTAR, Mr. FLORIO, Mr. KINDNESS, Mr. LEBOUTILLIER, Mr. SCHEUER, Mr. LAGOMARSINO, Mr. SMITH of New Jersey, Mr. BOWEN, Mr. MOLLOHAN, Mr. MCCLORY, Mr. WOLPE, Mr. WINN, Mr. BEARD, Mr. NOWAK, Mr. ROTH, Mr. MADIGAN, Mr. HUGHES, Mr. VENTO, Mrs. HOLT, Mr. TRAXLER, Mr. SOLOMON, Mr. WHITEHURST, Mr. EDGAR, Mr. HOWARD, Mr. FRANK, Mr. PEPPER, Mr. PANETTA, Mr. LUNGREN, Mr. JEFFORDS, Mr. CORCORAN, Mrs. MARTIN of Illinois, Mr. MOFFETT, Mr. RINALDO, Mr. WIRTH, Mr. SUNIA, Mr. BONIOR of Michigan, Mr. JACOBS, Mr. ROUSSELOT, Mr. ARCHER, Mr. LIVINGSTON, Mr. FROST, Mr. MCGRATH, Mr. JONES of Tennessee, Mr. NEAL, Mr. DE LA GARZA, Mr. WEBER of Minnesota, Mr. ATKINSON, Mr. DOUGHERTY, Mr. PORTER, Mr. PURSELL, Mr. PRICE, Mr. LOTT, Mr. CONTE, Mr. FORD of Tennessee, Mr. FISH, Mr. COLLINS of Texas, Mr. MARKEY, Mr. ROSE, Mr. DYSON, Mr. KILDEE, Mr. SHARP, Mr. DONNELLY, Mr. YOUNG of Alaska, Mr. ALEXANDER, Mr. HAMMERSCHMIDT, Mr. CLAUSEN, Mr. MATSUI, Mr. FAZIO, Mr. GOLDWATER, Mr. MOORHEAD, Mr. DORNAN of California, Mr. BROWN of Colorado, Mr. LOWERY of California, Mr. TAUKE, Mr. YATRON, Mr. MILLER of Ohio, Mr. FRENZEL, Mr. ZEFERETTI, Mr. SMITH of Alabama, Mr. CARMAN, Mr. LOEFFLER, Mr. BETHUNE, Mr. AKAKA, Mr. KRAMER, Mr. SAWYER, Mr. ALBOSTA, Mr. VOLKMER, Mr. ADDABBO, Mrs. CHISHOLM, Mr. DAUB, Mr. ERLENBORN, Mr. EVANS of Delaware, Mr. BREAUX, Mr. COURTER, Mrs. SCHNEIDER, Mr. PATTERSON, Mr. YOUNG of Florida, Mr. LONG of Maryland, Mr. EARLY, Mr. WAMPLER, Mr. FINDLEY, Mr. GUARINI, Mr. MATTOX, Mr. FOWLER, Mr. RICHMOND, Mr. EDWARDS of Oklahoma, Mr. MONTGOMERY, Ms. MIKULSKI, Mr. EVANS of Georgia, Mr. WALGREN, Mr. PAUL, Mr. WATKINS, Mr. AUCOIN, Mr. MCDADE, Mr. PHILIP M. CRANE, Mr. JOHNSTON, Mr. MINISH, Mr. ST GERMAIN, Mr. MURPHY, Mr. WON PAT, Mr. RODINO, Mr. BONER of Tennessee, Mr. OTTINGER, Mr. WALKER, and Mr. BAILEY of Pennsylvania):

H.J. Res. 213. Joint resolution designating July 17, 1981, as "National P.O.W.-M.I.A. Recognition Day"; to the Committee on Post Office and Civil Service.

By Mr. MARRIOTT (for himself and Mr. MYERS):

H.J. Res. 214. Joint resolution to authorize the President to issue a proclamation designating the week beginning on November 22, 1981, as "National Family Week"; to the Committee on Post Office and Civil Service.

By Mr. BONKER (for himself and Mr. JONES of North Carolina):

H. Con. Res. 96. Concurrent resolution calling for an indefinite moratorium on the commercial killing of whales and otherwise expressing the sense of the Congress with respect to conserving and protecting the world's whale populations; to the Committee on Foreign Affairs.

By Mr. NEAL:

H. Con. Res. 97. Concurrent resolution declaring the sense of Congress regarding periods of silence in public schools; jointly, to the Committees on the Judiciary and Education and Labor.

By Ms. OAKAR:

H. Res. 112. Resolution calling for completion of the investigation into the murders of four U.S. missionaries in El Salvador in December 1980; to the Committee on Foreign Affairs.

By Mr. ST GERMAIN:

H. Res. 113. Resolution creating a select committee to conduct an investigation of the nationalization of the oil industry; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CORRADA:

H.R. 2649. A bill for the relief of Vera Zabala Clemente, Roberto Clemente, Jr., Luis Roberto Clemente, Roberto Enrique Clemente, Luisa Walker Clemente, Maria M. Reyes Vda. Lozano, Angel R. Lozano, Jr., Wanda Ivellize Lozano, Angel Gabriel Lozano Morales, Mayra Lizette Lozano Baez, Antonio Narvaez, Margarita C. Matias, Ana Margarita Matias, Francisco Matias, Jr., Lourdes Margarita Matias, Jose Francisco Matias, Francisco Javier Matias, and Dolores Lugo; to the Committee on the Judiciary.

By Mr. WALGREN:

H.R. 2650. A bill for the relief of John W. Graham; to the Committee on the Judiciary.

By Mr. BREAUX:

H. Res. 114. Resolution to refer the bill, H.R. 2337, to the Chief Commissioner of the Court of Claims; to the Committee on the Judiciary.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 85: Mr. PANETTA, Mr. MINETA, and Mr. WIRTH.

H.R. 224: Mr. WEBER of Minnesota.

H.R. 374: Mr. HAWKINS, Mr. DOWNEY, Mr. FOWLER, Mr. PORTER, Mr. GEPHARDT, Mrs. FENWICK, Mr. KASTENMEIER, Mrs. CHISHOLM, Mr. DONNELLY, Mr. PATTERSON, Mr. BONIOR of Michigan, Mr. COTTER, Mr. VENTO, Ms. FERRARO, Mrs. SCHNEIDER, Mr. LEHMAN, Mr. IRELAND, Mr. DELLUMS, Mr. STUDDS, and Mr. BROWN of California.

H.R. 375: Mr. MCHUGH, and Ms. MIKULSKI.

H.R. 1031: Mr. LUKEN, Mr. COTTER, and Mrs. SCHNEIDER.

H.R. 1294: Mr. DASCHLE, Mr. SEIBERLING, Mr. FAZIO, Mr. MCHUGH, Mr. SYNAR, and Mr. BURGENER.

H.R. 1353: Mr. JOHN L. BURTON, Mr. CORRADA, Mr. COTTER, Mr. DONNELLY, Mr. LAFALCE, Mr. RATCHFORD, Mr. RUSSO, and Mr. ZEFERETTI.

H.J. Res. 182: Mr. SPENCE, Mr. FITHIAN, Mr. RUDD, Mr. EVANS of Iowa, Mr. SKELTON, Mr. COATS, Mr. WHITTEN, Mr. SEIBERLING, Mr. BLANCHARD, Mr. LIVINGSTON, and Mr. ROBERT W. DANIEL, JR.

EXTENSIONS OF REMARKS

HUNT FOR SILVER—PART II

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. McDONALD. Mr. Speaker, today I am inserting into the CONGRESSIONAL RECORD part II of the article entitled, "Hunt for Silver" which appeared in American Opinion magazine of December 1980, in my furthering effort to achieve some balance in the record of the reason for the fall of the silver market last year. Part I appeared in the RECORD of March 17, 1981, on page 4607. Part II follows:

HUNT FOR SILVER—PART II

Throughout 1979 the price of silver had risen dramatically. By Labor Day it had reached $11 an ounce. But the price kept rising, up to the $15 to $16 level in October. Acting on behalf of the shorts, the Commodities Exchange (Comex) of New York and the Chicago Board of Trade (CBOT) began to raise margin requirements.[1] This action was intended to discourage new buyers of futures contracts and to encourage traders to sell the contracts they were holding. Each time margin requirements were raised, the small traders had more trouble holding on to their positions and were forced to sell. Whereas before a trader could buy or sell a 5,000-ounce silver futures contract worth $25,000 at $5 an ounce for only $1,000, by Labor Day the exchanges required him to pay $2,000 for the same 5,000-ounce contract. Eventually, as traders were required to put up more and more margin, a point was reached when as much as $75,000 in margin deposit was required for one 5,000-ounce contract! This is quite a hike from $1,000. Trustman explains how this inevitably squeezed the small traders out of the market:

"The rationale was plausible, if not sound. Tiny, as it was, initial margin of $1000 had been deemed an 'appropriate' cushion against a possible drop in price when the price of silver was $5 an ounce and the 5000 ounces cost $25,000. But, now that the price was $15, and the 5000 ounces cost $75,000, the initial margin of $1000 was deemed inadequate. And the changes were retroactive. If you had put up $1000 initial margin when you bought and they bumped the requirement to $10,000, you had to put up the other $9000 or you were subject to a margin call and the sale of your futures contract.

"The little people who had pyramided in accordance with existing rules, and bought more and more futures, had to put up a lot of additional margin—or sell some of their futures. Which was the purpose of the new rule, of course—to force them to sell their futures. When people have to sell, sell at any price, the price tends to go down."

[1] Margin is an amount of money deposited with a commodities broker to protect against loss if the price should move in the wrong direction—that is, against the direction the trader is betting on in his futures contract.

Despite the series of margin increases made by the exchanges, however, the price of silver did not fall. The rule changes hadn't worked. Only the little traders were forced to sell—and they didn't own very much silver compared to the big investors. The price of silver stayed up around the $15 to $16 range in October. The insiders on the exchanges, millions of ounces "short," were now desperate. And silver began to climb once more, closing at $18.82 in November, zooming through $20 by December twelfth, $25 by December twenty-sixth, $34.45 on December thirty-first, and then, $38.85 on January second. A spectacular climb! The Hunts were doing very well indeed, but those who were short the market were contemplating a leap from their penthouses.

The response of the exchanges? Change the rules some more, and keep changing them, to cheat the Hunts. Within a period of two weeks, three new rules were imposed. On January eight, the exchanges laid down position limits, decreeing—with retroactive force—that no trader could own more than 2,000 futures in all months, or 500 in any month. This was designed to force the big traders to sell their "excess" contracts. And, with this new retroactive rule suddenly imposed on them, the Hunt brothers found themselves holding a great many more futures positions than the new exchange rules would now permit. Then the exchanges lowered the monthly limits for January and February to only fifty contracts!

But, while the price of silver did dip a few dollars, it began to recover its upward trend. The Hunts had found a way around the rule changes and position limits. They sold their "excess" futures to Engelhard Minerals and Chemical Corporation, a company that was heavily short the market and hence was delighted to buy the long position to offset its shorts. Along with this was a private arrangement in which Bunker and Herbert agreed to buy from Engelhard, within sixty days, 19,000,000 ounces of silver at $35 an ounce ($665 million). This silver was to come from Engelhard's inventory and not from the futures market where Engelhard was short.

Now the price of silver shot up through $40 an ounce and then, on January seventeenth, briefly broke $50 an ounce. The shorts were in a panic and screaming for relief from their contracts. Thereupon the exchanges imposed two more new rules. First, they said that buyers could not demand delivery of their silver at the maturity of their futures, even though it was their right as stipulated in the terms of their futures contracts. Alan Trustman reveals that this and subsequent rules which contravened the terms of commodities contracts were knowingly approved by James Stone, the activist chairman of the Commodity Futures Trading Commission. Mr. Trustman observes:

"This created an anomaly. If you owned more than fifty contracts, you would still have to make payment on the due date unless you sold your extras, but you couldn't demand delivery on more than the fifty futures. Holders were given until January 31 to get their positions in line. What? That's right. Ten whole days. Could the exchanges really do it? Wasn't it illegal? Unconstitutional? Isn't there something in the Constitution about impairing the obligations of contracts?

"Chairman Stone made speeches declaring what was fair and for the general good; it was the function of the CFTC to declare the policy and purpose of the markets, and the sole purpose of the markets, the chairman now decreed, was to provide an opportunity for makers and users to hedge against rising or falling prices, and not an opportunity to own the underlying commodities, and never mind what the futures contracts said, or that you had to have an underlying delivery contract to make the contracts meaningful, or that you needed speculators who were willing to take delivery in certain cases to have a working market. It was perfectly all right to make the buyers pay while lifting the delivery requirement from the sellers."

The exchanges and the shorts had been playing a game of fractional-reserve commodity trading; there wasn't nearly as much silver on deposit at banks and warehouses as was represented by the futures contracts held and traded. The supply of silver overhanging the commodities market amounted to about 400 million ounces of above-ground bullion for trading purposes, plus whatever the exchanges were willing to sell short at the risk of having delivery demanded as provided for in the terms of the contracts. With the new rule, the shorts were no longer under the discipline of facing the possibility of demands for delivery; they were free to sell silver that wasn't there. This meant that the effective supply of silver became potentially infinite in terms of the paper contracts. What a way to drive the price of silver down to Hades!

Then, the final touch to sabotage the silver market: the third of the three rule changes. On January 21, 1980, the New York Comex again changed the rules in the middle of the game by suspending all trading *except for liquidation purposes* (and no deliveries) while raising margin requirements to their highest level in the history of the exchanges. The Chicago Board of Trade imposed similar restrictions the next day.

This meant you couldn't sell unless you were long—and you couldn't buy unless you were short. Even if you were willing and able to put up the $50,000 initial margin the exchanges were demanding, you would not be permitted to buy except to cover your short position. Longs were not permitted to buy in the new market. They were excluded—stacking the deck in favor of the short sellers who wanted the price to drop down far enough so they could get out of their positions. This effectively killed the silver futures market in America. The shorts—which Congressional Hearings later revealed to include members of the exchanges and members of the Commodity Futures Trading Commission itself—had used their influence to intervene and sabotage the market to swindle the Hunts.

As Bunker Hunt was later to lament: "There was no way to sell anything except at a distress price. The shorts were sitting on the Comex board, and we were sitting down here in Dallas long, trusting them."

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

Greatly disenchanted by the whole outrage Bunker Hunt observes: "All those exchanges are run by the shorts, and with the connivance of the shorts. There are 23 people on the Comex board. I've heard at least half of them made a huge amount of money. They positioned themselves the day before the big January 21 liquidation vote. They didn't even have the silver bullion. They just sold short. They knew they could break the market because they were the guys voting."

Herbert Hunt's analogy about the referees at a football game changing the rules in the fourth quarter was right as far as it went. Now players from the other side had climbed into costume as referees to make absolutely certain their team won. Suddenly the game was being run with all the fairness and equity of a lynching.

The series of margin hikes and position limits was bad enough. These drove out small buyers, and forced large traders to dispose of their contracts. The effect was to make the market increasingly illiquid and cash poor. Between September 28, 1979, and February 1, 1980, the number of outstanding contracts had dropped fifty-three percent on the Comex and more than sixty-nine percent on the CBOT. But the "liquidation only" rule was the final move of the vested insiders to rescue themselves as short players and sandbag the Hunts.

One of those vested insiders—and a character who played a key role in arranging for the Comex to adopt the "liquidation only" rule—was Dr. Henry Jarecki. A former Yale Medical School professor, Jarecki is a member of the Board of Governors of the New York Commodity Exchange and serves as chairman of its margins committee. It is very interesting to note that Henry Jarecki is also chairman of the board of Mocatta Metals Corporation, which was one of the major players heavily short the market, and who thus had a strong interest in forcing down the price of silver by whatever means necessary. Jarecki helped to arrange just the right scenario.

An irony in this story is that it was the Hunts who had bailed Mocatta Metals out of a potentially fatal predicament only a few months earlier in October of 1979. At that time Mocatta was heavily in debt to banks from which it had borrowed to finance its short position on the Comex. In fact, according to Green's Commodity Market Comments, Mocatta owed more than $400 million, and was worth only about $40 million. The Hunts allowed Jarecki to reduce Mocatta's short position rather than go deeper into debt as the price of silver rose.

In an interview with Fortune magazine (August 11, 1980) Herbert Hunt recounted the episode: "Chairman Henry Jarecki was in complete turmoil; he was getting eaten alive by margin calls. Between us, Bunker and I had put up 10.7 million ounces of silver with Mocatta, for which we had obtained loans totaling $50 million. But the loan agreement was so fouled up we didn't have the right to pay it off without Mocatta's permission. In fact, we didn't even realize that Mocatta could borrow against our bullion. It was perfectly legal, but suddenly I discovered that he had hocked our silver for as much as the banks would loan him—about $185 million, I believe."

When they realized that Mocatta was having big money problems, Herbert and Bunker Hunt flew up to New York to visit with Dr. Jarecki. They stayed several days. Bunker recalls: "When the price of silver is going up, Jarecki will give you almost a religious speech about how he is fully hedged. But let me tell you, I was concerned about getting our silver back before he blew it."

Although Jarecki now claims that Mocatta's solvency was never in jeopardy, Herbert Hunt remembers Jarecki rushing into his office and announcing: "When it hits $22.90 I am broke—Mocatta is insolvent." A few minutes later, according to Herbert, Jarecki came back in and anxiously admitted, "I have miscalculated. The figure is a litte lower."

The Hunts finally settled with Mocatta through an "exchange for physicals" transaction. The brothers matched up some of their long positions with Mocatta's short positions, canceling them out and reducing Mocatta's margin requirements. Also, Mocatta sold 23 million ounces of silver to International Metals Investment Corporation, a Bermuda-based company the Hunts owned jointly with several Arab partners. The cash from that sale was used by Jarecki to pay off the bank loan he had taken out against the 10.7 million ounces of Hunt silver. Did the Hunts ever get their 10.7 million ounces back from Mocatta? Not exactly. They had to settle for a combination of some bullion, silver leases, and bags of silver coins. A bag of silver coins with a total face value of a thousand dollars can contain anywhere from 715 to 727 ounces of silver metal, depending on how worn the coins are. Bart Cousins, Herbert Hunt's attorney, comments: "Jarecki insisted on getting credit for 725-ounce coins. He got the best of us by three or four ounces per bag."

As beneficial as this deal was for Mocatta, Jarecki seems to hold a grudge against Bunker Hunt. According to Fortune, Jarecki had remarked to a friend that, "Bunker Hunt cost me a lot of sleep. But for every hour he's cost me I'm going to make him lose ten!"

Bunker's reaction? "I want you to know I'm a very good sleeper," drawls the Texas billionaire. "I may lose money, but I don't lose sleep."●

BUDGET CUTS

HON. CARROLL HUBBARD, JR.

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. HUBBARD. Mr. Speaker, with what now appears to be a trend in the Congress to check Federal spending, I wish to insert a letter from my constituent, Mrs. Anna R. Page of Russellville, Ky., about the proposed budget cuts.

Mr. Speaker, I submit the following:

As you may recall, I corresponded with you on several occasions last year when we were trying to get a Basic Grant for my son, Mark Page, to go to college. You were most kind and helpful to my family and me and we are indeed grateful.

By working, borrowing, and with the meager help we could give him, Mark went to college last fall and is there at the present time. He would like to get a degree, possibly even a masters, in computer science, but, at the present time, his future in college looks rather bleak.

As his father is disabled, Mark is receiving student benefits from social security. He also has a NDSL and a GSL, and, after much effort, he received a small BEOG. It seems that Mr. Reagan is very determined to cut all of these programs. We are hopeful that the Democrats in Congress will be able to protect the poor people who so desperately need these programs.

I hope I am not being altogether selfish in my concern, for I realize that the Food Stamp Program, and others, are also facing cut backs. Possibly, even probably, all of these assistance programs have been abused, but they have also been of much help to people who had no other hope.

The price of gasoline is escalating and we are told that the price of natural gas will double if the controls are removed from that.

Again, the poor suffer.

Thank you for your time and help in the past and for any help you are able to give the poor people of this country.

Respectfully yours,

ANNA PAGE
(Mrs. James T. Page).●

DOMESTIC VIOLENCE PREVENTION AND SERVICES ACT

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Ms. MIKULSKI. Mr. Speaker, I am glad to submit for the CONGRESSIONAL RECORD the names of the 63 new cosponsors of H.R. 1651, the Domestic Violence Prevention and Services Act.

It has been very gratifying to hear from so many Members of Congress so soon after the introduction of this desperately needed legislation. It serves notice to the House of Representatives that the horrible tragedy of spouse abuse has not faded from the public consciousness. The support for this bill comes from both sides of the aisle, and represents a broad range of political views.

While that may strike some people as surprising, given the political climate and the administration's economic plans, I see this bill as perfectly consistent with the President's goals. The administration has announced that stopping terrorism is its top priority—but if we do not get rid of terrorism in the home, how are we ever going to stop it in the rest of the world?

The administration has announced that it supports the right to life—and nowhere is the right to life greater than in one's household.

The administration has announced that this Government will be run according to the principles of fiscal responsibility and local control—and this bill is sunset, with complete responsibility for allocation of grants in the hands of the States.

The administration has announced that we must be protected from violent crime—and statistics show that women are in greater danger of violent

injury or death in their own homes than out in the street.

So today I am proud—but not at all surprised—to announce and thank the Members of Congress who have joined Congressman GEORGE MILLER, Congresswoman LINDY BOGGS, and myself, and cosponsored H.R. 1651 thus far. I urge the rest of my colleagues to do the same, and provide protection for thousands of battered women, children, and senior citizens.

The list of additional sponsors follow:

ADDITIONAL SPONSORS

Joseph P. Addabbo, Daniel K. Akaka, Ike F. Andrews, Michael D. Barnes, David D. Bonior, William M. Brodhead, George E. Brown, Jr., John L. Burton, Phillip Burton, and William Clay.

George Crockett, Thomas A. Daschle, Ronald V. Dellums, Julian C. Dixon, Charles F. Dougherty, Bernard J. Dwyer, Dennis E. Eckart, Robert W. Edgar, Don Edwards, and Vic Fazio.

Geraldine A. Ferraro, James J. Florio, Thomas M. Foglietta, Barney Frank, Bill Frenzel, Sam Gejdenson, Henry B. Gonzalez, William H. Gray III, S. William Green, and Augustus F. Hawkins.

Margaret M. Heckler, James J. Howard, Robert W. Kastenmeier, Dale E. Kildee, Tom Lantos, William Lehman, Mike Lowry, Marc L. Marks, Joseph G. Minish, and Austin J. Murphy.

Leon E. Panetta, Jerry M. Patterson, William R. Ratchford, Frederick W. Richmond, Peter W. Rodino, Jr., Charles Rose, Benjamin S. Rosenthal, Gus Savage, James H. Scheuer, and Patricia Schroeder.

HAPPY BELATED ST. PATRICK'S DAY

HON. JAMES L. NELLIGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. NELLIGAN. Mr. Speaker, I am sure you realize that Tuesday, March 17, was St. Patrick's Day.

This special day honors St. Patrick, the patron saint of Ireland, and it is a joyous occasion to be celebrated by Irish and non-Irish alike. In one sense, St. Patrick's Day is the celebration of a culture developed through the centuries and enduring to this day. It is the celebration of a culture rich in tradition, and proud of its heritage.

But, as we are all painfully aware, violence and confusion still exist in the north of Ireland. The situation continues to be grave and it deserves a great deal of careful attention from all Americans. Thus, amidst this year's observance of St. Patrick's Day, it was also my fervent hope that the many problems of Ireland may be solved and peace restored to the Emerald Isle. There could be no better celebration than that occurring in a peaceful Ireland.

Yet, despite any adversity, I am confident that Irish people throughout the world will continue to enjoy the festivities of St. Patrick's Day. I consider this a tribute to the inherent optimism of the Irish people and their strong conviction that better times must always lie ahead.●

MONEY SPILLING ONTO THE FLOOR

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. BEDELL. Mr. Speaker, last week I stood before the House and took note of several news items.

First, I noted that Standard Oil of Ohio has made an apparently successful bid of $1.8 billion for the Kennecott Corp., the largest copper company in the United States. Second, Standard Oil of California has proposed the largest merger in history, offering $4 billion for Amax Inc., the Nation's third largest coal mining company. Third, each of these bids was at a price more than double the going stock market price.

Finally, in my remarks last week, I observed that this was strange behavior indeed for companies that are said to be in an industry that has a desperate need for more money. At least that is what the administration tells us, for that is the chief explanation they gave for hastening the decontrol of petroleum products, and that is what they are beginning to say about decontrolling natural gas prices.

Every time the price of gasoline goes up 1 cent at the pump, it costs consumers an extra $1 billion a year. The average price of gasoline has gone up approximately 8 to 10 cents per gallon since decontrol in early February. Thus, we already know that the oil companies will enjoy at least $8 billion in added revenue this year.

Of course, some of the money taken in by the oil companies will be paid to the Government in the form of windfall profits tax. And some will be paid to the OPEC countries for the crude oil we import into this country. But the main reason higher gasoline prices are needed, we are told, is that this will stimulate greater exploration for oil and other energy resources.

Now, when I hear talk about exploring for oil, the image that comes first to my mind is that of a couple of guys in cowboy boots and Stetsons toiling in the heat of the desert or, conversely, a few hardy souls bundled in parkas who are at some forlorn outpost in the Arctic. The last image that would come to mind is that of some well-heeled lawyers in three-piece suits on the floor of the New York Stock Exchange.

Nonetheless, that is precisely what is coming across now in the news reports we are receiving. It seems that the big oil companies are doing their most serious prospecting on Wall Street. How else can we explain the fact that in less than 1 week two oil companies have made offers totaling almost $6 billion to acquire other companies?

One of the logical places to look for explanations of this sort of phenomenon is the Wall Street Journal. And, in fact, a feature story in the March 13 edition provides a very good overview of the recent moves by various oil companies to buy up those mining concerns that have not already been acquired.

The Wall Street Journal quotes a securities analyst at E. F. Hutton & Co. He explains the recent acquisition efforts by the oil companies this way:

> If you have so much money that it is spilling onto the floor, you have to put it somewhere.

That is a rather vivid description of the financial condition of some of the oil companies, but it is remarkably similar to how the Washington Post describes the situation. That paper's news account of the Sohio-Kennecott merger began this way:

> Standard Oil Co. of Ohio, dripping with cash from Alaskan oil, agreed yesterday to pay $1.8 billion for Kennecott Corp., the Nation's largest copper company.

Mr. Speaker, I fear that what we are witnessing is not a pair of isolated incidents. Rather, we will see even more acquisitions by the big oil companies in the near future.

According to a study released last month by the Democratic Study Group, the major oil companies together accounted for 40 percent of all profits reported by publicly traded manufacturing companies in the United States.

I believe the implications of this situation are very serious and merit our further consideration. Consequently, from time to time, I will continue bringing relevant information to the attention of my colleagues and the public through this forum.

At this point in the RECORD, I wish to insert the text of an article that appeared in the Wall Street Journal on March 13, 1981.

MINING COMPANIES BECOME TARGETS OF OIL INDUSTRY'S DRIVE TO DIVERSIFY

(By Maria Shao)

Companies flush with oil profits are shopping around for bargains, and look at what they've turned up:

Amax Inc. at $4 billion bid.

St. Joe Minerals Corp. at $2 billion bid.

Kennecott Corp. at $1.77 billion bid, and accepted, yesterday.

Possibly Newmont Mining Corp., Phelps Dodge Corp. and most of the rest of the U.S. mining industry, at prices the guessing of which will keep Wall Street traders and

securities analysts happily, if not gainfully, employed for many months.

"It's a wipeout of the industry," says Robert Kilmarx, a Washington mining consultant and official at the Center for Strategic and International Studies at Georgetown University.

Oil companies have been buying mines and metals for years. This past week the players and the stakes made the game a lot more impressive. Standard Oil of California took after Amax Inc., sending Amax share prices up by $20 or so in a single swoop. Seagram Co., loaded with cash from the sale of oil assets last year, bid for St. Joe Minerals. St. Joe's shares soared, too. Standard Oil of Ohio agreed to buy Kennecott at $62 a share, about $35 above its closing price on Wednesday; Kennecott shares weren't traded yesterday.

The big mining and mineral companies have become especially tempting, vulnerable targets now because their profits have hit hardrock bottom, their shares in many cases have been trading way under book value, and a sharp turnaround seems to be in the works.

"It's like Mount St. Helens," says Peter Ingersoll, a securities analyst at E. F. Hutton & Co. "It's been building up. The plug blows with Socal making a giant bid, and everyone else does it. Then it's boom, boom, boom."

"People are saying, 'Let's get in on the ground floor before the stock prices go up,'" Mr. Kilmarx says.

"This sector of the economy is extremely undervalued. Buyers are looking for these assets just before a major recovery," says Peter Anker, a securities analyst at First Boston Corp. The recovery is expected to take place after 1981.

"If you've got so much money that it's spilling onto the floor, you have to put it somewhere," says Hutton's Mr. Ingersoll.

In 1977, Atlantic Richfield bought Anaconda Co., then the second largest U.S. copper producer. By now, oil companies produce some 35% of the nation's copper, 25% of the uranium and 25% of the coal. Socal actually made its first purchase of Amax shares back in 1974. Socal's chairman said then, "In view of the current economic conditions" facing the oil industry "and the uncertainties of future governmental action, we feel it is prudent the company devote some part of its future activity to other natural resources."

If the oil companies "have to diversify," says Louis Perlman, president of Consolidated Research Inc., the New York arm of Commodities Research Unit Ltd. of London, "the nearest cousin is other natural resources." Oil and mining both involve geological expertise, costly exploration, drilling, and heavy processing.

But while oil has prospered, mining has gone on the rocks. Even the commodities boom of the late 1970s produced only one notably profitable year, 1979. Low metals prices, inflationary costs and big spending on antipollution measures have kept the industry depressed and short on cash.

If the prospect for mining and metals is improving, to exploit the upturn by starting new mining operations would be enormously expensive. "What one is paying for assets like Amax's and St. Joe's "is relatively cheap compared with starting from scratch," Mr. Perlman says. "If I buy them, I am buying capacity at well below its replacement cost."

Oil executives apparently believe the atmosphere in Washington is more favorable for their diversification. Although the sheer size of some of the potential acquisitions could raise antitrust questions. "The companies perceive they will have a freer hand to make conglomerate acquisitions than under Carter," says David Healy, a securities analyst at Drexel Burnham Lambert Inc.

Also, the Reagan administration has pledged to open federal lands to new mining exploration. The administration's defense spending will increase the demand for metals in weapons and technology.

All that "is going to make this industry more attractive in the 1980s and 1990s," Mr. Kilmarx says.

The prospect for a steady rise in coal demand helps make Amax and St. Joe attractive; both are large coal producers.

Kennecott has long lingered near the top of the list of securities analysts' takeover candidates. Standard Oil of Ohio long has been considered one of Kennecott's most interested potential acquirers.

Phelps Dodge has been on the takeover list for two years. Supposedly, Consolidated Gold Fields Ltd. and Harry Oppenheimer, chairman of the Anglo American Corp. and of De Beers Consolidated Mines Ltd., have considered acquiring Phelps Dodge. They also have been rumored at times to be seeking Newmont Mining Corp., the big copper and gold producer.

Trading in all those target companies' shares has been heavy in recent days, as it has also been in Asarco Inc., the silver producer; and prices on many mining and metals shares rose sharply yesterday.

"Sure, they're trading Phelps Dodge, Newmont and Asarco like crazy," a Wall Street takeover-stock specialist said yesterday. "Who would have ever thought you could have three big mining companies go in the same week. It looks now like anything could happen."●

MARCH 19—AGRICULTURE DAY, 1981

HON. WILLIAM C. WAMPLER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. WAMPLER. Mr. Speaker, today is Agriculture Day, 1981.

It is a special day to salute and recognize the story of what agriculture means to America—a story every American can and should be proud of.

The year 1981 marks a very special year for Agriculture Day. For the first time in its 8-year history, it is being celebrated as an official national observance as a result of enactment of House Joint Resolution 560, which passed last October 9.

I am delighted to say that this official designation has helped the observance realize some very significant growth. The Agriculture Day Foundation, sponsors of the observance, reports record participation in program activity and nationwide visibility.

The theme for the observance is "Agriculture: It's Your Heartbeat, America!"

Volunteers from all segments of the food production chain and from every State have joined together today to present this message to top decisionmakers, the news media, and urban audiences nationwide.

It is my pleasure to share some of the results already in:

A total of 47 States have proclaimed Agriculture Day at the State government level.

Distribution of creative materials to communicate the "heartbeat" theme has reached record levels, running five times greater than distribution for last year's observance.

News and public service media visibility has been very extensive—helping spread Agriculture Day messages to consumers in cities and suburbs across the country.

An exciting agenda of program activities is being implemented to dramatize agriculture's story—commodity, livestock, and equipment displays, farm tours, conducting school classes, and so forth—all to reach urban consumers on a 2-to-1 basis.

Agriculture Day volunteers are to be commended for the time and effort they have contributed to build better understanding of our Nation's most basic industry. They are helping the American people understand that the health of the U.S. economy is linked directly and substantially to the health of its agricultural production and distribution system—a message vital to America's future.

I'd like to especially commend the outstanding job the Agriculture Day Foundation has done in coordinating the 1981 observance. Their board of directors includes: Robert Lanphier III, Dickey-John Corp., Auburn, Ill., president; Connie Townsend, American National CowBelles, White Sulphur Springs, Mont., secretary; John Davies, International Harvester, Chicago, Ill., treasurer; Gene Akins, Catalytic Generators, Norfolk, Va.; Dave Bennett, Doane Agricultural Service, St. Louis, Mo.; C. W. Blodgett, Hunt-Wesson Foods, Fullerton, Calif.; Rod Brannen, Ad/Creation Dekalb AgResearch, Dekalb, Ill.; Kent Christensen, Food Marketing Institute, Washington, D.C.; Noah Perry, West Virginia Department of Agriculture, Charleston, W. Va. and Don Tindall, Southern States Cooperative, Richmond, Va.

Staffing and program administration for the project are provided by the Agriculture Council of America as part of its overall job in serving as a communications link between the farm and nonfarm public. Jim Eskin of the ACA staff is Agriculture Day staff coordinator.

Saluting the story of modern agriculture is extremely important and timely in our urban society, because agriculture is the heartbeat of America—an industry that means so much to our Nation's past, present, and future. And we need at least 1 day

each year to remind the American people of this important message.●

STIFFENED PENALTY FOR CRIMES COMMITTED WITH A FIREARM

HON. JOHN B. BREAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. BREAUX. Mr. Speaker, I am increasingly alarmed by the statistics showing the number of crimes committed with firearms in this country. Daily one reads of violent, brutal acts involving fireams. So numerous have they become that one local paper at one time had a front page column entitled, "Today's Violent Crime."

In many urban areas, this problem has reached such proportions that it now takes an act of courage to even walk the street. Obviously when this becomes the case, high-minded talk about freedom and civil liberties makes little sense. One can hardly be free or practice his guaranteed civil liberties when he jeopardizes his life by going out for the morning paper.

Many have argued that stricter gun control laws are needed to combat this problem. The most serious flaw with this argument is that it presumes that all people are not responsible enough to own firearms and that firearms should therefore, be registered or controlled. The logical extension of this argument is that the individual cannot be held fully accountable for his actions and that, inasmuch as firearms can be dangerous and can kill, all people should be relieved of the possibility of possessing them. Once again is a seemingly benign argument offered which reinforces the concept that the individual is not responsible for all of his actions. Others have used this argument in the past, most notably the defenders of Nazi criminals at the Nuremberg trials following World War II.

I have today introduced legislation which takes a different tack in assuming that one can and should be held accountable for his actions, especially if it is a question of a criminal act involving the use of a firearm. In the past those convicted of this type crime automatically received a sentence of not less than 1 and not more than 10 years. My bill would make this penalty a mandatory 5 years, without possibility of parole or pardon, to be served in addition to any other penalties connected with the crime.

My honorable colleague from Hawaii, Mr. HEFTEL, introduced earlier similar legislation and I intend to work closely with him on it.●

CONGRESSMAN TONY P. HALL SPEAKS ON THE STATE OF THE AMERICAN AUTO INDUSTRY

HON. TONY P. HALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. HALL of Ohio. Mr. Speaker, on March 17 I had the honor and the privilege of addressing the UAW National CAP Conference. Along with Senator DONALD RIEGLE, and Representatives PARREN MITCHELL and JAMES BLANCHARD, I was invited to participate in a discussion of "The Auto Industry and Economic Recovery."

In view of the urgent need for Federal action to help the ailing American auto industry, I would like to share my remarks before the UAW National CAP Conference with my colleagues:

REMARKS OF CONGRESSMAN TONY P. HALL

Ladies and gentlemen, I am honored to have the chance to participate in this panel discussion on the present state of the American auto industry. I hope that your conference here in Washington will be productive and that all of you will be successful in bringing your concerns about the auto-related industry in this country to the attention of the new Administration and the Congress.

I don't think I need to take much time to review the current state of the American auto industry. You and I both know that the general economic decline, high interest rates, and foreign competition have combined to create a dramatic downturn in the sales of U.S. cars and trucks. Sales last year were at their lowest levels since 1961. About 24 percent of the automotive work force was on indefinite layoffs at the end of last year, and an estimated 1,600 car dealerships were forced to close in 1980.

The auto manufacturers in the United States reported losses totalling $4.2 billion for last year. At the same time, sales of imports have been taking a greater percentage of the U.S. market. Imports accounted for about 27 percent of all cars sold in this country.

Most of these imports—80 percent, in fact—came from Japan. In 1979, we sold Japan about $200 million worth of motor vehicles and parts. They exported to us $9.3 billion in vehicles. That means our trade deficit with Japan in the automotive area is $9.1 billion! Clearly, the automotive trade between our two countries is a one-way street: they send and we buy.

These statistics I've cited confirm what you have experienced firsthand; the sales of U.S.-made cars and trucks have dropped sharply and foreign imports—principally Japanese—are taking over more of the shrinking market. What, then, should the Federal government do about this?

There are some economic observers who don't believe the Federal government should do much to help the auto industry. They don't want to see the government intervene in what they believe is the "free market."

I contend—and I think my colleagues on this panel will agree—that we do not have free and fair trade with Japan with respect to motor vehicles. It also is important to keep in mind that the Japanese enjoy a $1,000 to $1,500 per car cost advantage. Experts believe that it will take the United States auto industry about five years to match that productive cost advantage.

In my opinion, the Federal government has an obligation to help the American auto industry. The auto-related industry is not just another industry in this nation. One out of every six jobs is related to the auto industry. More than 4 million people directly owe their employment to the automobile: 800,000 in direct manufacturing, 1.4 million in supplier industries, and 2.6 million in sales and servicing.

A healthy and productive auto-related industry is essential to the economic well-being of the entire nation. When a key economic sector like the auto industry suffers, truly a national response is needed. In many ways, it is a matter of national security.

The Federal government already is involved in this crisis through payments of unemployment and trade adjustment benefits. So it is entirely appropriate for the Federal government to take action to head off the problem that requires these payments to be made in the first place. Indeed, unless the government acts, at least 500,000 more jobs could be lost in the auto industry within this decade. These jobs would be lost in Michigan, Ohio, Pennsylvania, New York, Indiana, and Illinois—the six States that account for 90 percent of all vehicle and parts production.

To give the American auto industry the breathing room it needs to get back on its feet, retool, and begin to reduce the productive cost advantage the Japanese have, I believe the Administration should immediately negotiate an import quota agreement with the Japanese government. Since there has been some disagreement in the past about the extent of the President's authority to enter into such negotiations, the Congress should quickly pass H. J. Res. 5, the Albosta resolution which I have cosponsored, which would make it clear that import quota limitation negotiations are authorized and should go forward.

There has been several reports in the media recently that the Japanese are willing at this time to enter into voluntary quota negotiations. They reportedly would like to have this matter settled before Japanese Prime Minister Suzuki meets with President Reagan in May.

I hope you will urge the Administration to move decisively on these negotiations, particularly if the Japanese are indeed willing to cooperate in this regard. Evidently, there is a battle going on among top Administration officials about import limitations. In my opinion, the President ought to listen to the eight Republican governors who have called for quota negotiations, rather than those advisers of his who persist in thinking there is some kind of "free and fair" auto trade between our nations.

If the Administration fails to pursue quota negotiations, I think there will be a strong push in Congress for unilaterally imposed import restrictions. In view of the apparent willingness of the Japanese to conduct these negotiations soon, it would make more sense for the Administration to take the initiative instead of leaving it up to Congress.

Even if an import quota agreement is concluded with Japan, there still must be an incentive for American consumers to buy the new, fuel-efficient U.S. cars In the absence of foreign competition, the high prices of the new cars and the high interest rates will

continue to discourage our citizens from buying cars.

To help solve this problem, I have introduced H.R. 2208, a bill which would provide a refundable tax credit to individuals for the purchase of new cars and light trucks based upon their percentage of domestic content. The tax credit would be calculated by taking 10 percent of the purchase price of the car or light truck, up to a limit of $1,000. This figure would then be multiplied by the percentage of domestic content of the vehicle. The more U.S. parts and labor used in the vehicle, the higher tax credit allowed.

Several bills have been introduced to provide tax credits for U.S.-made cars. If you will permit me to take a moment to put in a plug here: mine is the only one which would make the credit dependent upon domestic content percentages.

The bill would encourage consumers to buy domestically-produced cars and light trucks, and it would also encourage manufacturers—both American and foreign—to use more U.S. parts. As most of you know, more American automakers are starting to practice more "outsourcing," that is, they are using more foreign parts and labor to make American cars. My bill would help to discourage this and to encourage foreign automakers to build more cars in the United States and use more U.S. parts in the cars they build overseas.

The principal objection to my bill—and to all the tax bills relating to the automobile industry—is the question of cost. While any tax credit involves an initial loss of revenues to the Treasury, economic projections indicate that domestic auto tax credits would result in the sale of hundred of thousands of vehicles. Every four or five extra cars built helps to create an American job. The addition of these extra workers would result in increases in Federal income taxes paid by the employees, increases in Social Security taxes paid, and increases in corporate income taxes paid. Further, the States would realize increases in State income taxes paid and in State sales tax revenues.

At the same time, unemployment compensation and trade adjustment assistance payments would decrease, resulting in billions of dollars of savings to the Treasury. I would prefer to see the government provide tax credits to help American consumers buy fuel-efficient American-made cars and light trucks than have to pay out more benefits to help laid-off American auto workers.

Regardless of foreign competition, the key to the recovery of the American auto industry is sales. Even if import quotas were in effect, even if Federal regulation of the industry were relaxed, and even if Federal loan guarantees or subsidies were provided to the industry as a whole, an increase in sales would be necessary to improve employment and to provide the capital needed to revitalize the American auto industry.

Domestic content tax credits would be a cost-effective way of boosting sales and rewarding manufacturers who use the most American parts and labor. I am pleased that the United Auto Workers have endorsed the domestic content concept of my bill. I hope that we can get the House Ways and Means Committee to include the domestic content tax credit approach as an element of any overall package to assist the auto industry.

Earlier, I stated that a healthy and productive auto industry is a matter of national security. In closing, I would like to read to you some observations from the Transportation Department's report, "The U.S. Automobile Industry, 1980," which emphasize that point:

"Our strategic position could be gravely undermined were we to depend on others for our basic manufactured goods. As we have learned with our oil supplies, our national security can be threatened as much by a vulnerable position in international economic competition as by a direct military threat."

We must begin now to develop a national policy to address the problems facing the American automobile industry. All Americans should understand that the challenges facing the auto workers are theirs as well. Let it be clear that the threat is to the U.S.A., not just the U.A.W.●

U.S. DRUG TRAFFIC

HON. HAROLD S. SAWYER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. SAWYER. Mr. Speaker, drug trafficking in the United States is increasing at an alarming rate fostered by enormous profit potential—a staggering $64 billion in 1 year alone, 1979.

In my view, Federal efforts to contain the drug abuse problems which are seriously effecting our Nation's young people must be redirected to get at these illegal profits.

The bill which I am introducing today would require the seizure and forfeiture of all of a drug trafficker's personal assets—the businesses which are operated with profits from the drug trafficking business, vacation homes, yachts, and other assets—unless the drug trafficker could prove by a preponderance of the evidence the assets were acquired from legal sources of income.

This approach would hit traffickers where it hurts most—their pocketbooks. It would dry up sources of capital which would put drug traffickers and their organizations out of business. With this type of penalty we can reduce the profit motive and increase the risks for those involved in illegal activity.

In addition, my proposal would allow Federal law enforcement officials to use the return from the sale of forfeited assets in a positive manner to pay for additional Federal, State, and local drug enforcement programs. This will eliminate the tremendous financial advantage which the drug traffickers and their organizations presently have over law enforcement officials.

This legislation is being proposed at a very critical time. Just last week Peter Bensinger, Director of the Drug Enforcement Administration, appeared before the House Judiciary Crime Subcommittee, of which I am ranking member. Mr. Bensinger outlined a serious developing situation with regard to an upcoming uncontrolled influx of Southwest Asian heroin, with a bumper crop expected imminently. Sources here are not controlled and the changing political climate in Afghanistan and Iran makes further problems likely.

An accelerated program of taking the profits and proceeds away from the drug trafficking organizations can be a significant contribution toward solving our national crime problem. I look forward to pushing for enactment of this proposal which will immobilize drug traffickers' assets and provide taxpayers with relief while at the same time stepping up badly needed drug enforcement activity.●

INTRODUCING AIRPORT AND AIRWAY IMPROVEMENT ACT OF 1981

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. MINETA. Mr. Speaker, today I am introducing the Airport and Airway Improvement Act of 1981, a bill to renew the airport and airway assistance programs. The bill is cosponsored by Mr. HOWARD, chairman of the Public Works and Transportation Committee, and by my colleagues on the Public Works Committee, Mr. ANDERSON, Mr. LEVITAS, Mr. OBERSTAR, Mr. NOWAK, Mr. FARY, Mr. YOUNG of Missouri, Mr. RAHALL, Mr. APPLEGATE, Ms. FERRARO, Mr. ATKINSON, Mr. BONNER, Mr. DE LUGO, and Mr. SUNIA.

There is an urgent need for prompt passage of this legislation. The airport development program (ADAP) was last renewed in 1976 for a 5-year period through fiscal year 1980. In the last Congress, the Public Works Committee reported a bill to renew the program, H.R. 6721, but due to a disagreement with the Senate the legislation never passed. As a result, the authorizations in the program have lapsed and critically needed airport development is not being undertaken. At the same time, most of the user taxes supporting the program—the major one being the tax on airline passengers—continue to be collected. However, the revenues from these taxes now go into the general fund rather than into the aviation trust fund.

The bill I am introducing is very similar to the bill which the committee reported last year. Recognizing the need for tight fiscal controls, we have reduced the funding levels for all programs considerably. However, the reductions are not as great as those proposed by the Office of Management and Budget. If the OMB reductions were implemented there would be a serious deterioration in the capital plant of our national airport and airways systems. The system would be incapable of handling the demands placed upon it. There would be congestion

and delays for airlines and their passengers, and a substantial waste of fuel. The overall costs to the national economy would considerably exceed the short-term budget savings from reduced funding. Indeed, these savings are highly illusory since, as I will demonstrate, the needed development can be funded entirely from revenues from taxes on the users of the system.

During the next 5 years, substantial development will be required to insure that our airport system is safe and able to accommodate the increased traffic which is expected. FAA forecasts that between fiscal years 1979 and 1991 there will be a 61-percent increase in air carrier enplanements and a 170-percent increase in commuter carrier enplanement. During the same period, the hours flown by general aviation will also increase considerably. Substantial airport development will be required to accommodate these increased levels of traffic.

FAA's most recent estimate is that airport development needs will total $8.7 billion during fiscal years 1981 through 1985. These estimates are based on 1979 dollars and make no allowance for inflation. The OMB proposal of $2.25 billion for ADAP during the next 5 years falls far short of these needs.

The safety needs of the system will also be great. During the next 5 years FAA expects to undertake substantial replacement of tube-type radar and other equipment which has been in place for the last 20 years. The replacement equipment will be solid state and more efficient in terms of manpower and energy. Additionally, the next 5 years will be a critical period for the development of a new computer system which will be needed to replace the computers now in use, which were developed in the 1960's. During the next 5 years, FAA also plans an expensive modernization of its flight service stations, including automation of flight plan filing and the processing of weather information used by general aviation. Further FAA plans include the development and installation of the discrete address beacon system (DABS) which will be the backbone of a collision avoidance system.

FAA has recently estimated that $8.5 billion is the minimum F. & E. investment over the next decade needed to prevent serious deterioration. Unless this development is undertaken, FAA estimates that the delay costs for airlines and their passengers, which exceeded $500 million in 1979 at the largest 24 hub airports, will be in the billions of dollars by 1990. Yet, despite these needs, OMB proposes only $323 million for F. & E. for fiscal 1982.

The funding levels in the introduced bill are lower than we would have liked. However, they are adequate to prevent deterioration of aviation's capital plant. The introduced bill establishes funding levels for fiscal 1982 of $750 million for the ADAP program and $400 million for the acquisition of capital equipment under the facilities and equipment program. These amounts are increased through subsequent fiscal years in an effort to approach the minimum levels recommended by the FAA studies I have discussed.

Because the introduced bill has lower funding levels for ADAP than last year's reported bill, it has also been necessary to reduce the entitlements in the bill to preserve a reasonable level of discretionary funds to go where the needs are greatest.

The introduced bill follows the approach of last year's bill of increasing the contribution of users to the costs of operating and maintaining the air traffic control system. Under the 1980 authorization for O. & M., the general taxpayer paid 82 percent of these expenses, and users of the system paid 18 percent. The introduced bill contemplates that users will pay 50 percent of O. & M., recognizing that the airways system benefits both users and the general public.

The recommended funding levels in the introduced bill can be covered by revenues from users of the system. During the first 10 years of the program, 1970–80, users contributed more than $10 billion to the aviation trust fund, of which only $7 billion was spent. There is now a surplus in the trust fund of more than $3 billion.

I am not yet committed to any particular tax program for the next 5 years and do not expect to recommend a program until after we have had hearings. However, it is clear that we can adopt a reasonable tax formula which will enable us to fund all necessary development from the trust fund. For purposes of illustration, FAA has estimated, at my request, that with the passenger ticket tax at 5 percent and the fuel tax at 8½ cents a gallon, we could fund the programs in the introduced bill for 10 years. Under this assumption, the trust fund surplus would be nearly eliminated by the end of the 10-year period.

As I have indicated, most of the details of the bill are the same as in last year's reported bill. These details are fully discussed in House Report 96-887, part 2, and I will not repeat them at this time.

It should be noted that the reported bill continues the eligibility of all airports for funding. This contrasts with the bill introduced in the Senate in which the 69 largest airports are made ineligible for funding, even though their passengers would continue to pay user charges. Under the Senate approach, the tail of the airport system would be wagging the dog. The smaller airports which would have only 10 percent of total enplanements and contribute only 20 percent of passenger ticket tax revenues would receive 100 percent of the funding. Apart from the obvious inequity of this proposal, its practicality is highly questionable. The assumption appears to be that because the airports to be "defederalized" are large, they could negotiate with the airlines and obtain all the funds needed for capital development. In point of fact, many of the larger airports have contracts with the airlines which provide that the airlines using the airport cannot be required to pay increased fees for capital development unless a majority of the airlines consent. Given the airlines' present financial difficulties and the increased competition they are facing under the Deregulation Act, the airlines are not likely to support much capital development in the next few years.

I have recently stated my reasons for opposing defederalization in detail and I would respectfully refer those interested in this issue to my remarks at page 1182 in the CONGRESSIONAL RECORD of January 28, 1981.

Although I do not favor defederalization, I believe that if airports are made ineligible for Federal aid, the Federal Government should not prohibit these airports from generating revenues through a "head tax" on airline passengers. Accordingly, the introduced bill provides that the ban on head taxes in the Federal Aviation Act will not apply to any airport made ineligible for ADAP funding. While I am hopeful that the Senate will see the wisdom of preserving the eligibility of large and medium hub airports for the ADAP program, I have included a head tax provision so that the conference will be able to consider this option.

Mr. Speaker, it is important that this legislation be passed promptly so that there will be no further delays in airport development. The Public Works Committee will process this legislation promptly and I look forward to early passage of this needed legislation.●

1981 RECIPIENTS OF THE SOUTH BAY MEDAL OF VALOR

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. ANDERSON. Mr. Speaker, on Thursday, March 26, a very important luncheon will be held at the Hyatt House Hotel in Westchester, Calif. There, recipients of the seventh annual South Bay Police and Fire Medal of Valor will be announced and presented with this coveted medal. The Medal of Valor is highly regarded by all police officers and firefighters,

as it represents the highest caliber of bravery and personal selflessness in the course of duty. This year, two men are being honored, and I would like to outline for my colleagues the events which led to these men receiving their medals.

Officer Newland Hingley is a 16-year veteran of the El Segundo Police Department, and was in the midst of writing a speeding ticket on March 26, 1980, when a man shouted that several people had just broken into his house. Officer Hingley reported the burglary, and having spotted a car speeding away, took up the chase on his motorcycle. Noticing his lights and siren, the car accelerated even faster. Officer Hingley followed the auto, until it stopped some blocks away.

Believing that the driver had submitted to his pursuit, Officer Hingley parked his motorcycle about 10 yards behind the car. Suddenly, the driver shifted into reverse and slammed into Officer Hingley, throwing him off his motorcycle 5 feet away. In this fall, he suffered a broken wrist and a bruised collarbone, including other injuries. Yet Officer Hingley got up, and followed the car on foot. The suspects crashed into a parked car, and he was able to catch them. Although Officer Hingley ordered the three out of the car, one attempted to escape, and thrust his hand behind his back, as if to draw a weapon. Hingley interpreted this gesture as such, and fired one shot in his direction. Subsequently, all three men surrendered, and were arrested. They were charged with suspicion of assault with intent to kill, and suspicion of burglary.

When Officer Hingley was nominated for the medal of valor, El Segundo Police Chief J. H. Johnson said of his actions:

> Officer Hingley * * * can serve as an example for all who wear a police badge.

And, Mr. Speaker, this is my sentiment exactly. Newland Hingley, despite his several injuries, thought not of himself but of the suspects who had encroached on the lives of area citizens with their criminal behavior. He surpassed the call of duty, and for this he is supremely qualified to receive the South Bay Medal of Valor. I commend him for his actions, and on behalf of the entire South Bay, thank him for his selflessness. It is citizens like Officer Hingley that help make our area what it is, Mr. Speaker, for without Newland Hingley and other committed men and women, our lives would be overrun by miscreants and criminals.

The other recipient of the South Bay Medal of Valor, Mr. Speaker, is Redondo Beach Firefighter Thomas Kiesewetter. His story is one of saving two innocent people from the raging seas near the breakwater at King Harbor Marina on February 2, 1980.

These two individuals, a young man and a 10-year-old boy, had been swept out into the rough waters during an early morning swim. Firefighter Kiesewetter arrived on the scene with two paramedics, and was told that because of the 10-foot waves it would take a patrol boat up to a quarter of an hour to reach the drowning people. Scaling the seawall, Kiesewetter and his paramedics were able to see them, as were about 20 fishermen who were at the scene as well.

With disregard for his own life and personal safety, Kiesewetter stripped off his uniform and dove into the water. He swam through the rough, high waves, was able to reach them, and guided them to the safety of the shore. The victims were immediately taken to a nearby hospital for treatment, suffering from exhaustion and exposure to the 57° water temperature.

Because of Firefighter Kiesewetter's actions, these people were saved. He acted at no one's behest, and without any hesitation whatever.

The victims would probably have suffered death or additional injuries had it not been for Thomas Kiesewetter. In his nomination, the Redondo Beach Fire Department said:

> Firefighter Kiesewetter has distinguished himself by conspicuous bravery.

It is by this selfless disregard for his own life in saving the lives of others that Thomas Kiesewetter is an inspiration to all the firefighters who are called on to save those placed in danger by fire, water, or any of the other natural or manmade elements. I commend this man, Mr. Speaker, for having acted so quickly and bravely. It is reassuring to know that individuals such as Thomas Kiesewetter are nearby in case of emergency, for without him and his associates, we would all suffer immeasurably from the tragedies that can befall us. Thomas Kiesewetter has helped alleviate such tragedy, and his Medal of Honor is certainly well deserved.

My wife, Lee, and I, congratulate these two men for the outstanding honor which has been bestowed upon them. We wish them all the best in their respective careers, certain that these medals represent but a part of their illustrious years of public service.●

NEED FOR CORPORATE CHARITABLE FUNDING

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. FRENZEL. Mr. Speaker, Mr. Kenneth N. Dayton, the chairman of the executive committee of the Dayton-Hudson Co., a Minneapolis based firm, wrote an article for the Washington Star entitled "Will Business Fill the Gap That Budget Cuts Create?" In his article, Mr. Dayton outlines the need for increased participation on the part of corporations in the funding of philanthropic activities.

At present, the national average for corporate charitable contributions is less than 1 percent of pretax earnings. In contrast, the Dayton-Hudson Corp. donates 5 percent of its pretax earnings to a variety of causes. As a result of the leadership of Ken Dayton, and others like him, 45 firms in the Minneapolis area now contribute 5 percent of their pretax earnings as well. During this time of fiscal austerity, when Federal funding of many worthwhile projects will be sharply reduced, Dayton-Hudson's example needs to be emulated on a broad scale.

I commend Ken Dayton's article to my colleagues and urge them to bring his message to the business leaders in their own districts:

WILL BUSINESS FILL THE GAP THAT BUDGET CUTS CREATE?

As the new administration sets about the task of trimming government, bringing down inflation and stimulating the economy, its much-heralded ally—business—faces an unprecedented challenge of its own.

After all, business "won" the election, or so goes the popular argument. Now America is waiting to see what business will do with its born-again political clout—and just what responsibility business will claim for itself in revitalizing the country.

Indeed, every snip of Stockman's shears offers business an unparalleled opportunity to help America find non-government alternatives to meet the needs now serviced by the programs facing budget cuts.

To put is more bluntly, America's "new beginning" challenges all America—but business in particular—to back up its rhetoric with hard dollars where support for voluntary initiative is concerned. After all, government didn't invent those needs that we criticize it for trying—and failing—to meet. The needs are real, and they aren't going to disappear just because we now want less government.

LOGICAL SOLUTION

Because of its vast resources and its traditional association with the concept of limiting the public sector, business itself provides one very logical solution to help ensure that America's social health is not sacrificed at the expense of attempts to restore its economic health: increased corporate philanthropy.

Not that business can take the place of government; it cannot and it should not. But if we do, indeed, want to "get government off our backs," as the saying goes, business must help America get its hands out of government's pockets—by opening up its own pockets instead.

Moreover, failure to commit substantial private sector resources to help address this nation's needs will surely result in a swift return to dependence on the public sector, with all the regulatory and legislative punishment that such dependence entails.

Indeed, business has many powerful incentives to raise the national standard of corporate giving from below one per cent,

where it is today, to a more respectable and more effective level. To begin with, building a better environment for the free enterprise system is crucial to its survival, as is building greater public confidence and credibility in the private sector.

More importantly, to protect our business "bottom line," we must be concerned with the environment in which our businesses operate. Crime rates, housing conditions, the quality of education and cultural resources all influence our business success just as surely as productivity and management practices. So increasing corporate giving is also a smart business decision.

Beyond that, the IRS provides what is perhaps the most attractive incentive of all: a tax deduction of up to five per cent of taxable income. No matter what administration is in office, business must ask itself: Why send all that money to Washington and let them decide how to spend it? Why not keep some of it—almost 50 cents on the dollar, up to five per cent—and put it to work solving problems in our local communities?

After all, we've been saying for years that the local level is where problems can be most accurately identified and most effectively addressed. Surely America's business leaders have much to contribute, in expertise as well as corporate resources, to the search for solutions in their local communities.

In Minneapolis, where 45 businesses give at the five percent level, we know from experience that the personal involvement of our business leaders is a key factor in making our philanthropy pay real dividends for our city. Were it not for the diverse cultural institutions and social service programs made possible by this partnership of contributions and leadership, a city the size of Minneapolis could not hope to attract the disproportionate number of company headquarters it does.

FOCUS

Another key factor in effective corporate philanthropy is focus. Indeed, any contribution program without a carefully planned and clearly articulated funding focus comes dangerously close to "casting money to the winds." For example, several years ago Dayton Hudson identified two areas in which our company wants to have impact: the arts and social action programs, particularly those that reduce barriers to self-sufficiency for the disadvantaged.

This focus is all the more critical to the effectiveness of our giving, since our company's growth—combined with our formal commitment to give at the five percent level—now generates an annual contributions budget of over $10 million. As the budget increases, we have learned there is a parallel need to professionalize.

We also know from experience that even modest resources that are leveraged with the time, talent and professional expertise of our people—and leveraged again with the contributions of like-minded corporate good neighbors—pay off handsomely in addressing local problems.

The Minneapolis standard, which is increasingly held up as a national standard, recognizes that the responsibility for solving problems does not rest in Washington alone. Nor does it rest solely in the state capitol or city hall. The responsibility rests with us as people, but most assuredly, with us as business leaders.

IT IS UP TO UNCLE

If business fails to meet the challenge of preserving voluntary effort in this country in the face of the proposed budget cuts, then we will have relinquished authority to government. We will have said, in effect, "Uncle, you do it, because we're too busy."

By contrast, if business launches a concerted effort nationwide to commit more corporate resources to solve local problems—and if those resources are properly leveraged with focus and personal involvement—then we can truly launch a "new beginning" for this nation.

Surely our businesses will be more successful for it, our cities healthier, and our nation more secure.●

THE CONSUMER FRAUD ACT

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. GILMAN. Mr. Speaker, I rise to inform my colleagues that I have introduced H.R. 2637, a bill to regulate commerce and to prohibit unfair or deceptive acts or practices in commerce, and for other purposes, the Consumer Fraud Act of 1981.

The bill has four main elements:

First, it would define consumer fraud.

Second, consumer fraud would constitute grounds for cancellation of a contract betweeen an individual consumer or a small businessman and a seller. If a consumer suffered a loss as the result of a fraud, treble damages could be recovered from the responsible party.

Third, State attorneys general could sue, as parens patriae of the citizens of their State, to enjoin the continuation of any consumer fraud and to recover damages, which may be distributed to damaged parties under the direction of the court. The Attorney General of the United States could also bring such suits.

Fourth, consumer fraud would be a Federal crime, which either the U.S. Justice Department or State attorneys general could prosecute in State or Federal court.

I have proposed this legislation in response to the incredible volume of consumer fraud being perpetrated on the American public. This legislation would provide effective tools to protect the consumer, and to compensate him when damage has been done.

This bill will neither establish new Federal agencies or authorize appropriations, nor does it increase the power of existing agencies except the Justice Department and the several States to institute legal proceedings.

Accordingly, Mr. Speaker, I urge my colleagues to join me in cosponsoring this legislation, and I insert a copy of the bill in the RECORD at this point:

H.R. 2637

A bill to regulate commerce and to prohibit unfair or deceptive acts or practices in commerce, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Consumer Fraud Act of 1981".

DEFINITIONS

SEC. 2. For purposes of this Act:

(1) The term "commerce" means trade, traffic, commerce, or transportation—

(A) between a place in a State and any place outside such State;

(B) which affects trade, traffic, commerce, or transportation described in subparagraph (A); and

(C) within the District of Columbia or within any territory or possession of the United States.

(2) The term "consumer" means any individual who is offered or supplied any goods or services for personal, family, or household purposes, and any small business concern which is offered or supplied any goods or services for use in connection with the business of such concern.

(3) The term "goods" means personal and real property, but such term does not include securities or interests in securities.(4) The term "organization" means an entity, other than a government, established or organized for any purpose, and includes a corporation, company, association, firm, partnership, joint stock company, foundation, institution, trust, estate, society, union, club, church, and any other association of persons.

(5) The term "sale" means any transfer of goods or services in exchange for anything of value.

(6) The term "services" means any benefit resulting from the labor, skill, or time of another person or from the use of property, including labor, professional service, transportation, telephone, mail, other public service, electricity, gas, other public utility service, banking, accommodations in hotels, restaurants, or other places, admission to exhibitions, performances, or other places, and the use of property owned by another person.

(7) The term "small business concern" shall have the meaning given it in section 3 of the Small Business Act (15 U.S.C. 632).

(8) The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin Islands, American Samoa, the Trust Territory of the Pacific Islands, the Northern Mariana Islands, and any other territory or possession of the United States.

(9) The term "State attorney general" means the chief legal officer of a State, or any other person authorized by State law to bring actions under section 4 or section 5. Such term includes the Corporation Counsel of the District of Columbia. Such term does not include any person employed or retained—

(A) for a contingency fee based on a percentage of the monetary relief awarded in the action involved; or

(B) on any other contingency fee basis, unless, in the case of actions brought under section 4(a)(1), the amount of the award of a reasonable attorney fee to a prevailing

plaintiff is determined by the court under section 4(d)(1).

(10) The term "statement" means any representation in any form of advertising, any oral or visual presentation, or any other representation, presentation, or conduct which is communicated to consumers.

(11) The term "supplier" means any person who is in the business of making goods or services available to consumers.

(12) The term "unfair consumer practice" means any of the following:

(A) offering or advertising goods or services for sale to a consumer and not selling such goods or services as so offered or advertised, or without ability to supply reasonably expectable public demands, unless the offer or advertisement clearly and conspicuously discloses the limitation;

(B) making false or misleading statements with respect to goods or services which are offered for sale or sold to a consumer with respect to—

(i) the need for such goods or services;

(ii) the need for repair or replacement of such goods or services;

(iii) rights, privileges, or remedies, in connection with the purchase of such goods or services;

(iv) prior ownership of such goods or services;

(v) the grade, age, quality, style, standard, or model of such goods or services; or

(vi) price or quality comparisons with similar goods or services offered for sale to consumers by the same or another supplier;

(C) making a statement that goods or services offered for sale, or sold to consumers, have sponsorship, approval, origin, safety or performance characteristics, ingredients or components, uses, features, benefits, or qualities which the goods or services do not have;

(D) accepting consideration for goods or services and failing to deliver such goods or perform such services as promised or failing to return or refund deposits or advance payments for goods or services which are not rendered in absence of any default or breach of obligation on the part of the consumer making such deposits or advance payments;

(E) using physical force, threat of physical force, tortious threats or harassment, or misrepresentation of law in the course of a sale or attempted sale to a consumer of goods or services or in the course of collection of the purchase price or any portion of the purchase price of goods and services from a consumer;

(F) making a statement that goods are original or new if such goods are deteriorated, altered, reconditioned, reclaimed, or otherwise used; or

(G) making any false or misleading statement with respect to the reasons for, existence of, or amount of, any price reduction in connection with the sale of any goods or services.

SANCTIONS RELATING TO UNFAIR CONSUMER PRACTICES

SEC. 3. (a) Any contract or agreement in commerce which provides for the purchase of goods or services and which results from a transaction involving an unfair consumer practice by a supplier may be voided by the affected consumer.

(b) Any person who induces a consumer to enter into a contract or agreement pursuant to or in furtherance of an unfair consumer practice shall be liable to such consumer in an amount equal to 300 percent of the damage or loss sustained, together with an amount equal to the cost of any legal action required (including a reasonable attorney fee). Such amount may be recovered in a civil action in an appropriate district court of the United States or in any State court of competent jurisdiction.

(c) The district courts of the United States may have jurisdiction of any action brought under this section without regard to the citizenship of the parties or the amount in controversy. An action under this section may be brought not later than three years after the date on which the unfair consumer practice was discovered or reasonably should have been discovered.

ACTIONS BY STATE ATTORNEYS GENERAL

SEC. 4. (a)(1) Any State attorney general may bring a civil action in the name of the State, as parens patriae on behalf of consumers residing in the State, in any district court of the United States having jurisdiction over the defendant or in any State court of competent jurisdiction, to secure monetary relief as provided for in this section for any damage or loss—

(A) which is sustained by such consumers by reason of any unfair consumer practice; and

(B) with respect to which an action may be brought by any injured party under section 3.

(2) An action under this section may be brought not later than three years after the date on which the unfair consumer practice was discovered or reasonably should have been discovered.

(3) The court shall exclude from the amount of monetary relief awarded in any action brought under paragraph (1) any amount of monetary relief which—

(A) duplicates amounts which have been awarded for the same damage or loss; or

(B) is properly allocable to consumers who have excluded their claims in accordance with subsection (b)(2).

(4) The court shall award to the State as monetary relief an amount equal to 300 percent of the total damage or loss sustained, together with an amount equal to the cost of the action (including a reasonable attorney fee).

(b)(1) In any action brought under subsection (a)(1), the State attorney general shall, at such times, in such manner, and with such content, as the court may direct, cause notice of such action to be given by publication. If the court finds that notice by publication would deny due process of law to any person, the court may direct further notice to any such person according to the circumstances of the case.

(2) Any person on whose behalf an action is brought under subsection (a)(1) may elect to exclude from adjudication the portion of the State claim for monetary relief attributable to such person by filing notice of such election with the court not later than the end of the period specified in the notice given under paragraph (1).

(3) The final judgment in any action brought under subsection (a)(1) shall be res judicata as to any claim based upon an unfair consumer practice under this Act by any person on behalf of whom such action was brought and who fails to give the notice specified in paragraph (2) before the end of the period specified in the notice given under paragraph (1).

(c) Any action brought under subsection (a)(1) may not be dismissed or compromised without the approval of the court. Notice of any proposed dismissal or compromise shall be given in such manner as the court directs.

(d) In any action brought under subsection (a)(1)—

(1) the amount of any attorney fee to the prevailing plaintiff shall be determined by the court; and

(2) the court may, in its discretion, award a reasonable attorney fee to a defendant upon a finding that the State attorney general has acted in bad faith, vexatiously, wantonly, or for oppressive reasons.

(e) Any monetary relief recovered in any action brought under subsection (a)(1) shall—

(1) be distributed in such manner as the district court in its discretion may authorize; or

(2) be deemed a civil penalty by the court and deposited with the State as general revenues;

subject to the requirement that any distribution procedure adopted by the court shall afford each person involved a reasonable opportunity to secure his appropriate portion of the net monetary relief.

INJUNCTIVE RELIEF

SEC. 5. The Attorney General of the United States, the appropriate United States attorney, or the State attorney general of any State in which a prohibited act or practice occurred (as parens patriae of the people of such State, after notifying the Attorney General of the United States) may, upon a finding that any person is engaged or is about to engage in any act or practice which constitutes an unfair consumer practice, bring an action in the appropriate district court of the United States, or in any State court of competent jurisdiction, to enjoin such act or practice. Such courts shall have jurisdiction over such actions and shall provide appropriate relief. Such courts may grant a temporary restraining order, or a preliminary or permanent injunction without bond.

AMENDMENTS TO TITLE 18, UNITED STATES CODE

SEC. 6. (a) Chapter 63 of title 18, United States Code, is amended by adding at the end thereof the following new section:

"§ 1344. Unfair consumer practices

"(a)(1) Whoever, in connection with the sale, attempted sale, or distribution of goods or services to a consumer, or in connection with the collection or attempted collection of the purchase price or any portion of the purchase price of goods or services by the use of any means or instrumentality of transportation or communication in commerce including the use of the mails, willfully or negligently engages in an unfair consumer practice, shall be fined not more than $100,000 if an individual, or not more than $500,000 if an organization, or imprisoned for not more than three years, or both.

"(2) For purposes of this subsection, the terms 'commerce', 'consumer', 'goods', 'organization', 'sale', 'services', and 'unfair consumer practice' have the meanings given them in section 2 of the Consumer Fraud Act of 1981.

"(b)(1) Each State attorney general shall have authority to bring an action, in the name of the United States, in an appropriate district court of the United States or in any State court of competent jurisdiction to enforce the provisions of this section.

"(2) In any case in which a State attorney general brings an action under paragraph (1), the State attorney general shall give notice of the commencement of such action to the United States by—

"(A) submitting a copy of the complaint involved to the Attorney General of the United States (by registered mail or certified mail) and to the United States attorney

for the district in which such action is commenced; and

"(B) submitting a written disclosure of any evidence or information in his possession which is material to the effective prosecution of such action, to such United States attorney or by registered mail or certified mail to the Attorney General.

"(3)(A) The Attorney General may enter an appearance in any action brought under paragraph (1) during the 45-day period following the receipt of notice under paragraph (2). The State attorney general involved may prosecute such action if the Attorney General fails to enter such an appearance before the end of such period, or notifies the court in writing during such period that the Attorney General will not enter such an appearance.

"(B) If the Attorney General enters an appearance in an action in accordance with subparagraph (A), then the action shall be prosecuted by or under the direction of the Attorney General. The Attorney General shall not be bound by any action taken by the State attorney general involved, and may proceed in such action as if such action had been commenced by the Attorney General.

"(C) If the Attorney General fails to prosecute an action with due diligence during the six-month period following the entry of an appearance by the Attorney General in accordance with subparagraph (A), or during such additional period as the court after notice may allow, then such action may be prosecuted by the State attorney general involved in accordance with paragraph (1).

"(4) For purposes of this subsection, the term 'State attorney general' means the chief legal officer of a State, or any other person authorized by State law to bring actions under this subsection.".

(b) The table of sections for chapter 63 of title 18, United States Code, is amended by adding at the end thereof the following new item:

"1344. Unfair consumer practices.".●

HISTORIC AGREEMENT BETWEEN DEBORAH HEART AND LUNG CENTER AND THE GOVERNMENT OF POLAND

HON. JAMES J. FLORIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. FLORIO. Mr. Speaker, Deborah Heart and Lung Center of Browns Mills, N.J., celebrates on Tuesday, March 24, a historic agreement with the Government of Poland.

At a luncheon ceremony in Philadelphia, officials of Deborah and Poland will sign an agreement that will inaugurate a program in which Polish children, who require pediatric cardiac surgery, will be treated at the center.

The importance of this agreement was noted recently by His Holiness, Pope John Paul II, who expressed his gratitude for the program's generosity.

Among those who will attend Tuesday's ceremony is a 6-year-old Polish boy who in January underwent a successful operation at Deborah.

Others who will attend Tuesday's ceremony include the Polish Ambassador to the United States, United Nations representatives, and pediatric cardiologists and surgeons.

Founded in 1922, Deborah Heart and Lung Center is respected internationally for the quality of its staff and its exceptional facilities. It is recognized as one of the Nation's leading centers for heart surgery.

One of Deborah's most unique aspects is that in its entire 58-year history not one of its patients has received a bill. Continuing in this tradition, the cost of treating young patients from Poland will be covered by contributions to the Deborah Hospital Foundation.

As an honorary trustee of Deborah, I am particularly proud to be associated with this new program that not only will treat afflicted Polish children, but also give Polish physicians and medical personnel the opportunity of observing the work of Deborah's expert surgeons.

I believe this new initiative between Deborah and the Government of Poland is an inspiring example of American achievement and compassion.●

FOIA HURTS OUR INTELLIGENCE AGENCIES

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. McCLORY. Mr. Speaker, applying the Freedom of Information Act to the CIA and FBI may not constitute a kind of casual madness, as our foreign allies contend, but it certainly does not serve as a good recommendation for our Nation's collective sanity. Not only does this law in its present state provide fewer and fewer benefits and greater and greater administrative burdens, but more importantly it significantly undercuts the ability of our intelligence agencies to perform the most fundamental task which the President assigns to them and the Congress endorses: The collection of sensitive, intelligence information. For, as long as FOIA is permitted to remain unamended, it will continue to erode our ability to gain the necessary trust of foreigners and allied foreign intelligence services. Without this trust, we simply cannot expect to be provided with the information upon which we can base our predictions of hostile government intentions and, therefore, our own security.

The problems I have mentioned have been repeatedly illuminated through examples when intelligence agency officials have appeared before the Permanent Select Committee on Intelligence, upon which I have the great pleasure to serve. Some people have claimed that the agencies make up all of these stories and simply oppose openness in government.

Mr. Speaker, in rebuttal, I would like to draw the attention of my colleagues to a recent article in the Washington Star in which Mr. Jack Valenti outlined his view of the situation. Mr. Valenti, who served as counsel to President Lyndon Johnson, has spoken directly with foreign officials, and from his own experience, he writes tellingly of the problems with FOIA.

In his article, Mr. Valenti calls on the Congress to take action—and that we must do. Both the Government Operations and Intelligence Committees, in their continuing oversight of FOIA, should seek changes which will accommodate the real needs of our intelligence agencies so that they can have all of the tools to do the job they have been asked to do.

Mr. Speaker, I commend Mr. Valenti's article to my colleagues, and insert it in the RECORD at this point:

[From the Washington Star, Mar. 13, 1981]

TOO FREE WITH OUR INFORMATION

(By Jack Valenti)

I spent some time recently in Western Europe chatting with key European officials, including several in the intelligence services of Great Britain and France. They seem persistently nonplussed by peculiarities in the American spirit, centered mostly on our Freedom of Information (FOI) Act and the porous quality it confers on the FBI and the CIA.

As one foreign official put it to me, "I daresay none of my colleagues today would pass on to the Americans sensitive data about the work of our operatives on the Continent—or even hint at anything which would identify agents we have in the field. It would be suicide for our people. It is already deadly to your own."

Another said, "How on earth can you possibly collect and hold intelligence which may slip into foul hands simply because someone you do not know writes in and asks for information? How you can have an intelligence organization that routinely gives away its files passes my understanding."

It isn't enough, they complain, that material extracted from the FBI and CIA with Freedom of Information requests is put through a sifter that supposedly culls out secret material. They point out that people are processing so many requests that human error makes it literally impossible to expunge all that is not designed to be made public. Slippage is inevitable—and when it happens, the irretrievable occurs.

The intent of the FOI Act is laudable. Light thrown on dark crannies of the government usually illuminates a good many practices that should be corrected. But a balance is required, say these Europeans.

CASUAL MADNESS

It is one thing, they point out, to probe the Department of Labor or Transportation for information, but to uncork the files of the FBI and the CIA is a kind of casual, and they hope momentary, madness.

The FBI received some 18,800 requests for information in 1979, and the CIA recorded some 14,000 requests since 1975. No one can be certain how many of the CIA requests come from foreign governments operating through cover names. And there is a difference between sending along a file of newspaper clippings, and parceling out documents with lines blacked out, with no one in the Agency quite certain that all that should be excised has been.

Most people would acknowledge that criminals, both organized and unorganized, are filing requests by the long ton to the FBI to learn what the feds may have on them that might be embarrassing or damaging—and to act on what they learn. Fragments of information are as valuable as the complete dossier.

Unhappily, some past events have convinced a good many people that the FBI and the CIA skulk about doing rude acts not countenanced by our own laws. Public suspicion about two enterprises, without whose vigilance we might be more anxious than we are now about our future security, stirs our unease.

In the war against terrorism in Europe, the intelligence services of the West Europeans find it necessary to foresee violent designs before they are hatched. The only known method to do that is to collect information so that if a design is forming it may be thwarted before it occurs—or at the very least to pick up the spoor of those sponsoring the skulduggery before they kill somebody.

AN INSTITUTIONALIZED LEAK

What the public doesn't know, and probably cannot know until it is too late, is how well our police and intelligence services are prepared to act before some violent deed is done. We have so institutionalized the "leak" in this country that nothing is truly safe from prying eyes. Granted that we may too often stamp Top Secret on a formula for dried milk; granted also that much of what is delivered to someone asking for information is valueless. But it is nonetheless true that in handling literally thousands of requests, brief lapses in scrutiny run throughout the whole costly process.

It is not the cost of handling these requests that should cause us concern. It is the disposition of crucial material, often collected at great risk from sources who believe it is sacrosanct, who suddenly discover to their horror and fear that it is not. All of which causes our colleagues in Europe to shake their heads.

This unease among our friends is not evidence of paranoia. As William Burroughs put it, "A paranoid is a man in possession of all the facts."

The work of the FBI and the CIA is by nature shadowy. But they labor to ensure the security of the nation. Most Americans assume that work is going forward with dispatch, skill and diligence. But many European friends of this country are queasy not so much about the quality of the labor, but of the impermanence of its safety.

One can only pray that the Congress and its oversight committees can figure out some common-sense balance which places off-limits sensitive information which is now leaked or routinely given away. There is legitimacy in the phrase "national security information."●

U.S. POSTAL AND CUSTOMS SERVICES DELIVER ON TIME

HON. GERALDINE A. FERRARO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Ms. FERRARO. Mr. Speaker, I would like to direct the attention of my colleagues to the cooperation and sincere efforts of two Federal agencies in locating six missing parcels and insuring that St. Patrick's Day arrived as scheduled for two dozen school children. The odyssey began over 2 years ago as the parents of, and children in the Cu Chullain Bagpipe Band decided to raise the money necessary to outfit the band with traditional tartan kilts. After all, every real band has a uniform and after years of practice on the bagpipes, this was a real band.

A fabric manufacturer was located in Scotland, money changed hands, and the kids and parents anxiously awaited the delivery of the kilts for the band. As luck would have it, the Scottish manufacturer went out of business, and the funds committed had to be written off.

But the members of the Cu Chullain Bagpipe Band were determined. More funds were raised, and a new manufacturer was located. The orders were placed again. All parties involved anxiously awaited delivery in time for this year's St. Patrick's Day festivities.

Again, fate intervened. Although the kilts had entered the United Kingdom's Postal Service on February 11, a month passed without delivery. As St. Patrick's Day neared the kilts were nowhere to be found, and the kids and parents readied themselves for another letdown.

On March 10 I brought this matter to the attention of the U.S. Customs Service and the U.S. Postal Service. These agencies went to work immediately to try to locate the kilts for the band. By March 12, half of the parcels were located. Two more were located on March 14, and the final parcel was located on March 16, the day before St. Patrick's Day.

I think this matter is worthy of mention because all too often we hear horror stories about the faceless, nameless bureaucracy. I do not know the names of all the employees and officials who worked to locate the parcels. I would not recognize their faces if I saw them today. But I certainly do recognize and appreciate their efforts and abilities.

The situations which caused the delay in delivery were beyond the control of either U.S. agency. The parcels languished in the British Postal System for 2 weeks. The Scottish exporter failed to ship the parcels by priority air mail. The parcels were improperly marked "Sample—No Commercial Value," and the goods were shipped in six separate parcels in an apparent attempt by the foreign exporter to reduce customs duty.

Despite these problems caused by external forces, U.S. Postal and Customs employees succeeded in locating the missing kilts in time for St. Patrick's Day.

Two important lessons may be learned from my experience. First, I found the much-maligned Federal work force to be staffed with real flesh and blood individuals who care about people. When we talk about eliminating Federal jobs, we are talking about the livelihood of these dedicated civil servants who provide the kind of service which kindles pride. We are also saying the public is going to have to give up this service.

Second, this first-rate service is often provided despite the errors and improper methods of mail users and those who export to our country.

This is a very special St. Patrick's Day for me. I am delighted that the kilts were located for the band in time for the parades. However, I am also pleased and proud of the many fine public servants who delivered for the kids in time for St. Patrick's Day.●

WHAT IS AT STAKE IN CUTBACK OF EXIMBANK LOAN AUTHORITY

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. BONKER. Mr. Speaker, the administration's proposal to cut Eximbank's lending authority will greatly affect many businesses, large and small, and jobs around the country. The Boeing Co., which was America's largest exporter in 1979 and possibly 1980, relies heavily on Exim financing. About $3 billion of Exim financing generated $5 billion of sales of commercial jet transports last year. Each billion dollars in exports creates 40,000 U.S. jobs thus Exim financing helped create 120,000 jobs in this case alone.

About 53 percent of each 747 is subcontracted. Loans granted to Boeing have a great impact on the "invisible exporters", with skills, people, technology, and research capabilities that also depend on foreign markets.

George E. Taylor, president of the Washington Council on International Trade in Seattle, aptly presents the arguments in favor of maintaining current funding levels in the following article which appeared in the Seattle Times on March 13, 1981.

Article follows:

WHAT'S AT STAKE IN CUTBACK OF EXIMBANK LOAN AUTHORITY

(By George E. Taylor)

When is a budget cut not a budget cut? Very simple. It is when David Stockman reduces the authorization of the Export-Import Bank to raise money from the private credit market, and the public thinks he is saving the taxpayer money and forcing sacrifices on the big corporations.

The taxpayer is not actually involved, because this is a cut in authorization, not a cut in an appropriation. The corporation is very much involved, because the administration's half-nelson on the Eximbank endangers—to take a local example—Boeing's share of the foreign market for planes and therefore the future of many hundreds of jobs in the State of Washington.

What is the Eximbank? When it began in the early days of the New Deal, like the Export Guarantee Department set up by the British in 1932, its main function was to insure against political and commercial risks. Now the bank carries out three main functions under the general supervision of the secretary of the Treasury. It assists American exports by arranging for medium- and long-term direct loans; by guaranteeing private credits, and by insuring against political and commercial risks. Today, every major trading county has something corresponding to the Eximbank. But the United States is alone in suspending the direct loan authority (Cooperative Finance Facility) of its Eximbank and in proposing to cut loan authority by one-third when it is restored.

What, then, is at issue? The issue is a matter of the application of general economic theory to a specific case. If we accept their premises, the theorists of the administration have a logical case. Norman Ture, now undersecretry of the Treasury, who develops the main case in his Heritage Foundation's "Mandate for Leadership," starts from the proposition that the Treasury spends too little time on its domestic responsibilities and too much time "doing a lot of work investigating, monitoring and manipulating markets or economic entities that do not need to be investigated, monitored or manipulated."

Ture suggests that the Treasury should not intervene in the marketplace unless the market fails to provide a desirable service or it is clear that the government can do a better job than the market. He says that "the balance of trade, the exchange rate of the dollar, and the value of the dollar as a financial asset are chiefly influenced by fundamental U.S. domestic policies regarding taxation, regulation, and money creation." Domestic energy policy also plays a role.

In other words, you cannot exploit international factors in order to solve domestic problems; and if we put our own house in order, there will be less need to interfere internationally.

It follows naturally from these premises that there would be no need for an Eximbank if we strengthened the domestic economy and eliminated export disincentives and impediments. The argument is that by lending money at one to two percentage points below its average domestic cost, Eximbank is subsidizing the purchaser of U.S. exports. The subsidy certainly helps the foreign consumer. According to Ture, if the subsidies are absorbed by American exporters, the taxpayer is subsidizing those exporters.

Such subsidies are not necessary, runs the argument, to help with the balance of payments, because we operate on a floating exchange rate and the accounts should automatically balance. American real income is therefore reduced, because we loan money to foreigners at interest rates below the yield on capital invested domestically. So if Eximbank loans money at less than the market's equilibrium rate, there will be a private market "shortage."

According to this argument, the government lowers interest rates and creates excess demand so that it can justify its presence because of the excess of demand. In the meantime, the Eximbank borrows from the private credit market, thus raising interest rates, and helps to redistribute income from U.S. taxpayers and businesses to corporations and governments abroad.

Another of the administration's theorists, Prof. E. Dwight Phaup of Union College, says that "no justification exists for the Eximbank, and it should be discontinued or allowed to operate as a private concern with no ties whatever to the U.S. government." That could be one answer.

The amount of money involved is substantial, but it is not taxpayers' money except in the most farfetched theoretical sense. According to Carter administration figures, the balance of Eximbank loans and guarantees at the end of fiscal 1981 will come to $14.4 billion and $7.95 billion, respectively. The bank paid no dividend to the Treasury for 1980 and will lose money in the present year. But it has reserves to carry it through for several years of losses, due to high interest rates. If interest rates come down and Eximbank is still alive, the bank might even become profitable again and pay dividends to the Treasury.

What does this mean for Seattle? The Boeing Co., to take the biggest concern, contends the Eximbank is vital to the aerospace industry. There is no doubt that Boeing's sales abroad have benefited from the Eximbank loans to foreign customers. That is why some critics have said the Eximbank gives most of its money to help the big companies. Quite true, but it is also true that a Boeing airplane is made with the help of several thousand smaller companies, located in many states.

It is also true that Eximbank financing of direct loans or guarantees in an overall ratio of $2 of exports for every $1 of support, goes far to explain the huge share of the world market for commercial aircraft that Boeing has conquered.

The share is now in danger, because things have changed over the past few years. Interest rates have gone up so high that Eximbank assistance is more important than ever. Competition with the European Airbus is intense; we no longer have the decisive technological lead. Large export markets are essential for economies of scale as well as for the resources to maintain leadership. The market strategies of the multi-government-supported Airbus are hard for a private corporation to oppose successfully. Airbus sales are increasing rapidly. The private manufacturers cannot match European government-subsidized financing, it is argued, without Exim support.

Administrative theorists have stated that if foreign governments are stupid enough to subsidize exports, we should let them do so, use our resources elsewhere, and get more value for the goods we export in payment for subsidized foreign goods. This view stems from the proposition that expenditures for international affairs are subject to the same criteria employed in assessing domestic expenditures. Foreign-policy considerations can be taken into account, but only on a strict cost-benefit contractual basis. Would that the world fit the model, but it does not.

The ideological purity of an economic model has little to do with the facts of international life. When we leave the domestic model, we move into an international scene without law and order and with a *minimum* of enforceable international agreements. From the domestic scene the international scene differs in kind as well as in degree. The economic competition in international affairs is a vital aspect of the struggle for national survival, and dominance in aerospace is a factor to national security.

The U.S. government has been rightly attempting for several years to negotiate an international agreement to eliminate subsidized export financing. But until the Organization for Economic Cooperation and Development agrees, there is every reason for us to keep some sort of device to give the U.S. exporter, at least for strategic goods, an equal footing in the "international credit war."

In the meantime, as Norman Ture puts it, "let us first strengthen our own economy and eliminate export disincentives and impediments."●

A TRIBUTE TO MR. EDWARD J. DILLON

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. APPLEGATE. Mr. Speaker, I would like to take this opportunity to congratulate a constituent of mine, Mr. Edward J. Dillon, on his retirement from 36 years of outstanding service to the Boy Scouts of America in Columbiana County, Ohio.

The success and growth of the Columbiana County Boy Scouts is in great measure due to the efforts and leadership of Mr. Dillon. In the 36 years he has served the Boy Scouts, he instituted a number of programs for the benefit of Columbiana County. He increased the membership from 36 units serving 901 boys to 76 units serving 1,809 boys; he increased the fund raising levels from $7,800 to $26,000 annually; he had a direct part in the acquiring and development of 6 Boy Scout camps.

As a member of a number of civic organizations, Mr. Dillon brought considerable expertise to his work. His dedication and ideals have helped enrich the lives of all those young men who participated in the Boy Scout programs.

We owe a great deal to Mr. Dillon. We are proud of his achievements. We are proud of him. We will miss him and most of all, we thank him.●

HEALTH PROGRAMS AMENDMENTS OF 1981, H.R. 2562

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. WAXMAN. Mr. Speaker, on March 17, 1981, I introduced omnibus legislation which reauthorizes eight program areas. The bill, H.R. 2562, consists of five titles: control programs, a prevention block, health services programs, research and statistics, and medical libraries. The authorizations for these programs are substantially lower than those of fiscal year 1981 and lower than 1981 appropriations.

The administration has proposed a radical departure from the existing practice of targeting Federal health dollars for specific health programs. In simple terms, the administration is requesting the abolition of categorical programs, and the creation of what is in essence another revenue sharing program. Two so-called block grants would be established, lumping together all the various diverse and unrelated health programs, and funding them at only 75 percent of this year's level.

I am prepared to meet the administration more than half way. The legislation I have introduced, H.R. 2562, does cut the funding for these programs. In fact, the five titles that are contained within the Health Programs Amendments of 1981 cut by almost 50 percent the levels Congress authorized for fiscal year 1981. Congress authorized $1.3 billion for these same programs for fiscal year 1981; this year, we are only recommending $777.5 million. Wherever a cut could be made, we made it.

However, this legislation does not accept the administration's recommendation to establish two block grants. I am concerned that this proposal, if adopted, would result in a fundamental retreat from our commitment to and responsibility for Federal health programs, and a lack of accountability on the part of the States as to how these Federal funds are spent. I am also concerned at the number of unanswered questions that have yet to be addressed by the administration with regard to this proposal.

The first title of this bill provides limited funding for three disease control programs which have a particular claim upon Federal attention—even at a time of cutbacks and austerity. However severe restraints must be, as a Nation we cannot afford epidemics.

Federal efforts to immunize children and to prevent and control tuberculosis and veneral diseases have been demonstrably effective in the past: The incidence of childhood diseases—polio, diphtheria, whooping cough, and tetanus—has decreased dramatically. Until very recently, the numbers of cases of tuberculosis have steadily diminished. And while the numbers of cases of veneral diseases are of astounding proportions, the Federal control programs are our strongest protection against the explosion of this epidemic.

Each of these programs is of national significance. Infectious diseases do not respect State borders and State health officers are powerless to control diseases that cross State lines. Each of these programs is, moreover, dependent upon a constant nationwide survey of the incidence of disease. The centers for disease control (CDC) now provide this epidemiological study in a manner unequaled by any agency in the world. Such full surveillance simply cannot be done on a State-by-State basis.

Finally, these programs provide a national network of skilled personnel. Working through a cadre of physicians, epidemiologists, and laboratory scientists, CDC supplies States and localities with expertise which the States and localities could not buy, hire, or contract for themselves. Because of their importance, the control program authorizations in this bill are $93 million, $97.5 million, and $103 million for fiscal years 1982, 1983, and 1984, respectively.

The second title of this bill also deals with disease prevention and control, but with diseases or problems, which are local and noncontagious. The Federal programs involved—project grants for preventive health services for hypertension, control of rodents, fluoridation, and lead poisoning—have each been successful in the past. But at a time when budgetary and regulatory problems are the subject of heated debate, if we are to retain those programs which can be managed only at the national level, we must consolidate those others which might be appropriately run by State and local governments. Title II combines these categorical grant authorities, reduces authorization to approximately two-thirds of current appropriations, and provides for a block grant to the States to finance preventive health programs as each State finds appropriate. This block grant is authorized at $60 million for each of the fiscal years 1982 through 1984.

The migrant health center program and the community health center program make primary health care available to medically underserved populations. In addition, the hospital-affilated primary care center program and the primary care research and demonstration projects provide other program grants for the development of medicare-certified home health agencies in underserved areas. Funding for all of these authorities expires this fiscal year.

Given current budgetary constraints, it is necessary to maximize the effectiveness of Federal health outlays. Title III reflects this priority. It proposes an extension of funding for the community health center and migrant health center programs for the next 2 fiscal years. In view of budget constraints, however, the primary care research and demonstration projects would be phased out during the next fiscal year, and no new funding would be authorized for the hospital-affiliated primary care program, the home health services grant program, and the technical assistance demonstration grants and contracts authority. In this manner, the bill allocates the limited Federal dollars available to existing programs that are delivering needed primary care.

Current authorizations for these primary care programs total $587 million; total fiscal year 1981 appropriations are $376.4 million. Just to maintain current services in the face of inflation would require funding of approximately $410 million. This bill proposes a total primary care authorization level for fiscal year 1982 of $362.5 million—some $14 million below current appropriations, and about $48 million below the amount needed to accommodate inflation next year at current service levels.

This is a real cut. It will result in the closure of some community health centers, the reduction of services at others, and the loss of access to primary care by some of the current users of those centers. However, I am confident that these reduced authorizations will not do major damage to current programs upon which millions depend for primary care.

The migrant health centers program, authorized by section 329 of the PHS Act, provides grants to public and private nonprofit entities that provide primary care to migrant and seasonal farmworkers. These centers are located in areas that experience a high seasonal influx of workers during the growing and harvest seasons. Because of the importance of this program to the health and productivity of migrant and seasonal farmworkers, title III proposes to extend if for the next 2 years. The authorization levels—$49.5 million in fiscal year 1982 and $56.5 million in fiscal year 1983—reflect an adjustment of the current appropriations level to account for inflation. These levels would not allow any increase in the number of centers but would allow centers to maintain their current level of services. The bill does not propose any substantive revisions in the migrant health center authorities.

The community health center program, authorized by section 330 of the PHS Act, provides grants to public and private nonprofit organizations to provide primary care to medically underserved populations. Centers are locat-

79-059 O - 1984 - 43 - (Vol. 127 Pt.4)

ed in urban and rural areas with high levels of poverty, high proportions of elderly people, high infant mortality rates, and a shortage of physicians and other health providers. The community health center program, now going on its 16th year, must be continued if we are not to abandon our commitment to those with no alternative sources of primary care. Accordingly, title III of the bill proposes to extend program authorizations for an additional 2 years. The proposed funding levels are $310 million for fiscal year 1982 and $325 million for fiscal year 1983. I would note that these authorizations represent a substantial reduction from fiscal year 1981 appropriations of $325 million and the amounts that would be required to maintain current service levels.

I have carefully examined the goals and the performance of each of these programs. This case-by-case review has led me to the following conclusions. First, these programs, as a group, have worked. While there is always room for improvement—indeed, this bill suggests several—these programs are making quality primary care available to millions who would otherwise go without. Second, despite this accomplishment, many disadvantaged people in both urban and rural areas remain without access to primary care at current program funding levels. Real health care needs far outstrip current program resources. Finally, some of these programs are more effective than others at meeting the needs of the medically underserved. I continue to believe that the Federal Government has an important role to play in making primary care available to underserved urban and rural populations. Historically, the needs of these people, most of whom are poor or near poor, have not been met by the private sector or by the States. Federal assistance fills this gap.

Title IV of the bill revises and extends the statutory authorities for the National Center for Health Services Research, the National Center for Health Statistics, and the National Center for Health Care Technology. These Three Centers together constitute the focus of Federal efforts to better understand, and to improve the efficiency and effectiveness of the Nation's $250 billion health care system.

The National Center for Health Services Research (NCHSR) supports research on problems in the organization, delivery, and financing of health care services. It coordinates health services research within the Public Health Service and insures that the findings of such research are relevant and reliable. The Center is responsible for comprehensive and systematic efforts to develop new options for health services delivery and to test the assumptions on which current and proposed health policies are based. H.R. 2562 provides authorizations for the NCHSR of $25 million, $27.5 million, and $30 million for fiscal years 1982, 1983, and 1984, respectively. The $25 million authorization for fiscal year 1982 is a 20-percent reduction from the fiscal year 1981 appropriation. Funding at these levels will continue a decade long trend which has reduced real dollar support for the NCHSR to 25 percent of its level in 1974.

The National Center for Health Statistics (NCHS) provides data on virtually every aspect of health and medical services. The NCHS monitors births and infant mortality, the prevalence of disease and disability, personal health expenditures, coverage by health insurance, the utilization of health services, and the causes of death. NCHS data gives us the ability to measure the success or failure of our medical and public health programs. H.R. 2562 extends the authorizations for the NCHS at the level appropriated in fiscal year 1981.

H.R. 2562 also extends the authorizations for the National Center for Health Care Technology (NCHCT). The NCHCT has the responsibility for monitoring the development of new health care technologies, supporting the assessment of a limited number of priority technologies, and providing recommendations to medicare concerning payment for new medical procedures. H.R. 2562 extends the authorizations of appropriations for the NCHCT at $5 million, $6 million, and $7 million for fiscal years 1982, 1983, and 1984, respectively. This compares with an appropriation of $4 million in fiscal year 1981. With hospital costs now increasing by more than $15 billion a year, and with up to 75 percent of these increases attributable to new services, $5 million is an appropriate amount to invest in technology assessment which can help to hold down the costs of our health care financing programs.

Title V of H.R. 2562 extends the authorizations for the medical library assistance and national research service award programs for 1 year. These programs will be reviewed next year when the subcommittee reconsiders the statutory authorities for the National Institutes of Health. The authorization for medical libraries is set at $9 million, the amount appropriated for fiscal year 1981. The NRSA program is continued at a substantially reduced level from the fiscal year 1981 spending level; $153 million is authorized. At this level, NIH would be required to make some reductions in support for institutions which sponsor NRSA training. The bill revises the NRSA authority by allowing young researchers up to 1 year of support without incurring a payback obligation. This change is designed to increase the attractiveness of entering the field of health research to young physicians.

When Congress is asked to create a new program, Members expect a thorough analysis of the need for the program and the data to justify any claims made about such a need and the projected costs. The demand for analysis and data are no less great when an existing program is proposed to be discontinued or restructured. The administration is proposing a major restructuring of 26 separate Federal health programs, but in the budget documents made public to date the administration has not provided any supporting analysis or data.

I believe every Member is entitled to a comprehensive analysis of the proposed block grants before we pass judgment on them, an analysis which, at the very least, addresses the following:

First, the duplicative and unnecessary administrative requirements which are supposed to offset the proposed 25-percent cut in current appropriations—would not each State have to duplicate the Federal bureaucracy and will blocking these programs reduce administrative savings or simply shift them to the States?

Second, the capacity of the States to manage program grants and whether they are capable of delivering the services currently provided by private organizations.

Third, the probably impact upon persons dependent on the services who live in States that cannot absorb the proposed reduction in Federal financing.

Fourth, how accountability for the use of Federal tax dollars by the individual States would be assured.

Fifth, the ways, if any, in which allocation of block grant funds to the States will take into account the relative fiscal and health needs of each State.

Sixth, the feasibility of the States' making the budgetary, legislative, and administrative changes necessary to implement the block grant proposal on October 1, 1981, the administration's target date.

The administration has suggested that if Congress is not prepared to accept its programs, then Congress should be prepared to come forward with alternatives. H.R. 2562 is just such an alternative. As I have indicated in the questions I have posed and the concerns I have raised, I believe the challenge still lies with the administration. Ideology is not an adequate substitute for analysis. However, when that process is completed, I am prepared to discuss with the administration, with an open mind, those categorical health programs that rationally lend themselves to the block grant approach.●

WORLD FREEDOM DAY RALLY

HON. WILLIAM CARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. CARNEY. Mr. Speaker, our distinguished former colleague who represented Long Island's Fifth Congression District so ably for 18 years, John W. "Jack" Wydler, recently participated in a World Freedom Day rally in the Republic of China.

People from all over the free world gathered in the Sun Yat-Sen Memorial Hall in Taipei for that rally which included Jack among its speakers.

One of the major addresses at the meeting was delivered by Dr. Ku Cheng-Kang, honorary chairman of the World Anti-Communist League.

I believe Dr. Ku's remarks about the 1980's prospects in the struggle between the forces of freedom and democracy against communism deserve careful study by the Members of this body, and I include them for the RECORD:

SPEECH OF DR. KU CHENG-KANG

Premier Sun, Distinguished Guests, Ladies and Gentlemen:

NEW DECADE OF JOINT ENDEAVOR

We are on the threshold of a new age in the course of history's development. Both the decade of the 1980s for the whole world and that of the 70s of the Republic of China have started. All the Chinese and others who stand for freedom and democracy have hand in hand stepped into an era of joint endeavor. This World Freedom Day Meeting here today represents the great new unity of such people in the new age, determined to fight on against Red totalitarians.

The 1980s shall see further rise of forces for freedom and democracy. It will be the decade of Communist fall. The ROC's 70s shall see China's reunification in freedom and democracy. The "World Freedom Day" Movement is the major driving force of this new situation.

PRESENT RISE OF FREE DEMOCRATIC FORCES

The present rise of international forces for freedom and democracy is moving in these four major directions.

As regards the bipolar confrontation by freedom and democracy against Communist autocracy, Russia's invasion of Afghanistan and continuous advances into the Mediterranean as well as the Indian Ocean and the Western Pacific have been accompanied by all-out Red Chinese infiltration to create rifts and armed rebellions in free countries, but these moves have made free democratic nations rise speedily with positive military readiness against Red aggression and expansion and better countermeasures against subversion. Unity and cooperation will be further enhance among free nations. The whole free camp is being consolidated for collective steps to safeguard freedom and democracy.

In the race involving the two camps, the free world progress, prosperity, freedom and well-being are in growingly sharper contrast with the backwardness, poverty, autocracy and suffering under Communism. Greater than ever impacts will be created in the 1980s. More and more people in the free world will discard Communism, and more people behind the Iron Curtain will rise against Red tyranny. Identical thinking will bring unity of purpose and spur joint steps. In the face of a greater awakening of humanity and confronted by the determined surge of people everywhere for well-being, Communism will tread its path to downfall.

Changes within the Red bloc will further expose the failure of Communist rule, widen the rift between revisionists and doctrinaires, and bring sharper clashes for power and hegemony. The struggle waged by Teng Hsiao-ping and other Red Chinese powerholders against the Gang of Four and its followers is widening the crack that will make the Red rule fall apart. The widespread strikes by Polish workers are bringing similar results. Communist regimes will come to their end amidst theoretical bankruptcy and opposition of gallant Iron Curtain masses.

Developments of the free world have been such that people have learned enough from the mistaken policies of appeasement and compromise in the 1970s. Those policies succeeded only in bringing rampant Red expansion, but the exposed Red aggressiveness made the free world wide awake and spurred the rise of righteous forces for anti-Communist campaigns. A surge is shaping up for the destruction of Red tyranny in the 1980s.

CHINA'S UNIFICATION IN FREEDOM AND DEMOCRACY

The rising free democratic forces are the mainstream of the 1980s. Unification of China in freedom and democracy will be the guiding force of history in the decade ahead.

The 900 million people on the Chinese mainland have been plunged in despair by Red rulers and no longer pin any hope to Communism. Even before getting under way, the so-called "four modernizations" started producing four bitter fruits: production suspension, economic withering, currency inflation and social confusion. The trial of the Lin Piao and Chiang Ching cliques came recently as an attempt to heap blames on a few past leaders. By condemning these scapegoats, the regime wants to fool the people under it and divert the attention of the world outside. But the trial, aside from foreboding even fiercer power struggle, has exposed the wickedness of Mao Tse-tung and Chou En-lai, testified to the crimes of Teng Hsiao-ping and others now in power, and proven that the days are numbered for Marxism, Leninism and Communism. The opposition of the mainland masses to the regime will intensify.

In Taiwan, the Republic of China has implemented democratic constitutional rule, brought, about great progress through policies of well-being for all, and succeeded in glorifying China's great cultural heritage. Our society has been built as one that is free, democratic, open and prosperous. A bright vista has thus been created for all of China. Tremendous attraction and influence are being exerted. The 900 million people on the mainland are receiving great encouragement for their anti-Communist struggles to win freedom, democracy and human rights. Their calls for emulation of the Taiwan economy example are evolving into demands for learning from the ROC in politics and for return to the Three Principles of the People. This is enhancing the march to China's unification in freedom and democracy in the 1980s.

The Republic of China will never compromise with the Chinese Reds or contact the Soviets. The firm ROC stand of never departing from the democratic camp has positively contributed to the building of peace and freedom in Asia and the world. The nation continues as a vanguard in man's struggle to safeguard freedom and democracy. Unification of China in freedom and democracy will add 900 million people to the free democratic camp and put all the oppressed masses behind the Iron Curtain on their feet for action to terminate Communist rule.

WHAT FREEDOM FORCES MUST NOW DO

Ladies and Gentlemen: The 1980s will usher in victories for freedom and democracy. This highly advantageous turning point of history must be fully grasped so that struggles for freedom, democracy and human rights will triumph before long. To meet this demand, I hereby on this glorious World Freedom Day advance the following calls:

We maintain that the newly-established Reagan Administration resolutely ends the humiliating U.S. policy of detente and compromise with Red forces. The awakened Americans support President Reagan's effort for national renewal. The United States is powerfully demonstrating that she will, with strength, safeguard freedom and peace and, with justice and righteousness, lead the free world.

President Reagan said clearly in his inaugural address that the U.S. would strengthen her ties with free nations and assure them of America's support and firm commitment, matching loyalty with loyalty. The Republic of China has had long-standing cordial historic ties with the U.S. She used to be regarded as an American ally. She is one of America's Asian-Pacific neighbors. She always has been a loyal friend, and the United States used to have commitment in her. We have reasons to request the new U.S. Government to take concrete steps to promote normalization with the ROC and abandon the dangerous mistaken tactics of "allying with the Chinese Reds for the checking of the Soviets" so that America "will again be the exemplar of freedom and a beacon of hope for those who do not now have freedom." The 900 million people on the Chinese mainland are in misery without freedom. America absolutely should not join hands with those Red rulers who have deprived the Chinese mainland people of their freedom.

Strategic interests are such that any U.S. attempt to pit the Chinese Reds against the Soviets will spur the latter's expansion on many fronts. Furthermore, the U.S. inevitably will be dragged into wars regardless of whether the two Red regimes engage in open clashes or become reconciled.

We heartily agree that, as President Reagan said, the will and moral courage of free men and women is a weapon the adversaries of free nations do not have. America's mission today is to bring free nations together and safeguard freedom with this weapon.

We maintain that free nations come to the unequivocal understanding that because of their failure to unite and cooperate as one, the Communists have become so rampant. Free nations therefore should speedily develop common defense cooperation and, with collective strength, check Red expansion and assure regional security.

We maintain that free nations take forceful steps to support the heroic Afghan war against Soviet aggressors, help the Polish workers and other East Europeans cope

with Moscow's threat to their campaigns for freedom, aid the Indochinese, the Cubans and the North Koreans who are struggling to be free, and give strength to the Africans for successful fights against subversion, aggression and communization.

We maintain that free nations together encourage the 900 million Chinese mainland people's anti-Communist struggles to regain freedom, democracy and things Chinese. Support should be given the people on both sides of the Taiwan Straits who are striving for China's unification under the Three Principles of the People.

We maintain that our 900 million compatriots on the Chinese mainland fully grasp the regime's current conflict and confusion and rise for a wide-spread anti-Communist revolution to overthrow the Red tyranny.

Ladies and Gentlemen: The history of man's struggle for freedom is written in blood and tears. The road to freedom has to be opened and leveled with firm steps of multitude. We will in the decade ahead break through the Communist mist and build a broad avenue of freedom for all mankind.●

FIND A DOMESTIC SOLUTION

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. FRENZEL. Mr. Speaker, under the headline, "Find a Domestic Solution," the Journal of Commerce's four part editorial of March 14 points out further disadvantages in counterproductive suggestions to limit imports of automobiles from Japan.

The common thread running through this editorial, and other thoughtful objections to stopping world trade, is that we have a problem at home which we must solve at home.

Scapegoating may make a Member of Congress feel good, but we are not going to put auto workers back to work until we find a domestic solution to our domestic problem.●

MARTIN LUTHER KING, JR., CONVOCATION: APRIL 4, 1981

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. CONYERS. Mr. Speaker, this April 4—the 13th anniversary of the assassination of Dr. Martin Luther King, Jr.—seminars, dialogs, and teach-ins will take place across the Nation and in Washington, D.C., to rediscover and build upon Dr. King's political courage and his moral purposes.

Representing Americans in all walks of life—the religious community, the labor movement, civil rights institutions, women's organizations, minority communities, and among public interest organizations—the Martin Luther King events will set about to rediscover the King legacy for a new generation of Americans. In doing this, all of us will have to confront what is wrong with the politics of the present and move toward a new blueprint for social and political action that can transform the country.

I want to share with my colleagues the following documents that explain the nature and purposes of the King April 4 events and the organizations and individuals who at this point have agreed to participate in the events.

The documents follow:

REDISCOVERING MARTIN LUTHER KING, JR.'S IDEAS AND POLITICS IN THE 1980'S

On April 4, 1981—the anniversary of the assassination of Dr. Martin Luther King, Jr.—seminars, teach-ins, and informal meetings will take place across the nation and in Washington, D.C to rediscover and build upon Dr. King's political genius and moral purposes.

Twenty-six years ago in Montgomery, Alabama, King launched a new politics in America, and forged the broadest and most positive political coalition in recent history. He addressed the leading issues of his day, which remain the issues in our lives—full employment and economic justice; equality of opportunity; the safeguarding of the rights of working men and women; peace in the world and a halt to violence at home; and the abolition of racism. Linking these issues with new forms of political action, Dr. King created, in its totality, a new politics of hope and empowerment for millions of Americans and peoples throughout the world.

The historic coalition that King nurtured a generation ago needs to be rebuilt today. Millions of Americans feel frustration, helplessness and fear. Insidious tendencies toward polarization are afoot. Liberals and progressives are experiencing isolation, indecision, and drift. We need a new coalition to preserve and improve upon the human resource programs that a whole generation fought to create, to challenge the militarization of foreign policy, and to confront the orchestrated conservative attack on human rights at home and throughout the world.

Representing Americans in all walks of life, in the religious community, the labor movement, the women's movement, civil rights institutions, and in minority communities, we issue this call to reclaim Dr. King's genius for this generation of Americans, rebuild the great progressive coalition, and fashion the new ideas and programs that can transform America.

On Saturday, April 4, the Congressional Black Caucus, the Martin Luther King, Jr. Center for Social Change, and the other organizations listed, will sponsor in Washington, D.C. a series of seminars on rediscovering Dr. King's politics: a seminar on King, full employment, and economic justice, that will convene in 1100 Longworth House Office Building; a seminar on King, civil and human rights, that will take place at the Howard University Law School; and a seminar on King and global concerns, that will convene at the Institute for Policy Studies.

The seminars will convene at 10:30 a.m., include panels of distinguished leaders, and will generate broad discussion among all segments of the community. The proceedings will be published and widely distributed.

Similar teach-ins and meetings will take place in towns and cities across the nation. In rediscovering Dr. King's politics and ideas, all of us will have to confront what is wrong with the politics of the present, engage in dialog on alternatives, and move toward a new blueprint for social and political action.

We call for continuing discussion beyond April 4th among citizens and leaders to develop further actions to bring to bear the power and inspiration of Martin Luther King, Jr. We are convinced that if we meet, share counsel, and act together now, we can bring the nation back to the pursuit of justice, equality, and peace.

As a first step, we urge your participation in the King events in Washington, D.C. and in other cities on Saturday, April 4, 1981.

Further information on these events can be obtained from the Congressional Black Caucus in Washington, D.C. (202-225-1691) or the office of Congressman John Conyers (202-225-5126.)

HAPPY BIRTHDAY, EARTH DAY

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. HUGHES. Mr. Speaker, Earth Day 1981 will be celebrated on March 20, and I think this event worthy of note. Too few of us appreciate the marvels of our great spaceship—its beauty, its mysteries, and its bounteous resources. Thus, I think I would be on safe ground to propose that we take the time for a down-to-earth tribute for our crusty old friend.

In doing so, we will join my constituents in Bridgeton, N.J., who were pioneers in the Earth Day celebration. Led by John McConnel who, with the late Margaret Meade, cofounded the Earth Society Foundation 11 years ago, Bridgeton citizens will this year focus on "water—our most precious resource." Bridgeton citizens plan to mark Earth Day with recreational and educational activities emphasizing this often abused resource. Aquaphiles of all ages will gather in Bridgeton for festivities and, I hope, the citizens across the country will follow their fine lead.

The city of Bridgeton has drafted a most eloquent proclamation honoring our long-suffering planet, which I present below. It is a good way to begin our celebration of Earth Day 1981.

EARTH DAY PROCLAMATION

Whereas the greatest potential power on Earth is the power of the human heart, when it is engaged in a clear and important work of love. And the most important task for those who love is now the love and care of Earth, and

Whereas mankind's disregard for nature and the laws of Nature has brought about a global crisis of population, pollution and poverty, and

Whereas seeds of change have, nevertheless been planted, here and there people who love the Earth are demonstrating ways to meet human need through harmony with Nature . . . without polluting, wasting and destroying the Earth, and

Whereas instead of continuing the road to chaos and oblivion we can by our united actions save, revive and redeem our endangered planet and that by an all-out effort now and in succeeding years we can by the year 2000, our Bimillennium, make the dreams of a golden age come true.

Be it therefore resolved, that our citizens, young and old, will join on Earth Day, March 20, in a salute to our planet Earth. When the United Nations Peace Bell rings, at the moment of the Equinox, we ask that our church and temple bells will also ring. And that we, joined by others around the world, will turn our hearts to silent prayer, meditation or personal vows for Earth's renewal. That instead of preparing for war, as we have in the past, we will seize this grand moment in history and vigorously begin to prepare for the Millennium, knowing that once the Millennium is in our hearts and minds we will work fervently to obtain a peaceful, healthy planet . . .

Now, therefore, I, Donald H. Rainear, Mayor of the City of Bridgeton, County of Cumberland and State of New Jersey, do hereby proclaim, Friday, March 20, 1981 as Earth Day.

In Witness, Whereof, I have hereunto set my hand and caused the seal of the City of Bridgeton to be affixed at Bridgeton on this 20th day of March, 1981.

DONALD H. RAINEAR,
Mayor.●

HEROIN AS A PAIN RELIEVER

HON. EDWARD R. MADIGAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1981

● Mr. MADIGAN. Mr. Speaker, heroin is widely recognized as an extremely effective pain reliever. A small proportion of terminal cancer patients who would derive great benefit from the controlled use of injectable heroin must do without its analgesic effects. Under present law, legitimate medical us of heroin (diacetylmorphine) is prohibited despite its acknowledged efficacy.

The Harrison Narcotics Act of 1914 restrained the availability of previously unregulated narcotics. The worthy objective of the act was to limit available opiates to those necessary for medical and scientific use. At that time, narcotics were freely dispensed and addiction was becoming a pressing social problem. A physician was still able to prescribe and distribute opiates within the course of regular practice under the Harrison Act.

The Supreme Court restricted the rights of medical doctors to prescribe narcotics for the treatment of addiction in two important decisions. These judicial precedents became an effective ban on any manner of heroin prescription.

In 1924, Congress passed a law prohibiting the importation of crude opium for the purpose of manufacturing heroin. This ban continues to this day.

At present, morphine is the standard analgesic of choice for cancer patients experiencing severe pain. In the absence of limiting circumstances, oral administration is preferred initially both for its effectiveness and for the extent to which it permits a patient to function in a relatively normal fashion. As certain types of neoplastic disease progress, however, adequate pain relief through oral administration may become impossible and parenteral (injected) medication may become necessary.

Several factors may cause a need for administration of analgesics by injection. The pain may be so intense that it fails to respond even to large doses of oral morphine or other analgesics. The patient in severe pain who is unable to obtain adequate relief with the highest effective dose of oral morphine often needs injected medication every 3 or 4 hours. Injections may also be required due to unrelieved nausea and vomiting which prevent the full absorption of oral medications. Finally, during the last hours of life, a patient's increasing debility may make the oral route difficult if not impossible.

For the emaciated patient with severe muscle wasting, the relative insolubility of morphine poses a special problem, for the administration of a higher dosage at frequent intervals must be accomplished by means of high volume injection. Under such circumstances, the use of a small volume injection is clearly the most humane practice. Thus, heroin is the better choice for it is possible to administer heroin in a far smaller volume than morphine. Heroin salts are more potent and are inherently more soluble than morphine salts.

This question of solubility underlies the need for legislation. In the recognized absence of an equipotent analgesic of equivalent solubility to heroin, I believe that Congress should make heroin available to the thousands of terminal cancer patients who need it each year. It is our responsibility to see that the dying do not suffer needlessly.

I think it unfortunate that heroin, one of the most potent pain remedies known to medicine, is presently banned from even limited legitimate use. I can think of no compelling argument that exists for a continued ban on the use of this powerful analgesic in the very limited circumstances of certain advanced cancers. As a result, I have reintroduced legislation to modify the prohibition on the medical use of heroin. I am pleased to note that nine of my colleagues have chosen to join me in the reintroduction of this bill.

Our bill transfers heroin from schedule I to schedule II of the Controlled Substances Act, acknowledging that this drug does indeed have an accepted medical use contrary to its present legal status. In addition, our bill establishes specific practitioner regulation standards and terms for the controlled use of his drug in qualified hospitals and hospices. It sets forth diagnostic guidelines, including restrictions on the definition of terminal cancer, and provisions for appropriate medical review following accepted standards. It further directs the Attorney General to promulgate necessary regulations in accordance with the legislation, and provides for the suspension or revocation of practitioner licenses on findings of noncompliance. The bill also amends the Controlled Substances Import and Export Act to permit the legitimate importation of crude opium for the purpose of manufacturing heroin. Finally, the bill directs the National Cancer Institute to take necessary action to insure that heroin can be distributed for proper medical use.
